SEATTLE TRANSIT MASTER PLAN

BRIEFING BOOK

The State of Seattle’s Transit System
SEATTLE TRANSIT MASTER PLAN
BRIEFING BOOK

The State of Seattle’s Transit System

FEBRUARY 2011

Nelson\Nygaard

presented by Nelson\Nygaard Consulting associates, inc.
in association with

URS Corporation
SvR Design
DKS associates
Underhill Company
CONTENTS

1 Introduction ...........................................................................................................1-1
2 Travel Demand and Transit Market Analysis ......................................................2-1
3 Land Use and Development ..............................................................................3-1
4 Overview of Existing and Planned Transit Services ..........................................4-1
5 Peer Review ........................................................................................................5-1
6 Mode Analysis .....................................................................................................6-1
7 Best Practices .......................................................................................................7-1
   Elements of Bus Rapid Transit ........................................................................7-1
   Mixed Modes: High Capacity Transit and European Street Trams...7-7
   Transportation Land Use Linkages .................................................................7-11
   Local Government Standards for Transit agencies .......................................7-13
   City-Based Transportation Demand Management Strategies .................7-17
   Congestion Pricing .........................................................................................7-21
   Transit-Supportive Policies and Programs .....................................................7-25
   Supporting Transit and Non-Motorized Travel Through Complete Streets...7-29
   Transit Priority Treatments ...........................................................................7-33
   Emerging Technology .......................................................................................7-37
   Adaptive Traffic Signal Systems ..................................................................7-39
   Bicycle Access to Transit ...............................................................................7-43
   Pedestrian Access to Transit ..........................................................................7-51
   Capital Funding and Finance .........................................................................7-59

76 Financing Operations ........................................................................................7-65
77 Center City Circulation ..................................................................................7-73
78 Regional Governance of Transit ................................................................7-81
79 Transit’s Role in Meeting Greenhouse Gas Reduction Goals .......................7-87
80 Late Night Transit Service ..............................................................................7-95
8 Stakeholder Interview and Public Outreach Summary ..................................8-1

Appendix A Plans & Policies Impacting Transit in Seattle
Appendix B Glossary
