WINTER WEATHER

2015-2016

WHEN STORMS ARE HEADED OUR WAY - WE'RE PREPARING

We will plow major streets. They are the streets that are most important for getting to major public institutions such as hospitals and schools, the streets that are most frequently used by police, fire trucks and buses, and streets leading to Seattle's major employers. We do not plow non-arterial streets.

- We start preparing for winter in the summer: training staff, calibrating equipment and working with local agency partners.
- When high winds or heavy rain are forecast, our crews are ready to remove fallen trees from the road, and to repair signs and signals.
- Our supplies of salt and liquid anti-icer are ready to help keep ice from forming on main city streets and bridges.

SDOT WEBSITES WITH USEFUL INFORMATION

SDOT's winter weather website including links to maps:

www.seattle.gov/transportation/winterweather.htm

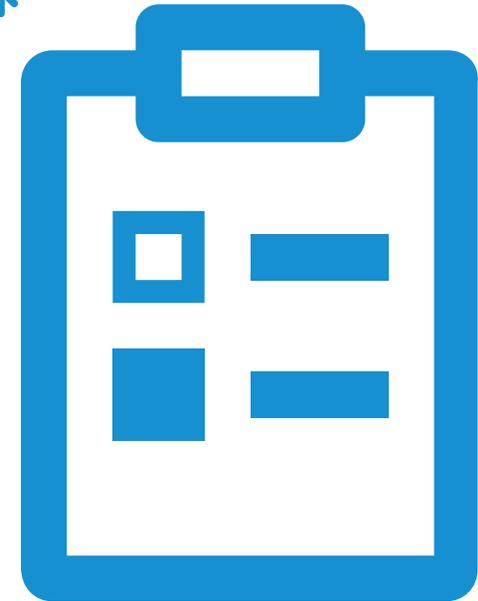

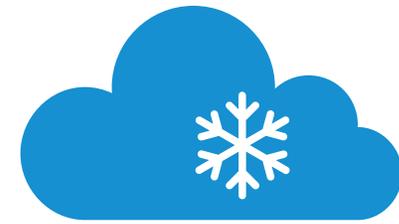

Live streaming cameras with views of major streets:

www.seattle.gov/travelers

WINTER STORMS - HERE'S OUR PLAN

In Seattle, winter can bring heavy rain, high winds, ice and snow. We're monitoring conditions.

- Our staff follows weather reports 24 hours a day, all year long, with a direct line to the National Weather Service and live Doppler radar feeds.
- We use a forecasting tool developed with the University of Washington called SNOWWATCH to learn how a storm will most likely affect different neighborhoods. This information helps determine where the crews will be needed first.
- Computerized sensors located on city bridges, and also ground surface sensors, provide timely and accurate air and roadway surface temperatures.
- We use real-time, live-streaming cameras to see actual conditions on key streets. You can see the camera views on SDOT's website, www.seattle.gov/travelers.

The City of Seattle takes a proactive approach, using best practices to respond to snow and ice:

- SDOT crews use trucks fitted with plows and salt-spreaders to keep major streets clear.
- Before the snow starts falling, the crews pre-treat key streets and bridges with anti-icer to help prevent ice from forming.
- As the snow begins to fall, the crews continue to drive their routes, treating the roadway with salt where needed. When approximately one inch of snow has accumulated, they begin plowing.
- During a snow event, a Global Positioning Satellite (GPS) system tracks the locations of the trucks. A map on SDOT's website shows where the trucks are at the current time and also which streets the trucks have already serviced. During a storm you will be able to see the map on our website at web6.seattle.gov/sdot/winterweathermap

WINTER WEATHER QUICK TIPS

DRESS FOR WINTER

HELP NEIGHBORS:

- Clear sidewalks
- Groceries, supplies

KNOW SNOW ROUTE
BUS SCHEDULE

TAKE THE BUS

CLEAR SIDEWALKS OF
LEAVES, SNOW, AND ICE

LISTEN TO WEATHER
FORECASTS

SDOT REMOVES ICE
AND SNOW FROM
MAJOR STREETS

OBEY "STREET
CLOSED" SIGNS

**STREET
CLOSED**

CAR:

- Drive in snow only if necessary
- Clear the windows
- Have good tires; traction devices ready
- Drive slower
- Leave plenty of room between cars

WHAT THE MAP SHOWS

SDOT's snow routes show the level of service planned for each street, not which streets will be plowed first. We will provide the highest level of service to the most significant streets within the City of Seattle that are maintained by the city. The state maintains I-5 and several bridges in Seattle. These streets were selected because they are the busiest streets that connect Seattle's neighborhoods with downtown and the greater Puget Sound region. They are the streets that are most important for getting to major public institutions such as hospitals and schools, the streets that are most frequently used by police, fire trucks and buses, and streets leading to Seattle's major employers. During a citywide snow storm, SDOT's strategy is to treat streets of both levels of service at the same time to keep traffic moving.

Remember, SDOT does not plow non-arterial streets.

LEVELS OF SERVICE

The map shows the different snow routes in two different colors, gold and emerald.

Gold Snow Routes: These are streets of regional importance for hospitals, buses, large trucks and major employers. SDOT's objective is to provide bare and wet pavement over all travel lanes within 12 hours of a significant lull in the storm.

Emerald Snow Routes: These are streets of citywide importance for hospitals, buses and general traffic. SDOT's objective is to provide bare and wet pavement for one lane in each direction within 12 hours of a significant lull in the storm.

COORDINATION WITH THE BUS SYSTEM

SDOT and King County Metro Transit have worked carefully to make sure that SDOT's snow routes meet the needs of the transit-riding public. The snow routes include the streets that Metro buses use when it snows.

OTHER STREETS

There are some streets that SDOT crews will not be able to plow or treat with salt. These are the lesser traveled streets, and streets on hills that often become unsafe for the public and for SDOT trucks during periods of ice and snow.

Our crews know which steep streets often become unsafe for driving when it snows. The crews store Street Closed signs on the sidewalks at the corners of these streets at the beginning of winter so they will be available when needed to close the streets. When Seattle Police Officers decide a street is unsafe for driving, they move the Street Closed signs into the middle of the road.

For your safety, it is important to obey the Street Closed signs even if a street looks safe to you. There may be ice under the snow, or there may be a trouble spot beyond your view.

SNOW/ICE SERVICE LEVEL

- **GOLD**
All travel lanes bare and wet within 12 hours of a lull in the storm
- **EMERALD**
One lane in each direction bare and wet within 12 hours of a lull in the storm
