

**Military Road South Drainage Project
SEPA Determination of Non-Significance (DNS)**

Description of Proposal

The purpose of this proposed project is to address uncontrolled surface flow in the vicinity of Military Rd S and 29th Ave S in the City of Seattle's South Beacon Hill neighborhood. Two existing 18-inch diameter concrete culverts pass under Military Rd S and terminate in the unopened right-of-way at a headwall structure surrounded by sandbags. A 12-inch diameter corrugated high-density polyethylene (HDPE) pipe exits the sandbag structure and runs along the ground, parallel to Military Rd S, before entering a headwall junction box structure near Military Rd S and S Austin St. The junction box has a buried 12-inch diameter corrugated metal outlet pipe that conveys flows to the west through the steep slope towards I-5.

SPU would install a new Type 240C catch basin in line with the existing eastern 18-inch diameter concrete culvert. The existing western 18-inch diameter concrete culvert would be cut and deflected to the new catch basin using 18-inch diameter ductile iron pipe. The catch basin would have a new 12-inch diameter ductile iron pipe outlet that would connect to a new Type 240C junction box to the southwest. A second Type 240C junction box would be installed just west of the existing headwall junction box structure, in line with the existing 12-inch diameter corrugated metal pipe. The first and second Type 240C junction boxes would be connected with 12-inch diameter polyvinylchloride (PVC) pipe. The existing corrugated HDPE pipe and sandbag structure would be removed and the existing drainage system downstream of the new catch basin (18-inch concrete culverts, headwall structure, and headwall junction box structure) would be abandoned.

In total, the project would install one catch basin, two junction boxes, and approximately 15 feet of 18-inch diameter ductile iron pipe, 17 feet of 12-inch diameter ductile iron pipe, and 75 feet of 12-inch diameter PVC pipe.
