SDOT’s mission & vision

Mission: delivering a high-quality transportation system for Seattle.

Vision: a vibrant Seattle with connected people, places, and products.
Our core values

Through transportation, we contribute to a city that is:

• **Safe** – we eliminate serious and fatal crashes

• **Affordable** – we give all people high-quality, low-cost travel options

• **Vibrant** – we use our streets and sidewalks to improve health, prosperity, and happiness

• **Interconnected** – we provide an easy-to-use, reliable system that gives you the options you want when you need them

• **Innovative** – we understand and plan for the changes of tomorrow, while delivering great service today
Presentation overview

- Meeting purpose
- Project review
- Design process and alternatives
- General Q & A
- Feedback session
Meeting purpose

• Present design alternatives
• Gather community input
Background

• Safety improvements requested by local community
• Issue Identification Meetings – November 2014
• Hundreds of public comments
Project goals

Make Rainier Avenue South safer for everyone

• Reduce speeds
• Provide new and enhance existing pedestrian crossings
• Maintain efficient transit service
• Improve intersection safety
• Reduce injuries
Vision Zero

Seattle’s plan to eliminate traffic deaths and serious injuries

- Street designs that prioritize safety
- Public education and engagement
- Targeted enforcement patrols

www.seattle.gov/visionzero
Project area

Rainier Avenue S, between Letitia Avenue S and Seward Park Avenue S
Other SDOT projects

- Rainier & Dearborn Safety Improvements
- Accessible Mt. Baker
- Rainier Ave S Road Safety Corridor
- Rainier Beach Safety Improvements
Along Rainier

People
- More than 70,000 live in zip codes 98118 and 98144
- 15 percent of households car-less

Land uses
- 431 parcels
  - 45% Commercial/Mixed Use (195)
  - 30% Single/Multi-Family (128)
  - 16% Vacant (70)
- 18 major institutions
- 10+ schools and daycare centers within three blocks
- 10 industrial uses
- 5 parks
- Senior housing and community centers
- 2 libraries
Traffic data

• 19,700 to 26,600 vehicles per weekday
• More than 11,000 daily transit trips, transit service every 10 minutes
• Thousands of pedestrian crossings daily
• Primary emergency response route
• Commercial vehicle route
Rainier Avenue South
- Principal arterial
- 4 to 5 lanes
- 50-54 feet wide
- Curves and skewed intersections
Collision data

Average of 1 crash/day on Rainier

Last 3 years
• 1243 total collisions
• 630 injuries
• 2 fatalities

Last 10 years
• Nearly 3600 total collisions
• 1700+ injuries
• 11 fatalities
Collision data

Fatal and serious injury crashes  
Last 10 years within project area

- Fatal collisions
- Serious injury collisions
Collision data

Pedestrian and bicycle collisions last 3 years:
• 46 pedestrian-vehicle
• 10 bicycle-vehicle

Last 10 years:
• 165 pedestrian-vehicle
• 30 bicycle-vehicle
Collision data

Crashes per mile

Aurora
ADT = 37,000 to 74,400

Lake City Way
ADT = 34,600 to 40,400

Rainier (project area)
ADT = 19,700 to 26,600
Recent speed studies

Posted speed limit is 30 miles per hour

High-end speeders = 10+ miles per hour over the speed limit
Design options developed to:

- Balance the need to move people and goods with the function of the nearby land uses
- Eliminate correctable collision patterns

Modeling:

- Synchro 8 and SimTraffic 8
- Vissim
- Full report at Spring meeting
Design process

Performance monitoring:

• Collect baseline data and update traffic data regularly for locations on nearby streets including:
  – Seward Park
  – Lake Washington Blvd
  – MLK
• Vehicle and transit travel times
• Business tracking
Design process

Implementation

- Signal and signage improvements Spring 2015
- Additional work in summer 2015 and 2016
Design process

S Charlestown Street to S Alaska Street

Data

• 51 crashes, 24 injuries last three years

• Collision types:
  – 14 angle/driveway related
  – 11 rear end
  – 8 sideswipe
  – 26,600 vehicles/day
Design process

Rainier and Orcas
• 38 crashes last three years
• **25 left turn collisions**
• 25 injuries
• 4 pedestrian-vehicle collisions
  – 1 serious injury

Similar conditions at:
• S Edmunds St
• S Ferdinand St
Design process
Rainier and Orcas

Vehicle waiting to turn left blocks visibility

47% of left turn collisions occur in this scenario

Left turn collisions account for 63% of total collisions in last 3 years

Left turn collisions account for 63% of total collisions in last 3 years
Design process

Rainier and Holly

• 18 crashes, 18 injuries last three years
• 9 left turn collisions

Left turn collisions account for **50%** of total collisions within last 3 years
Design process

Rainier and Graham

• 15 crashes, 10 injuries last three years
• 6 angle crashes related to speeding and disobeying signal
Design alternatives

Lower speed limit
- S Alaska Street to S Kenny Street (Columbia City to Hillman City)
- 30 mph to 25 mph
- 0.9 miles
Design alternatives

• Signal improvements
  – Longer pedestrian crossing times
  – Reflectorized signals at:
    • Charleston
    • Andover
    • Genesee
    • Oregon
    • 51St Ave S
• Lane line markers (buttons) throughout the corridor
• Rainer Valley Neighborhood Greenway
Design alternatives

Enforcement
- Grant funds secured for extra patrols
- Data-driven deployment
- Pedestrian safety emphasis

Public engagement
- Travel demand management (TDM)
- Impairment-related programs and outreach
Design alternatives

S Charlestown St to S Alaska St

- Access management
  - Incremental implementation
  - Signs → physical changes
- Pedestrian safety emphasis patrols
Design alternatives

**Option 1a:** S Alaska St to S Henderson St
Rechannelization
- 4 lanes to 3 lanes
- 2 general purpose lanes
- Center left turn lane

**Key features**
- Reduce top collision types (left turns, sideswipe, parked car)
- Lower vehicle speeds
- Better conditions for people walking
- Opportunities for new crossings
- Improved efficiency
- Easier turning movements – especially for large vehicles

**Limitations**
- Initial modeling shows vehicle delays of +/- 2 minutes during peak hour traffic
Design alternatives

**Option 1b: S Alaska St to S Henderson St**

Rechannelization with protected bike lanes

- 2 general purpose lanes
- Center left turn lane
- Protected bike lanes from S Alaska Street to S Kenny Street (Columbia City to Hillman City)

**Key features**

- Same benefits as Option 1b
- Significantly improved environment for people biking

**Limitations**

- Initial modeling shows vehicle delays of +/- 2 minutes during peak hour traffic
- Design challenges for protected bike lanes
Design alternatives

**Option 2:** S Alaska St to S Henderson St

**Hybrid design**
- 2 general purpose lanes
- Center left turn lane
- Intermittent transit lanes

**Key Features**
- Improves transit performance
- Fewer collisions
- Lower vehicular speeds

**Limitations**
- Some parking removal likely
- Some delay during peak hour traffic (+/- 2 min)
Design alternatives

Safety benefits

- Lower speeds, less severe crashes
- Less exposure for vulnerable users
- Reduction in crash frequency
- Easier turning movements
