### PROJECT OVERVIEW

In late August 2020, Seattle City Light will upgrade the underdeck high pressure sodium (HPS) light fixtures at the State Route 99 overpass on South Cloverdale Street. The lights will be replaced with new light emitting diode (LED) fixtures. **A map of work area is located on the back of this flier.**

### PROJECT BENEFITS

- The new lights will increase visibility and improve pedestrian and traffic safety at South Cloverdale Street.
- The installations will lower operations and maintenance costs for the utility.
- LEDs reduce greenhouse gas emissions during manufacturing as well as when they are in use. Additionally, about 20,000 tons of reduced carbon emissions per year are the result of fewer service vehicle trips.

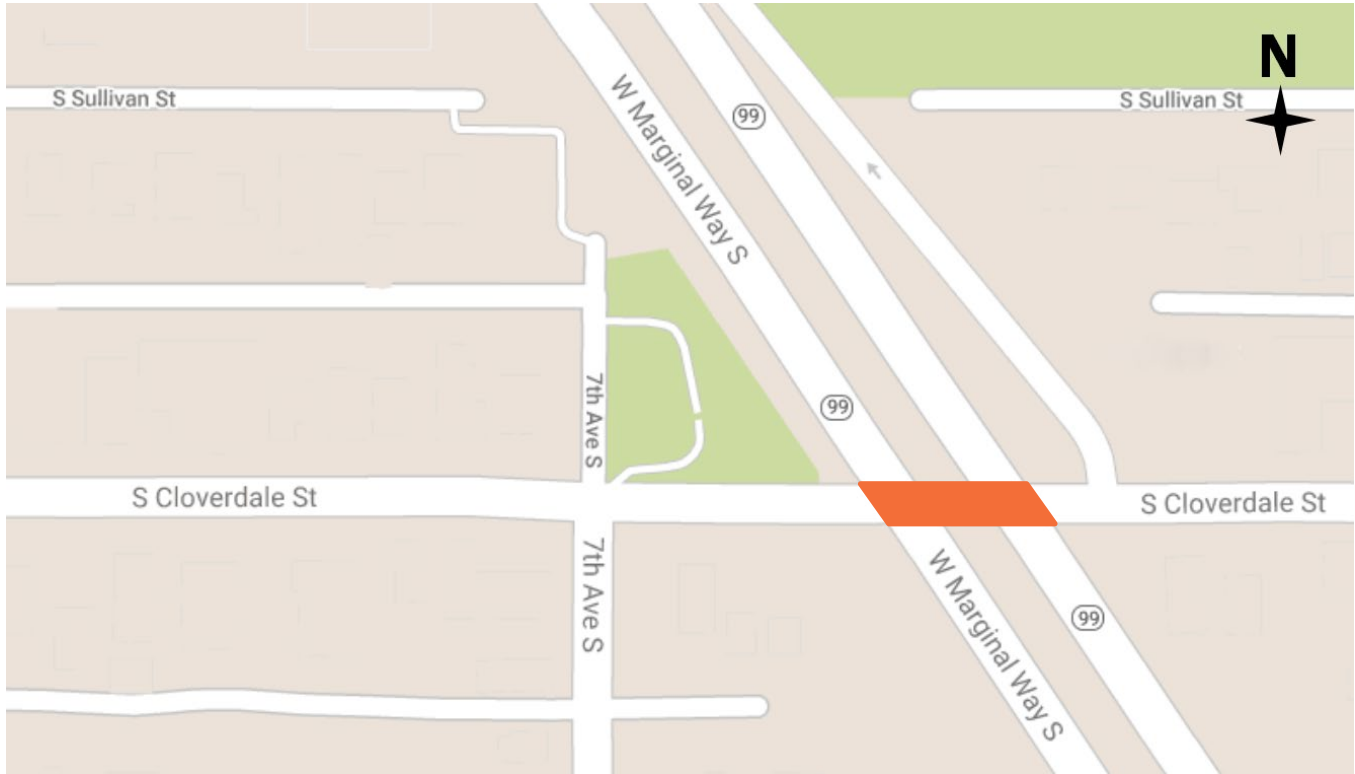

### PROJECT DETAILS

- Crews will replace the existing lights with new LED fixtures that focus on sidewalk and roadway lighting. The color temperature for the new lights will be at 3000 Kelvin (K), which emits a warm white color.
- Maintenance outages may be required to do the work safely. Customers will be notified in advance of any outage.
- Customers can expect sidewalk and lane restrictions in the immediate work area during construction hours. Traffic control flaggers will be used to maintain traffic and pedestrian safety through the work areas.
- Noise is expected from construction and heavy equipment.

Crews will replace the lighting under the State Route 99 overpass on South Cloverdale Street.

### TIMING AND COORDINATION

**Construction Start:** This project was previously scheduled to start in April 2020.

Construction is now estimated to start in late August 2020.

**Duration:** The project is expected to last approximately two to three months.

**Schedule:** Monday – Friday, 9 a.m. – 3 p.m.

*Crews may be working on weekends to complete this work.*
