220 3rd Avenue South Seattle, WA 98104 SFD_FMO_SystemsTesting@seattle.gov

SYSTEM TEST REPORT

ANNUAL TESTING/MAINTENANCE

Please call the Seattle Radio Shop at 206-386-1213 to arrange to borrow portable radios for the testing and schedule an appointment to confirm signal level received by Radio Shop.

Distributed Antenna Systems (DAS)	STATUS		
Annual Test Deficiency Repair Report	Red Yellow White		
Occupancy Information			
Building Name:	Building Address:		
Contact Name:	Contact Phone:		
Contact Address:	Contact Email:		
Central Station Monitoring: 🛛 Yes 🗌 No	Monitoring Required: 🗌 Yes 🗌 No		
Monitoring Company Name:	Monitoring Company Phone:		
DAS Inventory (M-mandatory)			
System Make (M):	System Model (M):		
Design Firm of Record:	Electrical Permit Application Date:		
Location of System in Bldg (M):	Applicable Code & Year (e.g. SFC 2015):		
Is this a hybrid system (shared with cellular phone carriers a	nd/or internal radios?) 🛛 Yes 🗌 No		
Is this an active or a passive system?	Active Passive		
PSERN Retune Completed? Yes No			
List of Critical Areas in Building (for coverage testing require	nents):		
Testing Company Information (All Fields Mandatory)			
Company Name:	Phone:		
Address:	Emergency Phone:		
	Email:		
Technician/Tester Information (All Fields Mandatory)			
Technician Name:			
Technician FCC Certification/GROL#:			
Technician performing testing has received manufacturer tra	nining or other equivalent: Yes No		
Specify manufacturer training received and year: Train	ning: Yr: 20		
Testing Equipment (All Fields Mandatory)			
Spectrum analyzer make/model**:			
Spectrum analyzer calibration date:			
Calibration performed by firm (qualified firm name):			
** Use of a calibrated spectrum analyzer, with a current cali	pration, is required for this testing.		
Test Information (Mandatory)			
Date of Test:			
The items on the checklists below shall be inspected and tes	ted. This list does not constitute all of the required inspecting		
and testing requirements for BDA/DAS. Refer to the CURREN			
MANUFACTURER'S INSTRUCTIONS for weekly, monthly, and/or quarterly inspecting and testing requirements.			
PRE-TEST CHECKS			
Take precautions necessary to avoid preventable alarms.			
1 If a monitored fire alarm system is present in the buildin	g, the Central Station		
Monitoring Service was notified that DAS testing is occu	rring and will be 🛛 Yes 🗌 No 🗌 N/A		
generating supervisory signals.			
GENERAL - RECORDKEEPING			

2	The following documents from the installation/acceptance testing are stored in emergency				
	responder radio system enclosure and/or the building engineer's office:				
a.	Grid diagram for each floor, showing test signal strengths in each floor, and				
	indicating location of each critical area. Include information on location of fire	- 🗌 Yes	🗌 No		
	resistance-rated pathways.				
b.	A diagram showing location of BDA/DAS control equipment, amplifiers, signal				
	boosters, backup battery systems, and any outdoor antennas, and a wiring	🗌 Yes	🗌 No		
	schematic.				
C	Copies of manufacturer specification sheets for all BDA/DAS systems				
0.	components, including amplifiers, signal boosters, antennas, coax, couplers,	🗌 Yes	🗌 No		
	splitters, combiners, and other passive components.				
d.		_	_		
	Data sheets for the backup battery and charging system (if utilized), and	□ _{Yes}	□ _{No}		
	include calculations to ensure the backup power requirements are met.				
e.	Certification letter stating that the BDA/DAS system has been installed per	🗌 Yes	🗌 No		
	code and was complete/fully functional at time of install.				
DAS	SPECIFICATIONS/PERFORMANCE AT COMMISSIONING AND CURRENT				
Ante	enna Type:				
ERP	to Donor Site (dBm):				
	Testing shall be done using a public safety radio				
	held at face level and placed in transmit mode,				
	transmitting within 3' of the antenna predicted to				
	have the lowest loss to the BDA (based on				
	distance from the BDA equipment). The output				
	power of the BDA shall than be measured with a				
	calibrated power meter or spectrum analyzer.				
	Using the measured power, and the estimated				
	enna Gain (dBd):				
Ante	enna Coordinates (NAD83):				
	enna Azimuth (degrees true):				
Upli	nk Gain Setting: Gain Setting:		db		
_	Power:		dbm		
Dow	nlink Gain Setting: Gain Setting:		db		
	Power:		dbm		
Sign	al Level Received at Donor Site (-dBm):				
	The signal level received at the donor site shall be				
	measured by the City of Seattle Communications				
	shop. Call 206-386-1213 at least two days in				
	advance to borrow radios and arrange a testing				
	time. A test signal shall be generated from a				
	public safety radio held at face level and placed in				
	transmit mode, transmitting within 3' of the				
	antenna predicted to have the lowest loss to the				
	BDA (based on distance from the BDA				
	equipment).				
<u> </u>					
Sign	al Level Received from Donor Site (-dBm):				
	Measure active control channel, w/20 KHz				
	resolution bandwidth, at the jumper that				
	connects to the DAS head-end donor port.				

Cha	Channelized Donor Site Name:					
Channelized or Broadband:						
ACTIVE COMPONENTS						
3	Signal booster is within a NEMA 4 or IP66 or equivalent enclosure.		—	□ • · / • *		
	* Only select N/A if system was installed prior to the adoption of the 2009 edition of the Seattle Fire Code.	Yes	🗌 No	🗌 N/A*		
Δ						
4	Battery is within a NEMA 3R or IP65 or equivalent enclosure for systems installed under 2018 code (or NEMA 4 or IP66 for systems installed under					
	2009-2015 code).	Yes	🗌 No	□ N/A*		
	* Only select N/A if system was installed prior to the adoption of the 2009					
	edition of the Seattle Fire Code.					
5	Equipment is FCC certified.	Yes	🗌 No			
	If no, list corrections required:	—	_			
6	Active components checked to verify operation within manufacturers' specificati	ons:				
a.	Equipment alarm log checked for recurring or substantial alarms and	Yes	🗌 No			
	addressed as per manufacturer's recommendations.					
b.	Isolation testing performed and measured system isolation is at least 20 db	_	_			
	above the total downlink and the total uplink gain (whichever is greater)	Yes	🗌 No			
_	between least isolated DAS antenna and the donor antenna.					
7	Signage at Fire Alarm Panel "This building is equipped with an Emergency					
	Responder Radio Coverage System. Control equipment located in room", and signage on or adjacent to the door of the room containing the main					
	system components stating: "Emergency Responder Radio Coverage System		🗌 No			
	Equipment".	Yes				
8						
-	DAS is communicating with same donor site as identified at time of	_	_			
	commissioning or communicating with approved donor site as documented in	Yes	🗌 No			
	writing by Radio System Operator or Authority Having Jurisdiction.					
9	DAS signal strength received from donor site at the input to the BDA meets	Π.,	□	□		
	original installation values plus or minus 2 db.**	□ Yes	└ No	⊔ N/A		
10	Uplink amplifier gain matches gain at commissioning plus or minus 2 db.	Yes	🗌 No	🗌 N/A		
	Downlink amplifier gain matches gain values recorded at commissioning plus	_				
	or minus 2 db.	Yes	🗌 No	🗌 N/A		
12	Antenna azimuth (bearing) matches commissioning matches commissioning					
	azimuth plus or minus 5 degrees.	Yes	🗌 No	□ N/A		
**	If original installation or previous values are not available, select N/A (the current	values entere	ed for this test	t will be		
	stored in inventory for future tests).					
	TRIBUTION SYSTEM AND COVERAGE – OPTION 1: STANDARD TEST					
13a	Perform in-building coverage test/grid test using a calibrated spectrum	Yes	🗌 No			
	analyzer: Signal strength remains stronger than (less negative than)					
	-95 dBm for 90% of grids on each floor in non-critical areas (for a 20 grid					
	square test, this means that at least 18 of the grids must pass for the floor to					
	pass).					
	If no, location(s) of failed grids:					
13b	The list of critical areas to be provided coverage in this building is complete	Yes	🗌 No			
	(list is stored with inventory information above). If not correct, email					
	required changes to SFD_FMO_SystemsTesting@seattle.gov, and select Yes.					
13b		Yes	🗌 No			

13c Critical areas are provided with 99% floor area radio coverage with coverage stronger than -95 dBm.	Yes	🗌 No						
If no, location(s) of critical areas that do not meet threshold:								
13d Perform functional (talk-back) testing in each critical area using one radio in the building and one radio outside the building – radios function sufficiently	🗌 Yes	🗌 No						
for communications with a DAQ of 3 or higher?								
If no, location(s) of non-acceptable communications:								
13e Perform functional (talk-back) testing between each critical area in the	🗌 Yes	🗌 No						
building to fire command center, or if no command center, fire alarm control								
panel – radios function sufficiently for communications with a DAQ of 3 or higher?								
If no, location(s) of non-acceptable communications:								
DISTRIBUTION SYSTEM AND COVERAGE – OPTION 2: ALTERNATIVE IN-BUILDING O	OVERAGE TES	т						
This section may be utilized in lieu of Option 1 (13a-e) only when the full grid squa	are test docum	nentation from the						
acceptance test and most recent previous annual test results are available.								
14a Perform alternative in-building coverage test/grid test in non-critical areas.	🗌 Yes	🗌 No						
Signal strength shall be tested using a spectrum analyzer. For floor plate with	Yes	🗌 No						
Signal strength shall be tested using a spectrum analyzer. For floor plate with standard 20 grid squares, test 3 grids per floor, those grids having the poorest	U Yes	No No						
Signal strength shall be tested using a spectrum analyzer. For floor plate with	U Yes	No						
Signal strength shall be tested using a spectrum analyzer. For floor plate with standard 20 grid squares, test 3 grids per floor, those grids having the poorest performance in the acceptance test or in subsequent annual testing, when	U Yes	☐ No						
 Signal strength shall be tested using a spectrum analyzer. For floor plate with standard 20 grid squares, test 3 grids per floor, those grids having the poorest performance in the acceptance test or in subsequent annual testing, when annual testing has previously occurred. Failure of 2 grids is 90% pass rate and acceptable. Failure of more than 2 grids (signal strength weaker than -95 dBm) on a floor 	U Yes	☐ No						
 Signal strength shall be tested using a spectrum analyzer. For floor plate with standard 20 grid squares, test 3 grids per floor, those grids having the poorest performance in the acceptance test or in subsequent annual testing, when annual testing has previously occurred. Failure of 2 grids is 90% pass rate and acceptable. Failure of more than 2 grids (signal strength weaker than -95 dBm) on a floor indicates failure of the in-building coverage test for the building. Is test 	∐ Yes	□ No						
 Signal strength shall be tested using a spectrum analyzer. For floor plate with standard 20 grid squares, test 3 grids per floor, those grids having the poorest performance in the acceptance test or in subsequent annual testing, when annual testing has previously occurred. Failure of 2 grids is 90% pass rate and acceptable. Failure of more than 2 grids (signal strength weaker than -95 dBm) on a floor indicates failure of the in-building coverage test for the building. Is test passed? 	∟ Yes	☐ No						
 Signal strength shall be tested using a spectrum analyzer. For floor plate with standard 20 grid squares, test 3 grids per floor, those grids having the poorest performance in the acceptance test or in subsequent annual testing, when annual testing has previously occurred. Failure of 2 grids is 90% pass rate and acceptable. Failure of more than 2 grids (signal strength weaker than -95 dBm) on a floor indicates failure of the in-building coverage test for the building. Is test 	∐ Yes	☐ No						
 Signal strength shall be tested using a spectrum analyzer. For floor plate with standard 20 grid squares, test 3 grids per floor, those grids having the poorest performance in the acceptance test or in subsequent annual testing, when annual testing has previously occurred. Failure of 2 grids is 90% pass rate and acceptable. Failure of more than 2 grids (signal strength weaker than -95 dBm) on a floor indicates failure of the in-building coverage test for the building. Is test passed? If no, location(s) of failed grids: 	☐ Yes	□ No						
 Signal strength shall be tested using a spectrum analyzer. For floor plate with standard 20 grid squares, test 3 grids per floor, those grids having the poorest performance in the acceptance test or in subsequent annual testing, when annual testing has previously occurred. Failure of 2 grids is 90% pass rate and acceptable. Failure of more than 2 grids (signal strength weaker than -95 dBm) on a floor indicates failure of the in-building coverage test for the building. Is test passed? If no, location(s) of failed grids: 14b Signal strength shall be tested for one grid for each serving antenna, if not already tested in 14a. Is test passed? 								
 Signal strength shall be tested using a spectrum analyzer. For floor plate with standard 20 grid squares, test 3 grids per floor, those grids having the poorest performance in the acceptance test or in subsequent annual testing, when annual testing has previously occurred. Failure of 2 grids is 90% pass rate and acceptable. Failure of more than 2 grids (signal strength weaker than -95 dBm) on a floor indicates failure of the in-building coverage test for the building. 14e	Perform functional (talk-back) testing between a radio in the fire command center and a radio at a location outside the building – radios function sufficiently for communication with a DAQ of 3 or higher. If no, location(s) of non-acceptable communications:	☐ Yes	□ No	
14f	Perform functional (talk-back) testing between a radio at the fire alarm control panel and a radio at each landing in each stairwell – radios function sufficiently for communication with a DAQ of 3 or higher. If no, location(s) of non-acceptable communications:	☐ Yes	☐ No	
BA	ITERIES/SECONDARY POWER			
15	Backup batteries and secondary power supply tested under load for one hour and meet requirements.	🗌 Yes	🗌 No	
ALA	ARM PANEL MONITORING			
16	If a fire alarm system is present in the building, the fire alarm system is supervising the DAS including donor antenna function, active RF emitting device failure, and power supply. Separate annunciation is not required at fire alarm panel, if a secondary panel at the DAS separately indicates these conditions. * Only select N/A if system was installed prior to the adoption of the 2009 Edition of the Seattle Fire Code, or if the building is not required by code to have a fire alarm system.	🗌 Yes	🗌 No	□ N/A*
17	If a fire alarm system is present in the building, the communications link between the fire alarm system and the two-way radio communications enhancement system is monitored for integrity and the monitoring is operating correctly.	🗌 Yes	🗌 No	
18	For buildings without a fire alarm system, a dedicated monitoring panel annunciates supervisory and trouble signals for the signal booster system and power supply(ies) and sounds an audible signal at a constantly attended location. * Select N/A only if the building has a fire alarm system and information was provided in questions 17, 18, and 19 regarding the alarm system.	□ _{Yes}	□ _{No}	□ _{N/A*}
	AL CHECKS			
19	If building includes a fire alarm system, inform alarm monitoring company that testing is complete.	🗌 Yes	🗌 No	

SIG	SIGNATURES AND REPORTING				
20		rellow or white tag was placed on the system indicating the and test date consistent with my inspection today and SFD Rule 9.02.	Yes	🗌 No	
	The color of the	e tag is:	🗌 Red	Yellow	🗌 White
21	diagram of each critical area sha	inspection and maintenance along with an updated grid n floor showing tested strengths in each grid square and each II be provided to the building owner and included with the maintained in the DAS enclosure or building engineer's office.	Yes	🗌 No	
22	I will provide a	copy of the confidence test report to the owner.	🗌 Yes	🗌 No	
23	I will submit this fire department	s test report within seven days of the date of the test to the t through TCE.	Service Yes	🗌 No	
By a	accepting this sta	tement I, the certified technician shown on this form, certify tha	t this fire pro	tection system(s	s) has been
properly inspected for functional operation in accordance with the current Fire Code (FC) used by the department that has					
jurisdiction and NFPA Standards adopted by the FC for this system. Any deficiencies found are noted in the report and have					
bee	been reported to the building Owner/Manager for corrective action.				
	l accept.	I am authorized to submit this report for the certified technician who has accepted this statement.	(Initials of Emplo	oyee)
