# Evolution of Landscape Architecture Sustainability in Practice

October 22, 2014 [www.svrdesign.com](http://www.svrdesign.com)

Peg Staeheli, ASLA, PLA

PART 1: Design for Function +  
Aesthetics

PART 2: Integrate maintenance  
staff/perspective into design process

PART 3: Feedback Loop

# PART 1: Design for Function + Aesthetics

- Performance Driven
- Codes
- Layout
- Plant trends
- Soil prep and mulch
- Trees
- Prototypes

# Planting Design - Performance

- Is it part of a residential streetscape?

- or part of a downtown streetscape?

# Planting Design-function and aesthetics

- Pollinators
  - Plant palettes reflect desire to encourage pollination
- Urban food production
  - Community gardens
  - Edible plants are moving into public space. (blueberries, herbs, apple trees, etc...) where appropriate

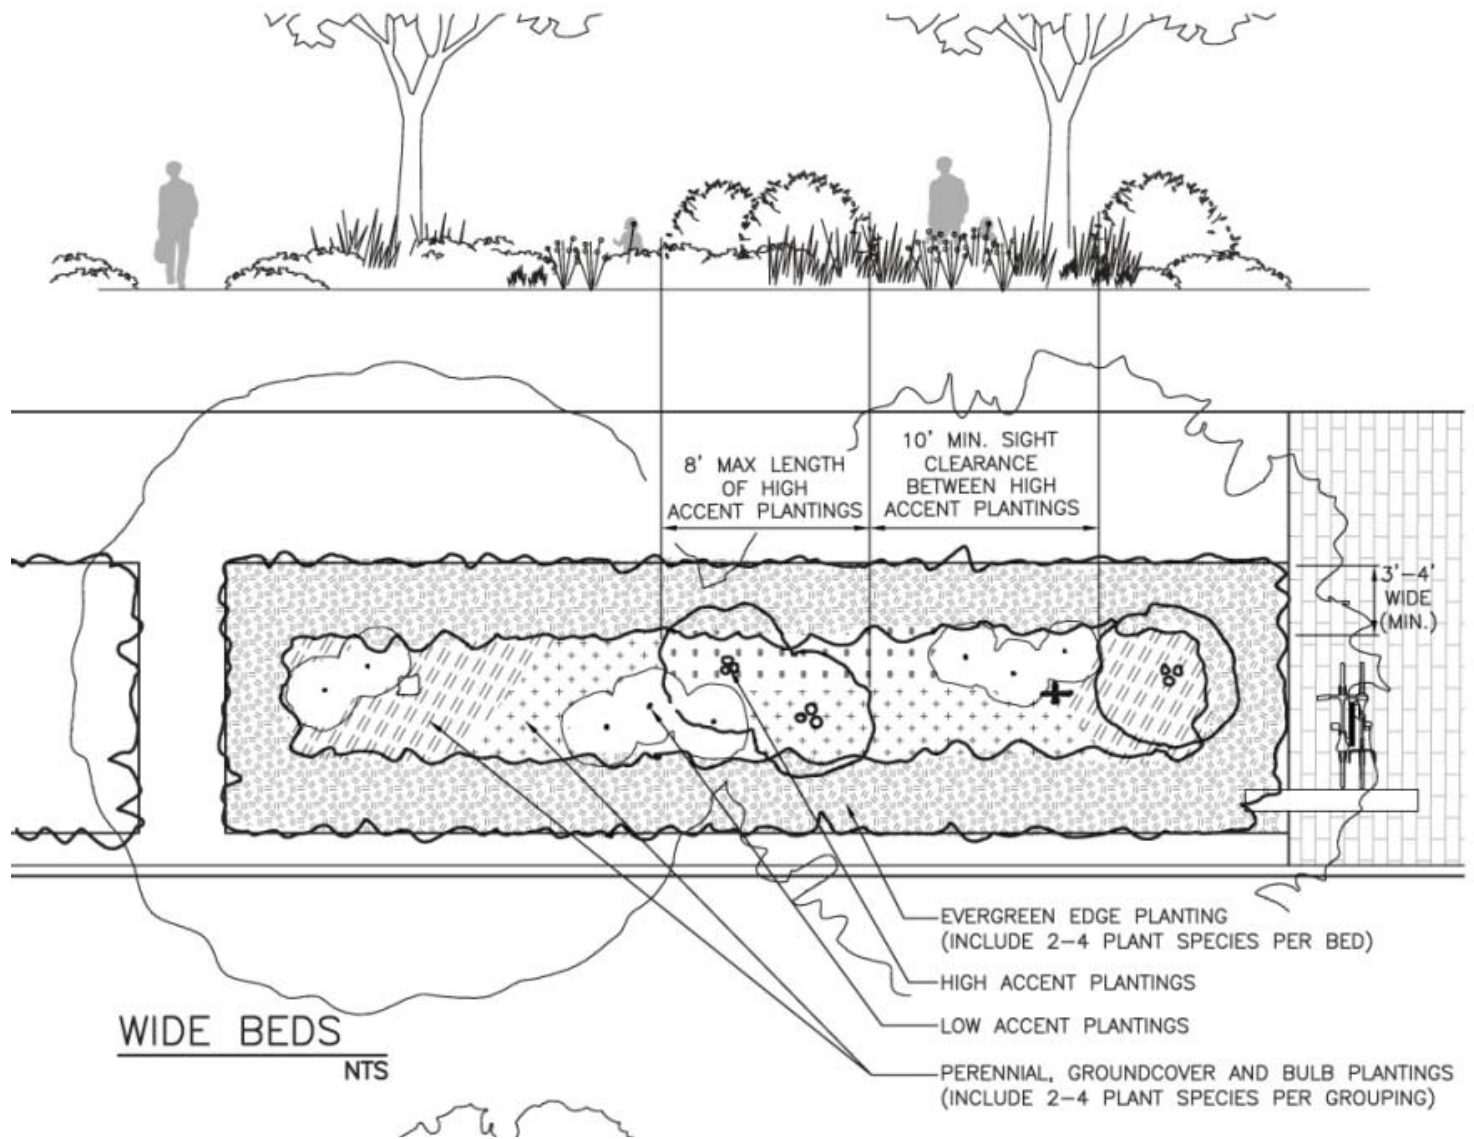

# Codes: Things to Consider

- Example Streetscapes
  - What are the city standards?
  - Keep sight lines between pedestrian and vehicular traffic open at street corners.
  - Height - CPTED
  - Tree purpose & placement
  - Who maintains?

Figure 1: Shrub height in the right-of-way

*Within 30 feet of an intersection, SDOT limits shrub height to 24". Elsewhere in the right-of-way, they may be 30". Shrubs taller than 30" subject to review.*

# Codes: Things to Consider

- Setbacks- what space and exposure exists ....and with land use changes what will be there?
- Tree Canopy Coverage – is there above and below space to allow the tree to meet the canopy goal?
- Plant mix- will the approach adapt to changing weather patterns?
- Siting - Is the siting of required natural drainage/green infrastructure techniques (BMP's) providing multiple function?

# Layout: Example Rain Garden Zones

| SYMBOL | ZONE  | PLANT TYPE   | LOCATION                                       | FUNCTION                  | PLANT HT.                                     | DECIDUOUS / EVERGREEN |
|--------|-------|--|--|---------------------------|---|-----------------------|
|        | 1     | Emergents, Perennials & Low Shrubs (sedges, rushes, grasses, irises) | Swale Bottom / Lower Slope                     | Water Quality Treatment   | 36" max.                                      | Mix                   |
|        | 2     | Steppables / Groundcovers/ Arborist Wood Chip Mulch                  | Crossing / Overflow / Curb Strip / Upper Slope | Steppable                 | 6" +/-  | Evergreen             |
|        | 2     | Pervious Concrete Path   | Crossing                                       | Access                    |   |                       |
|        | 3     | Groundcovers / Low Shrubs  | Driveway / Intersection                        | Sight Clearance / Durable | 24" max.                                      | Evergreen             |
|        | 4     | Groundcovers / Shrubs  | Sidewalk / Upper Slope                         | Accent / Border / Anchor  | 6"-36"  | Mix                   |
|        | 4     | Tall Accent Shrub  | Sidewalk / Lower Swale                         | Accent                    | 4'-6' +/-                                     | Mix                   |
|        | 4     | Small Tree / Large Shrub   | Sidewalk / Upper Slope                         | Shade / Water Quality     | 25' max.                                      | Mix                   |
|        | 2 + 4 | Tree   | Crossing / Sidewalk / Upper Slope              | Shade / Water Quality     | 20'-50' - varies based on power line location | Mix                   |

TYPICAL BIORETENTION SWALE PLANTING Z

# Rain Garden Zones of Planting

# Planting Design-Seasonal Interest – it still matters

- Spring and Summer?

- Winter interest?

# Planting Palettes

## BULB & INTERSECTION PALETTE (UNDER 24" HEIGHT)

| PLANT ID & SPECS |  | PLANT ID & SPECS |   | PLANT ID & SPECS |  |

### Bulb & Intersection Palette Characteristics

- Bright foliage
- Medium sized leaves
- Vibrant colored flowers
- Low for visibility

FOLIAGE PERIOD  
 BLOOM PERIOD  
 FALL / WINTER INTEREST  
 NWN = NORTHWEST NATIVE OR CULTIVAR

Planting Zone Plan

# Plants Trends

- Choose plants that have been tested
  - Many new varieties are beautiful...
  - Vet in real situations to determine if they are hardy, have year round viability and don't cause unnecessary maintenance
  - Please specify new varieties but mix them in with reliables

# Soil Preparation and Mulch

- Mulch
  - One word does not fit all
    - Compost
    - Mulch
    - Wood chips
    - Arborist wood chips
    - Hog fuel
  - Know what you need
  - Specify carefully
  - Request certification
- Soil preparation
  - It is now code driven
  - It service both a drainage and a plant function
  - Testing best but not always funded
  - Results definitely

# Trees: slowly being recognized for multiple functions

- Trees provide flow control via interception, transpiration, and increased infiltration. (Ecology 2012 Stormwater Manual)
- Trees reduce heat island affect
- Trees as carbon offsets

# Prototypes: From Innovation to Standard Practice

City of Seattle-DPD Tip #532  
GSI Bioretention Cells

# PART 2: Integrate maintenance staff/perspective into design process

- Reciprocal sharing design ↔ maintenance
- Who maintains?
- How to get the perspective?
- How to give the perspective?

# Plant Maintenance

- Start thinking about maintenance at the beginning of the plant design process.
- What is the level of effort that fits the project budget and staffing?
- Will the project be maintained long term by paid staff with an annual budget or will this be maintained by volunteers?
- What tidiness level is appropriate for the location and type of plantings?
- Will plantings be hand watered or automatically irrigated?

# Plant Maintenance Basics

- Plan for a high level of maintenance during the first two years.
- A minimum of two years of watering is necessary to establish plantings, even drought tolerant species.
- Weeding regularly from the time of planting until plants have filled is important to stay ahead of the weeds. Weeds also love the rich bioretention soil.
- Select plant species with an annual maintenance schedule in mind.
- Considered the experience and plant knowledge of those maintaining the rain garden when selecting and laying out plants.

# Maintenance Schedule

- Develop a maintenance schedule at-a-glance – starting during design.
- This will help identify level of effort and assist in matching your planting design to maintenance capacity.
- This also provides a tool to discuss maintenance with your client.

## Maintenance Schedule At-A-Glance

Applies to All Landscaped Areas (Non-NDS and NDS)

|           | Remove Trash | Remove Leaf and Branch Debris | Mow Lawn | Redefine Lawn Edges     | Trim Lawn | Weed Lawn Areas Including Swales | Aerate, Overseed and Topdress Lawn | Trim Planted Areas Along Paved Edges | Weed Planted Areas           | Groom Perennials and Grasses | Prune Trees and Shrubs      | Irrigation System |
|-----------|--------------|-------------------------------|----------|-------------------------|-----------|----------------------------------|------------------------------------|--------------------------------------|------------------------------|------------------------------|-----------------------------|-------------------|
| January   | 1 time/week  | 1 time/month                  |          |                         |           |                                  |                                    |                                      |                              |                              |                             |                   |
| February  | 1 time/week  | 1 time/month                  | 1 time   |                         |           |                                  |                                    |                                      | swales 1 time                |                              | Late dormant season         |                   |

| October   | 1 time/week  | 1 time/week                   | 3 times  | ... early Oct.          | 2 times   | 1 time                           | 1/3 spring and/or fall             |                                      |                              |                              | Bleeding sap pruning season |                   |
| November  | 1 time/week  | 1 time/week                   | 2 times  |                         | 1 time    |                                  |                                    |                                      |                              |                              |                             |                   |
| December  | 1 time/week  | 1 time/month                  |          |                         |           |                                  |                                    |                                      |                              |                              |                             |                   |

See pruning schedule, Section 2-44

# PART 3: FEEDBACK LOOP

- Follow up-
  - designer with contractor
  - designer with owner/maintenance staff
- Transition to maintenance and coordination with operations (as applicable)
- One year check in
- Three to Five year observations
- Mature Landscapes and adaptation
- Share

# Follow up: Designer & Contractor

# Transition to Maintenance and Coordination with Operations

Example: Discuss Level of Service Acceptable / Unacceptable

ACCEPTABLE  
MAINTENANCE

Mostly healthy vegetation with good appearance

Appearance is good

Occasional weedy species (5-10%)

Some erosion and bare spots (0-5%)

UNACCEPTABLE  
MAINTENANCE

Debris buildup

Appearance is poor

Weedy

Overgrown

# One Year Check In

AT INSTALLATION

High Point Sylvan Way SW

High Point Lanham Place SW

Ballard 28th Ave NW

Portland

1+ YEARS AFTER INSTALLATION

Photos were taken during the summer. Conditions vary with seasons.

# Three to Five Years Observe for feedback

# Mature Landscapes Intent & Adaptation

**at planting**

**9 years later**
