

Dear Seattle City Councilmembers and Mayor McGinn,

April 2011

Save Seattle's shoreline.

As you undertake the task of updating Seattle's Shoreline Management Program (SMP), I would like to remind you of the importance of this work in order to restore Puget Sound back to health by 2020. Much of the Puget Sound region's shoreline is modified or altered which has resulted in negative impacts on the health of our wildlife. Shorelines are especially important as they serve as the "nursery" for many of our species. **I support a SMP that has strong environmental safeguards such as:**

- Vegetative buffers for shorelines to protect natural functions, which are based on science.
- The exclusion of intense development from ecologically sensitive areas and areas that are in good ecological shape
- Good standards to reduce expansion of and impacts of over-water development along the water's edges.
- Preferences to keep development that doesn't need to be next to the water away from the water.

May 2011

Save Seattle's shoreline.

As you undertake the task of updating Seattle's Shoreline Management Program (SMP), I would like to remind you of the importance of this work in order to restore Puget Sound back to health by 2020. Much of the Puget Sound region's shoreline is modified or altered which has resulted in negative impacts on the health of our wildlife. Shorelines are especially important as they serve as the "nursery" for many of our species. **I support a SMP that has strong environmental safeguards such as:**

- Vegetative buffers for shorelines to protect natural functions, which are based on science.
- The exclusion of intense development from ecologically sensitive areas and areas that are in good ecological shape
- Good standards to reduce expansion of and impacts of over-water development along the water's edges.
- Preferences to keep development that doesn't need to be next to the water away from the water.

Save Seattle's shoreline.

As you undertake the task of updating Seattle's Shoreline Management Program (SMP), I would like to remind you of the importance of this work in order to restore Puget Sound back to health by 2020. Much of the Puget Sound region's shoreline is modified or altered which has resulted in negative impacts on the health of our wildlife. Shorelines are especially important as they serve as the "nursery" for many of our species. **I support a SMP that has strong environmental safeguards such as:**

- Vegetative buffers for shorelines to protect natural functions, which are based on science.
- The exclusion of intense development from ecologically sensitive areas and areas that are in good ecological shape
- Good standards to reduce expansion of and impacts of over-water development along the water's edges.
- Preferences to keep development that doesn't need to be next to the water away from the water.

Save Seattle's shoreline.

As you undertake the task of updating Seattle's Shoreline Management Program (SMP), I would like to remind you of the importance of this work in order to restore Puget Sound back to health by 2020. Much of the Puget Sound region's shoreline is modified or altered which has resulted in negative impacts on the health of our wildlife. Shorelines are especially important as they serve as the "nursery" for many of our species. **I support a SMP that has strong environmental safeguards such as:**

- Vegetative buffers for shorelines to protect natural functions, which are based on science.
- The exclusion of intense development from ecologically sensitive areas and areas that are in good ecological shape
- Good standards to reduce expansion of and impacts of over-water development along the water's edges.
- Preferences to keep development that doesn't need to be next to the water away from the water.

Dear Seattle City Councilmembers and Mayor McGinn,

May 2011

Save Seattle's shoreline.

As you undertake the task of updating Seattle's Shoreline Management Program (SMP), I would like to remind you of the importance of this work in order to restore Puget Sound back to health by 2020. Much of the Puget Sound region's shoreline is modified or altered which has resulted in negative impacts on the health of our wildlife. Shorelines are especially important as they serve as the "nursery" for many of our species. **I support a SMP that has strong environmental safeguards such as:**

- Vegetative buffers for shorelines to protect natural functions, which are based on science.
- The exclusion of intense development from ecologically sensitive areas and areas that are in good ecological shape
- Good standards to reduce expansion of and impacts of over-water development along the water's edges.
- Preferences to keep development that doesn't need to be next to the water away from the water.
