#### **SUMMARY**

This Hazardous Materials Discipline Report describes the potential hazardous materials conditions present at and near the Fairview Avenue Bridge Replacement Project and the anticipated construction and operational effects to the project and the environment. The project will consist of constructing a new bridge to replace the existing twin parallel bridges that carry Fairview Avenue over a small inlet of water at the southeast end of Lake Union in Seattle, Washington. This discipline report addresses the Build Alternative. The Build Alternative consists of a bridge that is approximately 500 feet long and includes 3 lanes with bike lanes and sidewalks on both sides. The proposed four span bridge will be founded on drilled shafts at the north and south abutment and at the interior pier locations. The project will require raising grade at the south and north abutments by I to 2 feet. Retaining walls may be needed at both abutments to make the grade changes.

Most of the hazardous materials construction effects identified for the Build Alternative relate to identifying, handling and disposing of contaminated sediment, soil, and water. Other effects include hazardous substances that could be released during demolition of existing structures and during operation of construction equipment. The identified effects can be mitigated by proper construction methods. Mitigation measures identified herein and in the final design will be implemented during construction in accordance with the approved plans and specifications using Best Management Practices (BMPs) specified by the City of Seattle, and will be designed to minimize the unwanted spread or release of hazardous materials, protect the health and safety of workers and the public, and ensure regulatory compliance.

The hazardous materials-related operational effects of the Build Alternative identified are due mainly to stormwater runoff from the completed structure and accidental discharge of hazardous materials to the lake. Operational effects are those potentially occurring after construction is completed and the new facility is in operation. Mitigation measures identified during the design process would be used to address specific effects to the environment or adjacent facilities as appropriate.

#### I. PROJECT DESCRIPTION

#### 1.1. Introduction

The Fairview Avenue North Bridge Replacement Project is part of the City of Seattle's Bridging the Gap (BTG) transportation program. One of the nine-year goals of the BTG program, and the primary purpose of Seattle's Bridge Rehabilitation, Replacement and Seismic Retrofit Program, which is funded in large part by the BTG program, is to rehabilitate, replace, or seismically retrofit the city's most vulnerable bridges. The Fairview Avenue North Bridge Replacement project is

being funded in two ways: Bridging the Gap, a nine-year levy for transportation maintenance and improvement, and federal funding through the Bridge Replacement Advisory Committee (BRAC).

#### 1.2. Project Setting

The Fairview Avenue North Bridge is located on the southeast side of Lake Union in Seattle, King County, Washington (Figure 1). The bridge carries Fairview Avenue over a small inlet of water at the southeast end of Lake Union at the southeastern end of Waterway 8. The bridge, which has a southwest-northeast orientation, consists of two bridges built in parallel. These two bridges, known as the West Bridge and the East Bridge, support the single bridge deck currently visible to bridge users.

The West Bridge, built in 1948, carries one lane of southbound traffic and one mixed use (bicycle and pedestrian) lane. There is also an existing floating walkway connected to the West Bridge (Figure 2 and Appendix A). The bridge has a concrete deck and is supported on creosote treated timber piles, many of which are deteriorated and in poor condition, or previously repaired. The bridge is rated as structurally deficient, with a sufficiency rating of 23.98. The sufficiency rating formula is used to evaluate a bridge's sufficiency to remain in service, based on a combination of several factors. A sufficiency rating of 100 represents a new bridge and zero represents a fully deficient bridge or a bridge that is near collapse. Bridges are often closed when their sufficiency rating reaches the mid to low teens. The rating helps determine which bridges may need repair or replacement, but does not reflect the ability of the structure to handle loads or its potential for collapse. Therefore, the City is proposing to replace the entire structure with a new bridge that meets current design standards.

The East Bridge, built in 1963, has a pre-stressed concrete girder superstructure supported on pre-stressed concrete piles and carries two lanes of northbound traffic and one, raised 8-foot-wide sidewalk for pedestrians (Figure 2 and Appendix A). Although the East Bridge has a sufficiency rating of 40.98, a Type, Size, and Location study that analyzed various project construction options determined that replacement of both bridges was preferable to replacement of the West Bridge and rehabilitation of the East Bridge (HNTB and Perteet, 2013).

The ZymoGenetics building (formerly the Lake Union Steam Plant) is located immediately east of the bridge deck.

#### 1.3. Project Description

The proposed project will completely remove the East Bridge and West Bridge structures and replace them with a single, four-span, 500 foot long bridge. The project will also relocate underground and underwater utilities and add stormwater treatment and conveyance facilities. The roadway of the proposed new bridge will have three travel lanes, a bicycle track, a sidewalk and a mixed use lane. The new roadway will not add capacity.

Removal of the East Bridge and West Bridge will include the removal of numerous creosote-treated wood piles and concrete piles from the existing City right of way, including those supporting the East and West Bridges. Work will also include the removal of existing concrete rubble along the Lake Union shoreline within the project footprint. The four spans of the new bridge will be supported on bents consisting of four foot diameter, reinforced concrete bridge columns constructed on eight foot diameter shafts that will be drilled to an approximate depth of 140 feet. The road grade at the new bridge's southwest (south) and northeast (north) abutments will be raised I to 2 feet, requiring reconstruction of both roadway approaches to the bridge and possibly also the construction of retaining walls.

The project will temporarily relocate the existing floating walkway, presently connected to the existing West Bridge. The relocated floating walkway will be anchored to an estimated 16 steel pipe piles, up to 16-inches in diameter, which will be vibrated into place. The project will also construct two temporary trestles, on temporary drilled shafts, for use in constructing the drilled shafts for the new bridge. Relocation of the Seattle City Light power poles will also be required to facilitate construction of the proposed bridge structures.

#### II. METHODOLOGY

The purpose of this Hazardous Materials Discipline report is to:

- identify existing and potential hazardous materials conditions;
- assess the potential impacts the project might have on existing hazardous materials and the environment;
- assess the impacts that existing hazardous materials might have on the project; and
- identify measures to mitigate potential adverse impacts.

The following activities were undertaken to achieve this purpose:

- Review of the existing conditions (affected environment), including available topographic, geological, soils, surface and ground water, critical areas, and current land use information, in the vicinity of the area that will be disturbed during project construction (the project footprint);
- Based on existing conditions, identification of the area to be studied (the study area) for this report;
- Identification of the hazardous materials and conditions present within the study area by:

- Conducting, for the study area, the database and information research specified for a Phase I Environmental Site Assessment by the American Society for Testing and Materials' Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, E 1527-13 (ASTM, 2013). Such research consisted of:
  - Reviewing and evaluating selected historical topographic maps, aerial photographs, city directories, other consultant reports, Sanborn fire insurance maps of the study area and an evaluation of historical land use with regard to environmental issues. The objective of consulting historical sources is to investigate the history of the previous uses of the study area in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the project footprint.
  - Reviewing selected regulatory agency databases for indications of hazardous materials, contamination, spills, generation, storage, or disposal. The purpose of this records review is to obtain and review records that will help identify recognized environmental conditions in connection with the project footprint. ASTM defines the term 'recognized environmental conditions' as "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions." (ASTM, 2013).
  - Performing a review of pertinent files available at the Washington Department of Ecology for sites of concern which have a significant likelihood of adversely affecting the project by contamination that could be encountered during construction. A site may pose a liability to the project if the site is located within close proximity (adjacent to the proposed project footprint), or hydraulically upgradient, or has a confirmed release of hazardous materials or petroleum products to the surface or subsurface groundwater.
- Summarizing the results of environmental sampling performed by others and by HWA GeoSciences Inc. (HWA) during project-related subsurface explorations;
- o Performing a site reconnaissance of the project footprint and adjacent areas.
- Assessment of potential effects from hazardous materials;
- Formulation of mitigation measures to reduce or eliminate potential adverse effects;
- Preparation of this discipline report.

Conditions associated with site history and potential contaminated soil, sediments and ground water were reviewed because the project would involve movement and alteration of soil during construction. Understanding potential contaminated soil and ground water conditions in the project footprint is necessary to understand and limit potential environmental effects.

#### III. AFFECTED ENVIRONMENT

#### III.1. Physical Environment

#### III.I.I. Topography

The topography of the project footprint is that of a re-graded and flattened lakefront, with the ground being flat at both ends of the bridge due to previous grading and filling. To the east, the ground surface slopes up to I-5 at an average 15% grade, with the Capitol Hill district east of I-5. The bridge straddles the east edge of Waterway 8, a shallow inlet, with water depths up to 26 feet near the center of the bridge and becoming shallower to the east. The mudline (high water level) along the north end of the bridge inclines steeply to the north while the southern end has a more gentle increase in elevation to the south. The ordinary high water mark (OHWM) of the lake extends under the ZymoGenetics building, which is built on piles.

#### III.1.2. Current Use of Adjoining Properties

Adjoining property use includes:

- Northeast Fairview Avenue North and commercial development;
- Southeast Commercial development (ZymoGenetics former Lake Union Steam Plant);
- Northwest Lake Union;
- Southwest Fairview Avenue North and commercial development.

#### III.1.3. Regional Geology

During the Vashon stade (a period of time represented by a glacial deposit), from approximately 20,000 to 13,000 years ago, the Puget lobe of the Cordilleran continental ice sheet advanced south from western British Columbia, filling the Puget Sound lowland with an approximate maximum 3,000-feet of ice at the latitude of Sammamish. During advance of the ice, the sedimentary environment of lakes distant from the ice front transitioned from non-glacial to glacial. As the ice approached, glacial flour (silt and clay) was deposited in areas of slack water. Next, advance outwash consisting mostly of clean sand with pebbles was deposited in broad fans by meltwater emanating from the glacier. As the advancing glacier overrode the advance outwash, a layer of lodgment till was deposited at the base of the ice. The till consists of an unsorted, non-stratified

mixture of silt, sand, gravel, clay, and boulders. Due to the weight of the ice, the lodgment till, advance outwash, glaciolacustrine, and older non-glacial terrestrial deposits have been overconsolidated to a very dense or hard condition. Post-glacial geomorphic processes have included mass-wasting of steep slopes, alluvial reworking of sediments, and formation of wetlands in poorly drained areas. The area in the vicinity of the project footprint is predominantly underlain by these post glacial deposits, as described below.

#### III.1.4. Local Geology

General geologic information for the area in the vicinity of the project footprint is published in the Geologic Map of Seattle – A Progress Report (Troost et al., 2005). This map indicates that the near surface deposits at the project location consist of Vashon Recessional Lacustrine deposits that have been modified by human activity. Also mapped in the area are recent lake deposits to the north and southwest; Pre-Fraser glacial deposits, Olympia Beds (interglacial) deposits, Vashon Outwash deposits, and Vashon Lawton Clay deposits to the southeast; and Vashon till deposits to the north and south. Upslope and southeast of the bridge is mapped as landslide deposits. The accompanying Soils and Geology Discipline Report contains a more detailed description of site geology.

Based on HWA's subsurface exploration program, the Fairview Avenue North Bridge is underlain by a series of historic fill soils that are underlain by lake deposits, alluvium, coarse-grained landslide deposits, disturbed finer-grained deposits, recessional lacustrine deposits, coarse-grained glacial deposits, and fine-grained glacial deposits at depth (HWA, 2013a). Descriptions of these geologic units are presented in Table 1.

Table 1
Geologic Units in the Vicinity of the Fairview Avenue North Bridge

Geologic Unit	Description
	Three different fills, each associated with lake front development, were encountered:
	Historic fill: materials consist of loose, silty sand to slightly silty sand with gravel and wood
Historic Fill	debris.
	Gunn-Wright fill: materials consist of soft silts and clays with scattered gravel and sand.
	Counterbalance fill: materials consist of soft to medium stiff clay with sand and gravel.
	This deposit consisted of soft to medium stiff silt and clay interbedded with very loose to
Lake Deposits	medium dense silty sands to slightly silty sands. Wood debris, thin organic layers, and
	organic rich silt, sand, and clay were observed within this deposit.
	This deposit consisted of loose to medium dense sandy soils with lenses of fine detrital
Alluvium	organics and scattered wood debris. The alluvium was likely deposited by a local stream
	or streams from the hillside to the east, depositing sediment as a delta into the lake.
	This deposit is comprised of several soil types but generally consists of a downward-fining
Coarse-	sequence containing thicker deposits of sand in the north than in the south. It generally
Grained	consists of loose to dense, slightly silty, poorly to well graded sands, with fine to medium
Landslide	gravels and occasional layers of silt and clay. This unit appears to consist of glacially-
Deposits	derived soils, in particular recessional outwash soils that were subsequently disturbed by
	a landslide.
Disturbed	This deposit consists of very soft, lean to fat clays with layers of silt and fine sand. These
Fine-grained	fine-grained layers appear to have undergone deformation. Samples showed signs of
Deposits	deformation and off-set bedding above and below a shear zone
Recessional	The four borings advanced in Lake Union encountered distinct glacial lake deposits that
Lacustrine	were less consolidated than the Fine-Grained Glacial Deposits described below. This
Deposits	unit consists of very stiff to hard silt with gravel dropstones, and lenses of dense sand
	with variable silt content.
Coarse-	This deposit generally consists of very dense sand with variable amounts of silt and gravel.
Grained	Consistently high density and the absence of any soft clay/silt layers differentiate these
Glacial	deposits from the coarse-grained landslide deposits.
Deposits	
Fine-Grained	This deposit generally consists of very stiff to hard, dark gray, fat and lean clay that is
Glacial	predominately massive with scattered zones exhibiting faint laminations. Fine gravels and
Deposits	thin fine sand layers were also observed within the clay.

#### III.1.5. Surface Water and Ground Water

HWA's explorations indicate the ground water level on either side of the bridge is the same as Lake Union. No continuous impermeable layers or artesian ground water conditions were encountered in our borings at the time of the explorations.

Aspect Consulting (2009) conducted a geotechnical investigation as part of a bridge rehabilitation study. Aspect completed two borings, one each at the north and south approach to the bridge deck. Figure 2 shows the sediment sampling locations. A water level transducer was installed in Aspect's boring B-2, located at the north end of the bridge, to monitor groundwater fluctuations over a 7 month period. Based on the data collected at this location, the ground water level appears to fluctuate between Elevation 17.5 and 19.5 feet throughout the year. This fluctuation is due to controlled changes in the surface elevation of Lake Union by the Ballard Locks. The US Army Corps of Engineers controls the locks to maintain higher lake water levels in the summer to accommodate recreation as well as to allow the lake to act as a water storage basin in anticipation of drought conditions.

During construction of the bridge replacement the contractor should anticipate a 2 foot fluctuation in lake and ground water level throughout the year.

#### III.1.6. Study Area

The study area generally included the anticipated project footprint or work area, and encompasses all hazardous substances that could affect or be affected by project construction and operation. Search distances for the Phase I ESA equivalent portion of this study are shown on Table 2, and generally include increasing distances for sites of greater concern (e.g., one mile for superfund sites, ½ mile for leaking underground storage tank sites, ¼ mile for hazardous waste reporting with no releases, etc.

#### III.1.7. <u>Site Reconnaissance</u>

Mr. Vance Atkins LG, LHG (Hydrogeologist) from HWA GeoSciences Inc. conducted a site reconnaissance on February 14, 2014. The site reconnaissance proceeded with a walking tour of the project footprint, followed by a drive-by reconnaissance of surrounding areas for evidence of surficial contamination or use and/or storage of hazardous or regulated materials.

Site setting, characteristics, and use of adjoining properties are described above. Appendix A contains selected site photographs.

The project footprint is located within the Seattle urban area, and consists of the existing Fairview Bridge and its associated north and south approaches. Lake Union is west of the bridge. Remnants of the former fueling dock for the former Lake Union Steam Plant extend west of the bridge and consist of wooden pilings and decking. Development along the lake shoreline includes a seaplane dock to the northwest, and restaurants and a marina to the southwest.

East of the bridge is the former Lake Union Steam Plant, now ZymoGenetics. Properties to the south and north are primarily commercial (medical, office, and hotel). Apartments are located approximately one block northeast of the bridge. Interstate 5 is located approximately 500 feet east of the bridge.

#### III.2. Historical Land Use of Study Area

HWA investigated land use history by reviewing historical aerial photographs, topographic maps, city directories, and Sanborn fire insurance maps. Historical research indicates the bridge and Fairview Avenue were originally constructed in the early 20<sup>th</sup> Century during a period of filling and development along the Lake Union shoreline. The bridge was replaced and improved in the 1940's and 1960's. Development in the surrounding area has been of an urban and commercial nature since the late 19<sup>th</sup> Century and early 20<sup>th</sup> Century.

#### III.2.1. Historical Aerial Photographs

HWA reviewed historical aerial photographs of the project footprint and vicinity available from Environmental Data Resources (EDR, 2013a). Copies of the aerial photographs are included as Appendix B.

1943 - The photograph resolution makes it difficult to discern individual details. The area at and near the bridge is developed in its current use as a bridge with approaches to the north and south. Lake Union is visible to the west, and the areas surrounding the bridge to the north, east, and south appear as urban development. The Lake Union Steam Plant is located east of the bridge deck. The Lake Union Steam Plant was constructed in 1914, enlarged in 1918 and again in 1921, and adjoined the Lake Union Water Power Auxiliary Plant, which was built in 1917 and generated hydroelectric power from overflow water from a reservoir at Volunteer Park. Docks extend west of the bridge deck and a ship is seen docked at that location. Other docks and marine facilities are visible north and south of the bridge along the lake shoreline.

1956 - Significant changes are not noted at or near the bridge.

1968 - Interstate 5 has been constructed approximately 500 feet east of the bridge. This area was formerly primarily residential in nature. Significant filling along the lakeshore has occurred adjacent to the southern bridge approach west of Fairview Avenue. Construction of commercial and industrial development is visible on the newly filled area. The area surrounding the bridge includes additional residential and commercial development or redevelopment.

1977 - Significant changes are not noted at and near the bridge. Additional filling is visible west/southwest of the south approach, and the filled area appears to be used for storage of shipping or rail containers. Buildings visible in the prior photograph have been rebuilt or modified based on their footprints. A dock has been constructed extending west of the new fill area and ships are visible.

1980 - Significant changes are not noted at and near the bridge. The dock structure adjacent to the south fill area has been removed, although ships are visible moored at the former location.

1985 - Significant changes are not noted at and near the bridge. Building footprints to the north and south of the bridge have changed on some parcels, indicating redevelopment. The filled area adjacent to the south approach has been redeveloped with a commercial-scale building and parking, and multiple docks with moorage for small watercraft are visible.

1990 - Significant changes are not noted at or near the bridge, with the exception of an additional commercial-scale building constructed on the fill area adjacent to the south approach.

2006 - Significant changes are not noted at or near the bridge, with the exception of an additional commercial-scale building constructed east of the former Lake Union Steam Plant building.

2009 - Significant changes are not noted at or near the bridge.

2011 - Significant changes are not noted at or near the bridge.

Other than the features described, HWA did not observe any evidence or near the project footprint of surface features typically associated with environmental contamination that are visible in aerial photographs. The presence of numerous fills is the primary feature observed that is typically associated with environmental contamination.

#### III.2.2. Historical Topographic Maps

HWA reviewed historical topographic maps from 1895, 1897, 1909, 1949, 1953, 1968, 1973 and 1981 provided by EDR (EDR, 2013b). These maps are included in Appendix C.

- 1895 The map shows the area at and around the current bridge to be undeveloped lake shoreline. Several surface streets and structures are depicted east of the current bridge location. Downtown Seattle is approximately  $\frac{1}{2}$  mile south of the current bridge location.
- 1897 Details are difficult to discern due to the map scale, however, additional urban development appears to be present in the vicinity of the current bridge location.
- 1909 Infilling of the Seattle urban area is depicted, with street, commercial, and residential development in the vicinity of the current bridge location.
- 1949 Fairview Avenue and bridge are present, with filling and construction along the lake shoreline. The Lake Union Steam Plant is depicted east of the bridge. Docks and filling are depicted north and south of the bridge into the lake.
- 1968 Interstate 5 has been constructed east of the bridge. Redevelopment of parcels in the vicinity with commercial-scale buildings is depicted. Significant filling along the lakeshore has occurred adjacent to the southern bridge approach west of Fairview Avenue.
- 1983 The bridge area appears similar to the 1968 topographic map. Redevelopment of parcels in the vicinity with commercial-scale buildings is depicted.

Features were noted on the maps indicating changes in topography, and filling of roadway and shoreline areas at and near the bridge. Other changes included a gradual increase in residential and commercial development surrounding the bridge area.

#### III.2.3. Sanborn Insurance Maps

HWA reviewed Sanborn Fire Insurance maps from 1905, 1917, 1950, and 1969 provided by EDR (EDR, 2013c). These maps are included in Appendix D.

- 1905 The bridge and roadway are not yet present. Eastlake Avenue is the farthest west street adjacent to Lake Union. Dwellings are depicted along Eastlake and adjoining streets. A limited number of structures are shown on the lake shoreline.
- 1917 A street labeled Southlake Avenue is present in the current location of Fairview Avenue, with the bridge described as a wooden viaduct. The Lake Union Steam Plant and a commercial laundry are depicted east of the bridge. The map notes that houseboats are moored along the west side of the bridge on the lake.

1950 - The bridge and adjacent stream plant are not depicted on the map.

1969 - Fairview Avenue is present, with the bridge described as a wooden viaduct. The Lake Union Steam Plant and associated offices are depicted east of the bridge. The map notes that the southern end of the viaduct is constructed on filled land.

#### **III.2.4.** City Directories

EDR performed a review of City Directory information to evaluate whether sites with high potential for contamination have historically operated at or near the project footprint (EDR, 2013d). Directories were available for the project footprint vicinity dated from 1920 to 2013. These directory listings are included in Appendix E.

The area in the vicinity of the Fairview Avenue North Bridge has been developed with a combination of residential and commercial use. Commercial uses at adjacent addresses include auto body and repair, machining, and medical uses. The Lake Union Steam Plant is listed adjacent to the bridge.

Many of the commercial sites are also included in the agency database review, below, and are discussed further based on agency file review.

#### III.2.5. <u>Title Documents</u>

Title documents or chain-of title reports were not available and were not reviewed, due to the lack of planned property acquisition.

#### III.2.6. Agency Database Review

HWA contracted with EDR to conduct a review of regulatory databases (EDR, 2013d). Appendix F contains the complete EDR report, including a table summarizing the results of the database search, and maps showing the approximate locations of identified sites. Table 2 provides a summary of the databases reviewed, search radii, and corresponding acronyms. Table 3 provides a summary of sites that may be considered to have the potential to adversely affect the project.

HWA also reviewed the EDR 'Orphans' list of unmapped sites. Twenty sites were listed. Based on HWA's review of the sites and field observations, none of the listed sites are within the applicable search radii. An additional site (Frye Art Gallery, EDR ID#A13), marked adjacent to the bridge, is actually approximately one mile west, based on the listed address. Appendix F contains a complete list of databases searched, location maps, and information on the individual facilities.

#### III.2.7. Known or Suspected Environmental Conditions

HWA requested files from the Washington State Department of Ecology (Ecology) Northwest Regional Office for the sites listed on Table 3, to assess if these sites might adversely affect the project. Figure 2 shows the site locations. The findings of the review of these files are discussed below.

Table 3

I. The distance field contains approximate distance, direction and whether the site is higher or lower elevation than the project location.

NFA – No further action determination

#### Fred Hutchinson Cancer Research Center - I 100 Fairview Ave N

Agency files were associated with hazardous waste generator reports and inspection only (i.e., no reported releases to the environment). The Center encompasses multiple addresses and city blocks. Site investigations and remediations have been undertaken as part of site redevelopment by the Center. However, the database did not include specific sites, with the exception of the 'Fuzzy Wuzzy' site (below). In general, the Center is presumed to have a low likelihood to adversely impact the project due to distance and assumed ground water flow gradient.

#### Rainier Precision, LLC, 1150 Eastlake Ave E

Hart Crowser performed a Phase II soil and ground water assessment in 2002 as a follow-up to a preliminary investigation by Environmental Associates in 2001 (not in file), which identified oil-range petroleum hydrocarbons in shallow soils (Hart Crowser, 2002). One Environmental Associates boring had also observed free product. Additionally, the solvent PCE and its degradation product vinyl chloride were detected in one ground water sample above MTCA cleanup levels. Historical development at the site included residential, commercial, and a machine shop.

Hart Crowser completed 12 direct-push borings and three hollow-stem auger borings at the site. The direct push borings were completed to depths of six to 20 feet, and the hollow-stem borings were competed to depths of 41.5 to 76.5 feet. One hollow stem boring was completed as a monitoring well.

Thirty soil samples were collected for analysis. Diesel and oil-range petroleum hydrocarbons were detected in three shallow (less than two feet) samples. One exceeded MTCA Method A cleanup levels. Polynuclear aromatic hydrocarbons (PAHs) were detected in the same sample in exceedance of MTCA cleanup levels. Soil samples were also analyzed for polychlorinated biphenyls (PCBs) and VOCs, and these analytes were not detected at laboratory reporting limits.

Four ground water samples (three from temporary direct-push well screens, and one from the monitoring well) were collected. The three direct-push samples were collected from shallow perched water, and the monitoring well was completed in deeper ground water (25 feet bgs). The VOC chloromethane was detected in one shallow ground water sample, but at concentrations below cleanup levels. Arsenic exceeding MTCA cleanup levels was detected in two samples, but this was attributed to elevated arsenic in regional ground water.

Hart Crowser did not recommend further investigations.

# Lake Union Steam Plant / ZymoGenetics, 1179 Eastlake Ave E / 1201/1241 Eastlake Ave E

The Lake Union Steam Plant was constructed in 1914, enlarged in 1918 and again in 1921, and adjoined the Lake Union Water Power Auxiliary Plant, which was built in 1917 and generated hydroelectric power from overflow water from a reservoir at Volunteer Park. Power was also generated by steam-driven turbines. The boilers were oil-fueled. The plant was operated full-time until 1978, and used as backup/peak power generation during the early 1980s. The plant was retired from use in 1987.

Fuel for the boilers was supplied by a 90,000 gallon bulk tank at north end of the site, with three smaller tanks at south end of the building (two-16,000 gallon tanks and one 7,500 gallon tank). The bulk tank was constructed on an oiled sand base within a concrete foundation ring. The smaller tanks were housed within a subsurface concrete vault.

The City remediated the site in two phases as part of the property decommissioning and sale. One phase was performed in 1991, and the second in 1992 (CH2M Hill, 1991, Anne Symonds & Associates, Inc., CH2M Hill, 1992).

The initial scope of work included work on the interior and exterior of the building. Interior work included removal of asbestos-containing building materials (ACBM), decommissioning equipment, and cleaning of oil-stained surfaces. Exterior work included removal of the bulk fuel tank and underlying contaminated soils; removal of the south tanks from the vaults; and removal of contaminated backfill soils in the vaults. Piping between the tanks and along the pier into Lake Union was also removed.

Additionally, contractors attempted to remove oil stained debris and standing water in the northern part of the power plant subbasement and under the hydroelectric building. The subbasement is part of the foundation of the building and structures within the subbasement limited access for cleanup. These structures included walls, beams, and pile tops. Debris included a significant amount of wood from concrete forms left during construction. The subbasement elevation causes it to be partly flooded due to ground water and the adjacent lake level.

North tank – Based on pre-remedial characterization, contaminants included petroleum and PCBs. The bulk tank was removed, as were the oiled sand foundation and oil-stained soils in vicinity of distribution piping. Eighty-one soil samples were collected; 42 of the samples were in-place confirmation samples. The confirmation samples did not exceed MTCA cleanup levels for petroleum (200 mg/kg at the time) and PCBs in soil were less than the MTCA cleanup level of one ppm. However, during excavation, free product and water entered the excavation from under the north side of the building. The oil contained 20 to 29 mg/kg PCBs. Excavation was halted due to high ground water levels. The excavation was lined with plastic sheeting and backfilled.

South tanks – The vaults were demolished to access the tanks, and pea gravel surrounding the 7,500 gallon tank was removed. The pea gravel was petroleum-contaminated and was disposed. The vaults surrounding the 16,000-gallon tanks were demolished and surrounding backfill soils from within the vaults was stockpiled and tested. Petroleum hydrocarbons in the backfilled soils exceeded MTCA cleanup levels, and PCB results were below 0.16 mg/kg. Water with a sheen was observed within the 16,000-gallon tank vault. The vault floor was not removed due to water inflow, and the walls of the vault were left in place. The vault was partially filled with concrete to control water inflow. At the time of the work, contaminants appeared to be contained within the vault. Limited excavation outside of the vaults did not appear to expose contaminated soils. Based on sample analysis, the remnant soils in the vaults did not exceed MTCA cleanup levels for petroleum or PCBs.

The scope of work for the additional 1992 remediation work included removal of oil stained soils adjacent north and south of the building, removal of sediment and debris from the northern and southern subbasement, and additional cleaning of oil stained concrete surfaces.

North end – The contractors removed additional shallow soils adjacent to the building, including some extending under the building slab. The soils were located between the former bulk tank location and the building. The contractor completed additional excavation in an area previously excavated in 1991, but had been halted due to high ground water levels. The contractor removed clean backfill and excavated soils to approximately one foot below the ground water surface at the time of excavation (depth not described). Additional soils were removed from along the north face of the building, including a limited volume removed from under the basement floor. Minor amounts of free product and sheen were noted at the time of excavation and were recovered with absorbents. Post- excavation sampling was conducted and soils were removed until petroleum hydrocarbon concentrations in composited samples did not exceed the MTCA cleanup level (at the time) of 200 mg/kg.

South end – Soil excavation and investigations were completed exterior of the former tank vault. The contractor excavated soils east and west (lake side) of the vault. Soils were excavated to one foot below the ground water surface. Dewatering was not considered feasible due to the proximity of the lake. And oiled timber structure was found west of the vault. The purpose of this structure was not determined. Remnant soils containing petroleum concentrations in exceedance of 2000 ppm were left in place along the lake side of the vault. A concrete sump and associated soils were also removed between the vault and building. Access was limited due to adjoining structures. Soils were excavated to elevation five feet msl, and post-excavation samples contained petroleum hydrocarbons at concentrations of 121 to 10,030 mg/kg.

Along the east side of the former vault, sediment and debris were removed by hand digging and removed through accessways cut in the building foundation. Due to the access restrictions, only a

small volume of soils could be removed. Post-excavation samples contained petroleum hydrocarbon concentrations of 250 to 4120 mg/kg.

Upon completion of the remedial activities, exterior excavations were backfilled with Controlled Density Fill (CDF) and gravel.

Three soil borings were completed after backfilling to assess remnant petroleum concentrations in soil at the site: I) through the vault excavation, 2) in the former sump area, and 3) along the lakeshore west of the vault and outside of remedial excavation areas. Soil samples collected from the three borings contained petroleum at less than 200 mg/kg, 339 mg/kg, and below detection limits, respectively.

Additionally, the contractor attempted to remove debris and sediment at multiple locations within the building subbasement. At the north-center subbasement, the contractor hand-removed sediment and debris (typically wood forms left from construction). Some additional material was removed after limited dewatering, but large-scale dewatering was not practicable due to proximity of the lake. The subbasement floor surface was heavily covered in rubble and remedial work was limited by access (i.e., thru manholes).

Samples collected from sediment left in place contained petroleum concentrations of 123 to 267 mg/kg. PCBs were not detected at reporting limits.

At the southwestern subbasement, some debris was removed around pile caps as access permitted. Safe access and work was hampered by floating wood debris, and the floor was submerged. No sediment was removed.

The cleanup actions at the site removed petroleum-affected soils associated with former fuel storage and distribution. Soils left in place were typically below the current cleanup level of 2000 mg/kg for heavy-oil range hydrocarbons, and PCBs were below cleanup levels.

Further cleanup reports for the site were not available in project files, and additional documentation of site conditions, cleanup or monitoring were not available.

#### Gunn Building, 1165 Eastlake Ave E

This site is listed as a 'confirmed or suspected contaminated site', although site investigation and/or remediation reports were not available, and agency files were associated with hazardous materials generator documentation only. Based on site reconnaissance, the property appears to have been redeveloped, and no building with the 1165 Eastlake address was observed.

#### Chrysler Air/Seattle Seaplanes - 1325 Fairview Ave E

This site does not have any reported releases, and agency files were associated with UST inspections only.

#### Equinox Apartments, 1520, 1524, 1530 Eastlake Ave N.

Environmental Partners performed a Phase I ESA at the site, and found that the site (1530 Eastlake) was a former auto repair shop, with a possible concrete tank or sump under the building. Environmental Partners installed four monitoring wells at the property. Ground water was encountered at 15 feet bgs. Soil cuttings were sampled for petroleum hydrocarbons, but did not contain petroleum in exceedance of MTCA cleanup levels. Discrete soil samples were not analyzed. The VOCs PCE and TCE exceeded MTCA cleanup levels in one ground water sample.

A Phase I ESA completed in 2005 suspected that a potential historical heating oil UST was present at the 1520 Eastlake address (former residential). The Phase I also confirmed that 1530 Eastlake had formerly been used for auto repair, (GeoEngineers, 2005).

GeoEngineers also completed a Phase II at the site. GeoEngineers initially collected ground water from five of seven existing monitoring wells on site (additional wells had been installed subsequent of 2001 during geotechnical investigations). The depth to ground water ranged from 15 to 30 feet bgs. Petroleum hydrocarbons, PAHs, and metals were either not detected or detected at concentrations less than MTCA cleanup levels. TCE was detected in exceedance of MTCA in one ground water sample.

GeoEngineers also completed four additional direct-push borings to 20 feet at the site. The borings were sampled for TPH and VOCs in soils. Petroleum at concentrations less than MTCA cleanup levels was detected in one boring, and PCE at concentrations less than MTCA cleanup level was detected in one boring.

The contamination source was suspected to be soils under the buildings or from the concrete tank in the 1530 Eastlake building basement. GeoEngineers recommended a construction contingency plan for handling and disposing of potential contaminated soils under the buildings during site redevelopment.

After site demolition, GeoEngineers completed four additional direct-push borings and 11 test pits at the property boundaries and under former building footprints (GeoEngineers, 2008). Petroleum in exceedance of MTCA cleanup levels was detected in two test pits and one surface soil sample under a former building. PCE in exceedance of MTCA was also detected in one test pit. Ground

water samples collected from on-site wells did not exceed MTCA with the exception of TCE in one sample.

Former monitoring wells (completed in 2001 and 2005) were decommissioned for construction, and the site had a dewatering system installed for construction.

Based on their investigation GeoEngineers concluded that diesel, naphthalene, and PCE exceeded MTCA in soils at the 1520 Eastlake building, and gasoline, oil, and cadmium exceeded MTCA under the former 1530 Eastlake building (auto shop). TCE was detected in ground water at one downgradient location (TCE is a degreaser or degradation product of PCE).

Prior to construction, I 200 cubic yards of soil were removed from under the I 520 Eastlake location, and confirmation samples did not exceed MTCA for petroleum and PCE. 200 cubic yards of soil were excavated prior to construction from the I 530 Eastlake location, and confirmation samples did not exceed MTCA for petroleum and metals. During construction, an additional I I 00 cubic yards of soil was excavated for basement construction. Post-excavation samples were also collected at this time, and no analytes were detected in any samples, with the exception of PCE in one sample at a concentration below MTCA cleanup levels.

After construction, GeoEngineers installed two monitoring wells downgradient of the site (TetraTech, 2011). The wells were completed to 20 feet bgs and ground water was encountered at 15 feet bgs. Four rounds of sampling were completed in 2010. Petroleum was not detected, and PCE was detected in one well at concentrations below MTCA cleanup levels. TetraTech requested a NFA for the site. The NFA was issued by Ecology in April, 2011.

#### Fred Hutchinson Parcel 5T (Charlie's Restaurant), 1509 Eastlake Ave N.

This site is listed as a 'confirmed or suspected contaminated site', although site investigation and/or remediation reports were not available. Based on site reconnaissance, the property appears to have been redeveloped, and no building with the 1509 Eastlake address was observed.

#### Fiberlay, 1158 Fairview Avenue N.

This site is listed as a 'confirmed or suspected contaminated site', although site investigation and/or remediation reports were not available. Based on site reconnaissance, the property appears to have been redeveloped, and no building with the 1158 Fairview address was observed.

#### FHCRC/Fuzzy Wuzzy Rug Company – 825 Eastlake Avenue (also listed as 815)

Hart Crowser removed three USTs in 1992, containing gasoline, diesel, and solvents. The petroleum USTs were located at the south end of the building. Post-excavation and stockpile samples did not contain petroleum in exceedance of Washington State Department of Ecology Model Toxics Control Act (MTCA) cleanup levels, and the excavated soils were used as onsite backfill. Soils from the solvent UST contained volatile organic compounds (VOCs) including Stoddard solvent, tetrachloroethylene (PCE), trichloroethene (TCE), dichloroethane (DCA), and trichloroethane (TCA) in exceedance of MTCA cleanup levels. The stockpiled soils were stored on site and not exported. Additionally, remnant VOCs in soil were left under the building and alleyway (Hart Crowser, 1992a, 1992b).

Environmental Associates completed an additional remedial action in 1993 (Environmental Associates, 1993). Solvent affected soil had previously been stockpiled on site and not treated. Environmental Associates completed additional soil excavation in the vicinity of the solvent tank and performed bioremediation of stockpiled soils generated by their excavation plus the former remediation. Approximately 55 to 60 cubic yards of soil were landfarmed for three months by addition of nutrients and periodic tilling. Soil samples were collected for multiple rounds until sampling demonstrated that no contaminants tested exceeded MTCA cleanup levels. At that time, the soils were backfilled into an excavation on site. Based on prior borings, remnant VOCs remained in soil left under the building and alleyway.

Dames & Moore coordinated excavation of remnant contaminated soils prior to site redevelopment (Dames & Moore, 1999). Site buildings were demolished and test pits were completed to delineate contamination extent and to identify petroleum and VOC-contaminated soils for segregation and disposal. Remedial soil excavation was implemented with assistance from a mobile laboratory to confirm cleanup. The remedial excavation extended from nine to 18 feet, with approximately 15,000 tons of soil removed from the site. Post-excavation samples either did not contain detectable concentrations of petroleum or VOCs, or concentrations were below MTCA cleanup levels. Dames & Moore also collected supplemental samples during shoring installation, and advanced soil borings in areas adjacent to the construction in order to confirm cleanup. Additionally, soils were excavated to approximately 13 to 15 feet below ground surface (bgs) during post-remedial mass excavation for site construction.

In 2010, Ecology performed a periodic review and site visit. The former cleanup site is currently occupied by a Fred Hutchinson Cancer Research Center (FHCRC) building with associated underground parking. The site was under a No Further Action (NFA) determination with a restrictive covenant (1999). Ecology and the owner reviewed the NFA based on MTCA changes and the owner requested to remove the restrictive covenant. The restrictive covenant was rescinded in 2010 (Lane Powell, 2010).

#### III.2.8. Prior Reports and Investigations

As part of our environmental review, HWA reviewed the following reports:

- Parametrix, Inc., 1989, Lake Union Sediment Quality, prepared for Seattle City Light, dated November.
- Aspect Consulting, LLC, 2009, Fairview Avenue Bridge Rehabilitation, Preliminary Geotechnical Report, Seattle, Washington, Aspect Project Number 080145-002, March 24, 2009.
- Moshenberg, K, 2004, A Sediment Triad Analysis of Lakes Sammamish, Washington, and Union, King County Department of Natural Resources.

Relevant sample locations and results are shown on Figure 2 and listed on Tables 4 (sediment samples) and 5 (soil samples). Sediment and soil sample analytical results are compared to open water sediment disposal criteria under the Puget Sound Dredged Material Management Program (USACE, 2013), as well as soil cleanup levels under the Washington Department of Ecology Model Toxics Control Act (MTCA, WAC 173-340). The MTCA criteria generally apply to upland soils, not to lake sediments, and are provided as a screening level indication of the environmental quality of the soils only, and for handling and disposal purposes.

The Parametrix study (1989) was performed as part of a Seattle City Light power line project. This work included sediment sampling at several locations throughout the waterway northwest of the bridge. Parametrix conducted sampling of shallow sediments at eight locations in the vicinity of the Lake Union Steam Plant, four of which are near the planned bridge work area (Figure, 2, Table 4). Polychlorinated biphenyls (PCBs), polynuclear aromatic hydrocarbons (PAHs), and the metals arsenic, cadmium, copper, mercury, nickel, silver, and zinc were detected in sediment exceeding current criteria for offshore open water sediment disposal under the Puget Sound Dredged Material Management Program (USACE, 2013) at three of the locations northwest of the bridge (SP-4-50, SP-5-50, and SP-5-200). One sample located approximately 200 feet west of the bridge (SP-6-250) not included on Table 4 or shown on Figure 2, exceeded Dangerous Waste criteria for PAHs.

Other prior studies of lake sediments also identified elevated metals PAHs and PCBs in the vicinity of the Steam Plant (Parametrix, 1989; Moshenberg, 2004), with generally similar results to the Parametrix study. Moshenberg sample locations are not included on Figure 2 because the scale of the report map does not provide sufficient detail.

### Notes:

**Bold -** Analyte Detected

**Bold/Yellow Highlighted** – Analyte exceeds MTCA soil cleanup level

**Bold/Blue Highlighted** – Analyte exceeds DMMP screening level

**Bold/Red Highlighted** – Analyte exceeds both MTCA and DMMP levels

< - Analyte not detected at analytical method reporting limit

Blank – Not Analyzed

Listed cleanup levels may not apply at this site, and are provided as a screening level indication of the environmental quality of the site only.

- M Estimated concentration due to low spectral match parameters
- Bgs below ground surface
- NE not established
- NA -not available
- 1 Washington Model Toxics Control Act Method A (WAC 173-340 Table 740-1) soil cleanup levels for unrestricted land use
- 2 MTCA Method B cleanup levels are from Ecology's CLARC (Cleanup Level & Risk Calculations) database
- 3- Dredged Material Management Program (DMMP) screening level (USACE, 2013)
  - SLI -Screening Level I suitable for open-water disposal
  - SL2 Screening Level 2 higher (less protective) sediment screening level value suitable for open-water disposal
  - BT Bioaccumulation trigger concentration requires further bioaccumulation testing to establish suitability for open-water disposal
  - ML Maximum Level unsuitable for open-water disposal
- 4 The MTCA Method A soil cleanup level is 100 mg/kg for gasoline mixtures without benzene and if the total of ethylbenzene, toluene, plus xylenes is less than 1% of the gasoline mixture. The soil cleanup level for all other gasoline mixtures is 30 mg/kg"
- 5 Sum of Naphthalene + I-Methylnaphthalene + 2-Methylnaphthalene
- 6 Toxic Equivalent Concentration of carcinogenic polynuclear aromatic hydrocarbons (cPAHs) per WAC 173-340-708(e)
- 7 1989 data reports total Benzo fluoranthenes
- 8 The MTCA Method A soil cleanup level for trivalent chromium is 2,000 mg/kg. Geochemical conditions on site would not cause oxidation to hexavalent chromium having a cleanup level of 19 mg/kg

Aspect Consulting (2009) conducted a geotechnical investigation as part of a bridge rehabilitation study. Aspect completed two borings, one each at the north and south approach to the bridge deck, and within the planned bridge work area. The borings encountered approximately 18 to 25 feet of fill soils over lacustrine and glacial recessional deposits. Field screening identified potential contamination effects in Boring B-I, completed at the south approach. Aspect collected composite soil samples from soil cuttings at each boring and analyzed them for petroleum hydrocarbons, PAHs, PCBs, and metals. Results were below criteria for offshore open water sediment disposal, although not all analytes required for offshore disposal were tested.

However, because these samples were collected as composite samples of soils throughout the borings, there is the potential for discrete soils within the soil column to contain higher concentrations of individual contaminants.

HWA collected environmental soil samples from the upper 0 to 7.5 feet of boreholes BH-3, BH-4, BH-5, and BH-6 for chemical laboratory analyses (HWA, 2013a). Borings BH-3 through BH-5 were drilled below the bridge deck into lake sediments and underlying soils. Boring BH-6 was an upland boring east of the south approach. Samples were collected from fill soils overlying native lake deposits and alluvial soils with the exception of BH-3, where the sample was collected from shallow alluvial deposits.

Gasoline, diesel and/or oil-range petroleum hydrocarbons, as well as carcinogenic PAHs were detected in three of the four soil samples (BH-4, -5 and -6) at concentrations above MTCA Method A and Method B soil cleanup levels. Volatile organic compounds (VOCs) were detected in all soil samples, but at concentrations below the soil cleanup levels. None of the VOCs detected were halogenated solvents. The metals arsenic, cadmium, and/or lead were detected above soil cleanup levels in two samples (BH-4 and BH-6). Lead exceeded the total metals screening level for Dangerous Waste characterization of 100 mg/kg in three samples (BH-4 S-1, BH-5 S-3, and BH-6 S-2)'. Further testing by the Toxicity Characteristic Leaching Procedure (TCLP) method during design or construction would be required to establish Dangerous Waste characterization status.

The HWA testing results generally fell within ranges for open water disposal criteria that would require additional (e.g., bioassay) testing (USACE, 2103).

Impacted soils were primarily in the fill layer. Undisturbed native alluvial soils below the fill sampled at BH-3 contained only trace concentrations of VOCs, PAHs, and chromium. Based on this, contamination does not appear to persist into the underlying native soils, and deeper native soils are not likely to be impacted. The fill layer ranges in thickness up to around 40 feet.

#### III.3. Summary Results of Study Area

The study area is within an urban and commercial developed portion of downtown Seattle. The Lake Union shoreline in the project vicinity has undergone historic commercial and industrial use and filling. Elevated levels of contaminants are present in both upland soils and lakebed sediments. The presence of these contaminants, including petroleum, PAHs, and metals, will require that soils and sediments excavated as part of construction activities be handled and disposed of in accordance with appropriate regulations. This includes requirements for contractor health and safety measures, monitoring, soil, sediment and water testing and disposal requirements, regulatory compliance, and reporting. Construction activities and practices should also be designed to minimize or mitigate potential contaminant migration.

#### IV. POTENTIAL EFFECTS

Potential effects can be classified as follows:

- Standard Hazardous Materials Potential Effects
- Project-Specific Environmental Effects
  - Direct (Construction) Effects
  - o Indirect or Secondary (Operational) Effects
  - o Cumulative Effects
- Project-Specific Property Acquisition and Agency Liability Effects

#### IV.I. Standard Hazardous Materials Potential Effects

Standard Hazardous Materials Potential Effects include hazardous substances that could be released during construction, such as during demolition of existing structures, installation of temporary electrical transmission poles, operation of construction equipment, and during management of contaminated soil or ground water. Such hazardous substances might include lead based paint, asbestos, PCBs (such as in transformers and light fixtures), and mercury (such as in light fixtures), as well as petroleum hydrocarbons from vehicle fluid spills, leaks, and releases. These effects are set forth in Appendix G (WSDOT, 2009).

#### IV.2. Project-Specific Environmental Effects

Project-specific environmental effects include effects to the environment and sensitive receptors (e.g., aquatic species), and can be classified as:

- Direct (Construction)
- Indirect or Secondary (Operational)
- Cumulative

#### IV.2.1. <u>Direct Project-Specific Environmental Effects</u>

Direct effects are defined as effects that have a direct, cause-and-effect relationship to the proposed action. Direct project-specific environmental effects may result from construction activities that have potential to re-suspend contaminated sediments, such as removal of existing piles and installation of drilled shafts. Other activities such as bridge superstructure demolition, barge activity, and installation of the floating walkway supports may also cause minor resuspension of contaminated sediments. Direct project-specific environmental effects for each activity are listed below.

#### Pile Removal

Pile removal is likely to cause the most sediment disturbance. Parametrix (1989) evaluated potential effects of sediment disturbance due to pile removal by breaking or cutting. Worst-case conditions were estimated based on highest detected contaminant concentrations within a radius

of 15 meters of a pile. Based on Parametrix' calculations, suspended sediments would likely exceed water quality criteria outside the selected dilution zone (15 meters) for metals, but not for organics (PAHs, etc.).

#### **Drilled Shaft Installation**

The largest source of contaminated sediment and soil excavation for this project will be the drilled shaft excavations, which will support a temporary work trestle as well as the permanent bridge structure. Based on the laboratory testing conducted to date, the upper 10 feet of soil excavated from Piers I and 2 and the southern abutment is likely contaminated, as is the upper 20 feet of at the location of Pier 3. Fill thickness in some shaft locations ranges up to 40 feet.

Similar to pile removal, the Parametrix evaluations estimated that drilled shaft installation would not suspended sediment more than 0.5 meters above the lakebed, and water pressure and lack of other disturbances would likely prevent sediment migration.

#### **Barge Activities**

Disturbance from near-shore barge operations are likely limited, and may result from anchoring or barge travel in shallow water. The water depth in the vicinity of the work area is approximately 16 feet, although the water depth decreases towards shoreline. The typical draft (hull depth below waterline) of a heavy construction barge is 6 to 10 feet.

#### **Bridge superstructure demolition**

Demolition of the bridge superstructure has the potential to generate re-suspension of contaminated sediment if portions of the superstructure are allowed to fall into the lake.

#### Installation of Floating walkway Supports

The current concept is to install vertical pile elements along the new floating walkway to anchor the structure into its new location. These vertical supports would consist of small diameter steel pipe piles that would be vibrated into place with a vibratory hammer. This activity has a small potential to suspend sediment in the immediate vicinity of the small diameter piles.

#### Installation of temporary electrical transmission poles

Existing electrical transmission line poles will be relocated during construction. Anticipated design includes placing two glue-laminated wood poles with multiple guying (6 helical anchors per pole) around 30 feet west of the current pole locations. Each of two poles pole will require an 8 foot diameter x 18'-6" deep excavation to install steel casings for the pole foundations. Total soil removed will be around 70 cubic yards for two foundations, most of which is likely fill and potentially contaminated.

#### IV.2.2. Indirect Project-Specific Environmental Effects

Indirect effects are defined as effects that are "caused by an action and are later in time or farther removed in distance but are still reasonably foreseeable" (Federal Regulation on the Protection of the Environment - 40 CFR 1508.8). These effects, which usually result from the initial action, include changes in land use, water quality, social issues, and population density.

Operational project-specific environmental effects would occur after construction is complete, and be due mainly to stormwater runoff from the completed structure. Effects would include potential discharge or release of contaminants to the environment (specifically Lake Union) from the completed bridge surface and approach roadways.

#### IV.2.3. <u>Cumulative Project-Specific Environmental Effects</u>

Cumulative effects are those that result from incremental consequences of an action when added to other past, present, and reasonably foreseeable future actions. The cumulative effects of a project may be undetectable when viewed in the individual context of direct or indirect effects. However, cumulative effects can add to other disturbances and eventually lead to a measurable environmental change.

No major cumulative project-specific environmental effects are identified. Nearby planned construction projects (e.g., the Gunn building) involving excavation and earthwork may encounter contaminated soils, but those effects will be limited to those projects. Similarly, effects at the Fairview Bridge project are unlikely to affect other nearby projects. For some transportation improvement projects, the project results in increased vehicle traffic or nearby development. In this case the bridge replacement is not by itself anticipated to change vehicle use or development type or density, which might in turn result in cumulative effects. The project will likely have a positive impact on the environment due to mitigation of contaminants, and improved stormwater practices.

#### IV.3. Project-Specific Property Acquisition and Agency Liability Effects

No entire-parcel property acquisition is being considered for this project, therefore acquisition liability effects are unlikely.

#### IV.4. Significant Unavoidable Adverse Effects

No significant unavoidable adverse effects that cannot be reasonably mitigated for are anticipated for this project.

#### V. MITIGATION MEASURES

#### V.I. Standard Hazardous Materials Mitigation Measures

Construction will entail the disturbance and excavation of contaminated soils and sediments. Construction design and practices will be incorporated to minimize contaminant disturbance and migration, and mitigation methods incorporated to control potential migration where excavation is required. The standard mitigation measures are summarized in Appendix G.

The standard mitigation measures presented in Appendix G were developed by WSDOT and based on WSDOT specifications, manuals, and programs. Because this project is a City of Seattle project, Seattle's Standard Specifications for Road, Bridge, and Municipal Construction, rather than WSDOT specifications, apply.

#### V.I.I. <u>Regulatory Requirements</u>

The handling, treatment and disposal of hazardous materials and waste is controlled by several local, state and federal laws and regulations, including:

- The Federal Comprehensive Environmental Response, Compensation and Liability Act (CERCLA, 42 USC 9601) also known as "Superfund"
- Chapter 173-303 WAC (Dangerous Waste Regulations)
- The Model Toxics Control Act (MTCA, Chapter 70.105D RCW), and the associated rules Chapter 173-340 WAC
- Chapter 173–304 WAC, Minimum Functional Standards for Solid Waste Handling
- National Pollution Discharge Elimination System (NPDES)
- King County Industrial Waste Local Discharge Limits
- Chapter 296-155 WAC (Safety Standards for Construction Work)
- Chapter 296-24 WAC (General Safety and Health Standards)
- Chapter 296-62 WAC (General Occupational Health Standards)

Mitigation will include compliance with applicable regulations, implemented via the project specifications and construction monitoring.

#### V.2. Project-Specific Environmental Mitigation Measures

#### V.2.1. Direct Mitigation Measures

Based on review of contamination and potential construction effects, the following project-specific mitigation measures will be implemented. Selection and specification of BMPs will be performed during final design. In general, Type II permeable DOT floating turbidity curtains will be specified

due to potential for minor current and wave action. Pile and/or barge-mounted localized turbidity barriers will also be used.

#### **Primary In-water Containment Curtain**

The project will implement containment BMPs consisting of a series of floating containment curtains in order to: 1) minimize entry of aquatic life in the immediate work area; and 2) contain suspended and potentially contaminated sediments to the immediate work area. The inner, secondary portion of the containment system will be installed and removed around specific work elements, outlined below. However, the primary, outer portion of this containment system will be present during the entirety of all in-water work activities. The primary containment system will consist of a permeable barrier capable of trapping suspended solids that will be supported on floats or booms. Although the exact material, specifications, and location of the primary containment curtain will be determined by the contractor, the contractor will be required to ensure that the curtain: I) encompasses the entire in-water work area; 2) extends horizontally the full extent of the water column, from the water surface to the lakebed (the bottom of the curtain may have attached weights ["lead-line"] to ensure it is fully deployed to the depth of the lakebed); and 3) extends vertically to connect to the locations where the OHWM crosses the west edge of the project on the north and south banks of Waterway 8. In addition the contractor will be required to ensure the curtain meets the dual performance standards of fish exclusion and turbidity containment.

The curtain will be placed to extend offshore to an extent that the curtain will surround all wetted areas of Lake Union where in-water and overwater work activities associated with bridge demolition and construction will occur. It is anticipated the curtain will extend from the shoreline to a maximum depth of approximately 40-feet. The outer curtain will be installed between October I and April 15, prior to the initiation of any additional in-water work. The curtain installation timeframe is intended to minimize the incidental trapping of aquatic life within the contained area. The curtain will be regularly inspected and maintained as necessary, and will remain in place during the entire in-water construction period (approximately 16 to 24 months).

#### Pile removal

All of the existing piles supporting the West Bridge will require removal during demolition of the existing bridge and construction of the temporary west work trestle. An estimated 60 to 250, 16-to 20-inch diameter creosote-treated wooden piles will be removed for construction of the west bridge. There are an unknown number of relic wooden piles from previous bridges that may require removal. The existing piles are creosote-treated and many are severely degraded and structurally compromised.

Following application of a sand layer around each piling to be removed, the piles will be removed using the preferences for pile removal methods and other guidance presented in the Washington

State Department of Natural Resources Best Management Practices For Pile Removal and Disposal (WDNR, 2011). The preference for pile removal as listed in the document is vibratory removal, followed by direct pull, clamshell removal, and cutting the pile off at the mud line. Although the priorities in this guidance will be followed to the extent possible, site specific conditions during the project may preclude use of the highest priority methods.

Some of the buildings and businesses adjacent to the existing bridge are sensitive to noise and vibration due to both the condition of the building and the type of business operated within the building (e.g., biotechnical research performed by ZymoGenetics). Due to these potential noise and vibration effects on surrounding infrastructure, vibratory pile removal methods, the preferred method in WDNR (2011), will likely not be feasible in some or all cases. Likewise, clamshell and direct pull may not be feasible due to the deteriorated conditions of the wooden piles. If the method of pile removal is cutting, the piles would be cut at 2 feet below the mud line, measured after the application of the sand mix. This would ensure that the potentially contaminated sediment located at and below the existing mud line would be only minimally disturbed.

Pile removal is likely to cause the most sediment disturbance. Parametrix (1989) evaluated potential effects of sediment disturbance due to pile removal by breaking or cutting. Worst-case conditions were estimated based on highest detected contaminant concentrations within a radius of 15 meters of a pile. Based on Parametrix' calculations, suspended sediments would likely exceed water quality criteria outside the selected dilution zone (15 meters) for metals, but not for organics (PAHs, etc.). Parametrix recommended mitigation methods to decrease or control sediment disturbance and migration including surrounding the work area with a silt curtain, and partial pile removal (cutting the pile at a sufficient height above the lakebed to avoid sediment disturbance).

Therefore, in order to minimize sediment suspension to the extent practicable, several minimization measures will be applied. As with the installation of the work trestle drilled shaft supports, the area to be disturbed with an inner, secondary silt curtain (the larger primary silt curtain described previously will remain in place during all in-water work activities). In addition, prior to removal of the existing piles, a one to two-foot deep layer of sand will be applied to the lake bed where the piles will be removed (see details on sand application in preceding section). This application will minimize the re-suspension of potentially contaminated materials on the lakebed during pile removal.

#### Apply Sand Layer around Existing Piles to be Removed

A one to two-foot thick layer of sand will be placed immediately around each individual pile slated for removed. This clean fill is being placed to contain and minimize disruption of existing contaminated soils. The precise particle size and composition of the fill material will be determined based on slope conditions. The mixture will be fine grained enough to effectively cover and contain

lakebed sediments, while containing enough larger-grained materials (e.g., larger grained sand or pea gravel) to ensure the treatment remains on the bottom and does not immediately shift downslope.

The sand layer will either be applied using uniform broadcast methods over the entire project footprint or the application will be targeted around each individual pile to be removed, with application subsequent to deck removal along each bridge span. The second scenario is more likely, due to access limitations associated with the large number of existing piles present under the existing bridge. The sand material may be placed with a track hoe or a crane with a skip box.

#### **Barge activities**

Barges may be used for construction of the project. Disturbance from near-shore barge operations are likely limited, and may result from anchoring, or barge travel in shallow water. The water depth in the vicinity of the work area is approximately 16 feet, although the water depth decreases towards shoreline. The typical draft (hull depth below waterline) of a heavy construction barge is 6 to 10 feet. Placement and movement of barges will be required to avoid grounding in shallow waters, in order to minimize sediment disturbance and associated turbidity. The use of barges, as with all other in-water work, will be required to comply with state water quality standards, and this activity would be included in the establishment of an approved water quality monitoring plan.

Barge activities will be written into project specifications, and will include the following:

- Specify minimum barge draft (hull bottom to mudline), fixed anchors, maximum barge speeds, barge operations, etc.
- Barge surface wash water and stormwater containment, e.g., watertight curbing, toe boards, bull rails, etc.
- Barge spuds, if used, must be protected with turbidity curtains

#### **Bridge superstructure demolition**

Demolition methods will be written into project specifications, and will include the following:

- Pre-demolition lead-based paint survey and demolition hazmat specifications to be performed by an AHERA certified consultant
- Specify no debris in water, etc. Catchment (nets, taps, scaffolds, blankets, etc.) for all over-water demolition activities
- Saw cutting concrete into sections that can be lifted by a crane or excavator and placed onto a truck, to reduce or eliminate demolition debris from entering the water
- Dust control measures for cutting, sawing, drilling, etc.
- Work area Containment BMPs to ensure that no materials from demolition will fall into the water. The specific BMPs to be utilized will be determined by the contractor, but

- may include containment tarps below the bridge or small floating Styrofoam barges placed beneath the construction area.
- Work area stormwater BMPs to contain, reroute, capture, test and treat as needed bridge deck and work area stormwater.

#### In-water Debris Cleanup and Removal

As part of bridge demolition activities, and after installation of the outer (primary) containment curtain, debris and rubble underneath the existing bridges will be cleaned up and removed. As with all in-water work activities that disturb sediment (e.g., drilled shaft installation/removal, pile installation and removal), a secondary containment curtain or curtains will be placed prior to debris removal to further minimize the spread of re-suspended materials in Lake Union. This secondary curtain will be of similar construction to the primary curtain, although it will be sized much smaller to encapsulate the specific work area(s). The secondary curtains will remain in place until completion of the specific sediment-disturbing activity, and then removed.

The majority of debris removal will occur by hand methods, with pieces of debris loaded into large buckets and bins to be removed with heavy equipment to the upland, where the material will be sorted and undergo disposal. All materials that are potentially hazardous (e.g., pieces of creosote treated wood) will be hauled off-site and properly disposed of at an appropriately licensed facility. Extremely large pieces of debris, or those that extend greater than a few feet into the lake sediment, will be left in place in order to minimize re-suspension of potentially contaminated lake sediments.

# Installation of Temporary Supports (Drilled Shafts or Piles) for West Bridge Work Trestle

Based on the need to maintain two way traffic and one sidewalk during construction, the removal of the existing West Bridge and construction of the west half of the new bridge structure will have to be completed prior to work on the east side of the project alignment.

The load limitations on the existing bridge do not allow for heavy equipment required to construct the drilled shafts. Safety considerations necessitate the construction of a temporary work trestle to operate the cranes and oscillator necessary for shaft installation. The temporary work trestle requires the installation of piles or shafts to support the trestle deck. Normally these temporary shafts would be driven pilings that are installed using a vibratory or impact hammer. However, vibration concerns for adjacent buildings, businesses, and underlying soil necessitate that the shafts are installed as drilled shafts.

Prior to removal of the existing West Bridge deck, holes will be cut in the concrete deck at the shaft locations. A drill rig will then be used to install a 36-inch diameter steel casings to the depth necessary to develop capacity (minimum depth of 40 feet below the mudline), through each hole. Approximately 60 supports will be required to support the west work bridge, all of which will be installed within the OHWM of Lake Union.

A previous study (Parametrix, 1989) estimated that drilled shaft installation along the shoreline would not suspended sediment more than 0.5 meters above the lakebed, and water pressure and lack of other disturbances would likely prevent sediment migration. However, in order to minimize sediment suspension to the extent practicable, several minimization measures will be applied. The first includes surrounding the area to be disturbed with an inner, secondary silt curtain (the larger primary silt curtain described previously will remain in place during all in-water work activities). In addition, prior to installation of the steel casings, a one to two-foot deep layer of sand will be applied to the lake bed where the drilling will occur (see details on sand application in following section). This application will minimize the re-suspension of potentially contaminated materials on the lakebed during drilling operations. Over the entire project footprint, the application of the sand will require approximately 2,100 cubic yards of material and cover a total area of approximately 28,200 square feet.

#### **Drilled shaft installation**

The drilled shafts will be installed from the temporary work trestle utilizing the oscillating casing method of shaft installation. This method utilizes a full depth temporary casing that is advanced through a slow oscillating motion which minimizes vibration to surrounding structures.

Prior to commencement of drilling for the shafts, BMPs will be applied to minimize re-suspension of potentially contaminated sediments. These BMPs will be identical to those described for temporary work trestle shaft construction (see above) and will consist of an inner, secondary silt curtain around each pier and the application of a one to two-foot deep layer of sand will be applied to the lake bed where the drilling will occur.

As the casing is advanced, the soils inside the casing are excavated with a clam shell and placed in lined dump trucks for transfer to the on-site decanting facility (in the case of wet soil) or to an off-site disposal site (for dry, uncontaminated soil). Excavated materials that are potentially contaminated will be kept separate, tested for contaminants, and decanted or disposed at a licensed facility (see earlier text for details on soil separation and decanting).

Each section will be rotated or oscillated into the ground and as the casing is installed additional sections will be bolted onto the top of the installed section until the desired depth is achieved. Once the termination depth of the shaft is achieved (elevation -120 to -130 feet NAVD-88) and the base of the shaft is cleaned out, a full-length rebar cage will be lowered fully into the excavated shaft. Concrete is then pumped to the base of the excavation with a concrete pump truck and tremie, through which concrete is placed below water level. All fresh and curing concrete will be fully contained within the shaft during construction. As the concrete is placed, the temporary casing is slowly removed to the specified elevation of the permanent casing. During this process water inside the casing will be pumped out, captured and treated as appropriate, based on the

results of water quality monitoring. No turbid or contaminated water will be released into Lake Union.

This method produces minimal vibration and is completed entirely inside a casing, minimizing propagation of sound waves into the surrounding lake water. It is estimated that each shaft will take 3 to 4 days to complete excavation, setting the rebar cage, and concrete pouring.

When the casing is set to designed grade, the drill operation will commence with the next pier casing while the rebar cage is set and concrete is placed in the first casing. This general sequence will continue until all piers are completed. The tops of the drilled shafts are estimated to be constructed at an elevation of +10 feet NAVD-88. Due to the sloping nature of the lakeshore, some of the drilled shafts furthest from the shoreline will extend in the water column up to 20 feet.

#### Soil handling and staging areas

The project requires the removal of potentially contaminated sediments from the lakebed of Lake Union, in order to construct the new bridge. The largest source of contaminated soil excavation for this project will be the drilled shaft excavations. Total excavation quantities for shaft construction are approximately 7,500 cubic yards over an approximate area of 1,600 square feet. Approximately 5,500 cubic yards (over 700 square feet) will be required for the permanent shafts and 2,000 cubic yards (over 900 square feet) for the temporary shafts.

Based on limited testing of sediments in the vicinity of the project footprint (see Section 3 for details), it is expected that approximately the upper 10 feet of sediments within Lake Union are likely to be contaminated. Contamination appears to decrease significantly in shallow native soils underlying sediment and fill. Based on this assumption, it is anticipated that approximately 400 cubic yards of contaminated soil will be removed from the drilled shaft casings during the bridge foundation installations. Some additional contaminated soil will be excavated for temporary shafts installed for the working platform. Temporary electrical transmission poles are also anticipated to produce around 70 cubic yards of soils which may be contaminated.

Given the proposed depth of each drilled shaft and the fact that the soils within the shafts will be excavated with clam shell, or other similar type, excavation equipment, the bid contract will specify that the contractor separate the near surface contaminated soils from the deeper clean soils during excavation. Sediment testing will also likely be required to determine the extent of contamination. The existing analytical data may be sufficient to establish a disposal profile, although deeper native soils will likely need additional characterization for purposes of segregation and documentation for 'clean' soil receiving facilities.

The contractor will be required to prepare a stormwater pollution prevention plan (SWPP) and to employ BMPs to ensure that neither excavated sediment nor excavation support materials contaminate Lake Union. Excavated contaminated soils will be disposed at a facility licensed to dispose, treat, or recycle contaminated soil.

In addition to separating soils during excavation activities, soils excavated from the drilled shafts will be saturated and will require decanting prior to removal from the project site. Therefore, as part of the excavation plan, the contractor will be required to isolate runoff from potentially contaminated soils. A likely construction methodology for meeting this requirement is the establishment of multiple decanting facilities in a staging area adjacent to the project site. One facility would be required for decanting of contaminated soils and the other facility would be required for decanting clean soils excavated from the shafts. During the decanting process, decanted water from potentially contaminated areas would be routed into a water quality treatment facility. Wastewater will be treated on-site to the greatest extent practicable. Decanted water from the potentially contaminated sediments may require testing to ensure it meets state and federal water quality standards. If water quality standards are not met, dilution or off-site disposal at an appropriate facility would be required. The primary means of treatment may include a vault system, sediment bag system, or Baker Tanks. In either case, no contaminated water or water with turbidity or pH outside of state water quality standards will be allowed to re-enter Lake Union.

All staging and stockpile areas will be located outside of lakes, streams, wetlands, and vegetated buffers. Staging and stockpile areas will be limited to paved or gravel right-of-way. Staging areas will be located in areas that will prevent the potential of contamination of Lake Union.

#### Soil handling and disposal

Construction bid or contract documents (e.g., plans and specifications) will include analytical results and provisions for contaminated soil sampling and analysis, handling, segregation, treatment or disposal, and health and safety requirements. If the soils are disposed of at an upland disposal facility, the existing analytical data may be sufficient to establish an initial disposal profile, although deeper native soils may need additional characterization for purposes of segregation and documentation for 'clean' soil receiving facilities. If soils will be decanted, there should be sufficient time to characterize them for disposal. Excavated contaminated soils should be disposed at a facility licensed to dispose, treat, or recycle contaminated soil, e.g., thermal desorption, asphalt or cement incorporation, or Subtitle D landfill disposal. Property owners at all receiving sites should be notified of the results of existing data and any additional testing information available at the time of construction.

Open water disposal is not feasible because I) surficial sediments will not likely meet disposal criteria, and do not constitute enough volume to make open water disposal cost effective, and 2)

deeper, presumed clean sediments have not yet been characterized sufficiently for open water disposal, and that process itself is costly and lengthy (taking several months). Upland disposal of clean soils is likely similar in cost to open water disposal.

#### **Monitoring and Testing**

Testing will be performed during construction. Bid specifications will include provisions for contractor assistance and access for Owner-representative testing of the different soil types. Typically, sampling is conducted at the onset or prior to of each type of soil generating activity. Monitoring activities will include:

- Preconstruction baseline sampling
- Lake water quality turbidity, pH, dissolved contaminants if warranted (e.g., metals, creosote)
- Inspections for BMP compliance with specifications

#### Worker and Public Health and Safety Mitigation Measures

Testing Appropriate health and safety measures will be taken during work in areas where contaminated soils, sediment, surface water, or ground water could be present. These measures will include, as needed:

- Preparing a project site-specific health and safety plan
- Monitoring air and water quality
- Using protective and decontamination measures
- Providing worker training and certification
- Medical monitoring

Project construction specifications will include all existing site assessment data and health and safety requirements. The contractor will be required to:

- Review the available environmental data for the project and inspect the work area to identify potential hazards for workers.
- Comply with all applicable health and safety regulations, including, State of Washington Department of Labor and Industries General Occupational Health Standards, Chapter 296-62 WAC and General Safety and Health Standards, Chapter 296-24 WAC.
- Institute a corporate health and safety program and have (when required based on site
  conditions) workers who are trained in hazardous waste site health and safety issues in
  accordance with 29 CFR 1910.120 of the Federal Register and Chapter 296-62 of the
  Washington Administrative Code, and personal protective equipment for employees as
  needed.
- Identify hazards, and develop and implement an appropriate Health and Safety Plan for all activities involving contaminated materials.

In addition, project specifications will include General Special Provisions advising contractors of the possibility of encountering contaminated soils and ground water, with procedures for reporting, testing, and handling of contaminated or hazardous materials encountered during construction.

#### **Worker and Public Health and Safety Mitigation Measures**

Testing Appropriate health and safety measures will be taken during work in areas where contaminated soils, sediment, surface water, or ground water could be present. These measures will include, as needed:

- Preparing a project site-specific health and safety plan
- Monitoring air and water quality
- Using protective and decontamination measures
- Providing worker training and certification
- Medical monitoring

#### **Stormwater**

Mitigation measures to avoid or reduce the spread of contamination during construction include BMP for stormwater and erosion control. Requirements for Stormwater Management and Erosion Control given in the Stormwater Management Manual for Western Washington (Ecology, 2013) and/or City of Seattle Stormwater regulations will be followed. These manuals provide presumptive design approaches and list acceptable BMPs for erosion control. Erosion control BMPs might include, but are not limited to:

- Implementing construction phasing that minimizes the amount of earthwork that exposes the ground surface to erosion;
- Implementing a Temporary Erosion and Sediment Control (TESC) plan including sediment-control BMPs such as silt fences, check dams, sediment traps, sedimentation basins, and flocculation methods;
- Using erosion-control practices (seeding, mulching, soil conditioning with polymers, use
  of geo-synthetics, sod stabilization, erosion-control blankets, vegetative buffer strips, and
  preservation of trees with construction fences);
- Using construction entrances, exits, and parking areas that reduce tracking sediment onto public roads;
- Performing routine inspections of erosion-control and sediment-control BMPs and subsequent BMP maintenance;
- Implement construction BMPs to control dust and limit effects to air quality, including the following:
  - O Wet down fill material and dust on site;
  - o Minimize ground disturbances;
  - Cover loads and ensure adequate freeboard to prevent soil particles from blowing away during transport;

- o Remove excess dirt, dust, and debris; and
- Revegetate disturbed soil as soon as practicable.

Stormwater Pollution/Spill Prevention BMPs might include, but are not limited to:

- A Spill Prevention Control and Countermeasure (SPCC) plan will be implemented.
   Elements of this plan will satisfy all pertinent requirements set forth by federal, state, and local laws and regulations.
- All vehicles operated within the project footprint will be inspected daily for fluid leaks
  before leaving the vehicle staging area. Any leaks detected will be repaired before the
  vehicle resumes operation. When not in use, all vehicles will be stored in the staging
  areas or stored with spill containment pans or pads.
- All mechanical equipment will be fueled at least 50 feet from the Lake Union. All
  equipment will be inspected daily for fluid leaks. Spill response equipment will be on-site
  for potential fluid leakage.
- The project is providing necessary treatment of stormwater runoff for the project, where none is currently provided. All stormwater from PGIS in the project footprint will receive basic stormwater treatment.

Due to the nature of the bridge and approach work area, some of these will not apply. Site specific mitigation BMPs are listed in Section V.2.1.

Project construction will follow Ecology's NPDES General Permit for Stormwater Discharges Associated with Construction Activities, including preparation of a Construction Stormwater Pollution Prevention Plan (SWPPP). The SWPP will identify how the project intends to control pollution generated during the construction phase, and includes 12 elements:

- Mark clearing limits
- Establish construction access
- Control flow rates
- Install sediment controls
- Stabilize soils
- Protect slopes
- Protect drain inlets
- Stabilize channels and outlets
- Control pollutants
- Control de-watering
- Maintain BMPs
- Manage the project

A Certified Professional in Erosion and Sediment Control will be identified in the Construction SWPPP and will be on-site or on call at all times.

#### **Soil and Building Materials**

Construction bid documents (plans and specifications) will include all available analytical results and provisions for handling, treatment, and/or disposal of contaminated materials. Contaminated materials would be sampled and analyzed prior to and/or during excavation to characterize the material for treatment or disposal. Several treatment and disposal options are available, including:

- Offsite landfill disposal
- · Offsite treatment and disposal or recycling
- Offshore open water disposal

Soil excavated for construction that does not contain contaminants exceeding cleanup levels may still require treatment or disposal at a licensed facility, as most fill sites will not accept soils with detectable concentrations of contaminants. Treatment and disposal options will be selected based on the nature and concentration of contaminants. Locations for temporary on-site storage and containment of contaminated materials will be identified to minimize interference with construction activities and inadvertent spreading or release of the contaminated materials.

Management of the contaminated materials will be thoroughly documented. Construction plans and specifications will also describe methods for managing or avoiding disturbance of in-place contaminants.

Hazardous materials potentially released during construction would be mitigated with a hazardous waste management plan (HWMP). The HWMP would mandate the following tasks to be completed in accordance with applicable laws and regulations:

- Identify hazardous materials
- Characterize hazardous materials by sampling and analysis
- Assess the risk to human health and the environment
- Evaluate alternatives for remediation
- Characterize, designate, transport and dispose of contaminated or hazardous wastes
- Communicate and coordinate activities and plans with environmental regulatory agencies
- Establish health and safety procedures during waste management activities

Hazardous building material waste that might be present during demolition, including but not limited to asbestos containing material and lead based paint, will be mitigated, handled, and disposed of by properly trained personnel.

#### V.2.2. Indirect Mitigation Measures

Operational project-specific mitigation measures will consist of stormwater collection, conveyance, treatment, and discharge measures to reduce or minimize stormwater effects to the lake. These

measures will be designed, constructed, and later maintained by the City, in accordance with applicable State and City stormwater management regulations (Ecology, 2013).

#### V.2.3. <u>Cumulative Mitigation Measures</u>

No cumulative project-specific environmental effects have been identified, therefore no mitigation measures are proposed.

#### V.3. Project-Specific Property Acquisition and Agency Liability

No entire-parcel property acquisition is being considered for this project, therefore acquisition liability effects are unlikely. Some agency liability effects may be incurred as the result of construction activities, but these are not unique to this project will be mitigated by standard project, contract, and construction best management practices.

COAL ASH EPA..... Coal Combustion Residues Surface Impoundments List

#### **SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

#### STANDARD ENVIRONMENTAL RECORDS

#### Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 04/26/2013 has revealed that there are 2 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
FIBERLAY INC	1158 FAIRVIEW AVE N	SW 0 - 1/8 (0.076 mi.)	E48	190
ABC METAL FINISHING INC	528 PONTIUS N	SSW 1/4 - 1/2 (0.457 mi.)	X163	498

#### Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
ZYMOGENETICS INC	1201 EASTLAKE AVE E	SSW 0 - 1/8 (0.028 mi.)	B18	17
FRED HUTCHINSON CANCER RESEARC	1100 FAIRVIEW AVE N	SW 1/8 - 1/4 (0.126 mi.)	H71	257

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 4 RCRA-CESQG sites within approximately 0.25 miles of the target property.

#### Federal ERNS list

ERNS: The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The source of this database is the U.S. EPA.

A review of the ERNS list, as provided by EDR, and dated 12/31/2012 has revealed that there are 4 ERNS sites within approximately 0.001 miles of the target property.

#### State- and tribal - equivalent NPL

WA HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the WA HSL list, as provided by EDR, and dated 08/26/2013 has revealed that there are 11

WA HSL sites within approximately 1 mile of the target property.

#### State- and tribal - equivalent CERCLIS

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 07/22/2013 has revealed that there are 58 WA CSCSL sites within approximately 1 mile of the target property.

## State and tribal leaking storage tank lists

WA LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Ecology's Leaking Underground Storage Tanks Site List.

A review of the WA LUST list, as provided by EDR, and dated 08/19/2013 has revealed that there are 2

WA LUST sites within approximately 0.5 miles of the target property.

#### State and tribal registered storage tank lists

WA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Ecology's Statewide UST Site/Tank Report.

A review of the WA UST list, as provided by EDR, and dated 02/08/2013 has revealed that there are 12 WA UST sites within approximately 0.25 miles of the target property.

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 07/22/2013 has revealed that there are 28 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

### Records of Emergency Release Reports

WA SPILLS: Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

A review of the WA SPILLS list, as provided by EDR, and dated 09/26/2013 has revealed that there are 2 WA SPILLS sites within approximately 0.001 miles of the target property.

#### Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 07/11/2013 has revealed that there are 23 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

WA Financial Assurance: A listing of financial assurance information for underground storage tank facilities. Financial assurance is intended to ensure that resources are available to pay for the cost of closure, post-closure care, and corrective measures if the owner or operator of a regulated facility is unable or unwilling to pay.

A review of the WA Financial Assurance list, as provided by EDR, and dated 02/24/2012 has revealed that there is 1 WA Financial Assurance site within approximately 0.001 miles of the target property.

#### **EDR HIGH RISK HISTORICAL RECORDS**

#### **EDR Exclusive Records**

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

WASHINGTON NATURAL GAS	815 MERCER ST	SW 1/2 - 1 (0.672 mi.)	198	667

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 21 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 4 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each

facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water

Quality Programs.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS

NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE

OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D005 Waste name: BARIUM

Waste code: WT02

Waste name: Washington State Dangerous Toxic Waste with a toxic constituents

concentration greater than or equal to 0.001% and less than 1.0%, determined by biological testing methods or a book designation

procedure.

Waste code: D001

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water

Quality Programs.

Direction Distance Elevation

Site Database(s) EPA ID Number

## LAKE UNION DRY DOCK CO (Continued)

1000199112

**EDR ID Number** 

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

#### HAZARDOUS WASTE BIENNIAL REPORTER

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

### Handler Activities Summary:

U.S. importer of hazardous waste: Nο Mixed waste (haz. and radioactive): No Recycler of hazardous waste: No Transporter of hazardous waste: No Treater, storer or disposer of HW: No Underground injection activity: No On-site burner exemption: No Furnace exemption: No Used oil fuel burner: No Used oil processor: No User oil refiner: No Used oil fuel marketer to burner: No Used oil Specification marketer: No Used oil transfer facility: No Used oil transporter: No

### Historical Generators:

Date form received by agency: 01/13/2011

Facility name: FRED HUTCHINSON CANCER RESEARCH CTR EAST

Classification: Conditionally Exempt Small Quantity Generator

Date form received by agency: 01/25/2010

Facility name: FRED HUTCHINSON CANCER RESEARCH CTR EAST

Classification: Conditionally Exempt Small Quantity Generator

Date form received by agency: 12/31/2007

Facility name: FRED HUTCHINSON CANCER RESEARCH CTR EAST

Classification: Not a generator, verified

Hazardous Waste Summary:

Waste code: WSQG

Waste name: A placeholder to allow BR submission to validate. In WA State,

Conditionally Exempt Small Quantity Generators (Called SQG in WA) are not required to report waste streams, so no valid State or Fed codes

are available for reporting to BR.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water

Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: WSQG

Waste name: A placeholder to allow BR submission to validate. In WA State,

Conditionally Exempt Small Quantity Generators (Called SQG in WA) are not required to report waste streams, so no valid State or Fed codes

are available for reporting to BR.

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS

NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE

OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water

Quality Programs.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS

NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE

OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D007
Waste name: CHROMIUM

Waste code: D022

Waste name: CHLOROFORM

Waste code: F002

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE,

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS

NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE

OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D007
Waste name: CHROMIUM

Waste code: D022

Waste name: CHLOROFORM

Waste code: F002

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE,

METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE,

CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND

1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE

Direction Distance

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D011
Waste name: SILVER

Waste code: F003

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT

Waste code: U010

Waste name: AZIRINO[2',3':3,4]PYRROLO[1,2-A]INDOLE-4,7-DIONE,

6-AMINO-8-[[(AMINOCARBONYL)OXY]METHYL]-

1,1A,2,8,8A,8B-HEXAHYDRO-8A-METHOXY-5-METHYL-, [1AS-(1AALPHA,

8BETA,8AALPHA,8BALPHA)]-

Waste code: U035

Waste name: BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]-

Waste code: U058

Waste name: CYCLOPHOSPHAMIDE

Waste code: U150

Waste name: MELPHALAN

Waste code: U188 Waste name: PHENOL

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 11024.2

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 774

Waste code: D011
Waste name: SILVER

Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**EDR ID Number** 

means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

#### Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to guery and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water

Quality Programs.

case-specific information on the "Best Available" air pollution technologies that have been required to reduce the emission of air pollutants from stationary sources (e.g., power plants, steel mills, chemical plants, etc.). RACT, or Reasonably Available Control Technology, is required on existing sources in areas that are not meeting national ambient air quality standards. BACT, or Best Available Control Technology, is required on major new or modified sources in clean areas. LAER, or Lowest Achievable Emission Rate, is required on major new or modified sources in non-attainment areas.

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Large Quantity Generator

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008 Waste name: LEAD

Waste code: D035

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water

Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each

facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water

Quality Programs.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to guery and display data maintained by the Washington Department of Ecology. This system contains key information for each

facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water

Quality Programs.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to guery and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to guery and display data maintained by the Washington Department of Ecology. This system contains key information for each

facility/site that is currently, or has been, of interest to the Air

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water

Quality Programs.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### STANDARD ENVIRONMENTAL RECORDS

#### Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/26/2013 Source: EPA
Date Data Arrived at EDR: 05/09/2013 Telephone: N/A

Number of Days to Update: 62 Next Scheduled EDR Contact: 01/20/2014
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

#### Federal Delisted NPL site list

**DELISTED NPL: National Priority List Deletions** 

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/26/2013 Date Data Arrived at EDR: 05/09/2013 Date Made Active in Reports: 07/10/2013

Next Scheduled EDR Contact: 01/20/2014 Data Release Frequency: Quarterly

#### Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

#### Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

### Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 07/11/2013 Date Data Arrived at EDR: 08/08/2013 Date Made Active in Reports: 09/13/2013 Number of Days to Update: 36

### Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 07/11/2013 Date Data Arrived at EDR: 08/08/2013 Date Made Active in Reports: 09/13/2013

Number of Days to Update: 36

Telephone: (206) 553-1200 Last EDR Contact: 10/02/2013

Next Scheduled EDR Contact: 01/13/2014 Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

#### Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 06/17/2013 Date Data Arrived at EDR: 06/21/2013 Date Made Active in Reports: 10/03/2013 Number of Days to Update: 104 Source: Environmental Protection Agency Telephone: 703-603-0695 Last EDR Contact: 09/10/2013

Next Scheduled EDR Contact: 12/23/2013 Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 06/17/2013 Date Data Arrived at EDR: 06/21/2013 Date Made Active in Reports: 10/03/2013 Source: Environmental Protection Agency Telephone: 703-603-0695 Last EDR Contact: 09/10/2013

Next Scheduled EDR Contact: 12/23/2013

Number of Days to Update: 104

Data Release Frequency: Varies

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 08/20/2013 Date Data Arrived at EDR: 08/23/2013 Date Made Active in Reports: 11/01/2013

Next Scheduled EDR Contact: 12/23/2013 Data Release Frequency: Semi-Annually

State- and tribal - equivalent CERCLIS

CSCSL: Confirmed and Suspected Contaminated Sites List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 07/22/2013 Date Data Arrived at EDR: 07/26/2013 Date Made Active in Reports: 09/19/2013

#### State and tribal Brownfields sites

**BROWNFIELDS: Brownfields Sites Listing** 

A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

Date of Government Version: 07/22/2013 Date Data Arrived at EDR: 07/26/2013 Date Made Active in Reports: 09/19/2013

Data Release Frequency: Varies
ADDITIONAL ENVIRONMENTAL RECORDS

# Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

### Local Lists of Hazardous waste / Contaminated Sites

#### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 08/06/2013 Date Data Arrived at EDR: 09/11/2013 Date Made Active in Reports: 10/03/2013

CSCSL NFA: Confirmed and Contaminated Sites - No Further Action

The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead, a No Further Action code is entered based upon the type of NFA determination the site received.

Date of Government Version: 07/22/2013 Date Data Arrived at EDR: 07/26/2013 Date Made Active in Reports: 09/19/2013

Number of Days to Update: 55

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

#### Local Land Records

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

### Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006 Date Data Arrived at EDR: 03/01/2007 Date Made Active in Reports: 04/10/2007

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995 Date Data Arrived at EDR: 07/03/1995 Date Made Active in Reports: 08/07/1995

Next Scheduled EDR Contact: 09/01/2008 Data Release Frequency: No Update Planned

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

#### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

### **EDR HIGH RISK HISTORICAL RECORDS**

#### **EDR Exclusive Records**

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

#### TACOMA/PIERCE COUNTY:

### Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

Most Recent Revision: 1983

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

### **GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

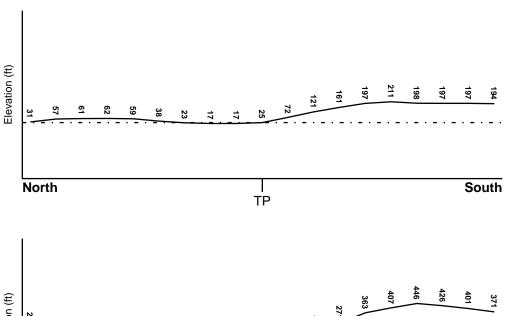

### **TOPOGRAPHIC INFORMATION**

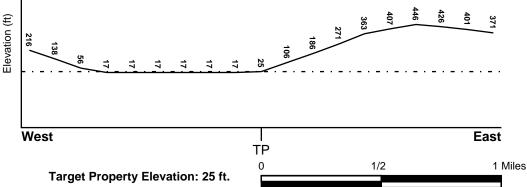

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

### **SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

### **HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

**FEMA FLOOD ZONE**

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### Site-Specific Hydrogeological Data\*:

Search Radius: 1.25 miles

Location Relative to TP: 1/8 - 1/4 Mile SW
Site Name: FIBERLAY INC
Site EPA ID Number: WAD027429141
Groundwater Flow Direction: NOT AVAILABLE

Inferred Depth to Water: 3 feet

Hydraulic Connection: The uppermost aquifer is overlain by permeable sand and gravel with

some impermeable clay.

Sole Source Aquifer: No information about a sole source aquifer is available
Data Quality: Information is inferred in the CERCLIS investigation report(s)

### **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION
MAP ID FROM TP GROUNDWATER FLOW

	LOCATION	GENERAL DIRECTION
MAP ID	FROM TP	GROUNDWATER FLOW
2	1/2 - 1 Mile SW	SE
A3	1/2 - 1 Mile SW	NE
A4	1/2 - 1 Mile SW	NE
5	1/2 - 1 Mile SW	WSW
6	1/2 - 1 Mile South	Not Reported
8	1/2 - 1 Mile South	SW

For additional site information, refer to Physical Setting Source Map Findings.

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### **ROCK STRATIGRAPHIC UNIT**

#### **GEOLOGIC AGE IDENTIFICATION**

Era: Cenozoic Category: Stratifed Sequence

System: Quaternary Series: Quaternary

Code: Q (decoded above as Era, System & Series)

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

#### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: ALDERWOOD

Soil Surface Texture: gravelly - sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained. Soils have a layer of low hydraulic

conductivity, wet state high in the profile. Depth to water table is 3

to 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

Soil Layer Information							
Boundary			Classification				
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	7 inches	gravelly - sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 6.00 Min: 2.00	Max: 6.50 Min: 5.10
2	7 inches	35 inches	very gravelly - loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 6.00 Min: 2.00	Max: 6.50 Min: 5.10
3	35 inches	39 inches	cemented	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

### OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam

very gravelly - sandy loam

Surficial Soil Types: silt loam

very gravelly - sandy loam

Shallow Soil Types: very gravelly - loam

Deeper Soil Types: very gravelly - coarse sand

stratified

very gravelly - loamy sand very gravelly - sand

# LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

#### **TOPOGRAPHIC INFORMATION**

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

#### HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

#### HYDROGEOLOGIC INFORMATION

AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

### **GEOLOGIC INFORMATION**

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map. USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

#### LOCAL / REGIONAL WATER AGENCY RECORDS

#### FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

#### STATE RECORDS

Water Wells

Source: Department of Health Telephone: 360-236-3148 Group A and B well locations.

Water Well Listing

Source: Public Utility District Telephone: 206-779-7656

A listing of water well locations in Kitsap County.

## OTHER STATE DATABASE INFORMATION

Oil and Gas Well Listing

Source: Department of Natural Resources

Telephone: 360-902-1450

Locations that represent oil and gas test well sites in Washington State from 1890 to present.

#### RADON

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

**EPA Radon Zones** 

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.

	Table # Standard Hazardous Materials Impacts & Mitigation Measures					
Impact Type	Impact	Mitigation Measure	Impacted Site Identification			
Environmental Impacts	Environmental Impacts are impacts that the project causes to the environment or sensitive receptors.					
Direct Impacts to the Environment		causes that occur at the same time and place. Direct Impacts from construction activities are typically short term and temporary i	n nature			
Spills	Accidental hazardous materials spills may occur due to construction activities. Construction sites involve various activities, equipment, and materials that can result in a release of hazardous materials into the environment. Traffic detours and lane closures can increase the risk of accidents that cause spills of hazardous materials or substances into the environment.  Hazardous materials have the highest adverse affect on waters of the state (creeks, lakes, streams, wetlands, groundwater, stormwater catch basins, wellhead protection systems, etc.).	Section 1-07.15. Prior to beginning construction, the Contractor is required to prepare a project-specific plan to be used throughout the duration of the project. The plan must be updated to reflect actual site conditions and practices. Preventing a spill is the primary goal; however, the Contractor is expected to be prepared to minimize the impacts of a spill through immediate and appropriate response actions. The current Standard Specifications Section 1-07.15 and SPCC plan guidance are available to Contractors at: <a href="http://www.wsdot.wa.gov/Environment/HazMat/SpillPrevention.htm">http://www.wsdot.wa.gov/Environment/HazMat/SpillPrevention.htm</a>				
	Releases of relatively small amounts of chemicals to the ground may result in rapid migration to the water table. Hazardous materials also have the potential to harm endangered species or their habitat or to harm humans, such as children, the elderly, or the sick, who are sensitive to chemicals. Particulates of lead-based paint (LBP), asbestos-containing material (ACM), or spores of Histoplasma capsulatum can migrate off-site in dust particles. The contaminated dust can expose the surrounding populace to these materials.	structures in order to decrease the possibility of exposure to the general public.				
In-situ Soil and Groundwater Contamination	groundwater are not properly managed and are allowed to spread to	regarding planning, acquisition, design, and/or construction options. Hazardous materials investigations are conducted early in the environmental planning, design, and acquisition phase. The reports often indicate the type and severity of contaminants in the area. These environmental reports are maintained in the Regional Environmental Office's project file.  Alternative construction design or techniques are used to avoid contaminated areas or minimize quantity of material generated. For example, different footing designs can lessen the area and depth of excavation to minimize the quantity of wasted soil generated. Another example is using driven piles where concrete is tremied into place to limit the volume of dewatering.  WSDOT Standard Specifications Section 1-07.5 requires the Contractor to comply with Environmental Regulations and current federal and state				
		laws and regulations.  General Special Provisions and Special Provisions (GSPs and SPs) can be added to the construction contract when site-specific circumstances warrant special measures that can be contractually enforced. GSPs are used when the contamination is predicted but not known. SPs are project-specific and used for known contamination. GSPs and SPs can inform the Contractor of known or potential contaminants and the investigative reports that are available for the Contractor's review. Once informed, the Contractor is responsible for safely and responsibly managing contamination in accordance with all federal, state, and local laws.				
		WSDOT Manuals provide policy and procedures for hazardous materials encountered during construction. The <i>Environmental Procedures Manual</i> (31-11), Chapter 620.08 provides policy and procedures for identifying, handling, and disposing of hazardous materials encountered during construction. The <i>Construction Manual</i> (M41-01), Section 1-2.2K provides WSDOT staff guidance and procedures to ensure environmental compliance during construction. These publications are available at <a href="http://www.wsdot.wa.gov/fasc/EngineeringPublications/library.htm">http://www.wsdot.wa.gov/fasc/EngineeringPublications/library.htm</a> .				
		Proper planning and training should be conducted for projects likely to encounter contamination. Planning should address the project-specific needs (e.g., limited space constraints preventing ability to stockpile contaminated soil or store several Baker tanks) to identify specific techniques and training requirements needed to effectively manage the hazardous materials generated during construction. Training should include key construction staff and project inspectors to recognize hazardous materials and understand appropriate protocols for safely isolating, containing, characterizing, and properly disposing of hazardous materials, and for securing disposal documentation.				
		WSDOT Hazardous Materials and Solid Waste Program staff is available to provide construction support by giving guidance and recommendations for general hazardous materials management procedures.				
		WSDOT On-call environmental consultants are available to provide hazardous materials management support. For projects that expect to encounter				

<sup>&</sup>lt;sup>1</sup> See 40 CFR 1508.8(a) (NEPA implementing regulations)

WSDOT Standard Hazardou	us Material Impacts and Mitigation Measures – continued		
		contaminants, it is recommended that a contract with an environmental consultant be established prior to the start of construction.	
Indirect Impacts to the Environment		Il impacts), are impacts caused by a project that occur later in time or further removed in distance, but are still reasonably include changes in land use, water quality, social issues, and population density.	
Traffic Flow	Vehicle accident spills and long-term ongoing vehicular use and road maintenance may contaminate adjacent soils and surface water. Hazardous materials associated with accident spills, vehicular use, and roadway maintenance typically include petroleum products and metals. Improved traffic flow from the project will reduce vehicle accidents, traffic, and the amount of hazardous materials leaked from vehicles while in traffic and spilled during vehicle accidents.  Alternatively, improved roadways may increase traffic volume, creating the potential for increased vehicular accidents that over time may result in the accumulation of contaminants in the soil,	Post-construction operation is generally expected to improve potential environmental impacts with increased traffic flow and safety. WSDOT will notify Washington State Department of Ecology (Ecology) and Washington State Patrol in the event of an accidental spill during the operational phase. Ecology serves as the state's Incident Command for emergency spills and. as such, responds to spills within highway rights-of-way.	
	sediment, surface water, and/or groundwater.		
Maintenance	of WSDOT's roadside vegetation management program and minerals associated with deicing activities.		
Cumulative Impacts to the Environment	who undertakes those actions. "Cumulative impacts can result environmental change.	sult from incremental impacts of a project when added to other past, present, and reasonably foreseeable future actions, regardless of ult from individually minor but collectively significant actions taking place over a period of time" and eventually lead to a measurable	
In-situ Soil and Groundwater Contamination	environment because the project work typically removes and properly disposes of USTs, contaminated soil, and contaminated groundwater. This eliminates potential contaminant sources and removes contamination that might otherwise have remained in the environment and continued to migrate.  Paving work can cap contamination and prevent the spread of	As contaminated media are uncovered and cleaned up during project construction, there is an improvement in environmental quality and an increase in economic development. This leads to the overall beneficial cumulative effect to the area.	
Stormwater	contaminants through infiltrating stormwater.  Impacts of hazardous materials and waste from normal operations	Mechanisms should be in place that would allow for the detention of contaminants within the surface runoff from impervious surfaces. Stormwater	
Stormwater	would primarily be associated with runoff of contaminants entrained in stormwater. Contaminants likely to be in stormwater runoff include petroleum products, metals, and automobile engine coolants such as ethylene glycol.	and water quality treatment facilities should be designed to collect and retain pollutants from traffic operations and improve water quality. These issues are addressed in more specific detail within the Water Resources Discipline Study because operational impacts related to hazardous waste and water are primarily associated with stormwater quality.	
Construction Impacts	Construction Impacts are direct impacts to the project	et including construction delays and increased costs	
General	Construction delays and increased costs often result from unexpected encounters of contamination. Delays are typically	These mitigation measures apply to all the general impacts during construction. Additional mitigation measures apply to each subset of impacts.  Hazardous materials investigations that identify known or suspected contaminated sites can allow WSDOT staff to determine how to avoid or minimize potential construction impacts. Hazardous materials investigations are conducted early in the environmental planning, design, and acquisition phase. Investigation reports allow WSDOT staff to make informed decisions regarding planning, acquisition, design, and/or construction options. The reports often indicate the type and severity of contaminants in the area. Even if contamination is not identified prior to construction, hazardous materials investigations are still an important resource during construction when contamination is unexpectedly encountered, because	
		different footing designs can lessen the area and depth of excavation to minimize the quantity of wasted soil generated. Another example is using driven piles where concrete is tremied into place to limit the volume of dewatering.	

See 40 CFR 1508.8(b) (NEPA implementing regulations)
 See 40 CFR 1508.7 (NEPA implementing regulations)

WSDOT Standard Hazardous Material Impacts and Mitigation Measures – continued WSDOT Standard Specifications Section 1-07.5 requires the Contractor to comply with Environmental Regulations and current rules of resource agencies. The Contractor is required to prevent spreading or contributing to existing contamination and appropriately dispose waste material in a manner consistent with federal, state, and local regulations. Section 1-07.04(2) of the Standard Specifications requires the Contractor to take precautions and perform any necessary work to provide and maintain a safe and healthful worksite in accordance with applicable laws. Sections 1-07.15 and 8.01 require the Contractor to prepare and implement a project-specific Temporary Erosion and Sediment Control Plan, which addresses prevention of wind dispersion of soil and water pollution during construction. Section 1-07.15(1) requires the Contractor to prepare and implement an SPCC Plan, which addresses both spills from hazardous materials use (including petroleum) and specific measures to prevent release or further spreading of materials in areas with identified preexisting contamination. GSPs and SPs can be added to the construction contract when site-specific circumstances warrant special measures that can be contractually enforced. GSPs are used when the contamination is predicted but not known. SPs are project-specific and used for known contamination. GSPs and SPs can inform the Contractor of known or potential contaminants and the investigative reports that are available for the Contractor's review. Once informed, the Contractor is responsible for safely and responsibly managing contamination in accordance with all federal, state, and local laws. GSPs and SPs can include specific requirements related to containment, removal, and disposal of hazardous materials, USTs, and contaminated soil and water. GSPs and SPs can also establish certification requirements of personnel, notification procedures, and documentation requirements. WSDOT Manuals provide policy and procedures for hazardous materials encountered during construction. The Environmental Procedures Manual (31-11), Chapter 620.08 provides policy and procedures for identifying, handling and disposing of hazardous materials encountered during construction. The Construction Manual (M41-01), Section 1-2.2K provides guidance and procedures to ensure environmental compliance during construction. These publications are contained at http://www.wsdot.wa.gov/fasc/EngineeringPublications/library.htm. Proper planning and training should be conducted for projects likely to encounter contamination. Planning should address the project-specific needs (e.g., limited space constraints preventing ability to stockpile contaminated soil) to identify specific techniques and training requirements needed to effectively manage the hazardous materials generated during construction. Training should include key construction staff and project inspectors to recognize hazardous materials and understand appropriate protocols for safely isolating, containing, characterizing, and properly disposing of hazardous materials, and for securing disposal documentation. WSDOT Hazardous Materials and Solid Waste Program staff is available to provide construction support by giving guidance and recommendations for general hazardous materials management procedures. When resources are not available, the WSDOT project office can direct and manage environmental consultants in coordination with regional offices. This enables efficient work with the least amount of impact to construction schedule and budget as possible. WSDOT On-call environmental consultants are available to provide hazardous materials management support. Services include, but are not limited to: contaminant screening to identify and segregate potentially contaminated media; sampling; laboratory results QA/QC and interpretation; recommendations for proper management, reuse, or disposal options; preparation of waste profile forms; and assisting with waste manifesting and tracking. A contract with an environmental consultant should be established prior to the start of construction for projects that are expected to encounter contaminants. In-situ Soil and Construction delays and increased costs often result from Prior to Construction: Groundwater unexpected encounters of contamination in soil and water. Delays Hazardous materials investigations conducted early in the project development phase can identify known and potentially contaminated sites within a project corridor. The reports often indicate the type and severity of contaminants in the area. These investigations identify known or suspected Contamination related to stockpiling contaminated soil, dewatering contaminated water into storage containers, coordinating sample collection, contaminated sites and allow WSDOT staff to make informed decisions regarding planning, acquisition, and design and/or construction options. waiting for laboratory results, identifying a permitted disposal facility, These environmental reports are maintained in the Regional Environmental Office's project file. completing the disposal facility's waste profile sheet, and coordinating haul and disposal. Increased costs result from Mitigation measures for contaminated soil and groundwater include pre-construction planning to define the areas where contamination may be payments to the Contractor during the delay, payments for encountered, design changes to minimize contaminated media that must be managed, and implementing practical cleanup alternatives for containment supplies, payments to a qualified professional to obtain contaminated soil and groundwater. Mitigation includes incorporating GSPs and project-specific SPs, which makes the Contractor responsible for and analyze samples, laboratory charges, and expensive disposal being prepared to appropriately handle contaminated material with minimal delays. fees. Proper planning and training should be conducted for projects likely to encounter contamination. Planning should address the project-specific needs Construction (staging) activities may be impacted depending upon (e.g., limited space constraints preventing ability to stockpile contaminated soil or store several Baker tanks) to identify specific techniques and the need to alter their proximity due to contaminated media, USTs, training requirements needed to effectively manage the hazardous materials generated during construction. Training should include key construction etc. staff and project inspectors to recognize hazardous materials and understand appropriate protocols for safely isolating, containing, characterizing, and properly disposing of hazardous materials, and for securing disposal documentation. Contaminated Media Management Plans (CMMPs) are developed when significant amounts of known contaminated soil, groundwater, and sediment requires excavation or dewatering. CMMPs establish specific handling and disposal procedures and chains or responsibility to effectively manage contaminated soil and groundwater as it is encountered in order to minimize schedule delays and excessive costs. A comprehensive CMMP would address field screening methods, notification requirements, soil stockpile management, and sampling and disposal requirements. During Construction: For encounters of known or unknown contaminated soil or groundwater, project offices are directed to contact their WSDOT Hazardous Materials Specialist. A WSDOT Hazardous Materials Specialist or other contracted qualified environmental professional will provide the project office direction and technical support. Internal notification to WSDOT Hazardous Materials Specialists also ensures that the appropriate follow-up work (should contamination be left in place) is conducted in accordance with Model Toxics Control Act (MTCA) regulations. WSDOT's policy and procedures for identifying, handling, disposing of, and documenting contamination encountered during construction is contained in EPM Chapter 620.08. Timely, proper management of contaminated media can prevent spreading contaminants to clean soil, surface waters, and the air and can reduce construction delays and cost increases. Alternative construction techniques may need to be employed to minimize earthwork occurring near any of the above-mentioned liability issues. WSDOT and/or its contractors would be responsible for proper management of any

WSDOT Standard Hazardous Material Impacts and Mitigation Measures – continued regulated hazardous wastes. **USTs** USTs may be encountered during excavation activities. USTs may Hazardous materials investigations can identify documented Leaking Underground Storage Tanks (LUSTs), active regulated USTs, or potential be filled with product and have the potential of creating a spill if the historical UST sites. USTs can also be identified through Ecology's Facility Site Atlas (internet mapping system), ground penetrating radar, and old tank is ruptured. USTs in residential areas are likely to contain WSDOT right-of-way maps. Early identification of known or potential UST sites allows WSDOT staff to remove tanks, associated piping, and heating oil, whereas tanks used in commercial/industrial fueling will contaminated soil prior to project construction or incorporate GSPs in the construction contract requiring the Contractor to remove USTs during typically contain automobile fuel and other petroleum products. construction in accordance with the regulations. USTs in the automobile or machine repair business will typically WSDOT would assume cleanup liability for decommissioning and removal of suspected USTs if a UST is encountered during excavation activities. contain petroleum, waste oil, and hydraulic and transmission fluids where commonly associated contaminants include petroleum, heavy WSDOT may also acquire cleanup liability for any contaminated media resulting from a leaking UST in the right-of-way. WSDOT will follow procedures and regulations for decommissioning USTs as outlined in EPM Chapter 620.08. oil, metals, and polychlorinated biphenyls (PCBs). Construction delays and increased costs often result from For unexpected encounters of USTs, project offices will contact their WSDOT Hazardous Materials Specialist and follow internal notification unexpected encounters of USTs. Contaminated soil and/or procedures prescribed in the Construction Manual (M41-01.05) Section 1-2.2K(1) for the Environmental Compliance Assurance Procedure (ECAP). A WSDOT Hazardous Materials Specialist or other contracted qualified environmental professional provides the project office direction or oversight groundwater associated from USTs can affect project schedules and increase costs. to ensure compliance with UST regulations and the appropriate follow-up work in accordance with MTCA regulations. Spills WSDOT project office will follow the internal notification procedures prescribed in the Construction Manual (M41-01.05) Section 1-2.2K(1) for the Construction delays and increased costs may result in the event of a spill and cleanup work of hazardous materials that are used or ECAP to report spills of hazardous materials. An SPCC Plan is also required for all WSDOT construction projects per Standard Specifications generated during construction. Construction vehicles and Section 1-07.15. Prior to beginning construction, the Contractor is required to prepare a project/site-specific plan to be used throughout the duration equipment typically use gasoline, diesel, motor oil, transmission of the project. The plan must be updated to reflect actual site conditions and practices. Preventing a spill is the primary goal; however, the fluid, radiator coolant, brake fluid, and hydraulic oil. New Contractor is expected to be prepared to minimize the impacts of a spill through immediate and appropriate response actions. The required elements of the SPCC plan includes: construction work typically uses cement, asphalt, tar, paving oils, tack, and paint. 1. Responsible Personnel 2. Spill Reporting 3. Project and Site Information 4. Potential Spill Sources 5. Preexisting Contamination 6. Spill Prevention and Response Training Spill Prevention Spill Response 9. Project Site Map 10. Spill Response Forms Demolition Increased costs and delays may result when demolition requires Prior to demolition work, hazardous materials surveys with follow-up sampling (where required) should be conducted to identify equipment, materials, special handling and disposal of certain equipment, materials, or and structures that require special handling or disposal. A comprehensive building survey and sampling program helps limit the amount of material structures. Special demolition considerations can include: required for special removal and disposal. In addition, surveys help avoid the potential for environmental contamination and construction delays and promote worker health and safety. It is recommended that any demolition items (see list "Impact") that may be potential contaminant sources be a) ACMs are likely to exist in buildings constructed prior to 1985. clearly identified (locations and estimated quantities) and then appropriately handled, segregated, and removed for disposal as required by ACM poses risks to public and worker safety when disturbed applicable regulations. for maintenance, renovation, and demolition of structures. If a survey is not completed prior to construction, the project may ACM is often found in commercial and residential buildings constructed prior to 1985. A pre-demolition building survey, conducted by an Asbestos be delayed. Hazard Emergency Response Act (AHERA)-certified building inspector would verify the presence of ACM and provide locations and estimated LBP is likely to exist in structures built before 1978 and is quantities requiring special handling and disposal in a report. If ACM is identified, mitigation would consist of removing these materials in compliance typically found on steel bridge structures. LBP poses risks to with regulations prior to building demolition and disposal in a legally permitted facility (i.e., lined landfill). Regulations include specific notification, environmental health and worker safety when disturbed for work practice, packaging, labeling, and disposal requirements, Chapter 620.08 of the EPM provides additional mitigation measures details. maintenance, renovation, and demolition of structures including bridges and buildings. If a survey is not completed LBP poses risks to environmental health and worker safety when disturbed for maintenance, renovation, and demolition of structures including bridges and buildings. Testing and documentation should be completed as early in the project design phase as possible to determine if special prior to construction, the project may be delayed. USTs and associated piping (See sub-category above for procedures and disposal that will result in increased costs will be required for existing LBP. LBP testing, abatement, or related activities in specific UST impacts) Washington are required to be licensed by the Lead-Based Paint Program located within the Department of Community, Trade and Economic d) ASTs and other containers (such as drums, cans, and bottles) Development (CTED). Performing such activities without LBP certification from CTED is a violation of Chapter 365-230 WAC. Chapter 620.08 of the that store hazardous materials EPM provides additional mitigation measure details. Universal Waste, defined in Chapter 173-303 WAC, batteries, lamps, thermostats, and mercury-containing equipment Standard removal, testing, and disposal protocols of LBP on bridge structures are described WSDOT Standard Specifications Section 6.07.3 and Creosote or Arsenic Ja.k.a. Chromated Copper Arsenate EPM Chapter 6.08. Lead pipe or lead-painted metal can be recycled as scrap metal in accordance with WAC 173-303-071(3)(ff). If the material is (CCA)1 treated wood, such as railroad ties, telephone poles. not recycled, it must be evaluated to determine whether it requires management and disposal as a dangerous waste (per Chapter 173-303 WAC). and marine pilings Contractors are required to abide by WAC 296-62-07521 for general lead exposure health and safety. PCB-containing equipment in aboveground utilities Well decommissioning, including groundwater monitoring, **UST** mitigation information is provided above in the "USTs" row of this table. AST mitigation shall generally conform to UST mitigation. extraction, treatment, and supply wells Universal Waste poses a risk to the worker health, public safety, and the environment if improperly handled and disposed. A pre-demolition building survey should be conducted prior to demolition to identify these regulated materials and ensure that they are properly handled and disposed in accordance with WAC 173-303-573. Additional information is available in the following Ecology Publications, which can be accessed by using the Publication number at: http://www.ecy.wa.gov/pubs.shtm: The Universal Waste Rule, Publication 98-407 The Universal Waste Rule for Batteries, Publication 98-407a

WSDOT Standard Hazardous Material Impacts and Mitigation Measures – continued The Universal Waste Rule for Mercury-containing Equipment and Thermostats, Publication 98-407b The Universal Waste Rule for Lamps, Publication 98-407c Creosote or arsenic treated wood may be reused even if the treated wood is designated as a hazardous/dangerous waste per a Toxics Characteristics Leaching Procedure (TCLP) test (See Chapter 173-303 WAC). However, its reuse must be utilized for its "intended end use" per 40 CFR 261.4(b)(9). This means that treated wood cannot be chipped or shredded for mulch and used in landscaping applications. Ecology encourages reuse of treated wood as a preferred management alternative. If reuse is not feasible, disposal facilities will most likely require sampling (TCLP test for arsenic) of treated wood to determine if it is designated as a Dangerous Waste (per Chapter 173-303 WAC). If not a Dangerous Waste, then the treated wood can be managed as a solid waste (per Chapter 173-304 WAC) and accepted into a Subtitle D landfill or a Waste-to-Energy incinerator (hog fuel). If the wood is designated as a Hazardous/Dangerous Waste, then disposal at a higher cost is required at a Subtitle C facility. Chapter 620.08 of the EPM provides additional mitigation measure details. PCB-containing equipment, particularly aboveground utilities, poses a risk to worker health, public safety, and the environment if improperly handled and disposed. A pre-construction survey should be completed to identify equipment of concern. PCB-containing equipment should be disposed of per federal and state regulations. Well decommissioning is required when wells are unusable or abandoned, or will be impacted by the project. The wells should be identified the during the design phase to determine if project design may affect a well. A licensed well driller is required to install and decommission wells. Licensed drillers complete the required Notice of Intent Forms (application), which allows Ecology to inspect a well as necessary to make sure it is completed or decommissioned according to state regulations. Additional regulatory requirements are available in the EPM Chapter 540.25. Exposure of hazardous materials to construction workers and the Worker Safety & Hazardous materials investigations (as described above) identify known or potentially contaminated areas early in project. This allows WSDOT **Public Health** public may result during excavation and management of project staff to incorporate a GSP or SPs into the contract to notify the Contractor of site-specific conditions. Copies of hazardous materials contaminated media (e.g., soil, groundwater, abandoned drums or investigations are made available to the Contractor. When WSDOT informs the Contractor of these conditions, the Contractor is required to train the containers) or from the misuse of hazardous substances used or workers to recognize hazardous conditions in the work place and train them how to respond to and report such conditions. generated on-site during construction activities. Typical exposures in these situations include ingestion, dermal The Washington State Department of Labor and Industries requires that personnel receive proper training for working with hazardous materials and contact, and/or inhalation. Contaminants including vapors that donning appropriate personal protective equipment. Depending on the nature of any contamination encountered during construction activities, produce physical symptoms such as dizziness, irritated or burned worker safety training (such as 24- or 40-hour HAZWOPER training) may be required of personnel working on the site under Chapter 296-62 WAC. skin and eyes, long-term serious injury, suffocation, and death may The Contractor must protect workers and the public from potential safety and health impacts. The Occupational Safety and Health Act (OSHA) be present in excavations or drums. Minor spills of materials used in establishes requirements for site safety procedures, worker training, and worker safety and health standards for employees engaged in work related construction, such as fuels, lubricants, and hydraulic fluids, typically to or potential exposure to hazardous materials/substances. The WSDOT Standard Specifications (applicable to all projects) Section 1-07.04(2) occur during construction operations. Exposure to such accidental requires the Contractor to take precautions and perform any necessary work to provide and maintain a safe and healthful worksite in accordance release could damage skin, eyes, lungs, and other organs. with applicable laws. Contaminants and vapors that are typical for WSDOT construction sites are primarily petroleum based, where concentrations are In addition to health and safety training, workers should be trained in procedures to prevent hazardous materials from migrating off-site and coming expected to be similar to exposures during fueling at public gas into contact with the public. Erosion and dust controls should be maintained on-site at all times during construction, and any materials suspected to stations. contain lead or asbestos should be abated by professionals trained in the removal and disposal of these materials. Worker and public health and safety impacts are also a concern due According to the National Institute for Occupational Safety and Health, before an activity is started that may disturb any material that might be to the explosion and fire hazards posed by USTs and ASTs, and contaminated by Histoplasma capsulatum, workers should be informed in writing of the personal risk factors that increase an individual's chances of abandoned drums or containers. USTs/ASTs are an explosion developing histoplasmosis. Such a written communication should include a warning that individuals with weakened immune systems are at greatest hazard when vapors trapped within the tank reach explosive limits risk of developing severe and disseminated histoplasmosis if they become infected. These people should seek advice from their health care provider and detonate when ignited by a spark or some other incendiary about whether they should avoid exposure to materials that might be contaminated with Histoplasma capsulatum. device like a cigarette. Fire may produce irritating, corrosive, and/or toxic gases. Demolition work may release ACM, LBP, and/or bird quano. Inhalation and ingestion of LBP. ACM, and/or bird guano could have a damaging effect on workers' health. Common short-term symptoms of lead poisoning include abdominal pain, headaches, constipation, and aches in the joints. Exposure to high levels of lead poisoning can result in retardation, convulsions, coma, and death. The risks associated with low levels of contact with asbestos are not well established, so the EPA concludes there is no level of exposure below which the risks of contracting an asbestos-related disease are zero. Exposures to asbestos can result in long-term progressive illnesses including lung cancer, asbestosis, and mesothelioma. Histoplasmosis is an infectious disease caused by inhaling spores of a fungus called Histoplasma capsulatum found in bird quano. Construction delays and increased costs may result when the Contractor is unaware of site-specific circumstances that would warrant special employee safety training, certification and/or preparation of a site-specific Worker Health and Safety Plan. **WSDOT Liability** 

WSDOT Standard Hazardous Material Impacts and Mitigation Measures – continued Acquisition – WSDOT can inherit cleanup liability when 1) it acquires a Hazardous materials investigations identify known or potentially contaminated sites early, which allow WSDOT project staff to avoid acquiring or Cleanup Liability contaminated site. 2) construction activities spread or cause excavating in contaminated sites. The preference is to avoid purchasing a contaminated site and avoid cleanup liability. However, there are options contamination to become worse, or 3) final project construction prior to acquisition to reduce liability risks when no feasible alternative or design option is available and WSDOT is forced to acquire and/or excavate prevents or obstructs a potentially liable party from conducting contaminated property in order to complete a construction project. remedial activities. RCW 70-105D.040 identifies persons liable for a facility/property as: 1) the current or past facility owner/operator; 2) To manage potential cleanup liability risks, when necessary, WSDOT performs all appropriate inquiry prior to acquisition of and construction on anyone who arranged for disposal/treatment of hazardous potentially contaminated property. For WSDOT projects, "All appropriate inquiry" includes a site reconnaissance, and/or varied levels of Phase I and Il Environmental Site Assessments generally following American Society for Testing and Materials (ASTM) standards 1527, 1528, and 1903. The substances at the site; 3) anyone who transported hazardous type and level of environmental investigation is considered on a case-by-case basis in coordination with the WSDOT Hazardous Materials and Solid substances for disposal/treatment at the site, unless it could legally receive the materials at the time of transport; or 4) anyone who sells Waste Program. a hazardous substance with written instructions for its use, where abiding by the instructions resulted in contamination. In situations When USTs or contamination are identified prior to property acquisition, WSDOT should assign fair market property values that consider remediation where there is more than one liable party, each party is jointly and costs and potential long-term (i.e., on-going monitoring and site management) cleanup costs. To limit potential liability risks prior to acquisition, severally liable for costs associated with cleanup of a site and cost WSDOT can use performance bonds, indemnifications, and other tools to minimize agency costs and cleanup liability. to repair damages to natural resources. For sites that may be substantially contaminated, WSDOT must clearly demonstrate that "All Appropriate Inquiry" (per 40 CFR Part 312) had been Cleanup liability can become an expensive immediate or long-term undertaken to discover, investigate, and characterize the hazardous substance and, once discovered, that due care was exercised to prevent the release or spread of contamination. Demonstrating All Appropriate Inquiry per EPA's final rule establishes that WSDOT met specific regulatory cost. As a property owner, WSDOT would be liable for the cleanup of on-site contaminated soil and groundwater. Liability issues for requirements for conducting all appropriate inquiries into the previous ownership, uses, and environmental conditions of a property. This level of sites with contamination can also extend beyond the property investigation should be considered only when WSDOT decides to acquire property that may be substantially contaminated and the responsible party boundaries if contamination migrated off-site through soils or is not performing cleanup or under an Agreed Order. Decisions regarding site cleanup should be made in coordination with the Hazardous Materials groundwater. In addition, WSDOT would be responsible for the Program in order to ensure that the cleanup remedy will be "substantially equivalent of an Ecology conducted cleanup" to secure WSDOT's ability to removal of any stored or abandoned hazardous materials remaining recover cleanup costs from solvent companies who are potentially liable. on-site at the time of acquisition. WSDOT would incur the costs for characterization, cleanup, disposal, and potential long-term Additional guidance regarding appraisal and acquisition guidance is presented in WSDOT's Right-of-Way Manual (M26-01), May 2006, Sections 4monitorina. 4.4 D & E and 6-5.14. These publications are available at: http://www.wsdot.wa.gov/fasc/EngineeringPublications/library.htm. WSDOT generally would not incur liability for groundwater contamination that has migrated into the project footprint as long as the agency does not acquire the source of the contamination. Any contaminated groundwater that has entered into the project footprint may create an impact to construction activities as described in further sections of this discipline study. **Spills** Hazardous materials spills that impact surface water, groundwater, WSDOT project office will follow the internal notification procedures prescribed in the Construction Manual (M41-01.05) Section 1-2.2K(1) for the sediment, or soils located within the project footprint may result in ECAP to report spills of hazardous materials. An SPCC Plan is also required for all WSDOT construction projects per Standard Specifications WSDOT and/or the Contractor incurring liability for an appropriate Section 1-07.15. The SPCC plan describes the process for prevention and response for spills of hazardous materials during construction. cleanup of the affected area and for environmental damages to state and federal agencies. Disposal As an owner and/or generator, WSDOT could be subsequently WSDOT maintains disposal documentation (i.e., lab data, sampling procedures, waste profile sheets, and disposal tickets) proving contaminated liable for the cleanup of contaminated media disposed of at a nonwaste was properly characterized and disposed at a legally permitted facility. GSPs or project-specific SPs added to the construction contract require the Contractor to provide a copy of the shipping manifest or bill of lading indicating the amount of material hauled to disposal, and bearing the permitted facility. disposal site operator's confirmation for receipt of the material. Standard Specifications Section 2-03.3(7) requires the Contractor to provide the WSDOT Project Engineer the location of disposal sites and copies of required permits and approvals before any waste is hauled off the project. Additional policy and procedures for identifying, handling, disposing, and documenting contamination encountered during construction is contained in EPM Chapter 620.08.
