

PROJECT OVERVIEW

Seattle City Light will be upgrading the aging electrical cable along Broadway Avenue East and will be working with a company called Novinium during construction. Novinium will test and where possible, inject underground cables with silicon to fill cracks in the cable insulation to prevent outages. If cables are not suited for injection, they will be replaced at a later time.

A map showing the work zone is on the back of this flyer.

PROJECT BENEFITS

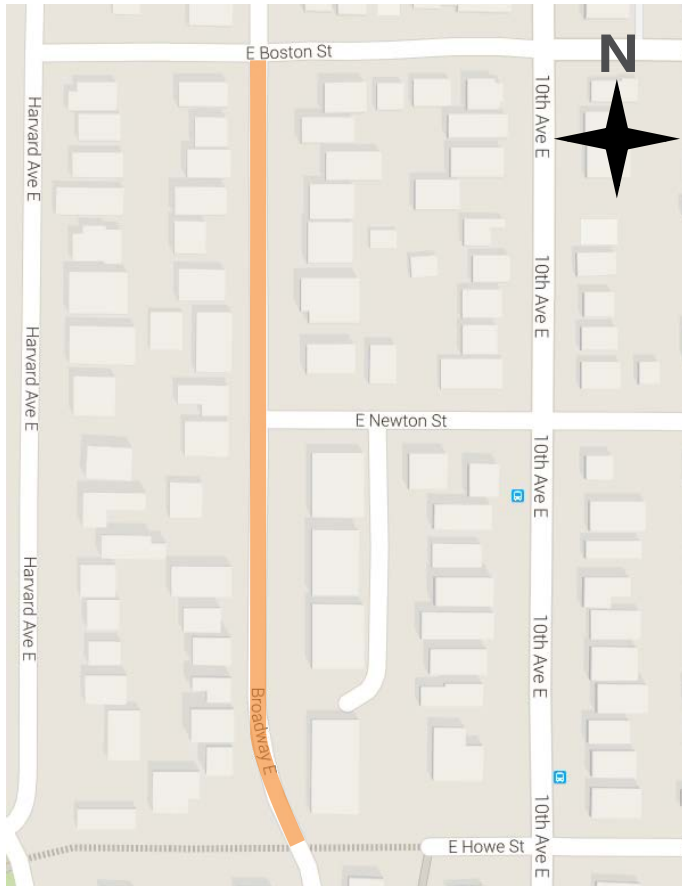

- As underground cables age, the protective insulation deteriorates. The silicon cable injection will help avoid unplanned power outages where injection is successful.
- We have successfully used this lower-impact, cost effective method of cable rejuvenation on 50 different neighborhoods.
- This work will extend the life of the cable for an additional 25 years and improve electrical reliability.

PROJECT IMPACTS

- The contractor, Novinium will be working for two days total between early-to-mid October and mid-November 2015.
- One maintenance outage is anticipated for this work. All affected customers will be notified the Thursday before the following week's outage. The outage date and time will be specified on the notification.
- Traffic and parking impacts are expected in the immediate area.
- Flaggers will be used where needed on residential streets.
- Crews will be careful to try and maintain access to driveways.

Construction will begin in early-to-mid October 2015 and last approximately six weeks.

 Location of underground electric cable

TIMING AND COORDINATION

Construction Start: Construction will begin in early-to-mid October 2015.

Duration: The entire project is expected to last until mid-November 2015.

Schedule: Daily working hours are from 8:30 a.m. to 4:30 p.m.
