Presentation overview

• Background
• Seattle’s approach
• Looking ahead
Safety is our top priority
Vision Zero: A Citywide Effort

- Launched as Mayor’s Initiative in February 2015
- Codified through Seattle’s Comprehensive Plan Update 2016
The Levy to

**MOVE SEATTLE**

[A SAFE CITY]

*Keep Seattle travelers safe by working to eliminate serious and fatal crashes and seismically reinforcing vulnerable bridges*

$320 million over 9 years to:

**Vision Zero** - Implement a program to eliminate serious and fatal crashes on Seattle streets

- Complete 12-15 corridor safety projects, improving safety for all travelers on high-crash streets
- Move Seattle for Kids - complete 9-12 Safe Routes to School projects each year providing safety education, and improving walking and biking safety at every public school in Seattle, with additional investment at schools in areas with the most barriers to children walking
- Increase crosswalk repainting frequency to a four-year or better cycle, with greater frequency in high traffic areas, to ensure every crosswalk is clearly marked

**Protect our most vulnerable travelers – people walking and biking**

- Build over 50 miles of new protected bike lanes and 60 miles of greenways. When added to work already underway to implement the Bicycle Master Plan, this completes half of the Bicycle Master Plan network, keeping us on track for full implementation.
- Repair up to 225 blocks of damaged sidewalks in our urban centers and villages
- Make curb ramp and crossing improvements at up to 750 intersections citywide
- Complete the Burke-Gilman Trail Missing Link in Ballard
Local Trends

- Fatal and serious injury rate continues to decline as population grows
- Annual fatalities increasing in 3-year trend
- Seattle’s 3-year annual average = 20 fatalities
Data and research

- Data-driven engineering, education and enforcement
- Partnerships

Crashes from Inattention in Seattle

2011

280% Increase

2014

2015 Collisions with Inattention as Contributing Factor
Engineering

- Master Plan implementation
- Safety corridors (3 – 5/year)
- BPSA projects
- Internal coordination
Enforcement and education

- Focus on top contributing factors, older adults, and historically under-represented communities
- High visibility enforcements
- Automated enforcement

Seattle’s Red Light Camera Program has reduced pedestrian and vehicular collisions
Evaluation

• Guides investments
• Helps improve countermeasures
• Builds public trust

Speed limits

• Lower speed limits on 2400 miles of non-arterial street
• Lower speed limits on 75 miles of arterials in central Seattle
Speed Limit Evaluations

- Focus: Urban Villages and high-collision corridors
- 20 corridors by 2020
- Evaluations for all SDOT projects
- Speed limit policy review
Bicycle and Pedestrian Safety Analysis

- Retrospective review of ped and bicycle collisions
- Exploratory and multivariate analyses
- Systemic, proactive approach
- Recommendations feeding all SDOT projects
Safety Corridors

- Focus on High Crash Network
- Wide range of countermeasures
- Results show this approach works
