### Occupancy Information

**Occupancy Name:**

**Occupancy Address:**

**Contact Name:**

**Contact Address:**

**Contact Phone:**

**Contact Email:**

### Central Station Monitoring

**Yes** □  **No** □

**Monitoring Required:**

**Yes** □  **No** □

**Monitoring Company Name:**

**Monitoring Company Phone:**

### Inspection & Testing Agency Information

**Name:**

**Address:**

**Phone:**

**Emergency Phone:**

**Email:**

### Inspector/Tester Information

**Name:**

**Phone:**

**SFD Certification No.:** SCP-________________

### Standpipe

**Date of Test:**

The items on the checklists below shall be inspected and tested. This list may not constitute all of the required inspecting and testing of the fire and life safety system. Refer to the Fire Code used by the AHJ Chapter 9, related regulations, and NFPA 25 for inspecting and testing requirements.

### PRE-TEST CHECKS

**AVOID UNNECESSARY ALARMS BY PUTTING THE FIRE ALARM SYSTEM IN TEST MODE.** Failure to place the Fire Alarm System (FAS) into test mode and/or taking other precautions to may cause preventable alarms.

1. All signs, placards, and labels are provided on doors and system controls. □ Yes □ No

### TESTING AND INSPECTION CHECKLIST

2. The bldg. is: □ Fully Sprinklered □ Partially Sprinklered □ Not Sprinklered

3. The standpipe is located in areas that could be damaged by water if a leak occurs, and passed the air pressure test at 25 psi (1.7 bar) prior to introducing water to the system. □ Yes □ No □ N/A

4. The standpipe passed the 5-year hydrostatic test in accordance with NFPA 25 (manual dry standpipe systems and semi-automatic dry standpipe systems only) □ Yes □ No □ N/A

5. The inspector did not find recalled devices during the visual inspection. Note: This inspection is a cursory visual assessment from the floor level in accessible areas. □ Yes □ No
**FLOW TESTS**

6. The required flow for this standpipe is:
   - ✣ 500 gpm @ 65 psi (installed prior to 1980)
   - ✣ 300 gpm @ 150 psi +/- 25 psi (installed 1980-2005)
   - ✣ 300 gpm @ 175 psi +/- 25 psi (installed after 2005)
   - ✣ 50 gpm @35 psi minimum (Class II)

7. The standpipe passed the 5-year Flow Test. □ Yes □ No

8. For stand-alone automatic standpipes: The system passed the main drain test, done in accordance with NFPA 25 Chapter 13. A separate main drain test does not need to be done on standpipes combined with a sprinkler system that has already been tested. □ Yes □ No □ N/A

9. Pressure regulating valves (PRV) provide acceptable flow and pressure. (Document results on separate page). □ Yes □ No

10. The flow switch(es) operates properly. □ Yes □ No

11. The flow alarm(s) operates properly. □ Yes □ No

12. Fire pump(s) started from roof flow. □ Yes □ No □ N/A

**OBSTRUCTION INVESTIGATION**

13. The 5-year obstruction investigation of Fire Department Connection (FDC) piping is up-to-date in accordance with NFPA 25 Chap. 14. □ Yes □ No □ N/A

Date of Test, If Known: ___________________

Note: This test is satisfied for combination standpipes when it is done for the automatic sprinkler system.

14. The 5-year obstruction investigation for the FDC(s) included testing and operation of the check valve and auto drain in accordance with NFPA 25 □ Yes □ No □ N/A

**GAUGES**

15. The maintenance on the system gauges is up-to-date. □ Yes □ No

Note: The system gauges are to be compared with a calibrated gauge every five (5) years. If a gauge is not within +/- 3% of the calibrated gauge it must be replaced or recalibrated. This check can be done for multiple floors at static pressure using one calibrated gauge and hydraulic calculations.

**VALVES AND HOSE CONNECTIONS**

16. The water supply control valves are secured or electronically supervised. □ Yes □ No

17. The Fire Department Connection(s)(FDC) is clear of bushes, guards, or other debris and is visible from the street. □ Yes □ No

18. All FDCs have protective plugs or covers. □ Yes □ No

19. If a plug or cover was missing from a FDC the piping was inspected for debris in accordance with NFPA 25. □ Yes □ No

20. All swivels turn freely. □ Yes □ No

21. All hose connection valves/ports have a protective cap with a 1/8" relief hole. □ Yes □ No

22. All caps and plugs have at least 12" clearance for operating wrenches. □ Yes □ No

**MONITORING**

23. A signal was received at the Central Station monitoring company. □ Yes □ No □ N/A

**RECALLS**

24. The inspector did not find recalled devices during the visual inspection. Note: the inspector’s inspection is a visual cursory inspection from the floor level in accessible areas. □ Yes □ No

If no, identify type and location:

By accepting this statement I, the certified technician shown on this form, certify that this fire protection system(s) has been properly inspected for functional operation in accordance with the current Fire Code (FC) used by the department that has jurisdiction and NFPA Standards adopted by the FC for this system. Any deficiencies found are noted in the report and have been reported to the building Owner/Manager for corrective action.

I am authorized to submit this report for the certified technician who has accepted this statement.
