You may already be familiar with the 35th Paving Project, but if not, we wanted to provide an update as we approach the final stages of design.

Last May, we announced the final street concept and, since then, have been working with our technical team to fine-tune the design of the street. We’ve also heard valuable feedback from the community since our announcement in the spring, including questions about parking, congestion, and cut-through traffic on side streets.

Stay tuned for opportunities this fall to talk with project staff and learn more about the final design details and how we’re addressing community concerns.

Next summer, we’ll repave and restripe approximately 2 miles of 35th Ave NE (between NE 89th St and NE 47th St, including NE 45th Pl). This allows us to extend the life of the pavement and make the roadway safer and more comfortable for travel. The project design includes elements called for in the City’s modal plans as well as in community feedback, aiming to:

- Support lower vehicle speeds
- Improve safety and predictability for everyone by creating a designated space for biking
- Maintain access to local destinations and businesses
- Contribute to a citywide bike network

In the meantime, we encourage you to sign up for our email listerv on our website: [www.seattle.gov/transportation/35thNEpaving.htm](http://www.seattle.gov/transportation/35thNEpaving.htm)
KEY FEATURES OF THE DESIGN:

- Parking consolidated to one side of the street and peak restrictions removed
- Bike lanes as designated in the Bike Master Plan
- Left-turn pockets for northbound and southbound traffic on 35th Ave NE at NE 75th St
- Transit speed and reliability improved for King County Metro routes that travel on 35th Ave NE, particularly for Route 65
