

City of Seattle
Edward B. Murray, Mayor

Department of Construction and Inspections
Nathan Torgelson, Director

**CITY OF SEATTLE
ANALYSIS AND DECISION OF THE DIRECTOR OF
THE SEATTLE DEPARTMENT OF CONSTRUCTION AND INSPECTIONS**

Application Numbers: 3026334 & 3026358
Applicant Name: Jonathan Lemons, Lemons Architecture, PLLC
Address of Proposals: 111 & 115 26th Ave E

SUMMARY OF PROPOSAL

3026334 - Land Use Application to allow one, 3-story, 4-unit rowhouse structure in an environmentally critical area. Parking for 14 vehicles to be provided, 7 for adjacent site at 115 26th Ave E. Existing structure to be demolished. To be considered with project #3026358 for shared access. Environmental review includes future unit lot subdivision.

3026358 - Land Use Application to allow two, three-story, two-unit townhouse buildings (four units) in an environmentally critical area. Covenant parking for seven vehicles will be provided on adjacent site at 111 26th Ave E. To be considered with project #3026334 for shared access. Environmental review includes future unit lot subdivision.

The following approval is required:

SEPA - Environmental Determination - (Seattle Municipal Code Chapter 25.05)

SEPA DETERMINATION:

Determination of Non-Significance

- No mitigating conditions of approval are imposed.
- Pursuant to SEPA substantive authority provided in SMC 25.05.660, the proposal has been conditioned to mitigate environmental impacts

BACKGROUND

The site was granted Relief on Steep Slope Development by the SDCI Geotechnical Engineer on June 21, 2016: Environmentally Critical Area Review is required. Because the steep slopes are less than 20 feet and are spaced further than 30 feet from the toe of one Steep Slope Critical Area to the top of the adjacent Steep Slope Critical Area, the criteria described in SMC 25.09.180 B2c

applies, and no ECA Steep Slope Variance is necessary. Development is allowable in the Steep Slope and Buffer. Except as described herein, the remaining critical area criteria applies to this development.

SITE AND VICINITY

Site Zone: Lowrise 2

Nearby Zones: North: LR2
South: LR2
West: LR2
East: LR2

ECAs: The site contains Potential Slide Area and Steep Slope Environmentally Critical Areas.

Site Size: #3026334: 4,963 sq. ft.
#3026358: 4,637 sq. ft.

PUBLIC COMMENT:

The public comment period ended on April 03, 2017. Comments were received and carefully considered, to the extent that they raised issues within the scope of this review. These areas of public comment related to potential lead risks, parking, traffic and congestion, alley access, loss of animal habitat/green space, storm water runoff, and construction pollution. Comments were also received that are beyond the scope of this review and analysis per SMC 25.05.

I. ANALYSIS – SEPA

Environmental review resulting in a Threshold Determination is required pursuant to the State Environmental Policy Act (SEPA), WAC 197-11, and the Seattle SEPA Ordinance (Seattle Municipal Code (SMC) Chapter 25.05).

The initial disclosure of the potential impacts from this project was made in the environmental checklists submitted by the applicant dated 10/28/2016 and 11/7/2016. The Seattle Department of Construction and Inspections (SDCI) has annotated the environmental checklists submitted by the project applicant; reviewed the project plans and any additional information in the project file submitted by the applicant or agents; and any pertinent comments which may have been received regarding this proposed action have been considered. The information in the checklist, the supplemental information, and the experience of the lead agency with the review of similar projects form the basis for this analysis and decision.

The SEPA Overview Policy (SMC 25.05.665 D) clarifies the relationship between codes, policies, and environmental review. Specific policies for each element of the environment, and certain neighborhood plans and other policies explicitly referenced may serve as the basis for exercising substantive SEPA authority. The Overview Policy states in part: "*where City regulations have been adopted to address an environmental impact, it shall be presumed that such regulations are adequate to achieve sufficient mitigation*" subject to some limitations.

Under such limitations/circumstances, mitigation can be considered. Thus, a more detailed discussion of some of the impacts is appropriate.

Short Term Impacts

Construction activities could result in the following adverse impacts: construction dust and storm water runoff, erosion, emissions from construction machinery and vehicles, increased particulate levels, increased noise levels, occasional disruption of adjacent vehicular and pedestrian traffic, a small increase in traffic and parking impacts due to construction related vehicles, and increases in greenhouse gas emissions. Several construction-related impacts are mitigated by existing City codes and ordinances applicable to the project such as: the Stormwater Code (SMC 22.800-808), the Grading Code (SMC 22.170), the Street Use Ordinance (SMC Title 15), the Seattle Building Code, and the Noise Control Ordinance (SMC 25.08). Puget Sound Clean Air Agency regulations require control of fugitive dust to protect air quality. The following analyzes air quality/greenhouse gas, earth/soils, and environmental health, as well as mitigation.

Greenhouse Gas Emissions

Construction activities including construction worker commutes, truck trips, the operation of construction equipment and machinery, and the manufacture of the construction materials themselves result in increases in carbon dioxide and other greenhouse gas emissions which adversely impact air quality and contribute to climate change and global warming. While these impacts are adverse, no further mitigation is warranted pursuant to SMC 25.05.675.A.

Construction Impacts - Parking and Traffic

Increased trip generation is expected during the proposed demolition, grading, and construction activity. The area is subject to significant traffic congestion during peak travel times on nearby arterials. Large trucks turning onto arterial streets would be expected to further exacerbate the flow of traffic.

The area includes limited and timed or metered on-street parking. Additional parking demand from construction vehicles would be expected to further exacerbate the supply of on-street parking. It is the City's policy to minimize temporary adverse impacts associated with construction activities.

However, the amount of excavation and size of construction will result in a small and temporary increase in truck trips and demand for on-street parking. Any closures of the public right of way will require review and permitting by Seattle Department of Transportation. Additional mitigation is not warranted per SMC 25.05.675.B.

Construction Impacts - Noise

The project is expected to generate loud noise during demolition, grading and construction. The Seattle Noise Ordinance (SMC 25.08.425) permits increases in permissible sound levels associated with private development construction and equipment between the hours of 7:00 AM and 7:00 PM on weekdays and 9:00 AM and 7:00 PM on weekends and legal holidays in Lowrise, Midrise, Highrise, Residential-Commercial and Neighborhood Commercial zones.

If extended construction hours are desired, the applicant may seek approval from SDCI through a Noise Variance request. The applicant's environmental checklist does not indicate that extended hours are anticipated.

The limitations stipulated in the Noise Ordinance are sufficient to mitigate noise impacts and no additional SEPA conditioning is necessary to mitigation noise impacts per SMC 25.05.675.B.

Earth / Soils

The ECA Ordinance and Director's Rule (DR) 5-2016 require submission of a soils report to evaluate the site conditions and provide recommendations for safe construction in landslide prone areas. Pursuant to this requirement the applicant submitted a geotechnical engineering study (Geotechnical Engineering Report Proposed Development: 111 – 26th Avenue E, Seattle, Washington, April 15, 2016, Stephen H. Evans). The study has been reviewed and approved by SDCI's geotechnical experts, who will require what is needed for the proposed work to proceed without undue risk to the property or to adjacent properties. The existing Grading and Stormwater Codes will sufficiently mitigate adverse impacts to the ECAs. No additional conditioning is warranted pursuant to SEPA policies (SMC 25.05.675.D).

Environmental Health

Should lead be identified on the site, there is a potential for impacts to environmental health. Lead is a pollutant regulated by laws administered by the U. S. Environmental Protection Agency (EPA), including the [Toxic Substances Control Act \(TSCA\)](#), [Residential Lead-Based Paint Hazard Reduction Act of 1992](#) (Title X), [Clean Air Act \(CAA\)](#), [Clean Water Act \(CWA\)](#), [Safe Drinking Water Act \(SDWA\)](#), [Resource Conservation and Recovery Act \(RCRA\)](#), and [Comprehensive Environmental Response, Compensation, and Liability Act \(CERCLA\)](#) among others. The EPA further authorized the Washington State Department of Commerce to administer two regulatory programs in Washington State: the Renovation, Repair and Painting Program (RRP) and the Lead-Based Paint Activities Program (Abatement). These regulations protect the public from hazards of improperly conducted lead-based paint activities and renovations. No further mitigation under SEPA Policies 25.05.675.F is warranted for lead impacts.

Long Term Impacts

Long-term or use-related impacts are also anticipated as a result of approval of this proposal including: greenhouse gas emissions; parking; potential blockage of designated sites from the Scenic Routes nearby; possible increased traffic in the area. Compliance with applicable codes and ordinances is adequate to achieve sufficient mitigation of most long-term impacts and no further conditioning is warranted by SEPA policies. However, greenhouse gas, parking, and transportation warrant further analysis.

Greenhouse Gas Emissions

Operational activities, primarily vehicular trips associated with the project construction and the project's energy consumption, are expected to result in increases in carbon dioxide and other greenhouse gas emissions which adversely impact air quality and contribute to climate change

and global warming. While these impacts are adverse, no further mitigation is warranted pursuant to SMC 25.05.675.A.

Parking

The proposed development includes 8 residential units with 14 off-street vehicular parking spaces. Parking provided by the project complies with the zoning ordinance and takes into account the project location and proximity to transit options. The Institute of Transportation Engineers (ITE) Parking Manual indicates an average parking demand of 1.38 vehicles from the proposed development. Peak residential demand typically occurs overnight.

This would result in a parking demand for 11.04 vehicles. The number of proposed parking spaces accommodates all of the anticipated parking demand, and no additional mitigation is warranted per SMC 25.05.675.M.

Transportation

Based on rates from the Institute of Transportation Engineers (ITE), the project is expected to generate a net total of approximately 46 daily vehicle trips, with 3.52 net new AM Peak Hour trips and 4.16 PM Peak Hour trips. ITE rates typically are based on data collected in suburban settings, with a greater emphasis on auto travel and less opportunities for trips by other modes than is common in Seattle. As such, trip estimates based on ITE rates may overstate likely auto trip volumes.

The additional trips would have minimal impact on levels of service at nearby intersections and on the overall transportation system. Concurrency analysis was conducted for nearby identified areas. That analysis showed that the project is expected to be well within the adopted standards for the identified areas. The SDCI Transportation Planner reviewed the information and determined that while these impacts may be adverse, they are not expected to be significant and no further mitigation is warranted per SMC 25.05.675.R.

DECISION – SEPA

This decision was made after review by the responsible official on behalf of the lead agency of a completed environmental checklist and other information on file with the responsible department. This constitutes the Threshold Determination and form. The intent of this declaration is to satisfy the requirement of the State Environmental Policy Act (RCW 43.21.C), including the requirement to inform the public of agency decisions pursuant to SEPA.

- Determination of Non-Significance. This proposal has been determined to not have a significant adverse impact upon the environment. An EIS is not required under RCW 43.21.030(2) (c).
- Mitigated Determination of Non-Significance. This proposal has been determined to not have a significant adverse impact upon the environment. An EIS is not required under RCW 43.21.030(2) (c).

The lead agency for this proposal has determined that it does not have a probable significant adverse impact on the environment. An environmental impact statement (EIS) is not required under RCW 43.21C.030 (2)(c). This decision was made after review of a completed environmental checklist and other information on file with the lead agency. This information is available to the public on request.

This DNS is issued after using the optional DNS process in WAC 197-11-355 and Early review DNS process in SMC 25.05.355. There is no further comment period on the DNS.

CONDITIONS – SEPA

None.

Brandon Cummings, Land Use Planner

IMPORTANT INFORMATION FOR ISSUANCE OF YOUR MASTER USE PERMIT

Master Use Permit Expiration and Issuance

The appealable land use decision on your Master Use Permit (MUP) application has now been published. At the conclusion of the appeal period, your permit will be considered “approved for issuance”. (If your decision is appealed, your permit will be considered “approved for issuance” on the fourth day following the City Hearing Examiner’s decision.) Projects requiring a Council land use action shall be considered “approved for issuance” following the Council’s decision.

The “approved for issuance” date marks the beginning of the **three-year life** of the MUP approval, whether or not there are outstanding corrections to be made or pre-issuance conditions to be met. The permit must be issued by SDCI within that three years or it will expire and be cancelled (SMC 23-76-028). (Projects with a shoreline component have a **two-year life**. Additional information regarding the effective date of shoreline permits may be found at 23.60.074.)

All outstanding corrections must be made, any pre-issuance conditions met and all outstanding fees paid before the permit is issued. You will be notified when your permit has issued.

Questions regarding the issuance and expiration of your permit may be addressed to the Public Resource Center at prc@seattle.gov or to our message line at 206-684-8467.
