Seward Park CSO Reduction Project          Summer 2014

Project Overview
As part of the North Henderson CSO Reduction project, Seattle Public Utilities (SPU) will construct a combined sewer overflow (CSO) underground storage facility in Seward Park to reduce the frequency and amount of stormwater and untreated sewage that overflows into Lake Washington during heavy rain events. The facility will be located under the existing tennis courts and adjacent parking lot area in Seward Park. **Construction is scheduled to begin in January 2015 and be complete by mid-2017. The construction area, including tennis courts and parking lot, will be closed to public use during this period and will be re-built following construction.** The map on reverse side shows the project area and alternate parking areas in Seward Park.

Alternate tennis courts nearby include Rainier Beach (8802 Rainier Avenue South), Brighton Playfield (600 39th Avenue South) and Rainier Playfield (3700 South Alaska Street).

Construction Impacts
The construction activities and impacts to park use will vary by season and the type of construction underway. Additional information will be provided as construction approaches and regularly during the construction period.

General impacts will include:
- Closure of the tennis courts and tennis court parking lot during construction.
- Increased truck and construction vehicle traffic at entrance of Seward Park and nearby streets.
- Closure of some nearby areas of Lake Washington during in-water construction work.
- Noise, dust, vibration and tree removal.
