## Appendix B - Employer Tax Variations

## 1. Hours v. Payroll Tax Comparison

Calculating the amount of an Employer Tax as a percentage of all payroll, rather than a flat amount per FTE employee, could make this tax more progressive. The chart below is intended as a conceptual example, not reflecting actual average pay in various sectors.

|  | "Restaurant Chain" \$40,000 average annual pay, 100 FTE | "Construction Firm" \$60,000 average annual pay, 100 FTE | "Law Firm" \$80,000 average annual pay, 100 FTE | "Tech Company" \$100,000 average annual pay, 100 FTE | Total Annual Revenue ${ }^{1}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| \$300 per FTE employee | $\begin{gathered} \$ 30,000 \text { annual tax } \\ = \\ \$ 0.156 / \text { hour } \end{gathered}$ | $\begin{gathered} \$ 30,000 \text { annual tax } \\ = \\ \$ 0.156 / \text { hour } \end{gathered}$ | $\begin{gathered} \$ 30,000 \text { annual tax } \\ = \\ \$ 0.156 / \text { hour } \end{gathered}$ | $\begin{gathered} \$ 30,000 \text { annual tax } \\ = \\ \$ 0.156 / \text { hour } \end{gathered}$ | $\sim$ \$75 million |
| $0.5 \%$ of total payroll | $\begin{gathered} \$ 20,000 \text { annual tax } \\ = \\ \$ 0.104 / \text { hour } \end{gathered}$ | $\begin{gathered} \$ 30,000 \text { annual tax } \\ = \\ \$ 0.156 / \text { hour } \end{gathered}$ | $\begin{gathered} \$ 40,000 \text { annual tax } \\ = \\ \$ 0.208 / \text { hour } \end{gathered}$ | $\begin{gathered} \$ 50,000 \text { annual tax } \\ = \\ \$ 0.260 / \text { hour } \end{gathered}$ | $\sim$ \$75 million |

1. Assuming $\$ 60$ K average annual pay in Seattle; $\$ 5$ million gross receipts exemption cut-off; and correctness of EHT revenue estimates given to the Progressive Revenue Task Force by Central Staff.

## 2. Graduation by Number of Employees

It may be possible to add another layer of progressivity by graduating a payroll-based tax by number of employees. For example:

| Size of business: | $1-50$ FTE employees | $50-100$ FTE employees | $100-500$ FTE employees | Over 500 FTE <br> employees |
| :--- | :--- | :--- | :--- | :--- |
| Tax paid: | $0.2 \%$ of all payroll | $0.4 \%$ of all payroll | $0.6 \%$ of all payroll | $0.8 \%$ of all payroll |

In this way, very large businesses with high-paid employees would pay the most per head; smaller businesses with lower-paid employees would pay the least per head; and large businesses with lower-paid employees and smaller businesses with high-paid employees would land somewhere in the middle. There could still be a gross receipts exemption cutoff, but perhaps it wouldn't have to be as high with these additional means of tapering the tax for smaller and lower-margin businesses. (The assumption being made here, which is worth checking, is that lower-margin sectors tend to be those that employ lower-wage workers.)

Below are extremely rough revenue estimates for two possible graduations of a payroll-based tax.

| Firm Size by <br> \# of <br> Employees ${ }^{1}$ | \% of Total <br> Employees ${ }^{1}$ $(2014)^{*}$ | Est. \# FTEs (2015) | Est. Salary Base @ Uniform \$29.41/hour ${ }^{2,3}$ | Proposed Tax Rate \% payroll | Avg. Tax Rate per FTE / hour ${ }^{4}$ | Est. Annual <br> Tax <br> Revenue | Exemption at $<\$ 5$ million ${ }^{5}$ | Exemption at $<\mathbf{\$ 1 0}$ million ${ }^{6}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0-50 | 34.1\% | 152,838 | 9,349,537,379 | 0.20\% | \$120/\$0.062 | 18,699,075 | [small] | [very small] |
| 51-100 | 11.4\% | 50,933 | 3,115,727,572 | 0.40\% | \$240/\$0.125 | 12,462,910 | [small] | [very small] |
| 101-500 | 26.1\% | 117,011 | 7,157,919,370 | 0.60\% | \$360/\$0.188 | 42,947,516 | 42,947,516 | 27,150,729 |
| 501+ | 28.5\% | 127,839 | 7,820,279,560 | 0.80\% | \$480/\$0.250 | 62,562,236 | 62,562,236 | 62,562,236 |
| Total | 100.0\% | 448,622 | 27,443,463,882 |  |  | 136,671,738 | 105,509,752 | 89,712,965 |

| $\begin{aligned} & \hline \text { Firm Size by } \\ & \text { \# of } \\ & \text { Employees }^{1} \end{aligned}$ | \% of Total Employees (2014) ${ }^{1}$ | Est. \# FTEs (2015) | Est. Salary Base <br> @ Uniform <br> \$29.41/ hour ${ }^{2,3}$ | Proposed Tax Rate \% payroll | Avg. Tax Rate per FTE / hour ${ }^{4}$ | Est. Annual Tax Revenue | Exemption at $<\$ 5$ million ${ }^{5}$ | Exemption at $<\mathbf{\$ 1 0}$ million ${ }^{6}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0-50 | 34.1\% | 152,838 | 9,349,537,379 | 0.25\% | \$150/\$0.078 | 23,373,843 | [small] | [very small] |
| 51-100 | 11.4\% | 50,933 | 3,115,727,572 | 0.25\% | \$150/\$0.078 | 7,789,319 | [small] | [very small] |
| 101-500 | 26.1\% | 117,011 | 7,157,919,370 | 0.50\% | \$300/\$0.156 | 35,789,597 | 35,789,597 | 22,625,607 |
| 501+ | 28.5\% | 127,839 | 7,820,279,560 | 0.75\% | \$450/\$0.234 | 58,652,097 | 58,652,097 | 58,652,097 |
| Total | 100.0\% | 448,622 | 27,443,463,882 |  |  | 125,604,856 | 94,441,694 | 81,277,704 |

## Assumptions:

1. Position counts, not adjusted for full-time equivalency (FTE) status.
2. Mean Seattle-Tacoma-Bellevue wage (all occupations) per BLS May 2016 Area Occupational Employment and Wage Estimates
3. Assumes uniform distribution of mean wage across all firm sizes
4. Assumes $\$ 60 \mathrm{~K}$ average annual pay in Seattle and uniform distribution of mean wage across all firm sizes. Averaged across all firms in each size category; the actual rate for a given firm will depend on that firm's average FTE pay
5. Assumes $55 \%$ of employees work for firms with gross receipts above $\$ 5$ million. Assumes the firms thereby exempted include the vast majority of 1-100 employee firms, and no 101+ employee firms.
6. Assumes $45 \%$ of employees work for firms with gross receipts above $\$ 10$ million. Assumes the firms thereby exempted include nearly all 1-100 employee firms, $\sim 36.8 \%$ of 101-500 employee firms, and no 501+ employee firms.

## 3. Hybrid FTE/Payroll Employer Tax Model

There are some tradeoffs between basing a tax on number of FTEs (or employee hours), or on total payroll. A hybrid model may be a good compromise. For example:

- Employers can choose to pay either $\$ 400$ per FTE or $0.5 \%$ of total payroll.
- A law firm with 100 employees that pays $\$ 400$ per FTE owes $\$ 40,000$. Suppose this law firm's average salary is $\$ 80 \mathrm{~K}$. Their total payroll is $\$ 8 \mathrm{M}$, and $0.5 \%$ of $\$ 8 \mathrm{M}$ is also $\$ 40,000$.
- So, for businesses with average pay $\$ 80 \mathrm{~K}$ and above, it would make sense to choose the first option.
- A grocery store with 100 employees also owes $\$ 40,000$ if they choose the first option. But suppose their average annual employee pay is only $\$ 40 \mathrm{~K}$. Their total payroll is $\$ 4 \mathrm{M}$, and $0.5 \%$ of $\$ 4 \mathrm{M}$ is only $\$ 20,000$.
- For businesses that employ lower-wage workers, it would generally make sense to choose the second option.

How much revenue would this raise? With a $\$ 5 \mathrm{M}$ exemption threshold, if everyone chose the first option, it would generate around $\$ 100 \mathrm{M} /$ year. If every worker in Seattle was paid minimum wage ( $\sim 30 \mathrm{~K} / \mathrm{year}$ ) and every employer chose the second option, it would generate around the same amount as a $\$ 150 /$ FTE flat rate, i.e. $\$ 37.5 \mathrm{M} /$ year. The actual figure would be somewhere between those two boundaries, likely toward the middle. So, this hybrid approach could bring in around $\$ 75 \mathrm{M} /$ year.

|  | \$X per FTE | 0.Y percent of total payroll | Hybrid: Employer's choice |
| :--- | :--- | :--- | :--- |
| Fairness / <br> Progressivity | Low-margin, high-revenue <br> sectors are hit hardest, <br> particularly when they are <br> labor-intensive (high ratio of <br> employees to revenue). | To the extent that low-margin sectors, <br> such as food and retail, tend to employ <br> lower-wage workers, this approach is <br> more equitable. Businesses with high- <br> paid employees, such as law firms and <br> tech companies, would pay relatively <br> more. | In terms of targeting those <br> businesses most able to <br> contribute, this approach falls <br> somewhere in the middle of <br> the other two, again assuming <br> that low-margin sectors tend <br> to be those with lower-wage <br> workers. |
| Employer <br> Administration | Relatively simple. | Employers may not want to disclose <br> their total payroll, and for businesses <br> with operations extending beyond <br> Seattle it may be difficult to calculate. | Employers can choose <br> whether it's worth it to them <br> to calculate and disclose their <br> payroll in order to pay a <br> lower amount. |
