

Hi Duane,

I am writing to support the recommendations that the 43rd District Democrats Environmental Caucus have made in the attached letter by Holly Townes. I believe these recommendations are critical to implement now as energy efficiency in our buildings is one of the cheapest and most effective ways to reduce Seattle's GHG emissions.

It is essential that we act aggressively and boldly now in order to protect our health and the viability of our city. This is especially true considering the recent catastrophic climate crisis events including the extensive wildfires, and associated horrendous smoke episodes; flooding, hurricanes and heat waves. We have no further time left to delay, delay, delay like we've done for the past 3 decades since the science on climate change became crystal clear.

Now is the time for Seattle to take action to do whatever it can to contribute to immediate reductions in GHG emissions. Please seriously consider implementing the attached recommendations. Thank you for your consideration.

Sincerely,

Marian Wineman
