ABOUT THE STATION

In October 2019, Seattle Fire, together with Finance and Administrative Services (FAS) and the Mayor's Office, determined that the existing Fire Station 31 no longer met the needs of this growing sector of the City. A new station will be built several blocks to the northeast of the existing station. This new interim station will provide the operational base for Fire Station 31 during the design and construction of the new station.

STATION FEATURES

- Two tent structures for the station's apparatus: Engine 31, Ladder 5, Medic 31 and Aid 31
- Two portable building structures for the station house and office accommodating twelve active-duty personnel per shift
- Seismic design for essential facilities
- Sustainable design meeting Capital Green

INTERIM STATION

This interim station is scheduled to be operational in fall 2021. Fire Station 31 units are currently responding from adjacent neighborhood stations until the new interim station is completed. It is anticipated that firefighters will be working from this station for approximately three years.
