

Directions for importing the SPU 158-year time series into WWHM.

1. Save the link “SPU 158-year series” to your local drive. The City’s servers cannot host the file in the correct format, so this is default labeled a “.txt” file.
2. Rename the file you just saved, “dpdp018615.txt, to: “SPU 158-year series.wdm” which will correct the file format.

For the following steps, refer to the “Seattle Precip Import .pdf”

3. Import into WWHM using the “Tools” button – NOT THE MAP.
4. In the “Tools” dialogue box, click on “ALTERNATE PRECIP”
5. Load the .wdm file that was renamed in Step 2.
6. Select dataset and copy to precip
7. Select dataset and copy to evap
8. Check “Use Alternate Precip/evap”
9. Use “Analysis” button to confirm the extended datasets were imported.
