

LAKE WASHINGTON BOULEVARD RENOVATIONS PROJECT

In partnership with the Seattle Department of Transportation and the community, Seattle Parks and Recreation is leading and managing the implementation of improvements to Lake Washington Boulevard to help promote pedestrian and bicycle activity and increase safety for everyone that visits and travels along Lake Washington Boulevard.

Through a community-centered process that prioritizes the voices of historically underserved and under-represented communities in southeast Seattle, the project aims to improve sidewalks and pedestrian paths to be ADA-compliant and enhance safety by adding stop signs, speed humps, raised crosswalks, and other traffic calming infrastructure. **This phase of the project does not include a dedicated bike lane.**

It is important for us to meet the community where they are.

We're attending community events and hosting pop-up outreach tables to talk with the community about the project. Visit the project webpage for a list of engagement opportunities and for more information: www.seattle.gov/allparks/lake-washington-boulevard
