# SPU/SDOT Design Drafting Guidelines

# **Design Drafting Checklists**

Prior to setting up drawing files:

Download CAD support files at: Seattle.gov/util/CAD
Become familiar with the latest version of the CAD Manual and fill out a BIM Execution Plan.
Acquire a Project Tracking Number (PTN) for file-naming purposes.

SDOT Projects:
Contact the SDOT Project Manager for the "SpeedType" (charge code).

SPU Projects:
Contact SPU CADsupport@Seattle.gov with the following information to obtain a PTN:
SPU Project Manager (PM) Name
Project Name
Project Location
SpeedType" (charge code; obtain from PM)

During 30% Design Development
Setup project folders and drawings (see Section 3 of the CAD Manual).

νι	iring 30% Desi	gn Development			
	Setup project folders and drawings (see Section 3 of the CAD Manual).				
	☐ Set up the sheet set with Sheet Set Manager:				
		Update "project milestone" field to 30% DESIGN DRAWINGS (NOT FOR			
		CONSTRUCTION).			
		Fill in the "Job Number - PC" field with the SpeedType.			
		Leave the "Job Number - CO" field blank—only used for the construction			
		SpeedType (if applicable).			
		Fill in the "Project Title" field.			
		Fill in the "Total Number of Sheets" field (if known).			
	☐ Create cov	ver sheet			

# SPU/SDOT Design Drafting Guidelines

		Ц	Add/modify PE stamp (color 254).		
			Vicinity Map		
			Location Map		
			Sheet Index		
			Datum Block (if applicable)		
			Detail & Section Referencing Block		
		Create not	es sheet (see SIP web page for sample notes) with PE stamp (color 254).		
		☐ Setup survey control drawing with PLS stamp (color 254).			
		Set up a "v	iew" drawing (XREF) that contains match lines on even stations and model space		
		views. This	drawing will be used to save-as and create all other plan/profile XREFs.		
		XREF base	map into sheets and create plan viewports based on the "view" drawing using		
		Sheet Set N	Nanager.		
		Create des	ign XREFs (save-as the "view" drawing to create each design drawing).		
			Layout the design under the direction of the project engineer.		
			Create profiles (with match lines that match stationing on plan) if required.		
			Add annotation based on planned viewport scale(s).		
		Overlay de	sign XREFs in sheets and create viewports for profiles if required.		
		Add/modif	y PE stamps (color 254) on all sheets.		
		Update "de	escription" fields for each sheet in Sheet Set Manager.		
	Review	Review checklists in Section 4 of the CAD Manual for planning purposes.			
	Check SPU Design Standards & Guidelines for 30% drawing requirements.				
	Check and plot drawing set for interdepartmental plans circulation (make PDF and DWF snapshots)				
	per Sec	ction 8 of the	e CAD Manual.		
	Send th	ne DWG files	and PDF file(s) to the City per Section 10 of the CAD Manual. Send files to Project		
	Manag	er and <b>SPU_</b>	CADsupport@Seattle.gov for review.		
D	ırina 6	500/ Doci	an Davalanmant		
		,	gn Development		
_	-	RUCTION).	lestone" field in Sheet Set Manager to 60% DESIGN DRAWINGS (NOT FOR		
П		•	ng the drawings under the direction of the project engineer.		
_		•	og changes during design development.		
			gn sketch for constructability throughout drafting progress, remind designer of		
	_		interference or constructability concerns.		
П	Follow	•	& presentation guidelines (see Section 4 of the CAD Manual).		
_		_	il numbers and titles using Sheet Set Manager (add cross-referencing blocks		
	_	•	fields linked to Sheet Set Manager).		
		Lock Viewp			
		•	Index (VPI) and serial numbers from SPU Engineering Records Center (Records		
			m to the title blocks via Sheet Set Manager ("Vault Plan Number" and "Vault		
		Number" fiel			
	If SIP is required, ensure drawings meet the 60% SIP checklist requirements.				

# SPU/SDOT Design Drafting Guidelines

	Check and plot drawing set for interdepartmental plans circulation (make PDF and DWF snapshots) per Section 8 of the CAD Manual.				
	Send the DWG files and PDF file(s) to the City per Section 10 of the CAD Manual. Send files to Project				
	Manager and SPU_CADsupport@Seattle.gov for review and asset onboarding.				
Du	ring 90% Design Development				
	Update "project milestone" field in Sheet Set Manager to 90% DESIGN DRAWINGS (NOT FOR				
	CONSTRUCTION).				
	Go through the checklists in Section 4 of the CAD Manual.				
	Prepare utility linework per Section 6 of the CAD Manual.				
	If SIP is required, ensure drawings meet the 90% SIP checklist requirements.				
	Check SPU Design Standards & Guidelines for 90% drawing requirements.				
	Check and plot drawing set for interdepartmental plans circulation (make PDF and DWF snapshots) per Section 8 of the CAD Manual.				
	Send the DWG files and PDF file(s) to the City per Section 10 of the CAD Manual. Send files to Projec Manager and SPU_CADsupport@Seattle.gov for review and asset onboarding.				
At	100% or Production of Conformed Drawing Set				
	Update the "project milestone" field in Sheet Set Manager to be blank (ALT+032) or with				
	CONFORMED DRAWING SET (MM/DD/YYYY).				
	Prepare project data for transmittal to the City.				
	Export data from Civil 3D source drawings to LandXML.				
	☐ Ensure all utility linework is classified (per Section 6 of the CAD Manual) and data filled in.				
	Transmit drawings & data (per Sections 9 and 10 of the CAD Manual) to the Project Manager and				
	SPU_CADsupport@Seattle.gov for archival and asset onboarding (applies to both SPU and SDOT				
	projects).				
	□ PDFs of sheets.				
	☐ ZIP file of drawing package including drawing (DWG) and Sheet Set Manager (DST) files.				
	☐ LandXML of proposed pipe alignments/profiles (horizontal & vertical data).				
	☐ LandXML of proposed surfaces.				
	Incorporate all design changes into the CAD files as they occur and send updated CAD files to				
	SPU_CADsupport@Seattle.gov on an ongoing basis (applies to both SPU and SDOT projects).

### **Frequently Asked Questions**

- **Q.** Why is it required to follow CAD standards?
- **A.** There are four main reasons:
  - 1. Readability: drawings conform to STANDARD PLAN NO 003.
  - 2. Consistent Plotting: lineweights are controlled by the SPU/SDoT color table (CTB) file.
  - 3. Ease of Data Transfer: drawing data is easily exported for field verification and GIS.
  - 4. <u>Project Efficiency:</u> maintaining coherence, minimizing wasted effort in recreating design, and maximizing the effectiveness of a project team.
- **Q.** Why is Sheet Set Manager required?
- **A.** There are many benefits to using Sheet Set Manager including easy sheet data management, detail and section referencing blocks containing dynamic fields that automatically get updated, dynamic bar codes that automatically get updated (required for archival), updatable sheet index table and batch plotting. See Section 2 in the CAD Manual for more information on setting up and using Sheet Set Manager.
- **Q.** How does file-naming work?
- **A.** Every project has a Project Tracking Number (PTN) that is used for file-naming (see the first page of this document for info on requesting a PTN for your project).

Replace [PTN] with the Project Tracking Number for these types of file names:

<u>Sheet Sets:</u> [PTN]\_[project\_name].dst

Title block sheets\* (Section 3 of CAD Manual): # [DWG].dwg

XREF drawings\*\* (Section 3 of CAD Manual): [PTN]\_X-[XXXX]-[optional\_description].dwg

PDF plan set for review: [PTN] [milestone]-[project\_name].pdf

<u>Final PDF submittal (Section 8 of CAD Manual):</u> [VPI #]-[Sheet #].pdf

**Q.** Why are DWFs requested?

<sup>\*</sup>replace [DWG] with drawing number as defined in Section 3 of the CAD Manual.

<sup>\*\*</sup>replace [XXXX] with a major layer field defined in Section 5 of the CAD Manual.

**A.** Many reviewers ask to see comparisons of a submittal to previous version and you can use Autodesk Design Review to compare one DWF to another. This is why we may request DWF files of the drawing set for every submittal. Also DWF files plot with the same fidelity as AutoCAD. See Section 8 of the CAD Manual for more information.

Q. Why are 3D surfaces and 3D utility data required?

**A.** At the time of advertisement project surveyors often ask for a LandXML file containing Civil 3D Surfaces of proposed finished grade and Civil 3D Pipe Networks or Civil 3D Profiles with PVIs matching vertical and horizontal locations pipeline inverts. A full-size DWF and PDF of the plan set should also be included with the data. See Section 6 in the CAD Manual for more information.

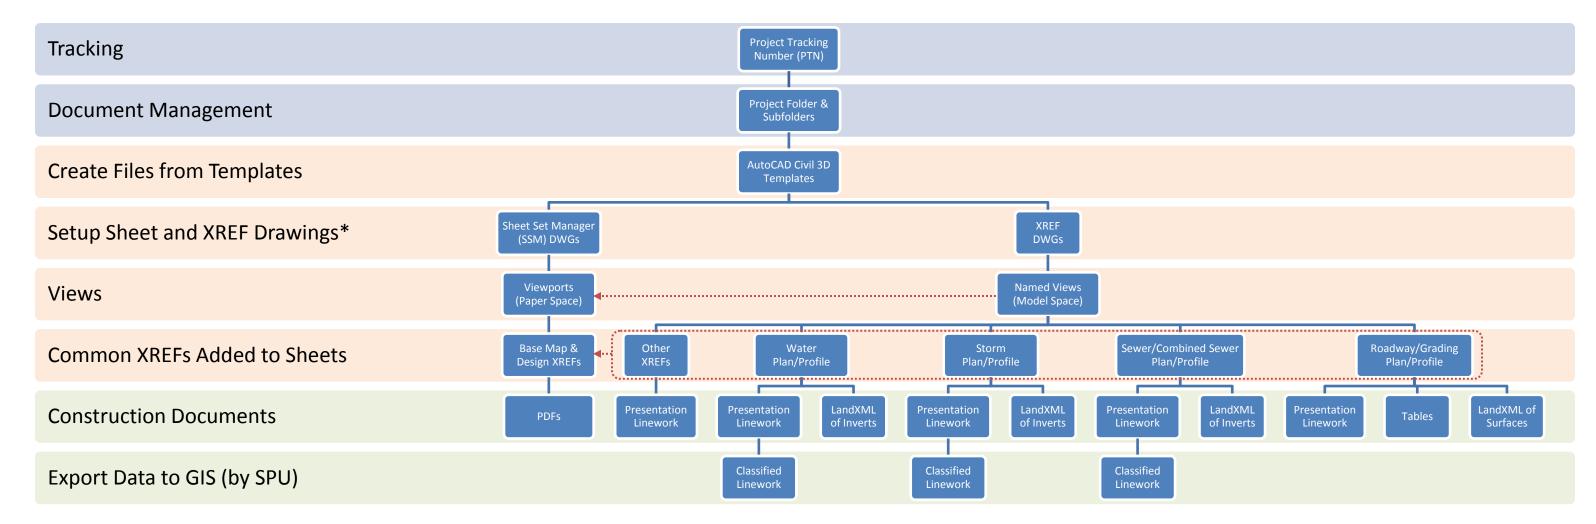

Q. Why are classified georeferenced 2D utility linework required for plans?

**A.** 2D classified horizontal/conveyance linework is required for asset onboarding. Seattle Public Utilities exports CAD data to GIS at 100% design (time of advertisement) and when Record Drawings are complete but the GIS system only accepts lines, points and polygons. In order for 2D utility linework to be exported into our GIS system, "Object Data Tables" need to be added to each 2D utility pipe ("Polylines" and "Multilines") and structure ("Blocks" or "Closed Polylines"). This process is called "Object Classification". See Section 6 in the CAD Manual for more information. Another benefit to drafting 2D linework in plan, is because you have more control over the presentation of the drawing.

Q. Am I allowed to create new layers for disciplines not defined in the CAD Manual?

**A.** Layer names for disciplines not specifically defined in the CAD Manual (such as architectural, structural or mechanical) must use layer fields shown in Section 5 of the CAD Manual or follow the naming conventions as defined in the <a href="National CAD Standards">National CAD Standards</a> (NCS). All layers must use colors shown in the plot style tables in Section 8 of the CAD Manual.

# **Typical Project Setup**

#### \*What Goes in Drawings:

# Civil 3D® DREFs

- •Corridors/Grading Objects/Feature Lines
- Alignments
- Surfaces
- •Pipe & Pressure Networks
- Data Shortcuts

#### Presentation XREFs

- •named plan, profile and civil section views
- Data References
- •classified linework w/ data
- •annotation & SSM reference callouts
- notes and legends

#### **Detail XREFs**

- •named detail & section views
- linework
- •annotation & SSM reference callouts
- •detail & section titles inserted via SSM "Sheet Views" tab

#### Sheet Drawings (Paper Space) via SSM

- •project data (via DST file)
- •title block w/ fields
- profile/section grids
- •viewports added via SSM "Model Views" tab
- •street names
- •north arrows & bar scales
