

Welcome!

Madison Street Bus Rapid Transit (BRT) open houses

AUGUST 3

5 - 7 PM

Seattle University,
Campion Ballroom

AUGUST 2-16

Online open house:

MadisonBRT.participate.online

AUGUST 4

11 AM - 1 PM

Town Hall

AUGUST 9

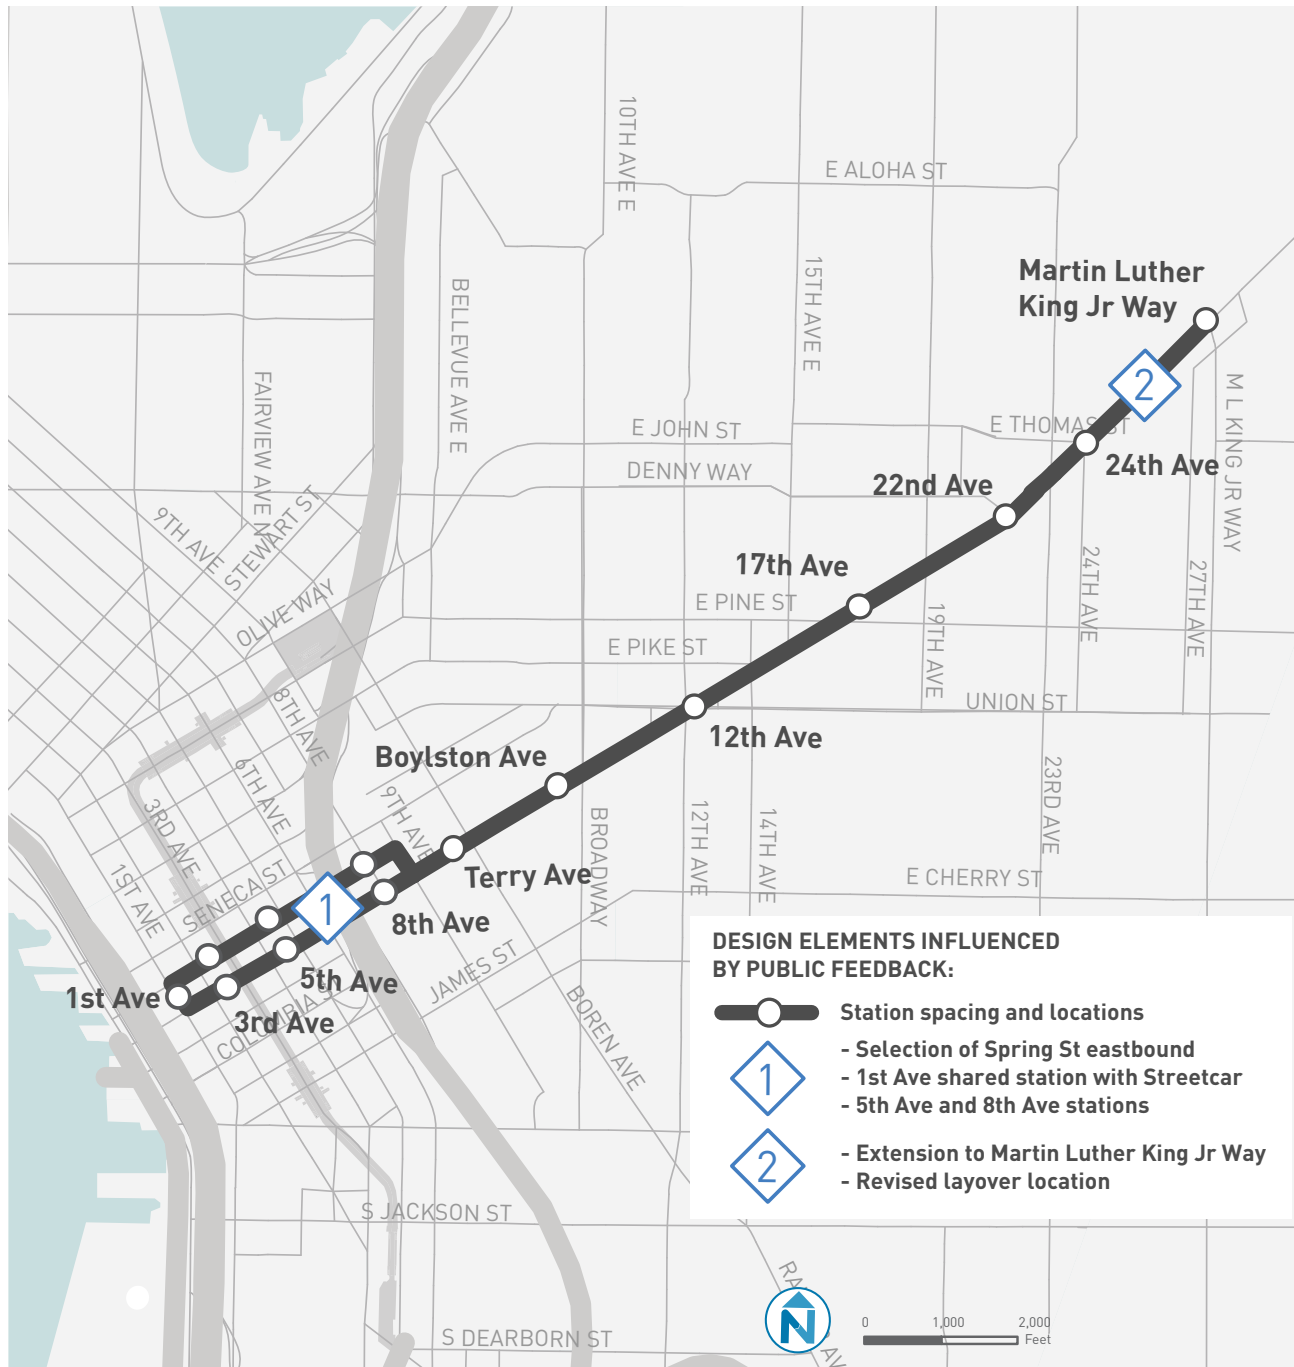

5 - 7 PM

Meredith Mathews
East Madison YMCA

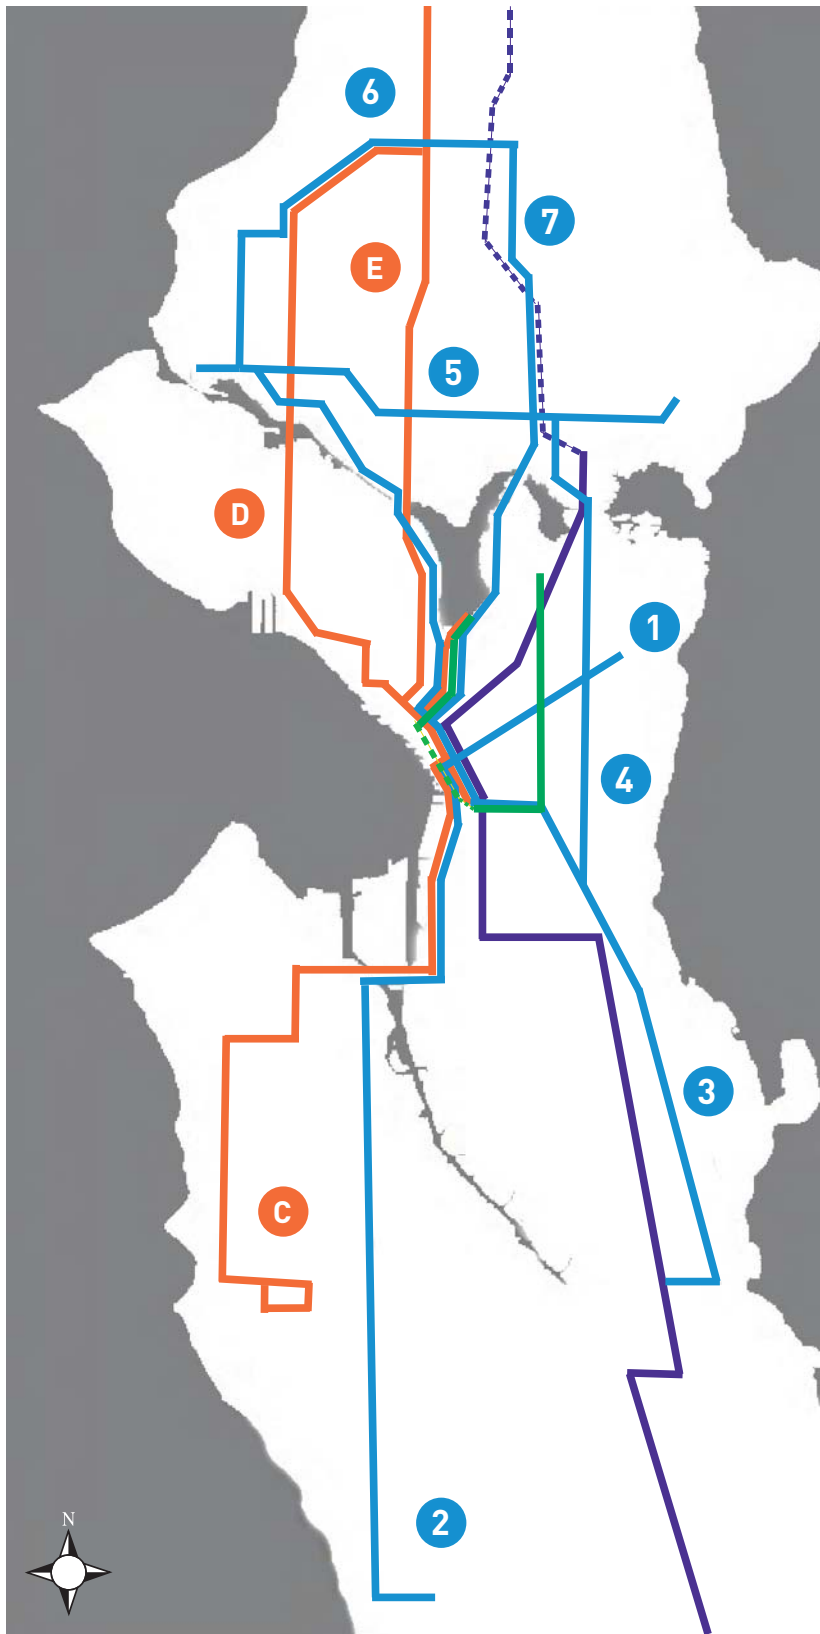

Open house room layout

Route developed with community input

The Madison St corridor is busy, dense, and still growing. Bus rapid transit (BRT) provides frequent, reliable, and comfortable bus service.

Seattle RapidRide Expansion Program

New RapidRide Corridors

- 1 Madison St
- 2 Delridge
- 3 Rainier / Jackson
- 4 23rd Ave
- 5 Market / 45th St
- 6 Northgate / Fremont
- 7 Roosevelt

RapidRide Network

- New RapidRide Corridors
- Existing RapidRide
- Existing Seattle Streetcar
- - - Future Seattle Streetcar Connection
- Link Light Rail
- - - Future Link Light Rail

Preliminary timeline

Open 2019	Open 2020	Open 2021	Open 2022	Open 2024
Delridge	Rainier/ Jackson	Roosevelt	Northgate/ Fremont	23rd
Madison		Market/ 45th		

What is bus rapid transit?

- Bus rapid transit (BRT) is a bus service that combines the capacity and speed of light rail with the flexibility, lower cost, and simplicity of a bus system.
- RapidRide is King County's bus rapid transit system. 3 of the 6 routes serve Seattle.
- Madison St is 1 of 7 new RapidRide corridors in Seattle included in the voter-approved Levy to Move Seattle in 2015.
- We build RapidRide lines and King County Metro operates them.

Bus and station features

RapidRide branding

Shelters with seating, lighting, and weather

Example RapidRide shelter/branding

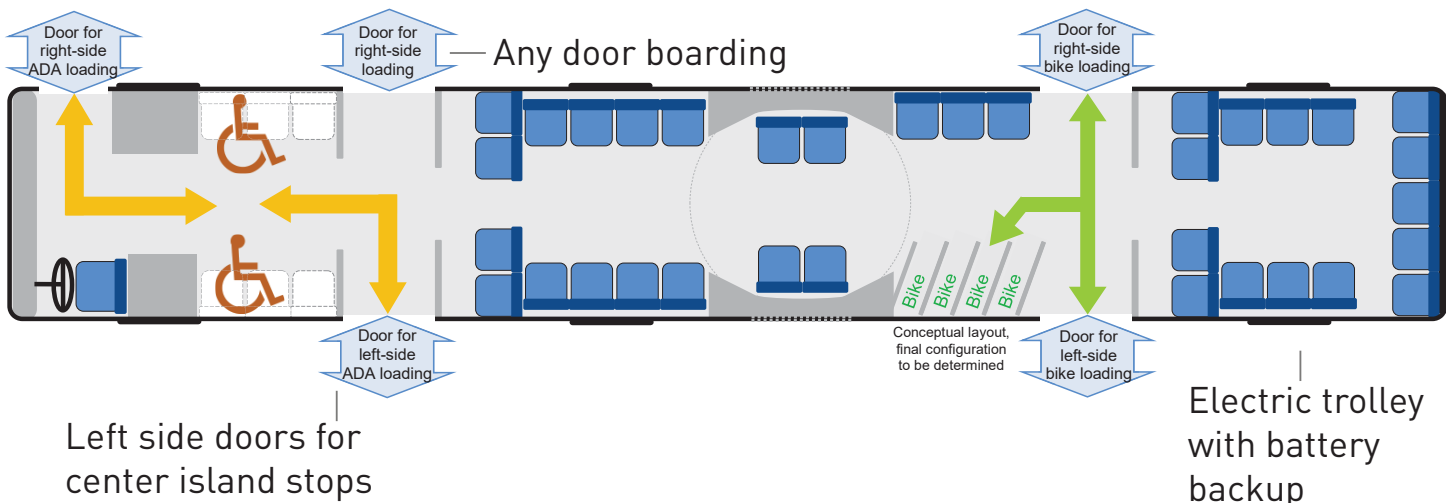

Other features:

- Real-time arrival information
- Off-board ORCA validation and other tools to speed up fare payment
- Stations with improved pedestrian access compliant with Americans with Disabilities Act (ADA) standards

Platform level with bus floor for quick and easy loading for all

Bus layout (conceptual)

Left side doors for center island stops

Electric trolley with battery backup

3 lane types

Based on traffic conditions and access needs, the design uses 3 types of lanes.

Check out the
long table to
see where the
lanes will be

Bus-only lane

60% of corridor

Bus-only lanes are painted red.

Business access and transit lane

4% of corridor

Business access and transit (BAT) lanes are bus-only lanes. However, vehicles can still reach driveways and side streets.

General purpose lane

36% of corridor

General purpose lanes are open to all traffic, with no restriction.

MADISON STREET BUS RAPID TRANSIT

Efficiency

- We are focused on ways to improve travel times and move more people.
- Street design will help make Madison Street BRT more reliable than current buses.
- The project will convert general-purpose lanes to bus-only lanes in certain areas to improve travel times for more people.
- When service begins, Madison St will move more people than it does today.

Travel time

An updated traffic analysis is in progress and will be available later this summer. The 10% design traffic analysis noted these traffic changes during evening peak hours once service begins:

TRANSIT

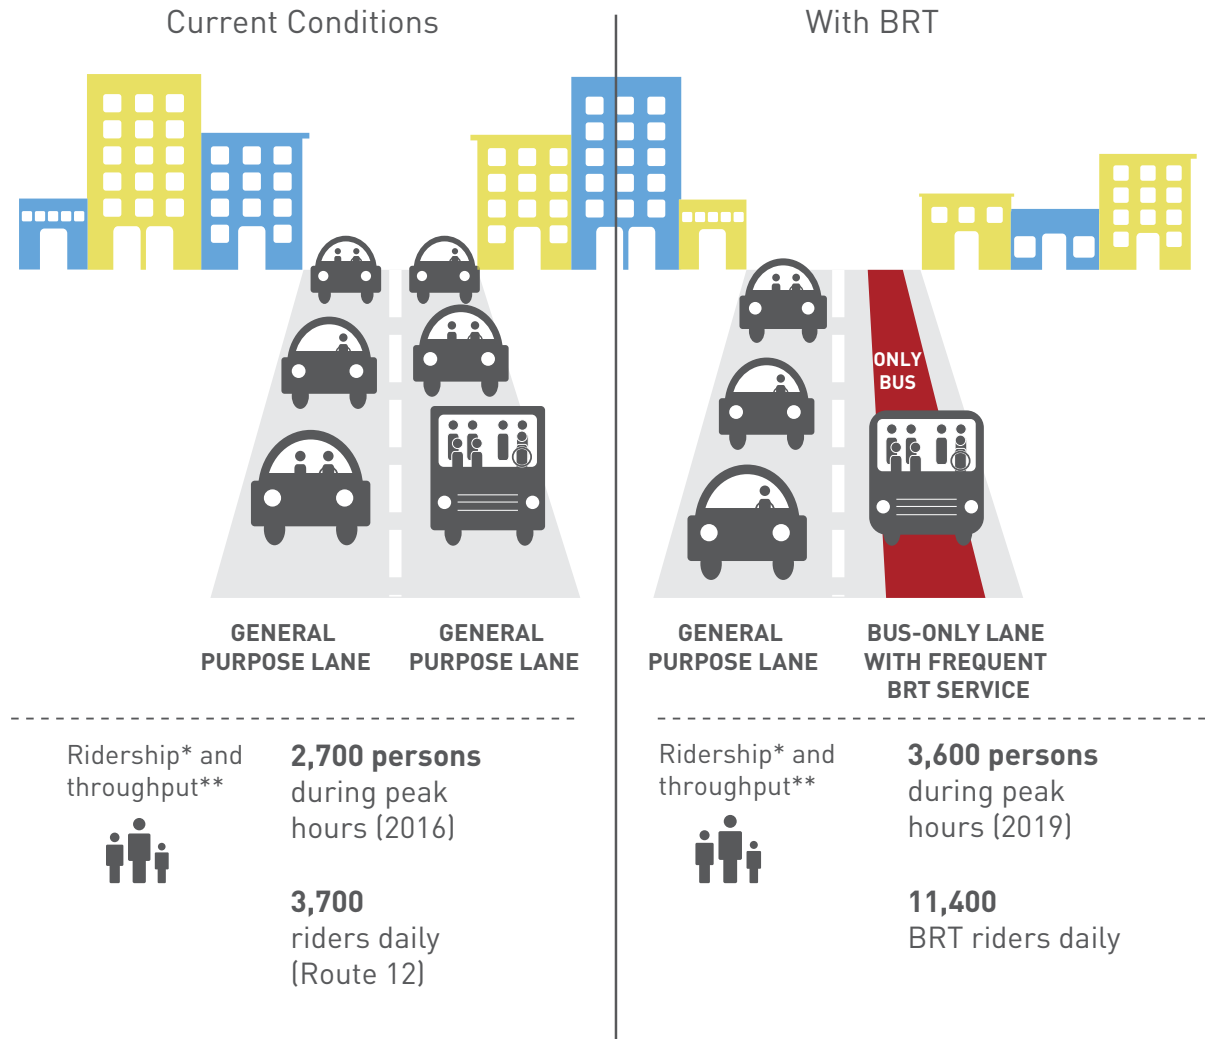

6.5 minutes faster from 1st Ave to 23rd Ave (eastbound) and about 4 minutes faster from 20th Ave to 1st Ave (westbound)

AUTO

3.6 minutes slower from 1st Ave to 23rd Ave (eastbound) and about 20 seconds slower from 20th Ave to 1st Ave (westbound)

USING THE SAME STREET TO MOVE MORE PEOPLE

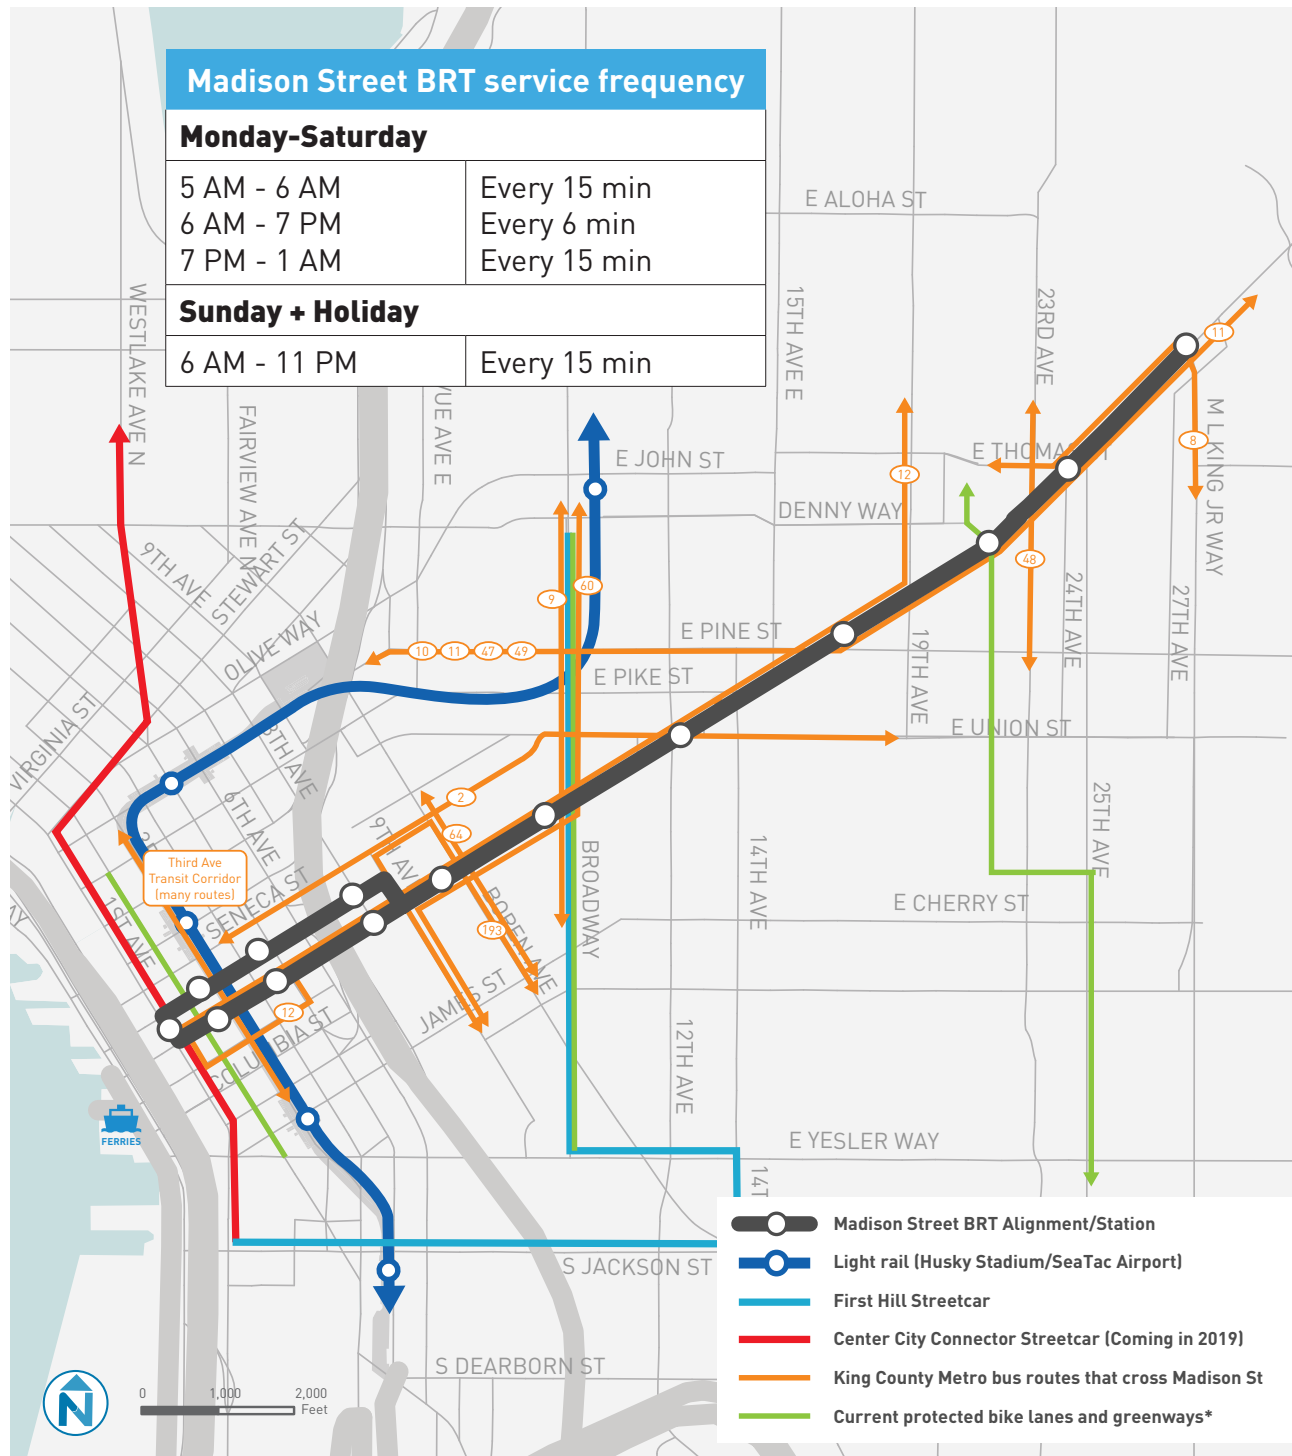

*Assumes 1.15 people/car, 60 people/bus, 100 people/BRT passing between Boylston Ave and Harvard Ave

**Approximate value

Connectivity

Madison Street BRT will connect into the existing and future transit system, creating quick and reliable connections to get you where you're going.

*See Bike Master Plan for future bike routes

Access

We will make it easier and safer for those walking and biking to reach stations. You can expect:

- Sidewalk repair and new curb bulbs
- New landscaping
- Improved bike facilities at key crossings

New landscaping, including planting 2 trees for every 1 tree removed

Painted bike crossing areas and bike facilities at key crossings

Sidewalk repair, including new curb bulbs to shorten crosswalk distances and other accessibility improvements

Sample location: Madison and Terry

View: Corner of Terry Ave and Madison St, looking north towards Virginia Mason Medical Center

View: Intersection of Terry Ave and Madison St looking north, including new right-turn only configuration from Terry Ave

Sample location: Madison/12th/Union

View: Intersection of Madison St, 12th Ave, and Union St, looking east down Union St

View: 12th Ave station and access improvements, including new bicycle lanes on Union St

Sample location: Madison/24th/John

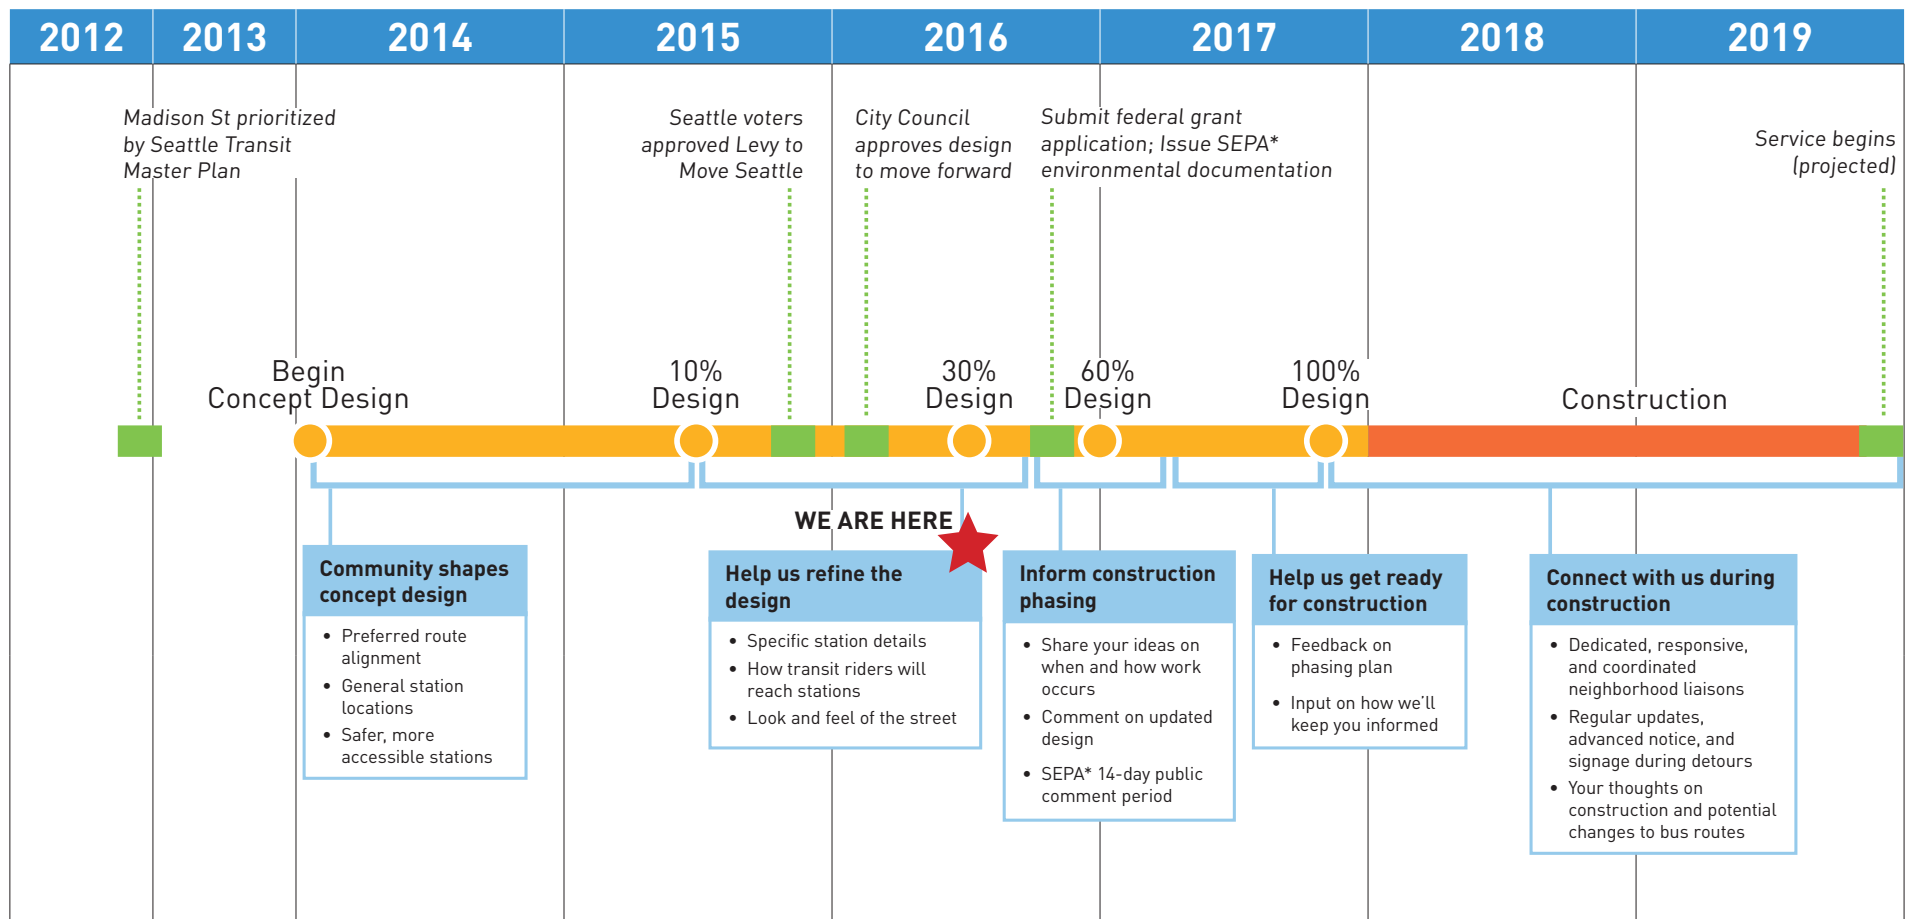

*View: Corner of
E Madison St and
E John St, looking
northeast*

*View: Intersection of
E Madison St and
E John St, including
potential location for a
small building used to
power electric trolley
buses*

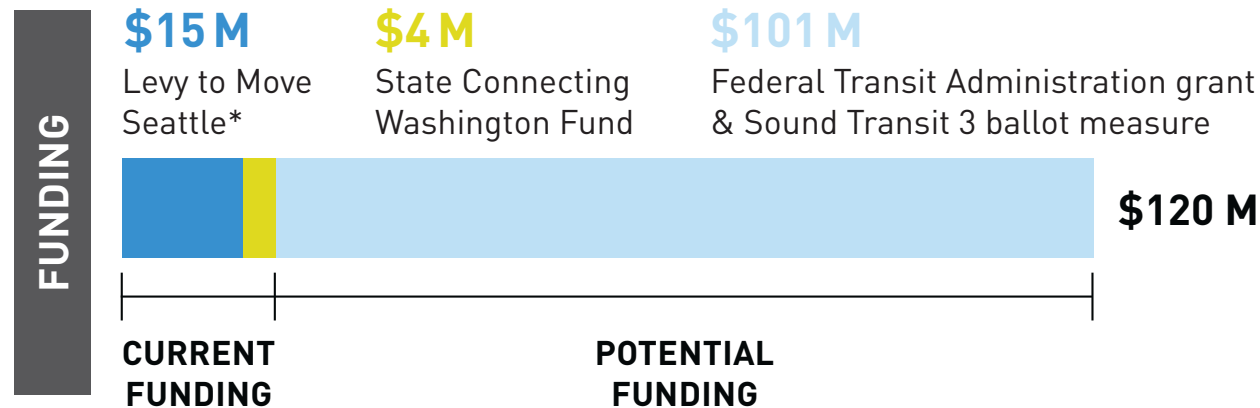

Schedule

*SEPA: State Environmental Policy Act

Public engagement opportunities Decision milestones Project design Construction

Cost and funding

* Madison St is 1 of 7 new RapidRide corridors in Seattle included in the voter-approved Levy to Move Seattle in 2015.

COST EFFECTIVENESS

BRT will be more cost-effective to operate per boarding

2013 METRO SYSTEM-WIDE

\$4.26
per boarding

BRT COST PER BOARDING

\$1.36-1.68
per boarding

Source: Metro Online

Looking ahead

In late 2016 we will work with property owners and businesses along the corridor to seek input on developing a construction phasing plan. We will bring the 60% design to you for your feedback at another public open house in early 2017.

Your input and collaboration will be as important to the pre-construction and construction phases as it has been in the design phase.

Communication during construction

Business and parking signage during detours

24-hour hotline

Community liaisons

Advance notices and regular updates

Neighborhood and property owner briefings

Translated materials
