Universal Design and Public Open Space

Emory Baldwin, AIA, ZAI Architects
Jocelyn Freilinger, Associate ASLA, Keystone Place Solutions, LLC
Karen L. Braitmayer, FAIA, Studio Pacifica, Ltd.

July 2, 2009

Welcome

Goals for this session

- Why Universal Design? Who benefits?
- Case studies from US and abroad
- Universal Design's role in Sustainability
- Inspire Universal Design in future projects
Core thoughts:

“Design is powerful and profoundly influences our daily lives and our sense of **confidence**, **comfort**, and **control**.”

*Variation in ability is **ordinary**, not special, and affects most of us for some part of our lives.*

Valerie Fletcher, Institute for Human Centered Design

---

**Universal Design**

Definitions:

Universal design is the design of products and environments to be usable by all people, to the greatest extent possible, without the need for adaptation or specialized design.

Ron Mace
The Center for Universal Design
NC State University

A framework for the design of buildings, products and information technology to be usable by the widest range of users.

Valerie Fletcher
The Institute for Human Centered Design

---

**Seven Guiding Principals of UD**

- **Equitable Use** The design is useful and marketable to people of diverse abilities.
- **Flexibility in Use** The design accommodates a wide range of individual preferences and abilities.
- **Simple and Intuitive Use** Use of the design is easy to understand, regardless of the user’s experience, knowledge, language skills or current concentration level.
- **Perceptible Information** The design communicates necessary information effectively to the user, regardless of ambient conditions or the user’s sensory abilities.
- **Tolerance for Error** The design minimizes hazards and the adverse consequences of accidental or unintended actions.
- **Low Physical Effort** The design can be used efficiently and comfortably and with a minimum of fatigue.
- **Size and Space for approach and Use** Approximate size and space is provided for approach, reach, manipulation, and use regardless of the user’s body size, posture, or mobility.

UD and the ADA

The ADA Standards for Accessibility are limited in application and set minimum design requirements focused largely on mobility aid users.

UD is a framework for rethinking the design of all environments, products, information AND communication for the widest possible spectrum of users.

Human Factors

Humans come in a wide range of abilities, sizes, ages, cognitive and sense acuity. We must embrace designing for the range, not for some narrow portion considered the “norm”.

Census Data
Census Data

Environments influence Ability

- A person with low hearing notices their "impairment" more in noisy environments and may not be able to participate.
- A person who uses a wheelchair is restricted by steps or steep slopes and may not be able to get to their chosen location.
- A person who has low vision is limited by low or no-contrast in surface materials and may inadvertently wander into an automobile zone.

Sustainability

Social Equity

Environmental

Economic

Sustainable and Universal

The 2006 Rio Charter on Universal Design for Sustainable and Inclusive Development defines the purpose of Universal Designs as

“serve needs and make possible social participation and access to goods and services by the widest possible range of users, contributing to both the inclusion of persons who have been prevented from interacting in society and to their development.

Examples of such groups include: poor persons, persons marginalized for reasons of culture, race, or ethnicity, persons with different types of disabilities, very obese persons and pregnant women, very tall or very short persons, including children, and all those who for different reasons have been excluded from social participation.”
"Design is only one part of the solution to a more inclusive world in which all people have equal opportunity for independence, autonomy and participation.

But **design matters.**

Understood as the work of ‘changing existing situations into preferred ones’ [Simon, 1967], and expanded to embrace solutions that include everyone, Universal Design is a framework that accepts diversity of ability and age as the most ordinary reality of being human and evaluates strategies and solutions based on how well they meet the needs of the widest possible group of potential users and enhance everyone’s experience.

It demands a quality of creativity and invention that can energize generations of designers to become partners with users in a revitalized appreciation of design as **intrinsic to social sustainability.**”

**Inclusive Pedestrian Environments**

Recommendations from Adaptive Environments and Project ACTION:

1. Transform the Roadway Design Culture

2. Elevate accessible pedestrian rights-of-way to the same status, responsibility and funding as automobile rights-of-way.

3. Make pedestrian advocates committed allies

4. Integrate good design information into standard materials and construction practice
