**Department of Planning and Development**  
D. M. Sugimura, Director

**CITY OF SEATTLE  
ANALYSIS AND DECISION OF THE DIRECTOR  
OF THE DEPARTMENT OF PLANNING AND DEVELOPMENT**

**Application Number:** 2307530  
**Applicant Name:** Julie LeDoux  
**Address of Proposal:** 2646 23<sup>rd</sup> Avenue West

**SUMMARY OF PROPOSED ACTION**

Master Use Permit to establish use for construction of a two-story, two-unit townhouse with an attached garage in an environmental critical area. Existing two-unit apartment building to remain.

The following approval is required:

**SEPA - Environmental Determination** – Chapter 25.05, SMC

**SEPA DETERMINATION:**  Exempt  DNS  MDNS  EIS  
 DNS with conditions  
 DNS involving non-exempt grading, or demolition, or involving another agency with jurisdiction.

**BACKGROUND DATA**

Site and Area Description

This midblock site is located in a Lowrise 1 zone on 23<sup>rd</sup> Avenue West. The site slopes down towards the alley to the east and is designated as an environmental critical area (landslide prone). Access to the site is presently from the alley, and a cut into the bank provides at least one parking space for the existing units.

There are existing apartment buildings adjacent to the north and south. There is a public park across the street to the west. The remainder of the area is a mix of single family homes, single family homes converted to multi-family use, and multi-family structures.

#### Proposal Description

The proposal is well-described in the notice. Each of the units facing the alley would be essentially a full three stories. There would be enclosed parking spaces under the building for each of the new units, and a notch would be taken in the north unit to accommodate a surface parking space to replace the one currently accommodating the existing duplex.

#### Public Comments

One comment letter was received during the public comment period. It expressed concerns about seepage and drainage, damage to the alley during construction, and loss of property value to nearby property due to loss of views.

#### ANALYSIS - SEPA

The proposal site is located in a landslide-prone critical area, thus the application is not exempt from SEPA review. However, SMC 25.05.908 provides that the scope of environmental review of projects within critical areas shall be limited to: 1) documenting whether the proposal is consistent with the City's Environmentally Critical areas (ECA) regulations in SMC 25.09; and 2) Evaluating potentially significant impacts on the critical area resources not adequately addressed in the ECA regulations. This review included identifying additional mitigation measures needed to protect the ECA in order to achieve consistency with SEPA and other applicable environmental laws.

Environmental review resulting in a Threshold Determination is required pursuant to the Seattle State Environmental policy Act (SEPA), WAC 197-11, and the Seattle SEPA Ordinance (Seattle Municipal Code Chapter 25.05).

The initial disclosure of the potential impacts from this project was made in the environmental checklist submitted by the applicant. The information in the checklist, supplemental information provided by the applicant (soils report), project plans, and the experience of the lead agency with review of similar projects form the basis for this analysis and decision.

The SEPA Overview Policy (SMC 25.05.665 D) clarifies the relationship between codes, policies, and environmental review. Specific policies for each element of the environment, certain neighborhood plans and other policies explicitly referenced may serve as the basis for exercising substantive SEPA authority. The Overview Policy states in part: "where City regulations have been adopted to address an environmental impact, it shall be presumed that such regulations are adequate to achieve sufficient mitigation" (subject to some limitations). Under certain limitations/circumstances (SMC 25.05.665 D 1-7) mitigation can be considered. Thus, a more detailed discussion of some of the impacts is appropriate.

### Short-term Impacts

The following temporary or construction-related impacts on the identified critical area are expected: 1) temporary soil erosion; and 2) increased vibration from construction operations and equipment. These impacts are not considered significant because they are temporary and/or minor in scope (SMC 25.05.794).

Several adopted codes and/or ordinances provide mitigation for some of the identified impacts. The Stormwater, Grading and Drainage Control Code regulates site excavation for foundation purposes and requires that soil erosion control techniques be initiated for the duration of construction. The ECA ordinance and DR 3-93 and 3-94 regulate development and construction techniques in designated ECA areas with identified geologic hazards. The Building code provides for construction measures and life safety issues. Compliance with these applicable codes and ordinances will reduce or eliminate most short-term impacts to the environment and no further conditioning pursuant to SEPA policies is warranted.

Due to the fact that grading will be undertaken during construction, additional analysis of earth and grading impacts is warranted.

### Earth/Soils

The ECA Ordinance and Directors Rule (DR) 3-93 require submission of a soils report to evaluate the site conditions and provide recommendations for safe construction in areas with landslide potential and/or a history of unstable soil conditions. The construction plans, including shoring of excavations as needed and erosion control techniques will be reviewed by DPD geotechnical experts and requires their approval. Drainage review has been approved. Any additional information showing conformance with applicable ordinances and codes (ECA ordinance, The Stormwater, Grading and Drainage Control Code, DR 3-93, and 3-94) will be required prior to issuance of building permits. Applicable codes and ordinances provide extensive conditioning authority and prescriptive construction methodology to assure safe construction techniques are used; therefore, no additional conditioning is warranted pursuant to SEPA policies.

### Long-term Impacts

Long-term or use-related impacts are also anticipated as a result of this proposal including: increased surface water runoff due to greater site coverage by impervious surfaces, and loss of plant and animal habitat.

Several adopted City codes and/or ordinances provide mitigation for some of the identified impacts. Specifically these are: the ECA Ordinance, the Stormwater, Grading and Drainage Control Code which requires provisions for controlled tightline release to an approved outlet and may require additional design elements to prevent isolated flooding. Compliance with these applicable codes and ordinances is adequate to achieve sufficient mitigation of most long-term impacts and no further conditioning is warranted by SEPA policies.

**DECISION - SEPA**

This decision was made after review by the responsible official on behalf of the lead agency of a completed environmental checklist and other information on file with the responsible department. This constitutes the Threshold Determination and form. The intent of this declaration is to satisfy the requirements of the State Environmental Policy Act (RCW 43.21C), including the requirement to inform the public agency decisions pursuant to SEPA.

Determination of Non-Significance. This proposal has been determined to not have a significant adverse impact upon the environment. An EIS is not required under RCW 43.21C.030 2c.

Determination of Significance. This proposal has or may have a significant adverse impact upon the environment. An EIS is required under RCW 43.21C.030 2c.

**CONDITIONS - SEPA**

None required.

**NON-APPEALABLE ZONING REQUIREMENT**

Please revise the cover sheet to clearly show that three parking spaces are proposed. (Cover sheet presently says that only two parking spaces are proposed.)
