**CITY OF SEATTLE
ANALYSIS AND DECISION OF THE DIRECTOR OF
THE SEATTLE DEPARTMENT OF CONSTRUCTION AND INSPECTIONS**

Application Number: 3023229
Applicant Name: Akasha Whoolery
Address of Proposal: 5029 Delridge Way SW

SUMMARY OF PROPOSED ACTION

Land Use Application to allow three single family and one two-unit townhouse structures (five units total) in an environmentally critical area. Parking for five vehicles to be provided within the structures. Existing structures to be demolished. Environmental review includes future unit lot subdivision.

The following approval is required:

SEPA - Environmental Threshold Determination (Seattle Municipal Code (SMC)
Chapter 25.05)

SEPA DETERMINATION:

Determination of Non-significance

- No mitigating conditions of approval are imposed.
- Pursuant to SEPA substantive authority provided in SMC 25.05.660, the proposal has been conditioned to mitigate environmental impacts

BACKGROUND

The site was granted Relief on Steep Slope Development by the SDCI Geotechnical Engineer on February 19, 2016: Based on a review of the City GIS system and the submitted information (including the November 9, 2015 “Geotechnical Engineering Study, Proposed Townhomes, 5029 Delridge Way Southwest, Seattle, Washington”, by Geotech Consultants, Inc.), SDCI concluded that the steep slope area on and adjacent to the site appeared to be less than 20 feet in height and

more than 30 feet away from the top or bottom of other steep slope areas. Consequently, the project qualified for the Relief From Prohibition On Steep Slope Development, as described in SMC 25.09.180 B2c. An Environmentally Critical Area (ECA) Steep Slope Area Variance, or an Exception, was determined to not be required for this application. Except as described herein, the remaining Environmentally Critical Areas requirements apply.

SITE AND VICINITY

Site Zone: Lowrise 2 (LR2)

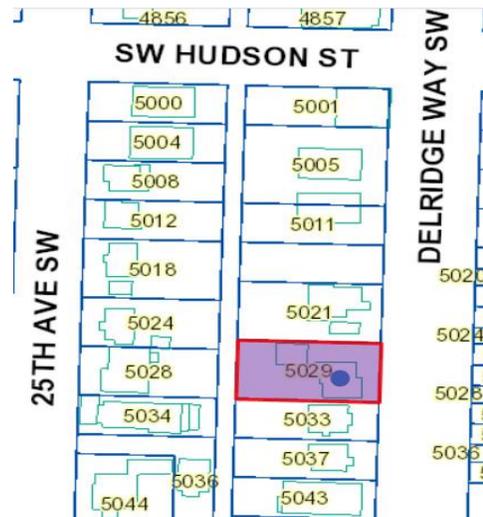

Nearby Zones: North: LR2
South: LR2
West: SF 5000
East: LR2

ECAs: Steep slopes, slopes exceeding 40% are located west and north of the existing house on the site.

Site Size: 7,455 square feet

Public Comment:

The public comment period ended on February 17, 2016. No comments were received.

ANALYSIS – SEPA

The project site is located in an environmentally critical area, as noted above. Proposals located in landslide prone areas (i.e. known landslide areas, potential landslide areas, and steep slopes), may require environmental review (SMC 25.05.908); thus this application is not exempt from SEPA review. However, the scope of environmental review of projects within these critical areas is limited to: 1) documenting whether the proposal is consistent with the City’s Environmentally Critical Areas (ECA) regulations in SMC 25.09; and 2) Evaluating potentially significant impacts on the critical area resources not adequately addressed in the ECA regulations. This review includes identifying additional mitigation measures needed to protect the ECA in order to achieve consistency with SEPA and other applicable environmental laws.

Environmental review resulting in a Threshold Determination is required pursuant to the State Environmental Policy Act (SEPA), WAC 197-11, and the Seattle SEPA Ordinance (Seattle Municipal Code Chapter 25.05).

The initial disclosure of the potential impacts from this project was made in the environmental checklist submitted by the applicant dated January 15, 2016. The Seattle Department of Construction and Inspections (SDCI) has annotated the environmental checklist submitted by the project applicant; reviewed the project plans and any additional information in the project file submitted by the applicant or agents; and any pertinent comments which may have been received regarding this proposed action have been considered. The information in the checklist, the supplemental information, and the experience of the lead agency with the review of similar projects form the basis for this analysis and decision.

City codes and/or ordinances apply to the proposal and will provide mitigation for some of the identified impacts. Specifically, these are: the Stormwater Code (SMC 22.800-808), the Grading Code (SMC 22.170), the Street Use Ordinance (SMC Title 15), the Seattle Building Code, and Regulations for Environmentally Critical Areas (SMC 25.09).

The SEPA Overview Policy (SMC 25.05.665) clarifies the relationship between codes, policies, and environmental review. Specific policies for each element of the environment, and certain neighborhood plans and other policies explicitly referenced, may serve as the basis for exercising substantive SEPA authority. The Overview Policy states, in part, “*Where City regulations have been adopted to address and environmental impact, it shall be presumed that such regulations are adequate to achieve sufficient mitigation*” subject to some limitations.

Under such limitations or circumstances (SMC 25.05.665 D) mitigation can be considered. Thus, a more detailed discussion of some of the impacts is appropriate. Short-term and long-term adverse impacts are anticipated from the proposal.

Short-term Impacts

The following temporary or construction-related impacts on the environmentally critical area are expected: 1) temporary soil erosion; and 2) greenhouse gas emissions. These impacts are not considered significant because they are temporary and/or minor in scope (SMC 25.05.794).

Greenhouse Gas Emissions

Construction activities including construction worker commutes, truck trips, the operation of construction equipment and machinery, and the manufacture of the construction materials themselves result in increases in carbon dioxide and other greenhouse gas emissions which adversely impact air quality and contribute to climate change and global warming. While these impacts are adverse, they are not expected to be significant. No further mitigation is warranted pursuant to SMC 25.05.675.A.

Earth / Soils

The ECA Ordinance and Director’s Rule (DR) 5-2016 require submission of a soils report to evaluate the site conditions and provide recommendations for safe construction in landslide prone areas. Pursuant to this requirement the applicant submitted a geotechnical engineering study (Geotechnical Engineering Study, Proposed Townhomes 5029 Delridge Way Southwest Seattle Washington, November 9, 2015 by Geotech Consultants, Inc. and subsequent letter dated January 12, 2016 by Geotech Consultants, Inc.). The study and letter have been reviewed and approved by SDCI’s geotechnical experts, who will require what is needed for the proposed work to proceed without undue risk to the property or to adjacent properties. The existing Grading and Stormwater Codes will sufficiently mitigate adverse impacts to the ECAs. No additional conditioning is warranted pursuant to SEPA policies (SMC 25.05.675.D).

Long Term Impacts

Long term or use-related impacts on the environmentally critical area are also anticipated as a result of this proposal, including: increased surface water runoff due to greater site coverage by impervious surfaces; loss of plant and animal habitat. Compliance with applicable codes and ordinances will reduce or eliminate most adverse long-term impacts to the environment.

No additional conditioning is warranted pursuant to SEPA policies.

DECISION – SEPA

This decision was made after review by the responsible official on behalf of the lead agency of a completed environmental checklist and other information on file with the responsible department. This constitutes the Threshold Determination and form. The intent of this declaration is to satisfy the requirement of the State Environmental Policy Act (RCW 43.21.C), including the requirement to inform the public of agency decisions pursuant to SEPA.

- Determination of Non-Significance. This proposal has been determined to not have a significant adverse impact upon the environment. An EIS is not required under RCW 43.21.030(2) (c).

The lead agency for this proposal has determined that it does not have a probable significant adverse impact on the environment. An environmental impact statement (EIS) is not required under RCW [43.21C.030](#) (2)(c). This decision was made after review of a completed environmental checklist and other information on file with the lead agency. This information is available to the public on request.

This DNS is issued after using the optional DNS process in WAC [197-11-355](#) and Early review DNS process in SMC 25.05.355. There is no further comment period on the DNS.

CONDITIONS – SEPA

None.

Sean Conrad, Land Use Planner
Seattle Department of Construction and Inspections

IMPORTANT INFORMATION FOR ISSUANCE OF YOUR MASTER USE PERMIT

Master Use Permit Expiration and Issuance

The appealable land use decision on your Master Use Permit (MUP) application has now been published. At the conclusion of the appeal period, your permit will be considered “approved for issuance”. (If your decision is appealed, your permit will be considered “approved for issuance” on the fourth day following the City Hearing Examiner’s decision.) Projects requiring a Council land use action shall be considered “approved for issuance” following the Council’s decision.

The “approved for issuance” date marks the beginning of the **three year life** of the MUP approval, whether or not there are outstanding corrections to be made or pre-issuance conditions to be met. The permit must be issued by Seattle DCI within that three years or it will expire and be cancelled (SMC 23-76-028). (Projects with a shoreline component have a **two year life**. Additional information regarding the effective date of shoreline permits may be found at 23.60.074.)

All outstanding corrections must be made, any pre-issuance conditions met and all outstanding fees paid before the permit is issued. You will be notified when your permit has issued.

Questions regarding the issuance and expiration of your permit may be addressed to the Public Resource Center at prc@seattle.gov or to our message line at 206-684-8467.
