

3.9 SUMMARY OF FINDINGS

OVERVIEW

This section includes a number of summary tables and graphics developed during Stage I of the Seattle Intermediate Capacity Transit Study. Included in this section are the updated corridor findings for: route length, estimated 2020 daily boardings, change in daily transit trips crossing specific locations, estimated capital costs, costs per mile, and costs per rider. These findings are presented in both tabular and graphic format.

This section also includes the Stage I evaluation criteria matrix, which includes comparison information for the broad topics of concept feasibility, impacts, service, and system criteria. *Not all evaluation criteria were evaluated under Stage I analysis, as evaluation of some specific criteria would not have been beneficial at this broad level of analysis.* Criteria not evaluated under Stage I analysis are expected to be undertaken under the more detailed Stage II analysis.

Information provided in this section includes additional model output and minor refinements not available at the time of the public forums, therefore the data presented for this work element (3.9) does not always correspond to data presented earlier.
