SITE & VICINITY

Site Zone: Lowrise 3 [LR3 (M)]

Nearby Zones: (North) Lowrise 3 [LR3 (M)]
(South) Lowrise 3 [LR3 (M)]
(East) Lowrise 3 [LR3 (M)]
(West) Lowrise 3 [LR3 (M)]

Lot Area: 7,682 sq. ft.

Overlays: Frequent Transit Service Area

Current Development:

Located at the southwest corner of 2nd Ave N and Valley St, the site is rectangular in shape and slopes downward northwest to southeast approximately 12 feet. The site houses a former church building constructed in 1912 and a single-family residence, previously the parsonage.

Surrounding Development and Neighborhood Character:

Valley Street splits at 2nd Ave, with a landscaped median accommodating the change in grade and separating east and west-bound travel lanes.

Located in the Uptown neighborhood, the site’s adjacencies include multifamily residential structures on all sides. The site is situated at a transition of uses, with multifamily and single-
family residential structures to the north and commercial, mixed-use residential and commercial, arts, and entertainment venues to the south. Roy St, a commercial corridor, is at the south end of the block, followed by Mercer St two blocks south and the Seattle Center. Moving west, Valley St intercepts Queen Anne Ave N, which provides north-south circulation through several residential neighborhoods.

The established fabric of the immediate neighborhood comprises a mixed composition of scale, massing, and density with mostly lowrise structures from one to four stories in height. Shingle, lap, brick, and stucco are prevalent façade materials. The age of existing structures varies widely, ranging from turn of the 19th century to recent construction. No one architectural style dominates. Residential structures are frequently characterized by staggered massing, which steps with the steep hillside, landscaping, private courtyards, and balconies.

**Access:**
Vehicular access is proposed from 2nd Ave S. Pedestrian access is proposed from Valley St.

**Environmentally Critical Areas:**
There are no mapped environmentally critical areas located on the site.

**PROJECT DESCRIPTION**
Streamlined Design Review for a 3-story, 6-unit rowhouse building. Parking for 6 vehicles proposed. Existing buildings to be demolished.

**PUBLIC COMMENT**
SDCI staff received the following design related comments:
- Requested eliminating the pop-up stair structure on the roof.
- Stated they would miss the historic church building.
- Concerned about the proposed height.
- Concerned about impacts to views.
- Asked for clarification about the proposed use.
- Asked if the tall, scraggly tree on the corner of 2nd Ave N and Valley St could be part of the demolition.
- Questioned why the existing church structure wasn’t designated a landmark and why it wasn’t repurposed to provide unique housing opportunities.
- Opposed to removing the large street tree at the corner of the lot and the trees on the apartment building’s lot to the south.
- Stated the row-house scale was not appropriate for the designated LR3 zoning.
SDCI received related comments concerning views, density, construction impacts, and housing affordability.

The Seattle Department of Transportation offered the following comments:

- Stated that street trees are required on both frontages.
- Noted that there are two code-compliant options for meeting the street tree requirements. The preferred option is to install a 5.5’ planting strip against the curb line with a 6’ sidewalk behind. The alternative option is to plant street trees in a continuous 5’ planting area behind the existing sidewalk.
- Did not support staging solid waste containers in the dripline of existing trees.
- Stated that bi-directional curb ramps should be installed at the corner of Valley St and 2nd Ave N.

All public comments submitted in writing for this project can be viewed using the following link and entering the record number: [http://web6.seattle.gov/dpd/edms/](http://web6.seattle.gov/dpd/edms/)

The purpose of the streamlined design review process is for SDCI to receive comments from the public, identify concerns about the site and design concept, identify applicable Seattle Design Guidelines and Neighborhood Design Guidelines of highest priority to the site and explore conceptual design and siting alternatives. Concerns with off-street parking and bicycle storage are addressed under the City’s zoning code and are not part of this review.

**PRIORITIES & SDCI STAFF RECOMMENDATIONS**

After visiting the site, considering the analysis of the site and context provided by the proponents, and hearing public comment, the Design Review Planner provides the following siting and design guidance. The report identifies the Seattle Design Guidelines & Neighborhood Design Guidelines (as applicable) of highest priority for this project.

1. Site Planning & Landscape Concept.
   a. Staff supports the overall site plan including providing vehicular access from 2nd Avenue and orienting the units and entries to Valley St. (CS2-B-1 Site Characteristics, CS2-B-2 Connection to the Street, DC1-B-1 Access Location and Design)
   b. A large area of the site is dedicated to vehicular access and maneuvering. Ensure this area does not exceed the minimum required by code and select textured, pervious paving materials. (DC1-C-2 Visual Impacts, DC4-D-2 Hardscape Materials)
   c. Staff supports the layered landscaping indicated at the unit entries. Provide a planting plan in the building permit plans which identifies specific plantings and incorporates native plants. (DC4-D-1 Choice of Plant Materials)
   d. Maintain the trash storage location in the garages and address SDOT guidance regarding the location of waste staging areas outside of the dripline of existing street trees. (DC1-C-4 Service Uses)

2. Massing & Façade Composition.
   a. The overall massing form, including the stepping of the units with the grade down Valley St. and the placement of the stair towers to the interior of the structure are
supported to reduce the perceived bulk and height. Ensure the height of the stair tower does not exceed the minimum required by code. (DC2-A Massing, CS1-C Topography)

b. The projecting bays, large windows, balconies and entry stoops provide depth and visual interest. The white frames do little to strengthen this composition or provide additional depth and aren’t necessary to demarcate the individual units. Staff recommends study of removing the framing elements to achieve a subtler composition. (DC2-B-1 façade Composition, DC2-A-2 Reducing Perceived Mass)

c. All building facades should be designed considering the composition and architectural expression of the building as a whole. The site faces onto two streets. While special attention has been paid to the Valley Street façade, the same level of detail has not been given to the 2nd Ave façade. Treat the 2nd Ave elevation as a primary façade and continue the Valley Street cladding and architectural language along the full 2nd Ave frontage. (DC2-B-1 Façade Composition, CS2-C-1 Corner Sites)

d. The south elevation is a long façade with no modulation of the massing. Break up the long massing by incorporating plane changes at material and color shifts. (DC2-B-1 Façade Composition, DC2-A-2 Reducing Perceived Mass)

e. In the building permit plans identify the location of venting and downspouts, which should be intentionally designed with consideration of the overall façade composition and architectural expression. (DC2-B-1 Façade Composition)

f. Staff strongly supports the use of brick and cedar siding cladding materials. Maintain the use of these high quality, textured materials. Provide details in the building permit plans identifying the fiber cement panel thickness and size, fastening system and reveals to ensure it will be applied and appear as a high quality material. (DC2-B-1 Façade Composition, DC4-A Building Materials, DC2-C-1 Visual Depth and Interest)

g. Staff supports the entry stoops which create a pedestrian scale and transition from public to private space. Incorporate lighting and address signage to further demarcate the entries. (PL3-B-2 Ground Level Residential, PL3-A Entries, DC2-D-1 Human Scale)

h. The west façade is located in close proximity to the adjacent residential structure. The window overlay diagram demonstrates minimal overlap with the adjacent structure, which should be maintained. (CS2-D-5 Respect for Adjacent Sites)

3. **Lighting.** Include a lighting plan in the building permit plans demonstrating how the project will provide unit entry lighting and site lighting without glare. Show and specify low level lighting at pedestrian paths, garages and at the residential entries. Ensure lighting is shielded and directed away from adjacent properties. (PL2-B-2 Lighting for Safety, DC4-C Lighting)

**DEVELOPMENT STANDARD ADJUSTMENTS**

Design Review Staff’s recommendation on the requested adjustment(s) will be based upon the adjustment’s potential to help the project better meet these design guideline priorities and achieve a better overall design than could be achieved without the adjustment(s).
At the time of Design Guidance, no adjustments were requested.

**DESIGN REVIEW GUIDELINES**
The Seattle Design Guidelines and Neighborhood Design Guidelines recognized by the Staff as Priority Guidelines are identified above. All guidelines remain applicable and are summarized below. For the full text please visit the Design Review website.

### CONTEXT & SITE

**CS1 Natural Systems and Site Features:** Use natural systems/features of the site and its surroundings as a starting point for project design.

**CS1-A Energy Use**

**CS1-A-1. Energy Choices:** At the earliest phase of project development, examine how energy choices may influence building form, siting, and orientation, and factor in the findings when making siting and design decisions.

**CS1-B Sunlight and Natural Ventilation**

**CS1-B-1. Sun and Wind:** Take advantage of solar exposure and natural ventilation. Use local wind patterns and solar gain to reduce the need for mechanical ventilation and heating where possible.

**CS1-B-2. Daylight and Shading:** Maximize daylight for interior and exterior spaces and minimize shading on adjacent sites through the placement and/or design of structures on site.

**CS1-B-3. Managing Solar Gain:** Manage direct sunlight falling on south and west facing facades through shading devices and existing or newly planted trees.

**CS1-C Topography**

**CS1-C-1. Land Form:** Use natural topography and desirable landforms to inform project design.

**CS1-C-2. Elevation Changes:** Use the existing site topography when locating structures and open spaces on the site.

**CS1-D Plants and Habitat**

**CS1-D-1. On-Site Features:** Incorporate on-site natural habitats and landscape elements into project design and connect those features to existing networks of open spaces and natural habitats wherever possible. Consider relocating significant trees and vegetation if retention is not feasible.

**CS1-D-2. Off-Site Features:** Provide opportunities through design to connect to off-site habitats such as riparian corridors or existing urban forest corridors. Promote continuous habitat, where possible, and increase interconnected corridors of urban forest and habitat where possible.

**CS1-E Water**

**CS1-E-1. Natural Water Features:** If the site includes any natural water features, consider ways to incorporate them into project design, where feasible.
CS1-E-2. Adding Interest with Project Drainage: Use project drainage systems as opportunities to add interest to the site through water-related design elements.

CS2 Urban Pattern and Form: Strengthen the most desirable forms, characteristics, and patterns of the streets, block faces, and open spaces in the surrounding area.

CS2-A Location in the City and Neighborhood
CS2-A-1. Sense of Place: Emphasize attributes that give a distinctive sense of place. Design the building and open spaces to enhance areas where a strong identity already exists, and create a sense of place where the physical context is less established.

CS2-A-2. Architectural Presence: Evaluate the degree of visibility or architectural presence that is appropriate or desired given the context, and design accordingly.

CS2-B Adjacent Sites, Streets, and Open Spaces
CS2-B-1. Site Characteristics: Allow characteristics of sites to inform the design, especially where the street grid and topography create unusually shaped lots that can add distinction to the building massing.

CS2-B-2. Connection to the Street: Identify opportunities for the project to make a strong connection to the street and public realm.

CS2-B-3. Character of Open Space: Contribute to the character and proportion of surrounding open spaces.

CS2-C Relationship to the Block
CS2-C-1. Corner Sites: Corner sites can serve as gateways or focal points; both require careful detailing at the first three floors due to their high visibility from two or more streets and long distances.

CS2-C-2. Mid-Block Sites: Look to the uses and scales of adjacent buildings for clues about how to design a mid-block building. Continue a strong street-edge and respond to datum lines of adjacent buildings at the first three floors.

CS2-C-3. Full Block Sites: Break up long facades of full-block buildings to avoid a monolithic presence. Provide detail and human scale at street-level, and include repeating elements to add variety and rhythm to the façade and overall building design.

CS2-D Height, Bulk, and Scale
CS2-D-1. Existing Development and Zoning: Review the height, bulk, and scale of neighboring buildings as well as the scale of development anticipated by zoning for the area to determine an appropriate complement and/or transition.

CS2-D-2. Existing Site Features: Use changes in topography, site shape, and vegetation or structures to help make a successful fit with adjacent properties.

CS2-D-3. Zone Transitions: For projects located at the edge of different zones, provide an appropriate transition or complement to the adjacent zone(s). Projects should create a step in perceived height, bulk and scale between the anticipated development potential of the adjacent zone and the proposed development.

CS2-D-4. Massing Choices: Strive for a successful transition between zones where a project abuts a less intense zone.

CS2-D-5. Respect for Adjacent Sites: Respect adjacent properties with design and site planning to minimize disrupting the privacy of residents in adjacent buildings.
CS3 Architectural Context and Character: Contribute to the architectural character of the neighborhood.

CS3-A Emphasizing Positive Neighborhood Attributes

CS3-A-1. Fitting Old and New Together: Create compatibility between new projects, and existing architectural context, including historic and modern designs, through building articulation, scale and proportion, roof forms, detailing, fenestration, and/or the use of complementary materials.

CS3-A-2. Contemporary Design: Explore how contemporary designs can contribute to the development of attractive new forms and architectural styles; as expressed through use of new materials or other means.

CS3-A-3. Established Neighborhoods: In existing neighborhoods with a well-defined architectural character, site and design new structures to complement or be compatible with the architectural style and siting patterns of neighborhood buildings.

CS3-A-4. Evolving Neighborhoods: In neighborhoods where architectural character is evolving or otherwise in transition, explore ways for new development to establish a positive and desirable context for others to build upon in the future.

CS3-B Local History and Culture

CS3-B-1. Placemaking: Explore the history of the site and neighborhood as a potential placemaking opportunity. Look for historical and cultural significance, using neighborhood groups and archives as resources.

CS3-B-2. Historical/Cultural References: Reuse existing structures on the site where feasible as a means of incorporating historical or cultural elements into the new project.

PUBLIC LIFE

PL1 Connectivity: Complement and contribute to the network of open spaces around the site and the connections among them.

PL1-A Network of Open Spaces

PL1-A-1. Enhancing Open Space: Design the building and open spaces to positively contribute to a broader network of open spaces throughout the neighborhood.

PL1-A-2. Adding to Public Life: Seek opportunities to foster human interaction through an increase in the size and quality of project-related open space available for public life.

PL1-B Walkways and Connections

PL1-B-1. Pedestrian Infrastructure: Connect on-site pedestrian walkways with existing public and private pedestrian infrastructure, thereby supporting pedestrian connections within and outside the project.

PL1-B-2. Pedestrian Volumes: Provide ample space for pedestrian flow and circulation, particularly in areas where there is already heavy pedestrian traffic or where the project is expected to add or attract pedestrians to the area.

PL1-B-3. Pedestrian Amenities: Opportunities for creating lively, pedestrian oriented open spaces to enliven the area and attract interest and interaction with the site and building should be considered.

PL1-C Outdoor Uses and Activities
**PL1-C-1. Selecting Activity Areas:** Concentrate activity areas in places with sunny exposure, views across spaces, and in direct line with pedestrian routes.

**PL1-C-2. Informal Community Uses:** In addition to places for walking and sitting, consider including space for informal community use such as performances, farmer’s markets, kiosks and community bulletin boards, cafes, or street vending.

**PL1-C-3. Year-Round Activity:** Where possible, include features in open spaces for activities beyond daylight hours and throughout the seasons of the year, especially in neighborhood centers where active open space will contribute vibrancy, economic health, and public safety.

**PL2 Walkability:** Create a safe and comfortable walking environment that is easy to navigate and well-connected to existing pedestrian walkways and features.

**PL2-A Accessibility**
- **PL2-A-1. Access for All:** Provide access for people of all abilities in a manner that is fully integrated into the project design. Design entries and other primary access points such that all visitors can be greeted and welcomed through the front door.
- **PL2-A-2. Access Challenges:** Add features to assist pedestrians in navigating sloped sites, long blocks, or other challenges.

**PL2-B Safety and Security**
- **PL2-B-1. Eyes on the Street:** Create a safe environment by providing lines of sight and encouraging natural surveillance.
- **PL2-B-2. Lighting for Safety:** Provide lighting at sufficient lumen intensities and scales, including pathway illumination, pedestrian and entry lighting, and/or security lights.
- **PL2-B-3. Street-Level Transparency:** Ensure transparency of street-level uses (for uses such as nonresidential uses or residential lobbies), where appropriate, by keeping views open into spaces behind walls or plantings, at corners, or along narrow passageways.

**PL2-C Weather Protection**
- **PL2-C-1. Locations and Coverage:** Overhead weather protection is encouraged and should be located at or near uses that generate pedestrian activity such as entries, retail uses, and transit stops.
- **PL2-C-2. Design Integration:** Integrate weather protection, gutters and downspouts into the design of the structure as a whole, and ensure that it also relates well to neighboring buildings in design, coverage, or other features.
- **PL2-C-3. People-Friendly Spaces:** Create an artful and people-friendly space beneath building.

**PL2-D Wayfinding**
- **PL2-D-1. Design as Wayfinding:** Use design features as a means of wayfinding wherever possible.

**PL3 Street-Level Interaction:** Encourage human interaction and activity at the street-level with clear connections to building entries and edges.

**PL3-A Entries**
- **PL3-A-1. Design Objectives:** Design primary entries to be obvious, identifiable, and distinctive with clear lines of sight and lobbies visually connected to the street.
PL3-A-2. **Common Entries**: Multi-story residential buildings need to provide privacy and security for residents but also be welcoming and identifiable to visitors.

PL3-A-3. **Individual Entries**: Ground-related housing should be scaled and detailed appropriately to provide for a more intimate type of entry.

PL3-A-4. **Ensemble of Elements**: Design the entry as a collection of coordinated elements including the door(s), overhead features, ground surface, landscaping, lighting, and other features.

**PL3-B Residential Edges**

PL3-B-1. **Security and Privacy**: Provide security and privacy for residential buildings through the use of a buffer or semi-private space between the development and the street or neighboring buildings.

PL3-B-2. **Ground-level Residential**: Privacy and security issues are particularly important in buildings with ground-level housing, both at entries and where windows are located overlooking the street.

PL3-B-3. **Buildings with Live/Work Uses**: Maintain active and transparent facades in the design of live/work residences. Design the first floor so it can be adapted to other commercial use as needed in the future.

PL3-B-4. **Interaction**: Provide opportunities for interaction among residents and neighbors.

**PL3-C Retail Edges**

PL3-C-1. **Porous Edge**: Engage passersby with opportunities to interact visually with the building interior using glazing and transparency. Create multiple entries where possible and make a physical and visual connection between people on the sidewalk and retail activities in the building.

PL3-C-2. **Visibility**: Maximize visibility into the building interior and merchandise displays. Consider fully operational glazed wall-sized doors that can be completely opened to the street, increased height in lobbies, and/or special lighting for displays.

PL3-C-3. **Ancillary Activities**: Allow space for activities such as sidewalk vending, seating, and restaurant dining to occur. Consider setting structures back from the street or incorporating space in the project design into which retail uses can extend.

**PL4 Active Transportation**: Incorporate design features that facilitate active forms of transportation such as walking, bicycling, and use of transit.

**PL4-A Entry Locations and Relationships**

PL4-A-1. **Serving all Modes of Travel**: Provide safe and convenient access points for all modes of travel.

PL4-A-2. **Connections to All Modes**: Site the primary entry in a location that logically relates to building uses and clearly connects all major points of access.

**PL4-B Planning Ahead for Bicyclists**

PL4-B-1. **Early Planning**: Consider existing and future bicycle traffic to and through the site early in the process so that access and connections are integrated into the project along with other modes of travel.
PL4-B-2. Bike Facilities: Facilities such as bike racks and storage, bike share stations, shower facilities and lockers for bicyclists should be located to maximize convenience, security, and safety.

PL4-B-3. Bike Connections: Facilitate connections to bicycle trails and infrastructure around and beyond the project.

PL4-C Planning Ahead For Transit
PL4-C-1. Influence on Project Design: Identify how a transit stop (planned or built) adjacent to or near the site may influence project design, provide opportunities for placemaking.

PL4-C-2. On-site Transit Stops: If a transit stop is located onsite, design project-related pedestrian improvements and amenities so that they complement any amenities provided for transit riders.

PL4-C-3. Transit Connections: Where no transit stops are on or adjacent to the site, identify where the nearest transit stops and pedestrian routes are and include design features and connections within the project design as appropriate.

DESIGN CONCEPT

DC1 Project Uses and Activities: Optimize the arrangement of uses and activities on site.

DC1-A Arrangement of Interior Uses
DC1-A-1. Visibility: Locate uses and services frequently used by the public in visible or prominent areas, such as at entries or along the street front.
DC1-A-3. Flexibility: Build in flexibility so the building can adapt over time to evolving needs, such as the ability to change residential space to commercial space as needed.
DC1-A-4. Views and Connections: Locate interior uses and activities to take advantage of views and physical connections to exterior spaces and uses.

DC1-B Vehicular Access and Circulation
DC1-B-1. Access Location and Design: Choose locations for vehicular access, service uses, and delivery areas that minimize conflict between vehicles and non-motorists wherever possible. Emphasize use of the sidewalk for pedestrians, and create safe and attractive conditions for pedestrians, bicyclists, and drivers.

DC1-B-2. Facilities for Alternative Transportation: Locate facilities for alternative transportation in prominent locations that are convenient and readily accessible to expected users.

DC1-C Parking and Service Uses
DC1-C-1. Below-Grade Parking: Locate parking below grade wherever possible. Where a surface parking lot is the only alternative, locate the parking in rear or side yards, or on lower or less visible portions of the site.
DC1-C-2. Visual Impacts: Reduce the visual impacts of parking lots, parking structures, entrances, and related signs and equipment as much as possible.
DC1-C-3. **Multiple Uses:** Design parking areas to serve multiple uses such as children’s play space, outdoor gathering areas, sports courts, woonerf, or common space in multifamily projects.

DC1-C-4. **Service Uses:** Locate and design service entries, loading docks, and trash receptacles away from pedestrian areas or to a less visible portion of the site to reduce possible impacts of these facilities on building aesthetics and pedestrian circulation.

**DC2 Architectural Concept:** Develop an architectural concept that will result in a unified and functional design that fits well on the site and within its surroundings.

**DC2-A Massing**

DC2-A-1. **Site Characteristics and Uses:** Arrange the mass of the building taking into consideration the characteristics of the site and the proposed uses of the building and its open space.

DC2-A-2. **Reducing Perceived Mass:** Use secondary architectural elements to reduce the perceived mass of larger projects.

**DC2-B Architectural and Facade Composition**

DC2-B-1. **Facades Composition:** Design all building facades—including alleys and visible roofs—considering the composition and architectural expression of the building as a whole. Ensure that all facades are attractive and well-proportioned.

DC2-B-2. **Blank Walls:** Avoid large blank walls along visible façades wherever possible. Where expanses of blank walls, retaining walls, or garage facades are unavoidable, include uses or design treatments at the street level that have human scale and are designed for pedestrians.

**DC2-C Secondary Architectural Features**

DC2-C-1. **Visual Depth and Interest:** Add depth to facades where appropriate by incorporating balconies, canopies, awnings, decks, or other secondary elements into the façade design. Add detailing at the street level in order to create interest for the pedestrian and encourage active street life and window shopping (in retail areas).

DC2-C-2. **Dual Purpose Elements:** Consider architectural features that can be dual purpose—adding depth, texture, and scale as well as serving other project functions.

DC2-C-3. **Fit With Neighboring Buildings:** Use design elements to achieve a successful fit between a building and its neighbors.

**DC2-D Scale and Texture**

DC2-D-1. **Human Scale:** Incorporate architectural features, elements, and details that are of human scale into the building facades, entries, retaining walls, courtyards, and exterior spaces in a manner that is consistent with the overall architectural concept.

DC2-D-2. **Texture:** Design the character of the building, as expressed in the form, scale, and materials, to strive for a fine-grained scale, or “texture,” particularly at the street level and other areas where pedestrians predominate.

**DC2-E Form and Function**

DC2-E-1. **Legibility and Flexibility:** Strive for a balance between building use legibility and flexibility. Design buildings such that their primary functions and uses can be readily determined from the exterior, making the building easy to access and understand. At
the same time, design flexibility into the building so that it may remain useful over time even as specific programmatic needs evolve.

**DC3 Open Space Concept: Integrate open space design with the building design so that they complement each other.**

**DC3-A Building-Open Space Relationship**

**DC3-A-1. Interior/Exterior Fit:** Develop an open space concept in conjunction with the architectural concept to ensure that interior and exterior spaces relate well to each other and support the functions of the development.

**DC3-B Open Space Uses and Activities**

**DC3-B-1. Meeting User Needs:** Plan the size, uses, activities, and features of each open space to meet the needs of expected users, ensuring each space has a purpose and function.

**DC3-B-2. Matching Uses to Conditions:** Respond to changing environmental conditions such as seasonal and daily light and weather shifts through open space design and/or programming of open space activities.

**DC3-B-3. Connections to Other Open Space:** Site and design project-related open spaces to connect with, or enhance, the uses and activities of other nearby public open space where appropriate.

**DC3-B-4. Multifamily Open Space:** Design common and private open spaces in multifamily projects for use by all residents to encourage physical activity and social interaction.

**DC3-C Design**

**DC3-C-1. Reinforce Existing Open Space:** Where a strong open space concept exists in the neighborhood, reinforce existing character and patterns of street tree planting, buffers or treatment of topographic changes. Where no strong patterns exist, initiate a strong open space concept that other projects can build upon in the future.

**DC3-C-2. Amenities/Features:** Create attractive outdoor spaces suited to the uses envisioned for the project.

**DC3-C-3. Support Natural Areas:** Create an open space design that retains and enhances onsite natural areas and connects to natural areas that may exist off-site and may provide habitat for wildlife.

**DC4 Exterior Elements and Finishes: Use appropriate and high quality elements and finishes for the building and its open spaces.**

**DC4-A Building Materials**

**DC4-A-1. Exterior Finish Materials:** Building exteriors should be constructed of durable and maintainable materials that are attractive even when viewed up close. Materials that have texture, pattern, or lend themselves to a high quality of detailing are encouraged.

**DC4-A-2. Climate Appropriateness:** Select durable and attractive materials that will age well in Seattle’s climate, taking special care to detail corners, edges, and transitions.

**DC4-B Signage**
DC4-B-1. **Scale and Character:** Add interest to the streetscape with exterior signs and attachments that are appropriate in scale and character to the project and its environs.

**DC4-B-2. Coordination with Project Design:** Develop a signage plan within the context of architectural and open space concepts, and coordinate the details with façade design, lighting, and other project features to complement the project as a whole, in addition to the surrounding context.

**DC4-C Lighting**

**DC4-C-1. Functions:** Use lighting both to increase site safety in all locations used by pedestrians and to highlight architectural or landscape details and features such as entries, signs, canopies, plantings, and art.

**DC4-C-2. Avoiding Glare:** Design project lighting based upon the uses on and off site, taking care to provide illumination to serve building needs while avoiding off-site night glare and light pollution.

**DC4-D Trees, Landscape, and Hardscape Materials**

**DC4-D-1. Choice of Plant Materials:** Reinforce the overall architectural and open space design concepts through the selection of landscape materials.

**DC4-D-2. Hardscape Materials:** Use exterior courtyards, plazas, and other hard surfaced areas as an opportunity to add color, texture, and/or pattern and enliven public areas through the use of distinctive and durable paving materials. Use permeable materials wherever possible.

**DC4-D-3. Long Range Planning:** Select plants that upon maturity will be of appropriate size, scale, and shape to contribute to the site as intended.

**DC4-D-4. Place Making:** Create a landscape design that helps define spaces with significant elements such as trees.

**DC4-E Project Assembly and Lifespan**

**DC4-E-1. Deconstruction:** When possible, design the project so that it may be deconstructed at the end of its useful lifetime, with connections and assembly techniques that will allow reuse of materials.

**STAFF DIRECTION**

At the conclusion of the Design Guidance, the SDCI Staff recommended the project should move forward to building permit application in response to the Design Guidance provided.

1. Please be aware that this report is an assessment on how the project is meeting the intent of the Design Guidelines. This review does not include a full zoning review. Zoning review will occur when the MUP plans and/or building permit is submitted. If needed and where applicable, SDR adjustments may be requested in response to zoning corrections. Any changes to adjustments that occur during review of the building permit will be documented in a letter to the project file.

2. If applicable, please prepare your Master Use Permit for SEPA review with a thorough zoning analysis listing the 23.45 and SMC 23.54 code section criteria, showing both required
and proposed information (include page number where you graphically show compliance). You may want to review Tip 201 (http://web1.seattle.gov/dpd/cams/CamList.aspx) and may also want to review the MUP information here: http://www.seattle.gov/dpd/permits/permittypes/mupoverview/default.htm

3. Along with your building permit application, please include a narrative response to the guidance provided in this report. This response should be submitted both as a separate document and included in the plans.

4. All requested adjustments must be clearly documented in the building permit plans.
