CITY OF SEATTLE
ORDINANCE ________________
COUNCIL BILL ________________

AN ORDINANCE relating to the Stormwater Code; amending Sections 22.800.100, 22.805.070, 22.805.080, and 22.807.020 of the Seattle Municipal Code to correct section references, make minor amendments, and clarify administrative requirements.

WHEREAS, this ordinance, to be known at the 2016 Stormwater Code Revision, contains amendments to further the purposes of the Stormwater Code; and

WHEREAS, the Sections of the Seattle Municipal Code amended herein were enacted or amended by Ordinance 124872, effective January 1, 2016, as part of a major update to the Stormwater Code; NOW, THEREFORE,

BE IT ORDAINED BY THE CITY OF SEATTLE AS FOLLOWS:

Section 1. Section 22.800.100 of the Seattle Municipal Code, enacted by Ordinance 124872, is amended as follows:

22.800.100 Transition to Revised Stormwater Code

A. Any building or grading permit (a) which was not considered, either in the initial application process or in a renewal process, under the version of the Stormwater Code in effect on or after January 1, 2016, and (b) pursuant to which construction has not started by June 30, 2020, shall expire on June 30, 2020.

B. Any master use permit for a project not requiring a building permit (a) which was not considered, either in the initial application process or in a renewal process, under the version of
the Stormwater Code in effect on or after January 1, 2016, and (b) pursuant to which
construction has not started by June 30, 2020, shall expire on June 30, 2020.

C. Neither Section 23.22.028, Section ((23.22.064)) 23.22.074, Section 23.24.050, RCW
58.17.033, nor RCW 58.17.170 shall require any permit application submitted on or after
January 1, 2016, to be considered under a version of the Stormwater Code in effect prior to
January 1, 2016. For purposes of this subsection 22.800.100.C, "permit application" means an
application for any permit required for construction within a plat or short plat or for construction
of facilities and improvements for a plat or short plat, including, but not limited to, master use,
building and grading permits.

D. Neither Section 23.22.028 nor ((23.22.064)) 23.22.074 shall authorize starting
construction, after June 30, 2020, of facilities or improvements for any plat without compliance
with the version of the Stormwater Code in effect on or after January 1, 2016.

E. For purposes of this ((section)) Section 22.800.100, "starting construction" or "started
construction" means the site work associated with and directly related to the approved project
has begun. For example: grading the project site to final grade or utility installation. Simply
clearing the project site does not constitute the start of construction.

Section 2. Section 22.805.070 of the Seattle Municipal Code, last amended by Ordinance
124872, is amended as follows:

**22.805.070 Minimum Requirements for On-Site Stormwater Management**

A. Applicability. The requirements of this subsection 22.805.070 apply as required in
Section 22.805.030 to Section 22.805.060.
B. Requirements. On-site stormwater management shall be installed to the extent allowed by law and maintained in compliance with the rules promulgated by the Director to receive flows from that portion of the site being developed and shall:

1. Comply with either:
   a. Subsection 22.805.070.C (On-site Performance Standard); or

C. On-site Performance Standard:

1. If the existing hard surface coverage is less than 35 percent and the project discharges to a listed creek, or to the drainage basin of such creek:
   a. The post-development discharge durations shall match the discharge durations of a pre-developed forested condition for the range of pre-developed discharge rates from 8 percent of the 2-year peak flow to 50 percent of the 2-year peak flow.

2. For all other projects:
   a. The post-development discharge durations shall match the discharge durations of a pre-developed pasture condition for the range of pre-developed discharge rates between the 1 percent and 10 percent exceedance values.

D. On-site Lists:

1. For each project surface, follow the appropriate project table in subsection 22.805.070.D.2 to subsection 22.805.070.D.5 to evaluate on-site BMPs shown for that type of surface, by category. All on-site BMPs used must comply with the rules promulgated by the Director. For each surface, consider all of the applicable on-site BMPs in the first category. Use any that is considered feasible. If none is feasible for that surface, move on to each successive category and repeat the selection process as necessary. Once one on-site BMP is used for a surface,
no other on-site BMP is necessary for that surface. If no BMP in the appropriate categories is feasible, then no further evaluation is required for that surface under this subsection 22.805.070.D.1. Feasibility shall be determined by evaluation against:

a. Design criteria, minimum size, limitations, and infeasibility criteria identified for each BMP in this subsection 22.805.070 and the rules promulgated by the Director; and

b. Competing Needs: Subsection 22.805.070.D (On-site Lists) can be superseded or reduced by the Director if the installation of the BMPs is in conflict with:

1) Any of the following federal or state laws, rules, and standards, as may be amended or superseded: Historic Preservation and Archaeology Laws identified in subsection 22.805.070.E (Historic Preservation and Archaeology Laws), Federal Superfund or Washington State Model Toxics Control Act, Federal Aviation Administration requirements for airports, the Americans with Disabilities Act, and related rules and standards; or

2) Special zoning district design criteria adopted and being implemented pursuant to a community planning process. Special zoning districts include, for example, historic and preservation districts, pedestrian zone overlays, station area overlays, special review districts, multifamily residential zones, urban centers and urban villages, and master planned communities. Specific criteria in these areas include, but are not limited to, minimum Floor Area Ratio standards; zero lot line development; usable open space requirements; minimum sidewalk width and required bicycle facilities; alley, loading, and access requirements; pitched roof standards; and street-level development standards for modulation and projections; or

3) Public health and safety standards; or
4) Transportation regulations to maintain the option for future expansion or multi-modal use of public rights-of-way; or

5) Chapter 15.43 (Tree and Vegetation Management in Public Places); Chapter 25.09 (Regulations for Environmentally Critical Areas); Chapter 25.11 (Tree Protection); and Chapter 23.60A (Standards for Vegetation in the Shoreline Master Plan).

2. For single-family residential projects, Table A for 22.805.070 applies.

X = Evaluation is not required for Roadway Projects, but is allowed.
P = Evaluation is required for all pollution-generating hard surfaces of Roadway Projects, unless otherwise noted below.

---

* * *

Section 3. Subsection 22.805.080.B of the Seattle Municipal Code, which section was last amended by Ordinances 124919 and 124872, is amended as follows:

**22.805.080 Minimum requirements for flow control**

* * *

B. Requirements. Flow control facilities shall be installed to the extent allowed by law and maintained pursuant to rules promulgated by the Director to receive flows from that portion of the site being developed. Post-development discharge determination must include flows from
dewatering activities. All projects shall use on-site BMPs identified in Section 22.805.070.D to
the maximum extent feasible to meet the minimum requirements. Flow control facilities that
receive flows from less than that portion of the site being developed may be installed if the total
new plus replaced impervious surface is less than 10,000 square feet, the project site uses only on-
site BMPs to meet the requirement, and the on-site BMPs provides substantially equivalent
environmental protection as facilities not using on-site BMPs that receive flows from all of the
portion of the site being developed.

1. Wetland Protection Standard. Protect the functions and values of wetlands and
their buffers from all projects discharging stormwater directly or indirectly to them. The
hydrologic conditions, vegetative community, and substrate characteristics of the wetlands shall
be protected, and impacts caused by changes in water flows and pollutants shall be prevented. The
introduction of sediment, heat and other pollutants and contaminants into wetlands shall be
minimized through the selection, design, installation, and maintenance of temporary and
permanent controls. The total volume of stormwater discharging into a wetland shall not be more
than:

- during a single precipitation event, 20 percent higher or lower than the pre-
project volume, and
- on a monthly basis, 15 percent higher or lower than the pre-project volume.

Before authorizing new discharges to a wetland, alternative discharge
locations shall be evaluated and infiltration options outside the wetland shall be maximized unless
doing so will adversely impact the functions and values of the affected wetlands. If one or more
of the flow control requirements contained in 22.805.080.B.2 through 22.805.080.B.4 also apply
to the project, an analysis shall be conducted to ensure that the functions and values of the affected
wetland are protected before implementing these flow control requirements. Projects triggering this requirement shall refer to Guide Sheets #1 through #3 presented in Appendix I-D of Ecology's Stormwater Management Manual for Western Washington (Ecology 2014) for additional guidance. Notwithstanding any provision in this subtitle, no net loss of wetland functions of values shall result from actions regulated by this subtitle.

2. Pre-developed Forested Standard. The post-development discharge durations shall match the discharge durations of a pre-developed forested condition for the range of pre-developed discharge rates from 50 percent of the 2-year peak flow to the 50-year peak flow.

3. Pre-developed Pasture Standard. The post-development discharge durations shall match the discharge durations of a pre-developed pasture condition for the range of pre-developed discharge rates from 50 percent of the 2-year peak flow to the 2-year peak flow.

4. Peak Control Standard. The post-development peak flow with a 4 percent annual probability (25-year recurrence flow) shall not exceed 0.4 cubic feet per second per acre. Additionally, the peak flow with a 50 percent annual probability (2-year recurrence flow) shall not exceed 0.15 cubic feet per second per acre.

Section 4. Subsection 22.807.020.B of the Seattle Municipal Code, which section was last amended by Ordinances 124919 and 124872, is amended as follows:

22.807.020 Drainage control review and application requirements

B. Submittal Requirements for Drainage Control Review and Approval
1. Information Required for Standard Drainage Control Review. The following information shall be submitted to the Director for all projects for which drainage control review is required.

a. Site Plan. A site plan shall be submitted to the Director.

b. Standard Drainage Control Plan. A drainage control plan shall be submitted to the Director. Standard designs for drainage control facilities as set forth in rules promulgated by the Director may be used. For a project with no accessible offsite discharge point, the drainage control plan shall be prepared by a licensed civil engineer in accordance with standards adopted by the Director.

c. Construction Stormwater Control Plan. A construction stormwater control plan demonstrating controls sufficient to determine compliance with subsection 22.805.020.D shall be submitted. The Director may approve a checklist in place of a plan, pursuant to rules promulgated by the Director.

d. Memorandum of Drainage Control. The owner(s) of the site shall sign a "memorandum of drainage control" on a form that has been prepared by the Director of SPU. Completion of the memorandum shall be a condition precedent to issuance of any permit or approval for which a drainage control plan is required. The applicant shall file the memorandum of drainage control with the King County Recorder’s Office so as to become part of the King County real property records. The applicant shall give the Director of SPU proof of filing of the memorandum. The memorandum shall not be required when the drainage control facility will be owned and operated by the City. A memorandum of drainage control shall include:

1) The legal description of the site;
2) A summary of the terms of the drainage control plan, including any known limitations of the drainage control facilities, and an agreement by the owners to implement those terms;

3) An agreement that the owner(s) shall inform future purchasers and other successors and assignees of the existence of the drainage control facilities and other elements of the drainage control plan, the limitations of the drainage control facilities, and of the requirements for continued inspection and maintenance of the drainage control facilities;

4) The ((side sewer)) permit or approval number and the ((date and)) name of the permit or approval for which the drainage control plan is required;

5) Permission for the City to enter the property for inspection, monitoring, correction, and abatement purposes;

6) An acknowledgment by the owner(s) that the City is not responsible for the adequacy or performance of the drainage control plan, and a waiver of any and all claims against the City for any harm, loss, or damage related to the plan, or to drainage or erosion on the property, except for claims arising from the City's sole negligence; and

7) The owner(s)' signatures acknowledged by a notary public.

e. Submittals identified by rule. Additional information shall be submitted to the Director to comply with the requirements of this subtitle and rules promulgated hereunder and to accomplish the purposes of this subtitle.

2. Information Required for Large Project Drainage Control Review. In addition to the submittal requirements for standard drainage control review, the following information is required for large projects:
a. Comprehensive Drainage Control Plan. A comprehensive drainage control plan, in lieu of a standard drainage control plan, to comply with the requirements of this subtitle and rules promulgated hereunder and to accomplish the purposes of this subtitle shall be submitted with the permit application. It shall be prepared by a licensed civil engineer in accordance with standards adopted by the Director.

b. Inspection and Maintenance Schedule. A schedule shall be submitted that provides for inspection of temporary and permanent flow control facilities, treatment facilities, and source controls to comply with Section 22.805.070 (Minimum Requirements for On-site Stormwater Management), Section 22.805.080 (Minimum Requirements for Flow Control) and Section 22.805.090 (Minimum Requirements for Treatment).

3. Applications for drainage control review and approval shall be prepared and submitted in accordance with provisions of this subsection, with Chapter 21.16 (Side Sewer Code), and with associated rules and regulations adopted jointly by the Directors of SDCI and SPU.

4. The Director may require additional information necessary to adequately evaluate applications for compliance with the requirements and purposes of this subtitle and other laws and regulations, including, but not limited to, Chapter 25.09 (Regulations for Environmentally Critical Areas) and Chapter 23.60A. The Director may also require appropriate information about adjoining properties that may be related to, or affected by, the drainage control proposal in order to evaluate effects on the adjacent property. This additional information may be required as a precondition for permit application review and approval.

* * *
Section 5. The provisions of this ordinance are hereby declared to be separate and severable. The invalidity of any clause, sentence, paragraph, subdivision, subsection or portion of this ordinance or the invalidity of the application thereof to any person or circumstance does not affect the validity of the remainder of this ordinance, or the validity of its application to other persons or circumstances.
Section 6. This ordinance shall take effect and be in force 30 days after its approval by
the Mayor, but if not approved and returned by the Mayor within ten days after presentation, it
shall take effect as provided by Seattle Municipal Code Section 1.04.020.
