

The applicant's proposal is to provide a multifamily dwelling project of eight (8) three story townhouses. Rooftop decks are proposed on each unit. Twelve (12) parking spaces are proposed with alley access only. The application includes landscaped entries and site landscaping.

The project is subject to Streamlined Design Review, a design process described in SMC 23.41.018. The applicant received design guidance from the planner based on the Seattle Guidelines, neighborhood guidelines if applicable, the underlying zone, site analysis, opportunities and constraints of the location and neighborhood characteristics. The applicant may request certain development standard adjustments per SMC 23.41.018 and they may be granted if the resulting design helps the project better meet design guidance. The design guidance and supporting documentation is located in the electronic project file under this project number 3016265.

Public Comments

Comment letters were received during the official public comment period which ended on May 14, 2014.

ANALYSIS - SEPA

Environmental review resulting in a Threshold Determination is required pursuant to the Seattle State Environmental Policy Act (SEPA), WAC 197-11, and the Seattle SEPA Ordinance (Seattle Municipal Code Chapter 25.05)

The initial disclosure of the potential impacts from this project was made in the environmental checklist submitted by the applicant. The Department of Planning and Development has analyzed and annotated the environmental checklist submitted by the project applicant; reviewed the project plans and any additional information in the file and any pertinent comments which may have been received regarding this proposed action have been considered. As indicated in the checklist, this action may result in adverse impacts to the environment. However, due to their temporary nature or limited effects, the impacts are not expected to be significant.

The SEPA Overview Policy (SMC 25.05.665) clarifies the relationship between codes, policies, and environmental review. Specific policies for each element of the environment, and certain neighborhood plans and other policies explicitly referenced, may serve as the basis for exercising substantive SEPA authority. The Overview Policy states, in part, "*Where City regulations have been adopted to address an environmental impact, it shall be presumed that such regulations are adequate to achieve sufficient mitigation*" subject to some limitations.

Codes and development regulations applicable to this proposed project will provide sufficient mitigation for short and/or long term impacts. Applicable codes may include the Stormwater Code (SMC 22.800-808), the Grading Code (SMC 22.170), the Street Use Ordinance (SMC Title 15), the Seattle Building Code, and the Noise Control Ordinance (SMC 25.08). Puget Sound Clean Air Agency regulations require control of fugitive dust to protect air quality.

Short Term Impacts

The following temporary or construction-related impacts are expected: temporary soil erosion; decreased air quality due to increased dust and other suspended air particulates during excavation, filling and transport of materials to and from the site; increased noise and vibration from construction operations and equipment; increased traffic and parking demand from construction personnel traveling to and from the work site; consumption of renewable and non-renewable resources; disruption of utilities serving the area; and conflict with normal pedestrian movement adjacent to the site. Compliance with applicable codes and ordinances will reduce or eliminate most adverse short-term impacts to the environment.

Greenhouse gas emissions- Construction activities including construction worker commutes, truck trips, the operation of construction equipment and machinery, and the manufacture of the construction materials themselves result in increases in carbon dioxide and other greenhouse gas emissions which adversely impact air quality and contribute to climate change and global warming. While these impacts are adverse, they are not expected to be significant due to the relatively minor contribution of greenhouse gas emissions from this project.

No further conditioning or mitigation is warranted pursuant to specific environmental policies or the SEPA Overview Policy (SMC 25.05.665).

Long Term Impacts

Long term or use-related impacts are also anticipated as a result of this proposal, including: increased surface water runoff due to greater site coverage by impervious surfaces; increased bulk and scale on the site; increased traffic in the area and increased demand for parking; increased demand for public services and utilities; loss of plant and animal habitat; and increased light and glare. Compliance with applicable codes and ordinances will reduce or eliminate most adverse long-term impacts to the environment.

Greenhouse gas emissions- Operational activities, primarily vehicular trips associated with the project and the projects' energy consumption, are expected to result in increases in carbon dioxide and other greenhouse gas emissions which adversely impact air quality and contribute to climate change and global warming. While these impacts are adverse, they are not expected to be significant due to the relatively minor contribution of greenhouse gas emissions from this project.

No further conditioning or mitigation is warranted pursuant to specific environmental policies or the SEPA Overview Policy (SMC 25.05.665).

DECISION – SEPA

This decision was made after review by the responsible official on behalf of the lead agency of a completed environmental checklist and other information on file with the responsible department. This constitutes the Threshold Determination and form. The intent of this declaration is to satisfy the requirement of the State Environmental Policy Act (RCW 43.21.C), including the requirement to inform the public of agency decisions pursuant to SEPA.

- Determination of Non-Significance. This proposal has been determined to not have a significant adverse impact upon the environment. An EIS is not required under RCW 43.21.030(2) (c).

The lead agency for this proposal has determined that it does not have a probable significant adverse impact on the environment. An environmental impact statement (EIS) is not required under RCW [43.21C.030](#) (2)(c). This decision was made after review of a completed environmental checklist and other information on file with the lead agency. This information is available to the public on request.

This DNS is issued after using the optional DNS process in WAC [197-11-355](#) and Early review DNS process in SMC 25.05.355. There is no further comment period on the DNS.

CONDITIONS – SEPA

None required.
