Seattle City Employees' Retirement System

720 Third Avenue, Suite 900, Seattle, WA 98104-1829, Telephone: (206) 386-1293, Fax: (206) 386-1506

To the Honorable Mayor and Seattle City Council Seattle, Washington

I am pleased to transmit the 2015 Annual Report of the Seattle City Employees' Retirement System. This Annual Report consists of four sections: the Introductory Section contains the Executive Director's letter of transmittal, an organizational chart for the System, and the table of contents for the report; the Financial Section contains the audited financial statements of the System, as well as a letter from the System's certified public accountants; the Actuarial Section contains the independent consulting actuary's opinion, along with related actuarial data and statements; and the Statistical Section includes tables of significant data pertaining to the System operations.

The compilation of this report is the result of the combined effort of the Staff under the leadership of the Retirement Board. The intention is to provide complete and reliable information to assist in management decisions, to present evidence of compliance with legal provisions, and to demonstrate responsible stewardship for the assets contributed by the members and their employers.

The Executive Director and staff have reviewed the internal accounting controls and the financial statements, supporting schedules and statistical tables, and we are of the opinion that they fairly represent the condition of the Retirement System.

The accuracy and completeness of the data contained in this report are the sole responsibility of the management of the Seattle City Employees' Retirement System.

Overview of the Seattle City Employees' Retirement System

The Retirement System was created and established by amendment to the Charter of the City of Seattle (Article XXII - Section 13) submitted to the voters at the municipal election of March 8, 1927. The System, known thereafter as the Seattle City Employees' Retirement System (SCERS), is to provide retirement income to help maintain the quality of life for its former employees. The retirement plan is a defined benefit plan, which means the employee's salary, years of service, and age at the time of retirement are used to determine the amount of retirement benefits. Members of the Retirement System also participate in Social Security.

The Retirement System covers employees of the City of Seattle, the Seattle Public Library, and certain employees of King County and METRO. The Retirement System does not cover law enforcement officers and fire fighter employees. The year ended December 31, 2015, concludes our 88th year of operations.

The City of Seattle also sponsors a voluntary deferred compensation plan which permits employees to make pre-tax contributions up to the federal limits and manage the investment allocation of their contributions. This plan is administered through the Seattle Department of Human Resources and a third party administrator.

Distribution of the 2015 Annual Report

The report will be posted to the System's website. We trust the departments and Retirement System members will find this report both informative and helpful.

We would like to express our gratitude to the staff, the advisors, and to the many other people who have worked so diligently to assure the successful operation of the System.

> Respectfully submitted, BOARD OF ADMINISTRATION, SEATTLE CITY EMPLOYEES' RETIREMENT SYSTEM

Kenneth J. Nakatsu

Interim Executive Director

INDEPENDENT AUDITORS' REPORT

Board of Administration Seattle City Employees' Retirement System Seattle, Washington

Report on the Financial Statements

We have audited the accompanying financial statements of the Seattle City Employees' Retirement System (SCERS), which comprise the statements of plan net position as of December 31, 2015 and 2014, and the related statements of changes in plan net position for the years then ended, and the related notes to the financial statements.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditors' Responsibility

Our responsibility is to express an opinion on these financial statements based on our audits. We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditors' judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Accordingly, we express no such opinion. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of SCERS as of December 31, 2015 and 2014, and the results of its operations for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Report on Required Supplementary Information

Accounting principles generally accepted in the United States of America require that the management's discussion and analysis and the schedules of changes in net pension liability and related ratios, employer contributions, and investment returns. Such information, although not a part of the financial statements, is required by the Governmental Accounting Standards Board who considers it to be an essential part of financial reporting for placing the financial statements in an appropriate operational, economic, or historical context. We have applied certain limited procedures to the required supplementary information in accordance with auditing standards generally accepted in the United States of America, which consisted of inquiries of management about the methods of preparing the information and comparing the information for consistency with management's responses to our inquiries, the financial statements, and other knowledge we obtained during our audits of the financial statements. We do not express an opinion or provide any assurance on the information because the limited procedures do not provide us with sufficient evidence to express an opinion or provide any assurance.

Report on Other Information

Our audits were conducted for the purpose of forming an opinion on the financial statements as a whole. The additional information, as listed in the table of contents, is presented for purposes of additional analysis and is not a required part of the financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the financial statements. The information has been subjected to the auditing procedures applied in the audits of the financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the financial statements or to the financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the additional information, as listed in the table of contents, is fairly stated in all material respects in relation to the financial statements as a whole.

SEATTLE CITY EMPLOYEES' RETIREMENT SYSTEM MANAGEMENT'S DISCUSSION AND ANALYSIS Years Ended December 31, 2015 and 2014

This section presents management's discussion and analysis of the Seattle City Employees' Retirement System's (SCERS or the System) financial performance during the years ended December 31, 2015 and 2014. Please read it in conjunction with the accompanying financial statements and the related notes.

The City of Seattle is responsible for establishing and maintaining an internal control structure designed to ensure the protection of assets from loss, theft, or misuse, and to ensure the accounting information generated is adequate to prepare financial statements in conformity with generally accepted accounting principles. The internal control structure is designed to provide reasonable, though not absolute, assurance of achieving these objectives.

As a department of the City of Seattle, the Seattle City Employees' Retirement System is subject to this internal control structure. In addition, section 4.36.140.D of the Seattle Municipal Code requires the Board of Administration to annually transmit a report of the financial condition of the System to the City Council.

This report is prepared in accordance with the principles of governmental accounting and reporting promulgated by the Governmental Accounting Standards Board (GASB). Investments are stated at fair value, and revenues include the recognition of unrealized gains and losses. The accrual basis of accounting is used to record assets, liabilities, revenues and expenses. Revenue recognition occurs when earned without regard to the date of collection. Expense recognition occurs when the corresponding liabilities are incurred, regardless of payment date. The basis of contributions to the System follows the principles of level cost financing, with current service financed on a current basis. Milliman Consultants and Actuaries, the consulting actuary, evaluates the funding status of the System.

This report contains the following information:

1. Basic Financial Statements including:

- a. Statements of Plan Net Position
- b. Statements of Changes in Plan Net Position
- c. Notes to the Financial Statements

2. Required Supplementary Information including:

- a. Schedule of Changes in Net Pension Liability and Related Ratios
- b. Schedule of Employer Contributions
- c. Schedule of Investment Returns

3. Additional Information including:

- a. Schedule of Administrative Expenses
- b. Schedule of Investment Expenses

The basic financial statements are described as follows:

The Statement of Plan Net Position shows the account balances at year-end and includes the net
position available for future benefit payments. The liabilities for future benefit payments are not
included in this statement; however, they are shown in the Schedule of Changes in Net Pension Liability
and Related Ratios that is included in the Required Supplementary Information.

SEATTLE CITY EMPLOYEES' RETIREMENT SYSTEM MANAGEMENT'S DISCUSSION AND ANALYSIS Years Ended December 31, 2015 and 2014

- The Statement of Changes in Plan Net Position shows the sources and uses of funds during the year and illustrates the change in net position from the previous year.
- The Notes to the Financial Statements are an integral part of the financial statements and include additional detailed information and schedules to provide a better understanding of the financial statements.

The required supplementary information provides historical trends that help to reflect the ongoing plan perspective and the long-term nature of the defined benefit plan.

- The Schedule of Changes in Net Pension Liability and Related Ratios contains actuarial information about the status of the plan.
- The Schedule of Employer Contributions contains historical trend information regarding the value of the total annual contributions the employer must pay and the actual contributions paid by employers in meeting this requirement.
- The Schedule of Investment Returns contains the investment returns realized on the total portfolio for the years since 2014.

Financial Highlights

- Net position decreased by \$10 million (-0.4%) during 2015. The primary driver was net investment income of \$7 million. Net position increased by \$106 million (4.8%) during 2014. The primary driver was a \$117 million increase in investment assets and receivables.
- Revenue additions to net position for 2015 were \$174 million which includes member and employer
 contributions of \$167 million and revenue from investment activity totaling \$7 million. Revenue
 additions to net position for 2014 were \$276 million which includes member and employer
 contributions of \$154 million and revenue from investment activity totaling \$122 million.
- Expenses (deductions from net position) for 2015 increased by \$13.0 million (7.6%) from 2014. This can be primarily attributed to a \$9.1 million increase in retiree benefits. In 2015, the net increase in the number of retirees receiving benefits was 3.4%. Expenses for 2014 increased by \$8.9 million (5.5%) from 2013. This can be primarily attributed to an \$8.8 million increase in retiree benefits. In 2015, the net increase in the number of retirees receiving benefits was 2.9%.

Plan Net Position

The table below provides a summary of assets and current liabilities for the years ended December 31:

| | <u>2015</u> | | <u>2014</u> | <u>2013</u> |
|--|---------------------|----|---------------|---------------------|
| Cash, short-term investments and receivables | \$ 170,672,072 | \$ | 128,978,368 | \$ 58,102,260 |
| Investments at fair value | 2,154,482,878 | | 2,226,745,449 | 2,180,184,714 |
| Securities lending collateral | 50,952,037 | | 25,231,591 | 13,595,048 |
| Total assets | 2,376,106,987 | | 2,380,955,408 | 2,251,882,022 |
| Securities lending payable | 53,633,431 | | 28,228,622 | 16,750,032 |
| Other payables | 9,452,393 | | 30,023,091 | 18,223,505 |
| Total liabilities | 63,085,824 | _ | 58,251,713 | 34,973,537 |
| Total net position | \$ 2,313,021,163 | \$ | 2,322,703,695 | \$ 2,216,908,485 |

Changes in Plan Net Position

The table below provides a summary of the changes in plan net position and reflects the activities of the fund for the years ended December 31:

| | 2015 | 2014 | 2013 |
|--|-------------------|-------------------|-------------------|
| Additions: | | | |
| Employer contributions | \$ 101,153,403 | \$ 89,988,898 | \$ 77,073,667 |
| Member contributions | 65,779,216 | 63,969,504 | 60,342,581 |
| Net investment income and other income | 7,083,633 | 122,510,195 | 289,817,661 |
| Total additions | 174,016,252 | 276,468,597 | 427,233,909 |
| Deductions: | | | |
| Retiree benefits | 159,349,807 | 150,239,008 | 141,424,206 |
| Refunds of contributions | 16,137,840 | 15,103,615 | 15,278,136 |
| Administrative expenses | 8,211,137 | 5,330,764 | 5,058,356 |
| Total deductions | 183,698,784 | 170,673,387 | 161,760,698 |
| Net increase (decrease) | \$ (9,682,532) | \$ 105,795,210 | \$ 265,473,211 |

Revenues - Additions to Net Plan Position

- In 2015, employer contributions increased by \$11.2 million (12.4%) compared to 2014. In 2014, employer contributions increased by \$12.9 million (16.8%) compared to 2013.
- Member contributions increased by \$1.8 million (2.8%) compared to 2014. In 2014, member contributions increased by \$3.6 million (6.0%) compared to 2013.
- Net investment income was \$7.1 million in 2015 compared to \$122.5 million in 2014 and \$289.8 million in 2013.

Expenses - Deductions from Net Plan Assets

- Retiree benefits increased in 2015 by \$9.1 million (6.1%) compared to 2014, primarily due to the increased number of members making application for retirement and a mandatory 1.5% COLA (Cost of Living Adjustment). As a comparison, retiree benefits increased \$8.8 million (6.2%) in 2014.
- Refunds of contributions increased in 2015 by \$1.0 million (6.8%) compared to amounts paid in 2014. In 2014, refunds decreased \$0.2 million (-1.1%) compared to amounts paid in 2013.

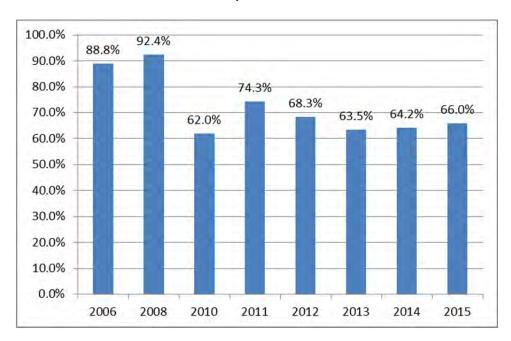

Changes in Plan Membership

The table below reflects the active membership and retiree changes for the years ended December 31:

| | <u>2015</u> | <u>2014</u> | <u>Change</u> |
|---|-------------|-------------|---------------|
| Retirees and beneficiaries receiving benefits | 6,223 | 6,020 | 3.4% |
| Current and terminated employees: | | | |
| Current employee members | 8,882 | 8,746 | 1.6% |
| Terminated members entitled to, but not yet receiving benefits, Vested Terminated members not entitled to benefits | 1,220 | 1,188 | 2.7% |
| beyond contributions and accumulated | | | |
| interest, Non-Vested | 977 | 935 | 4.5% |
| Total | 11,079 | 10,869 | 1.9% |

Funding Status

Schedule of Funding Progress Funding Ratio As of January 1st Valuation Date

With the January 1, 2011 Valuation and the 2007-2010 Experience Study, the Board of Administration adopted a policy of asset smoothing over a 5-year period. The reported funding ratio as of January 1, 2012 reflects that change. Prior to January 1, 2011, all funding ratios were reported on a market basis.

Funds are accumulated from employer and employee contributions and investment earnings, and are used to pay present and future benefit obligations and administrative expenses. We continue to make a constant effort to achieve a fully funded status, thereby assuring the participants of a financially sound retirement system. In 2015, most active members contributed 10.03% of their salaries to the retirement fund and the City contributed 15.73%.

Investment Activities

One-year returns on asset classes (gross of fees) and comparative benchmarks are presented in the table below for the years ended December 31. These returns are calculated on a time-weighted rate of return basis:

2015 Investment Performance

| Total Portfolio | 0.3% |
|--|------------------|
| Domestic Equities Benchmark: Russell 3000 Index (Blend) | 1.5% 1.2% |
| International Equities Benchmark: MSCI ACWI ex US IM/ND | (3.9%) (4.6%) |
| Broad Fixed Income Benchmark: Barclays U.S. Universal Index | 0.3% 0.4% |
| Private Equity Benchmark: ASP Custom Private Equity Index | 2.6% 3.5% |
| Real Estate Benchmark: Russell NCREIF Property Index | 13.5% 13.9% |
| Diversifying Strategies Benchmark: HFRI Fund of Funds Comp. Index | 0.2% (0.3%) |
| Cash Benchmark: Citigroup 3-Month T-Bills | 0.7% 0.0% |

2015 Investment Performance

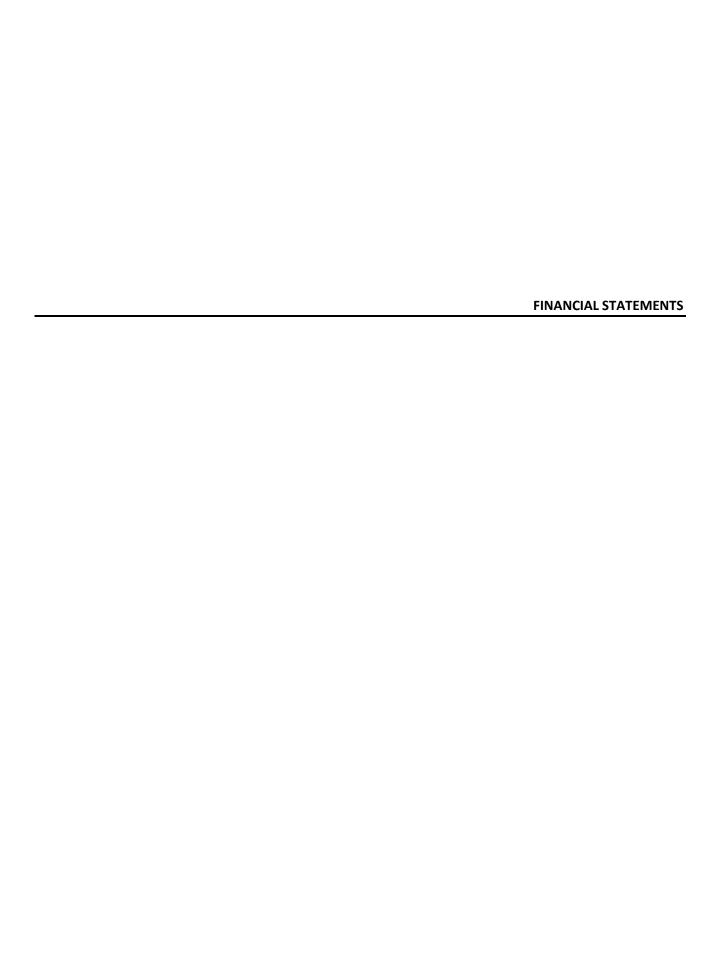

| Total Portfolio | 5.7% |
|---|------------------|
| Domestic Equities Benchmark: U.S. Equities Custom Index | 13.1% 10.1% |
| International Equities Benchmark: MSCI ACWI ex US IM/ND | (5.3%) (3.9%) |
| Fixed Income Benchmark: Barclays U.S. Universal Index | 5.6% 5.6% |
| Real Return Benchmark: CPI + 3% | 7.6% 3.7% |
| Private Equity Benchmark: ASP Custom Private Equity Index | (2.1%) 16.8% |
| Real Estate Benchmark: Russell NCREIF Property Index | 11.2% 12.4% |
| Cash Benchmark: Citigroup 3-Month T-Bills | 5.8% 0.0% |

The investments of the System are governed primarily by the prudent investor rule. The prudent investor rule, as set forth by the Revised Code of Washington, establishes a standard for all fiduciaries, which includes anyone who has authority with respect to the fund. The System invests retirement funds for the long-term, anticipating both good and poor performing financial markets. The overall investment portfolio is positioned in a diversified manner to maximize return given the System's risk tolerance.

Note 1 - Plan Description

The Seattle City Employees' Retirement System (the System) is a multiple employer defined benefit public employee retirement plan, covering employees of the City of Seattle and administered in accordance with Chapter 4.36 of the Seattle Municipal Code. The System is a pension trust fund of the City of Seattle.

The System is administered by the Retirement System Board of Administration (the Board). The Board consists of seven members including the Chair of the Finance Committee of the Seattle City Council, the City of Seattle Finance Director, the City of Seattle Personnel Director, two active members and one retired member of the System who are elected by other system members, and one outside board member who is appointed by the other six board members. Elected and appointed board members serve for three-year terms.

All employees of the City of Seattle are eligible for membership in the System with the exception of uniformed police and fire personnel who are covered under a retirement system administered by the State of Washington. Employees of METRO and the King County Health Department who established membership in the System when these organizations were City of Seattle departments were allowed to continue their System membership (there are currently fewer than 50 members in this category). There are currently 6,223 retirees and beneficiaries receiving benefits, and 8,882 active members of the System. There are 1,220 terminated, vested employees entitled to future benefits.

The System provides retirement, death, and disability benefits. Retirement benefits vest after five years of credited service, while death and disability benefits vest after ten years of service. Retirement benefits are calculated as 2% multiplied by years of creditable service, multiplied by average salary, based on the highest 24 consecutive months. The benefit is actuarially reduced for early retirement. The System provides post-retirement benefit increase including an automatic 1.5% annual COLA increase and a 65% restoration of purchasing power benefit.

Note 2 - Summary of Significant Accounting Policies and Plan Asset Matters

Basis of Accounting - These financial statements have been prepared with an "economic resources" measurement focus on the accrual basis of accounting in accordance with generally accepted accounting principles, as prescribed by the Government Accounting Standards Board.

Use of Estimates in Preparing Financial Statements - The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires the System to make estimates and assumptions that affect the reported amounts of assets, liabilities, additions and deductions to net position held in trust for pension benefits and disclosure of contingent assets and liabilities at the date of the financial statements and during the reporting period. Actual results could differ from those estimates.

Note 2 - Summary of Significant Accounting Policies and Plan Asset Matters (Continued)

Cash and Short Term Investments - The System classifies cash on deposit in financial institutions and cash on deposit in the City of Seattle's internal cash management pool as cash. The System also recognizes certain short-term highly liquid securities with an original maturity of three months or less as short-term investments.

Method Used to Value Investments - Plan investments are reported at fair value. Fair value is defined as the amount at which an investment could be exchanged in a current arm's length transaction between willing parties in which the parties each act knowledgeably and prudently. All investments are valued based on objective, observable, unadjusted quoted market prices in an active market on the measurement date, if available. In the absence of such data, valuations are based upon those of comparable securities in active markets. For illiquid or hard to value investments such as real estate, private equity, and other private investments, valuations are based upon data provided by the respective investment managers. These private asset valuations are generally based upon estimated current values and/or independent appraisals.

Investment income consists of realized and unrealized appreciation (depreciation) in the fair value of investments, interest and dividend income earned, less investment expense, plus income from securities lending activities, less deduction for security lending expenses. Interest income is recorded on the accrual basis and dividends are recorded on the ex-dividend date. Securities and securities transactions are reflected in the financial statements on a trade-date basis. Investments are made in accordance with the Prudent Person Rule as defined by the State of Washington RCW 35.39.060.

Federal Income Tax Status - The System is a qualified plan under section 401(a) of the Internal Revenue Code and is exempt from federal income taxes under section 501(a).

Contributions - Employee and employer contributions are reported in the year they are due to the System.

Benefits and Refunds of Contributions - Benefits and refunds of contributions are recognized when due and payable in accordance with the System's policy.

Reclassifications - Certain 2014 amounts have been reclassified in conformity with the 2015 presentation. These reclassifications had no effect on net position or changes therein.

Note 3 - Contributions

Member and employer contributions rates are established by the Seattle Municipal Code Chapter 4.36.

The employer contribution rate is determined by the actuarial formula identified as the Entry Age Cost Method. The formula determines the amount of contributions necessary to fund the current service cost, representing the estimated amount necessary to pay for benefits earned by the employees during the current service year and the amount of contributions necessary to pay for prior service costs. Total required contributions, including amounts necessary to pay administrative costs, are determined through annual actuarial valuations.

Actuarially determined contribution rates were 10.03% for most members in 2015 and 2014 and 15.73% and 14.31% for the employers in 2015 and 2014. There are no long-term contracts for contributions outstanding and currently no legally required reserves. See Note 8 for additional information on assumptions used in calculating the actuarially determined contribution rates.

Note 4 - Cash

SCRS' policy for custodial credit risk of deposits is to rely on Federal Deposit Insurance Corporation (FDIC) and Washington Public Deposit Protection Commission (PDPC) insurance. FDIC insures the cash deposits up to \$250,000. As provided by the State of Washington RCW 43.84, the PDPC collateralizes deposits in excess of \$100,000. The bank balances of deposits of a FDIC institution as of the balance sheet date are insured.

Note 5 - Investments

Investment policy - The pension plan's policy in regard to the allocation of invested assets is established and may be amended by the SCERS Board by a majority vote of its members. It is the policy of the SCERS Board to pursue an investment strategy that reduces risk through the prudent diversification of the portfolio across a broad selection of distinct asset classes. The pension plan's investment policy discourages the use of cash equivalents, except for liquidity purposes, and aims to refrain from dramatically shifting asset class allocations over short time spans. The following was the Board's adopted asset allocation policy as of December 31, 2015:

| Asset Class | Target Allocation |
|-------------------------|----------------------|
| Equity | |
| Public Equity | 48.0% |
| Private Equity | 9.0% |
| Fixed Income | |
| Broad Fixed Income | 18.0% |
| Credit Fixed Income | 5.0% |
| Real Assets | |
| Real Estate | 12.0% |
| Infrastructure | 3.0% |
| Diversifying Strategies | 5.0% |
| Total | 100.0% |

SEATTLE CITY EMPLOYEES' RETIREMENT SYSTEM NOTES TO FINANCIAL STATEMENTS Years Ended December 31, 2015 and 2014

Note 5 – Investments (Continued)

Money-weighted rate of return — As of December 31, 2015, the return for the System, based on a money-weighted rate of return methodology was 0.26%.

Short Term Investments - Short term investments include a Short-term Investment Fund (STIF), which is a collective trust that may include certificates of deposit, treasury bills, and mutual funds. The Alternative Investments category currently includes derivatives, hedge funds and private equity funds.

Commingled Funds — The System invests in various commingled funds where it has an ownership interest in a pool of securities alongside other fund holders. For those commingled funds that are anticipated to be held by the System on a long-term basis, the following tables in this Section reflect the System's pro rata ownership of the constituent securities in these commingled funds. The System's investments in commingled funds that are anticipated to be held on a temporary basis are not reflected in this manner.

Custodial Credit Risk – For investments, custodial credit risk is the risk that in the event of the failure of a financial institution or a bank, the System will not be able to recover the value of its deposits or investments that are in the possession of an outside party. The System mitigates custodial credit risk by having its investment securities held by the System's custodian (BNY Mellon) and registered in the System's name. The System's short-term investments are created through daily sweeps of excess cash by the System's custodian, and invested in a vehicle managed by the custodian.

Credit Risk - Credit risk is the risk that an issuer, or other counterparty, to an investment will not fulfill its obligations. The Retirement Board provides each of the System's Broad Fixed Income investment managers with a set of investment guidelines. These guidelines specify eligible investments, minimum diversification standards, and applicable investment restrictions necessary for diversification and risk control. In general, these guidelines require that at least 70 percent of the net asset value of a manager's portfolio be invested in investment-grade securities. Managers do not have authority to depart from their guidelines. A summary of the credit ratings of the System's fixed income investments is provided on pages 22 and 23.

Concentration of Credit Risk - Concentration of credit risk is the risk of loss attributed to the magnitude of a government's investment in a single issuer. The Retirement Board provides each of the System's Broad Fixed Income investment managers with a set of investment guidelines. These guidelines specify eligible investments, minimum diversification standards, and applicable investment restrictions necessary for diversification and risk control. In general, these guidelines require that investments in any one issuer may not exceed 5 percent of the net asset value of a manager's portfolio. Managers do not have authority to depart from their guidelines.

SEATTLE CITY EMPLOYEES' RETIREMENT SYSTEM NOTES TO FINANCIAL STATEMENTS Years Ended December 31, 2015 and 2014

Note 5 - Investments (Continued)

Interest Rate Risk - Interest rate risk is the risk that changes in interest rates over time will adversely affect the fair value of an investment. Market or interest rate risk is the greatest risk faced by an investor in the debt securities market. The price of a debt security typically moves in the opposite direction of the change in interest rates. The Retirement Board provides each of the System's Broad Fixed Income investment managers with a set of investment guidelines. These guidelines specify eligible investments, minimum diversification standards, and applicable investment restrictions necessary for diversification and risk control. In general, these guidelines require that the weighted average duration of the security holdings of a manager's portfolio not vary from that of the applicable benchmark by more than 20 percent. Managers do not have authority to depart from their guidelines. A summary of the maturities of the System's fixed income investments is provided on pages 20 and 21.

The fixed income portfolio is primarily managed by four external money management firms. Managers have agreed to a set of guidelines that provide ranges and limits for varying types of securities that may be held within the portfolio. A consultant is hired to measure performance and monitor the investment style. The Investment Committee reviews the consultant's results quarterly.

Foreign Currency Risk - Foreign currency risk is the risk that changes in exchange rates will adversely impact the fair value of an investment. The System's currency risk exposures, or exchange rate risk, primarily reside within the non-U.S. equity and fixed income investment holdings. The System expects these managers to maintain adequately diversified portfolios to limit foreign currency and security risk.

Note 5 – Investments (Continued)

The System's exposure to foreign currency risk in U.S. dollars as of December 31, 2015, is summarized in the following table.

| Currency Type | Equity | Fix | ked Income | Derivatives | | Cash | | Total |

Note 5 – Investments (Continued)

Derivatives - Foreign exchange forward contracts are periodically employed by the System to hedge currency risk of investments in foreign currencies. Generally, derivatives are subject both to market and to counterparty risk. The derivatives used by the System typically have no greater risk than their physical counterparts and, in many cases, are offset by exposures elsewhere in the portfolio. Counterparty risk, the risk that the "other party" to a contract will default, is managed by careful screening of counterparties. Derivative securities are priced and accounted for at fair value. Foreign exchange forward contracts are valued at the price at which the transaction could be settled by offsets in the forward markets.

The System's pending derivative transactions as of December 31, 2015 are summarized in the following table.

| Currency Type | Purchases | | Unrealized Gain/Loss | | Sells | | Unrealized Gain/Loss | Total Unrealized Gain/Loss |
|-----------------------|------------------|----|-------------------------|----|------------|----|-------------------------|--------------------------------------|
| Australian Dollar | \$ 1,280,126 | \$ | 538 | \$ | 1,284,051 | \$ | (18,722) | \$ (18,184) |

Note 6 – Securities Lending Transactions

Under the authority of State of Washington RCW 41.28.005 and the Seattle Municipal Code 4.36.130, the System's Board of Administration adopted investment policies that define eligible investments, which include securities lending transactions. Through a custodial agent, the System participates in a securities lending program whereby securities are lent for the purpose of generating additional income to the System. The System lends securities from its investment portfolio on a collateralized basis to third parties, primarily financial institutions. The market value of the required collateral must meet or exceed 102% of the market value of the securities lent, providing a margin against a decline in the market value of the collateral, and is limited to a volume of less than \$75 million. The contractual agreement with the System's custodian provides indemnification in the event the borrower fails to return the securities lent or fails to pay the System income it is due on the securities lent. Cash and U.S. government securities were received as collateral for these loans. The System invests cash collateral received; accordingly, investments made with cash collateral appear as an asset. A corresponding liability is recorded as the System must return the cash collateral to the borrower upon the expiration of the loan. Gross income from securities lending transactions are recorded in the operating statements as well as the various fees paid to the institution that oversees the lending activity.

As of December 31, 2015, the fair value of securities on loan was \$52,498,078. Associated cash collateral totaling \$53,702,631 was received. The fair market value of the reinvested collateral was \$50,952,037 at December 31, 2014, which includes an unrealized loss totaling \$2,681,394.

As of December 31, 2014, the fair value of securities on loan was \$27,013,522. Associated cash collateral totaling \$28,228,622 was received. The fair market value of the reinvested collateral was \$25,231,591 at December 31, 2013, which includes an unrealized loss totaling \$2,997,032.

Note 7 - Commitments

The System has entered into capital commitments to fund partnership interests in certain alternative investments. At December 31, 2015, the System has unfunded commitments of \$309,460,359 to these partnerships.

Note 8 - Net Pension Liability

The components of the net pension liability as of December 31, 2015 were as follows:

Total Pension Liability \$3,612,173,272
Plan Fiduciary Net Position
Net Pension Liability \$1,299,152,109

Plan Fiduciary Net Position as a Percentage of the Total Pension Liability 64.0%

SEATTLE CITY EMPLOYEES' RETIREMENT SYSTEM NOTES TO FINANCIAL STATEMENTS Years Ended December 31, 2015 and 2014

NOTE 8 – Net Pension Liability (Continued)

Actuarial assumptions

The total pension liability was determined by an actuarial valuation as of December 31, 2015, using the following actuarial assumptions, applied to all periods including the measurement period:

Investment Rate of Return: 7.50% compounded annually, net of expenses

Salary Increases: 4.00%

* The actuarial assumptions used in the January 1, 2015 valuation, and the mortality tables included in Appendix A of the valuation, were based on the results of an actuarial experience study for the period January 1, 2010 through December 31, 2013.

The long-term expected rate of return on pension plan investments was determined using a building-block method in which best-estimate ranges of expected future real rates of return (expected returns, net of pension plan investment expense and inflation) are developed for each major asset class. These ranges are combined to produce the long-term expected rate of return by weighting the expected future real rates of return by the target asset allocation percentage and by adding expected inflation.

Best estimates of geometric real rates of return for each major asset class included in the pension plan's target asset allocation as of December 31, 2015 (see discussion of pension plan's investment policy) are summarized in the following table:

| | Long-Term Expected |
|-------------------------|---------------------|
| Asset Class | Real Rate of Return |
| Equity | |
| Public Equity | 4.63% |
| Private Equity | 6.25% |
| Fixed Income | |
| Broad Fixed Income | 0.75% |
| Credit Fixed Income | 3.55% |
| Real Assets | |
| Real Estate | 3.25% |
| Infrastructure | 3.25% |
| Diversifying Strategies | 3.25% |

SEATTLE CITY EMPLOYEES' RETIREMENT SYSTEM NOTES TO FINANCIAL STATEMENTS Years Ended December 31, 2015 and 2014

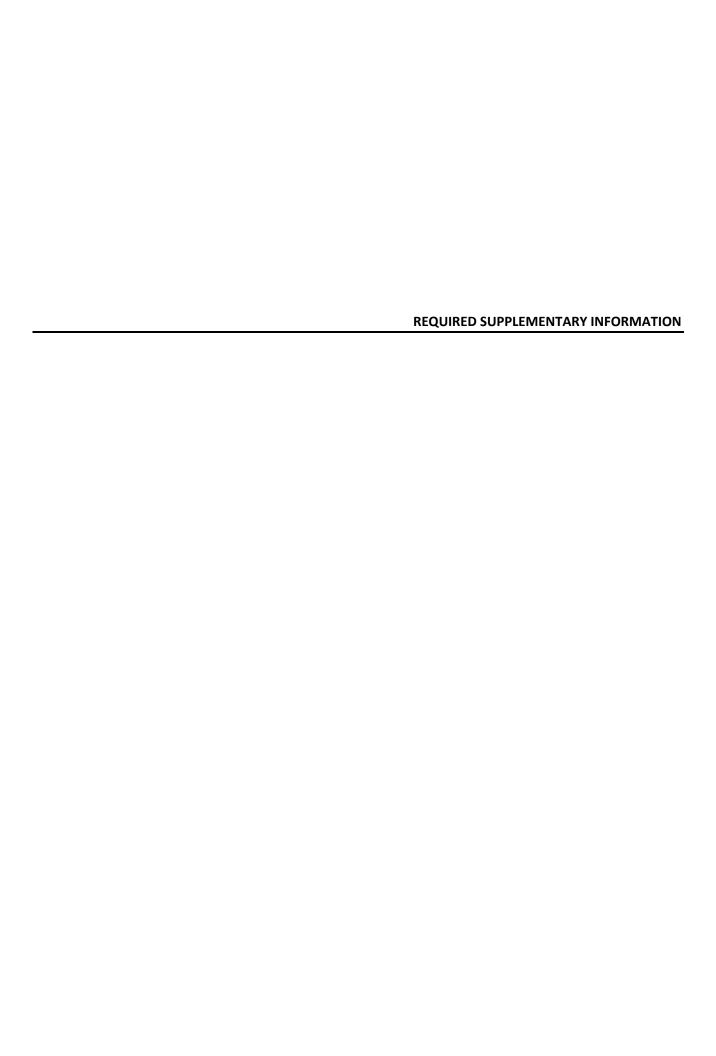

NOTE 8 - Net Pension Liability (Continued)

The above table reflects the expected (30 year) real rate of return for each major asset class. The expected inflation rate is projected at 3.25% for the same time period.

Discount Rate. The discount rate used to measure the total pension liability was 7.50%. The projection of cash flows used to determine the discount rate assumed that plan member contributions will be made at the current contribution rate and the participating governmental entity contributions will be made at rates equal to the difference between actuarially determined contribution rates and the member rate. Based on those assumptions, the pension plan's fiduciary net position was projected to be available to make all projected future benefit payments of current plan members. Therefore, the long-term expected rate of return on pension plan investments was applied to all periods on projected benefit payment to determine the total pension liability.

Sensitivity of the net pension liability. The following presents the net pension liability of the System, calculated using the discount rate of 7.50%, as well as what the System's net pension liability would be if it were calculated using a discount rate that is 1% lower or 1% higher than the current rate:

| 1% | Current | 1% |
|-----------------|-----------------|---------------|
| Decrease | Discount | Increase |
| (6.50%) | Rate (7.50%) | (8.50%) |
| \$1,740,175,209 | \$1,299,152,109 | \$928,111,691 |

Notes to Schedule:

Valuation Date: Actuarially determined contribution rates are calculated as of January 1, one year prior to the fiscal year in which the contributions will apply. Methods and Assumptions used to determine contribution rates for fiscal year 2015 are:

Actuarial cost method Individual Entry Age Normal

Amortization method Level percent

Remaining amortization period Closed 30 years as of January 1, 2013 Valuation

Asset valuation method 5 years smoothed, Non-asymptotic

Inflation 3.25%

Salary increases 4.00%, differs slightly from actuarial valuation due to exclusion of 0.50% active membership growth assumption for GASB calculations.

Investment rate of return 7.50%, net of pension plan investment expense, and gross of administrative expenses

Cost of Living Adjustments As noted in the January 1, 2015 actuarial valuation.

Retirement Board Seattle City Employees' Retirement System 720 Third Avenue, Suite 900 Seattle, WA 98104

Dear Members of the Board:

As requested, we have prepared an actuarial valuation of the Seattle City Employees' Retirement System (SCERS) as of January 1, 2016. This report reflects the benefit provisions and contribution rates in effect as of January 1, 2016.

Actuarial Certification

In preparing this report, we relied, without audit, on information (some oral and some in writing) supplied by SCERS staff. This information includes, but is not limited to, statutory provisions, employee data, and financial information. We found this information to be reasonably consistent and comparable with information used for other purposes. The valuation results depend on the integrity of this information. It should be noted that the valuation was based on the DRAFT audited financial statements, as the final audited statements were not yet available. If any of this information is inaccurate or incomplete our results may be different and our calculations may need to be revised.

All costs, liabilities, rates of interest, and other factors for the System have been determined on the basis of actuarial assumptions and methods which are individually reasonable (taking into account the experience of the System and reasonable expectations), and which, in combination, offer a reasonable estimate of anticipated experience affecting the System. Further, in our opinion, each actuarial assumption used is reasonably related to the experience of the Plan and to reasonable expectations which, in combination, represent our best estimate of anticipated experience under the System.

This valuation report is only an estimate of the System's financial condition as of a single date. It can neither predict the System's future condition nor guarantee future financial soundness. Actuarial valuations do not affect the ultimate cost of System benefits, only the timing of System contributions. While the valuation is based on an array of individually reasonable assumptions, other assumption sets may also be reasonable and valuation results based on those assumptions would be different. No one set of assumptions is uniquely correct. Determining results using alternative assumptions is outside the scope of our engagement.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Due to the limited scope of our assignment, we did not perform an analysis of the potential range of future measurements. The Retirement Board has the final decision regarding the appropriateness of the assumptions and adopted them as indicated in Appendix A at the May 8, 2014 meeting.

This work product was prepared solely for SCERS for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work. Milliman recommends that third parties be aided by their own actuary or other qualified professional when reviewing the Milliman work product.

Retirement Board Seattle City Employees' Retirement System June 17, 2016 Page 2

Actuarial computations presented in this report are for purposes of determining the recommended funding amounts for SCERS. Actuarial computations presented for financial reporting in a separate report under GASB Statements No. 67 and 68 are for purposes of assisting SCERS and participating employers in fulfilling their financial accounting requirements. The computations prepared for these two purposes may differ as disclosed in our report. The calculations in the enclosed report have been made on a basis consistent with our understanding of SCERS' funding requirements and goals. Determinations for purposes other than meeting these requirements may be significantly different from the results contained in this report. Accordingly, additional determinations may be needed for other purposes.

Milliman's work is prepared solely for the internal business use of SCERS. To the extent that Milliman's work is not subject to disclosure under applicable public records laws, Milliman's work may not be provided to third parties without Milliman's prior written consent. Milliman does not intend to benefit or create a legal duty to any third party recipient of its work product. Milliman's consent to release its work product to any third party may be conditioned on the third party signing a Release, subject to the following exception(s):

- a) SCERS may provide a copy of Milliman's work, in its entirety, to the System's professional service advisors who are subject to a duty of confidentiality and who agree to not use Milliman's work for any purpose other than to benefit the System.
- b) SCERS may provide a copy of Milliman's work, in its entirety, to other governmental entities, as required by law.

No third party recipient of Milliman's work product should rely upon Milliman's work product. Such recipients should engage qualified professionals for advice appropriate to their own specific needs.

The consultants who worked on this assignment are pension actuaries. Milliman's advice is not intended to be a substitute for qualified legal or accounting counsel.

The signing actuaries are independent of the City of Seattle. We are not aware of any relationship that would impair the objectivity of our work.

On the basis of the foregoing, we hereby certify that, to the best of our knowledge and belief, this report, along with the information contained in the Comprehensive Annual Financial Report, is complete and accurate and has been prepared in accordance with generally recognized and accepted actuarial principles and practices. We are members of the American Academy of Actuaries and meet the Qualification Standards to render the actuarial opinion contained herein.

Retirement Board Seattle City Employees' Retirement System June 17, 2016 Page 3

We would like to express appreciation to the system staff, including Mr. Jeff Davis, who gave substantial assistance in supplying the data on which this report is based.

Respectfully submitted,

Nick J. Collier, ASA, EA, MAAA Principal and Consulting Actuary

Section 1 Summary of the Findings

Overview

| | January 1, 2016 | January 1, 2015 |
|-----------------------------------|-----------------|-----------------|
| Total Actuarial Contribution Rate | 25.32% | 25.26% |
| Funding Ratio | 66.5% | 66.0% |

We are pleased to present the results of the January 1, 2016 actuarial valuation. This valuation determines the minimum actuarially required employer contribution rate payable beginning January 1, 2017 based on the Board's funding policy. Several key points of the valuation are summarized as follows:

- Investment Returns: For the year ending December 31, 2015, the SCERS assets returned around 0.1% on a market basis (net of investment expenses), a rate of return less than the assumed rate. From January 1, 2015 to December 31, 2015, the SCERS assets were assumed to earn 7.50%. The result is an actuarial loss on assets for the 2015 year. Note that only one-fifth of this loss will be recognized in the current year Actuarial Value of Assets (AVA), due to the asset smoothing method; see Section 3 of this report for details. Currently, a net asset loss is being deferred in the AVA; this implies that, if all actuarial assumptions are met in future years, the minimum actuarially required contribution rate is expected to increase in future years.
- City Contribution Rate: The minimum actuarially required contribution rate has increased from the prior valuation, from 25.26% to 25.32% of payroll. Since the employees contribute a fixed 10.03% of pay, the minimum actuarially required employer contribution rate has increased from 15.23% of pay to 15.29%.

The most significant factor causing this increase was the recognition of asset losses from prior years. See the section below titled "Analysis of Change" for more details.

■ Funding Progress: On the basis of the January 1, 2015 actuarial valuation, the Funding Ratio (which is measured as the AVA divided by the Actuarial Accrued liability) was 66.0%. Based on the January 1, 2016 valuation, the Funding Ratio has increased to 66.5%. The most significant factor causing this increase was the Unfunded Actuarial Accrued Liability (UAAL) amortization payment made by the City during the prior year. Note that these Funding Ratios are calculated using the AVA; Funding Ratio results based on the Market Value of Assets (MVA) are shown in Table 1 at the end of this section.

Overview (continued)

Funding Policy: In August 2013, the Seattle City Council passed a resolution to formally close the period over which any SCERS UAAL will be amortized. This resolution stipulated that the 30-year amortization period would be closed as of the January 1, 2013 actuarial valuation. The result is that, for purposes of the January 1, 2016 valuation calculation, a 27-year remaining closed period is in effect.

The effect of closing the UAAL amortization period is that the total SCERS UAAL is projected to be fully paid off over the next 27 years from the January 1, 2016 valuation date.

Minimum Actuarially Required Contribution Rate

Based on the actuarial valuation of the benefits in effect under the SCERS as of January 1, 2016, the total minimum actuarially required contribution rate increased from 25.26% to 25.32% for the year beginning January 1, 2017.

The current contribution rates for the death benefit program are projected to be sufficient to finance the \$2,000 death benefit.

Based on a fixed member contribution rate of 10.03%, this means the City's contribution rate may be increased from 15.23% to 15.29% effective January 1, 2017. This reflects the City's commitment to fund at least the minimum actuarially required contribution rate, which is based on a 27-year amortization of the UAAL beginning January 1, 2016. A greater City contribution rate would result in a shorter amortization of the UAAL, if all actuarial assumptions are met.

It should be noted that the recommended 25.32% of pay is calculated based on the AVA; see Section 3 of this report for details. This AVA is currently deferring a net actuarial asset loss of \$84.1 million under the asset smoothing method. This means that if no actuarial gains or losses occur in the future, the minimum actuarially required contribution rate would increase over the next several years as the deferred asset losses are phased into the AVA.

Minimum Actuarially Required Contribution Rate (continued) We have performed a five-year projection of the contribution rates if 7.50% was returned on the Market Value of Assets in each future year (and assuming that no other actuarial gains or losses occur and there are no other changes to assumptions or benefit provisions). This projection shows the expected impact of recognizing the currently deferred asset gains and losses over time. The result is ultimately an increase in the contribution rate over the next several years.

It is likely that the Market Value of Assets will not return an annual average of exactly 7.50% over all future years. To show the potential impact of volatility in asset returns on the contribution rate, we have performed a projection of the contribution rates at the 5th and 95th percentile expected returns (thereby yielding a 90% asset-return-based confidence interval for the specified rates). These projections are shown in the chart below.

| Projected Total Actuarial Required Contribution Rate | | | | | | | |
|--|-------------------------------|---|--|--|--|--|--|
| Contribution Year* | Assuming 7.50% Future Returns | 90% Asset Return Confidence Interval | | | | | |
| 2017 | 25.32% | 25.32% - 25.32% | | | | | |
| 2018 | 25.28% | 24.56% - 25.99% | | | | | |
| 2019 | 25.40% | 23.87% - 26.98% | | | | | |
| 2020 | 25.78% | 23.24% - 28.47% | | | | | |
| 2021 | 26.10% | 22.36% - 30.14% | | | | | |
| 2022 | 26.10% | 20.95% - 31.73% | | | | | |

^{*} Contribution year lags valuation year by one year. For example: Contribution Year 2017 is based on the 2016 valuation results, amortized over 27 years beginning in 2016, if the increase takes place in 2017.

| Compounded Average Return for Period | | | | | |
|--------------------------------------|--------|------------|-------|--|--|
| | | Percentile | | | |
| | | 95th | 5th | | |
| 1-Year | Period | -11.5% | 26.6% | | |
| 2-Year | Period | -6.7% | 20.1% | | |
| 3-Year | Period | -4.5% | 17.4% | | |
| 4-Year | Period | -3.2% | 15.8% | | |
| 5-Year | Period | -2.3% | 14 7% | | |

The 90% confidence interval results are based on the 5th and 95th percentile compounded returns for one-, two-, three-, four- and five-year periods. Since actuarial assets are used, deferred gains or losses would continue to decrease or increase the minimum actuarially required contribution rate after these dates.

See Section 8 of this report for a detailed discussion of the projected contribution rates.

Funding Valuation

This report provides information relevant to the funding of SCERS. Information for financial reporting purposes will be provided in a separate GASB 67 and 68 Disclosure report.

Funding Progress

On the basis of the January 1, 2015 actuarial valuation, the Funding Ratio was 66.0%. Based on the January 1, 2016 valuation, the Funding Ratio is 66.5%. The increase in the Funding Ratio is due mainly to the UAAL payment made by the City in 2015. See Section 3 of this report for a full discussion.

See the following section titled Analysis of Change for more details.

Analysis of Change

The following chart shows the sources of change in the actuarial contribution rate and the funding ratio between the prior and current actuarial valuations.

| Sources of Change | Actuarial Contrib. Rate | Funding Ratio |
|---|-----------------------------------|---|
| January 1, 2015 Actuarial Valuation | 25.26 % | 66.0 % |
| Expected Valuation-to-Valuation Change Asset Gain/Loss on Actuarial Value Salary/Membership Growth Different Than Expected Changes in Assumptions Other | 0.18 % (0.08)% - (0.04)% | 1.0 % (0.6)% (0.1)% - 0.2 % |
| Total Change | 0.06 % | 0.5 % |
| January 1, 2016 Actuarial Valuation | 25.32 % | 66.5 % |

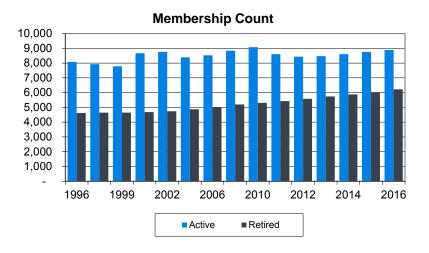

Contingent COLA Benefits

The Seattle Municipal Code allows for an increase in the cost-of-living adjustment (COLA) available to current and future retired members. Currently, the Floor COLA (also referred to as a Restoration of Purchasing Power COLA) is at the 65% level. The enhanced COLA benefit (70% Floor COLA) does not become effective until the System attains at least a 100% funding level.

Since it is unknown when this benefit will become effective, especially given the current funded status of the System, we have not included the valuation of these potential benefit changes (i.e., the increase in the ROPP COLA to the 70% level) in this valuation. See Appendix A of this report for further details.

Membership Information

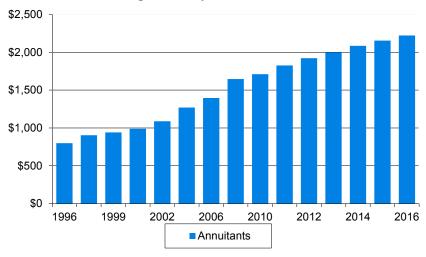

Total valuation payroll has increased by 6.0% since the 2015 valuation, and active membership has increased by 1.6% during this same period. As of January 1, 2016, the annualized payroll is \$687 million for 8,882 active members.

Membership Information (continued)

Retired member counts and average retirement benefit amounts continue to increase steadily. As of January 1, 2016, there were 6,223 retired members and beneficiaries with an average benefit of \$2,221 per month. This represents a 3.4% increase in count and a 3.1% increase in average benefit amount.

Analysis of Change in Member Population

The following table summarizes the year-to-year change in member population.

| | Actives | Deferred Members* | Retirees/ Beneficiaries |
|---------------------------------|---------|----------------------|----------------------------|
| January 1, 2015 Valuation | 8,746 | 2,127 | 6,019 |
| Termination with Refund / Death | (173) | (77) | (220) |
| Termination without Refund | (211) | 211 | - |
| Service Retirement | (324) | (46) | 370 |
| Disability Retirement | (3) | - | 3 |
| Rehires | 40 | (40) | - |
| New Entrants / Beneficiaries | 807 | 22 | 51 |
| Data Corrections | | | |
| January 1, 2016 Valuation | 8,882 | 2,197 | 6,223 |

^{*} Counts include non-vested terminated members whose contributions are still on deposit with SCERS as of valuation date.

Summary Exhibit

A summary of the key results of this valuation, along with a comparison to the January 1, 2015 valuation, is shown in Table 1.

Note that the valuation measures are based on the Actuarial Value of Assets, which recognizes asset gains and losses over a five-year period; however, we have also shown key measures using the Market Value of Assets.

Graphs 1 and 2 and the associated data table show historical asset and liability information, including the Present Value of Future Benefits (PVFB) and Present Value of Future Normal Costs (PVFNC), at previous valuation dates.

Section 2 Scope of the Report

This report presents the actuarial valuation of the Seattle City Employees' Retirement System as of January 1, 2016.

A summary of the findings resulting from this valuation is presented in the previous section. Section 3 describes the assets of the System. A summary of the assets is set forth in Table 2. Sections 3, 4, and 5 describe how the obligations of the System are to be met under the actuarial cost method in use.

Section 6 discloses additional historical information.

Section 7 sets forth estimated actuarial gains or losses from the various sources. Section 8 shows projections of the System's funding under both optimistic and pessimistic scenarios. Section 9 shows projections of SCERS benefit payments and dollar contributions over a 10-year period following the actuarial valuation.

Appendix A is a summary of the actuarial procedures and assumptions used to compute the liabilities and contributions shown in this report.

The current benefit structure, as determined by the provisions of the governing law on January 1, 2016, is summarized in Appendix B. Schedules of valuation data classifying the data used in the valuation by various categories of contributing members, former contributing members and beneficiaries make up Appendix C.

Comparative statistics are presented on the System's membership and contribution rates. Appendix D is a glossary of actuarial terms used in this report.

This page intentionally left blank.

Section 3 Assets

In many respects, an actuarial valuation can be regarded as an inventory process. The inventory is taken as of the actuarial valuation date, which for this valuation is January 1, 2016. On that date, the assets available for the payment of benefits are appraised. These assets are compared with the actuarial liabilities, which are generally well in excess of the assets. The actuarial process thus leads to a method of determining what contributions by members and their employers are needed to pay expected benefits.

This section of the report deals with the asset determination. In the next section, the actuarial liabilities will be discussed. Section 5 will deal with the process for determining required contributions, based on the relationship between the assets and the actuarial liabilities.

Financial Exhibits

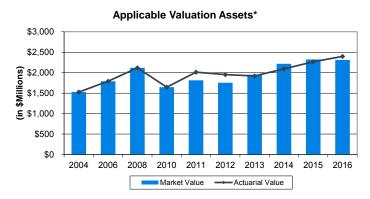

Table 2 shows the calculation of the Actuarial Value of Assets as of January 1, 2016. Note that a net loss is currently being deferred. This means that, if the system earns 7.50% in the future, the AVA will experience an actuarial loss over upcoming years as the remaining portions of deferred losses are recognized. In both the Executive Summary and Section 8 of this report, we discuss projections of the minimum actuarially required contribution rates resulting from this projected actuarial loss on the AVA.

Tables 3 and 4 summarize the financial resources of the System on January 1, 2016 on a Market Value basis. Table 3 shows the Market Value of Assets at January 1, 2016 and January 1, 2015. Table 4 shows the changes in Market Value of Assets during the year ending January 1, 2015 and the year ending January 1, 2016.

Tables 3 and 4 are taken directly from data furnished to us by SCERS staff. We have accepted these tables for use in this report without audit, but we have reviewed them for reasonableness and consistency with previous reports.

Actuarial Asset Method

Beginning with the January 1, 2011 actuarial valuation, SCERS adopted five-year asset smoothing. This smoothing process recognizes the asset gain or loss occurring in each year evenly over a five-year period. The following graph shows a historical comparison of the actuarial and market assets used for valuation purposes. Note that prior to 2011 the AVA was equal to the MVA.

^{*} Prior to 2010, actuarial valuations were only performed every second year.

Table 2 Calculation of Actuarial Value of Assets at January 1, 2016

(All dollar amounts in millions)

| Five-Year Asset Smoothing | | | | | | | | | | | | | |
|---|--|--------------------------------------|------------------------|---------------------------------------|----------------------------|----|-----------|---------|---------------------|----------------------|----------------------|----|------------------|

Section 4 Actuarial Liabilities

Actuarial Present Value of Future Benefits

In the previous section, an actuarial valuation was related to an inventory process and an analysis was given of the inventory of assets of the System as of the valuation date, January 1, 2016. In this section, the discussion will focus on the commitments of the System, which will be referred to as its actuarial liabilities (or, actuarial value of future benefits).

In an active system, the present value of future actuarial liabilities will almost always exceed the actuarial assets. This is usually expected in all but a fully closed down fund, where no further contributions of any sort are anticipated. This deficiency has to be provided for by future contributions. The funding method for the system sets out a schedule of future contributions that will deal with any deficiency in an orderly fashion. The determination of the level of future contributions needed is discussed in the next section (Section 5) of this report.

Table 5 contains an analysis of the actuarial present value of all future benefits for contributing members, former contributing members, and beneficiaries. The analysis is given by type of benefit.

The actuarial liabilities summarized in Table 5 include the actuarial present value of all future benefits expected to be paid with respect to each member. For an active member, this value includes a measure of both benefits already earned and future benefits to be earned. Thus, for all current members, active and retired, the value extends over benefits earnable and payable for the rest of their lives and, if an optional benefit is chosen, for the lives of their surviving beneficiaries.

The actuarial assumptions used to determine the liabilities are based on the results of the 2014 Investigation of Experience Report. New assumptions were adopted by the Board effective with the January 1, 2014 actuarial valuation. See Appendix A of this report for details.

Actuarial Cost Method

The method used to determine how the actuarial cost for an individual (or for the System as a whole) is allocated to past and future years is referred to as the actuarial cost method. For this valuation, the individual entry age normal cost (EANC) method has been used.

Under this method, the actuarial liabilities discussed above are allocated into two primary calculation components:

- 1. A normal cost
- 2. An actuarial accrued liability

Normal Cost and Actuarial Accrued Liability

The normal cost under the EANC method is developed so that benefits are allocated as a level percentage of payroll for each member, from the member's membership date to the member's termination date. One key feature of the EANC method is that normal costs tend to be stable from year to year (assuming no change in assumptions or benefit provisions) because most members' entry age cost percentages do not change materially from year to year, and because the population typically does not change considerably from year to year. The normal cost rates as a percentage of payroll for the current and prior valuation are shown by benefit type in Table 6. These normal cost contribution rates are intended to be contributed in each year in order to fund the ongoing cost of benefit accruals.

The annual normal cost rate may be considered the ongoing cost of benefit accruals for any given plan year. When the present value of all future normal costs is subtracted from the present value of total benefits, the result is the actuarial accrued liability (AAL). This can be thought of as the current value of all past normal costs, or the amount that would be in the fund if all prior actuarial assumptions had been exactly met. The AAL represents the portion of the present value of total benefits that the cost method allocates to past service.

To the extent that this AAL exceeds plan assets, an Unfunded Actuarial Accrued Liability (UAAL) exists. Table 7 calculates the UAAL, if any, for the current and prior valuations. Note that currently, a UAAL exists for SCERS; the payoff of this UAAL is discussed in more detail in Section 5 (City Contributions) of this report.

This page intentionally left blank.

Section 5 City Contributions

As shown in Table 7 in the previous section of this report, the AAL exceeds the current Actuarial Value of Assets. In other words, as of the January 1, 2016 valuation, a UAAL exists for SCERS.

Because a UAAL exists, the total calculated minimum actuarially required contribution rate will consist of two components:

- 1. The normal cost contribution rate as of January 1, 2016
- An amortization payment intended to pay off the UAAL in accordance with the SCERS funding policy

Funding

The current SCERS funding policy was updated by a Seattle City Council resolution in August 2013. The funding policy specifies that the UAAL will be amortized as a level percentage of payroll over a closed 30-year period as of the January 1, 2013 actuarial valuation. This means that, for the January 1, 2016 valuation, the amortization contribution rate must pay off the current UAAL over a 27-year period.

Actuarial Gains and Losses

When experience is different from actuarial expectation, an actuarial gain or loss occurs. Ongoing actuarial gains and losses decrease and increase the UAAL. Section 7 of this report illustrates the historical actuarial gains and losses on the UAAL by source.

Amortization of UAAL

Table 8 details the components of the minimum actuarially required contribution rate of 25.32% by breaking it into the necessary funding components: normal cost and amortization of UAAL. It then illustrates the split between member and employer contribution rates, assuming that member contributions are allocated entirely toward paying the ongoing normal cost of benefits.

As of the January 1, 2016 valuation, the minimum actuarially required contribution rate for the employer has increased to 15.29% beginning January 1, 2017. This is mainly due to the recognition of deferred asset losses from prior years.

The total contribution rate of 25.26% being paid in 2016 was calculated in order to amortize the January 1, 2015 UAAL over a 28-year period; however, this rate is not projected to perfectly amortize the January 1, 2016 UAAL over 27 years due to gains and losses that have occurred during the year. Table 9 details the expected amortization of the UAAL over the 27-year closed period beginning January 1, 2016.

Amortization of UAAL (continued)

The total contribution rate can be immediately (i.e., as of the beginning of the next calendar year) increased from 25.26% of pay to 25.32% of pay to be projected to amortize the UAAL over the scheduled 27 years from January 1, 2016. If the contribution rate is not increased, the UAAL would be projected to be amortized over a longer period than 27 years. Because this figure is based on an Actuarial Value of Assets that is currently deferring a net loss, this 25.32% is projected to increase over the next several years if no other actuarial asset gains or losses were to occur.

In Section 8 of this report, we have included a five-year projection of the actuarial required contribution, including optimistic and pessimistic investment return scenarios.

Table 8 Contribution Rates as Percentages of Salary

| | | Actuarial Required Cor | ntribution Beginning |

^{*} Amortization shown does not include the projected impact of currently deferred asset gains and losses.

Section 6 Additional Actuarial Information

The schedule of funding progress is shown in Table 10 and compares assets and liabilities over the years. Primarily due to the poor investment returns of 2000 through 2003, as well as the extreme market downturn of 2008, the plan is not fully funded. Another material factor in the current funding shortfall is the benefit enhancements triggered in 2007 (i.e., 65% Floor COLA and the 1.5% COLA for all retirees).

Exhibit 11 compares the Actuarial Value of Valuation Assets to the types of Actuarial Accrued Liabilities, applying them first to Active Member contributions, then to retirees and beneficiaries, and then the remaining amount to the Active Members benefits. This is referred to as the Solvency Test. Although not required under GASB, this test is part of the CAFR guidelines specified by the Government Finance Officers Association (GFOA).

Schedule of Funding Progress Table 10

Section 7 Actuarial Gains or Losses

An analysis of actuarial gains or losses was performed in conjunction with the January 1, 2014, January 1, 2015, and January 1, 2016 actuarial valuations.

The results of our analysis of the financial experience of the System in the three most recent actuarial valuations are presented in Table 12. Each gain or loss shown represents our estimate of how much the given type of experience caused the UAAL to change in the period since the previous actuarial valuation.

Gains and losses due to demographic sources are approximate. Demographic experience is analyzed in greater detail in our periodic assumption studies.

Table 12 Analysis of Actuarial Gains or Losses*

(All dollar amounts in millions)

| | G | ain/(Los | s) For Per | iod | |
|--|--------------|----------|------------|-----|--------|
| | 2015 | | 014 | | 2013 |
| Investment Income Investment income on AVA was greater (less) than assumed. | \$ (22.1) | \$ | 32.6 | \$ | 50.8 |
| Pay Increases Pay increases were less (greater) than expected. | (7.3) | | (3.9) | | 3.3 |
| Age and Service Retirements Members retired at older (younger) ages or with less (greater) final average pay than expected. | 17.2 | | 13.0 | | 11.7 |
| Disability Retirements Disability claims were less (greater) than expected. | (0.1) | | (0.1) | | (0.1) |

| Withdrawal from Employment More (less) reserves were released by withdrawals than expected. | (24.0) | | (25.4) | | (19.1) |
| Death after Retirement Retirees died younger (lived longer) than expected. | 9.0 | | 5.6 | | (3.1) |
| Total Gain or (Loss) during Period from Financial Experience | \$ (27.3) | \$ | 21.7 | \$ | 43.5 |
| Non-Recurring Items: | | | | | |
| Changes in actuarial assumptions and plan amendments caused a gain (loss). | - | | - | | (76.7) |
| Data revisions | - | | - | | - |
| Change in actuarial asset valuation method caused a gain (loss). | N/A | _ | N/A | _ | N/A |
| Composite Gain (Loss) During Period | \$ (27.3) | \$ | 21.7 | \$ | (33.2) |

^{*} Effects related to losses are shown in parentheses. Numerical results are expressed as a decrease (increase) in the UAAL.

Section 8 Contribution Rate Projections and Increases

This section of the January 1, 2016 actuarial valuation is devoted to a detailed discussion of the contribution rates currently needed, and projected to be needed, in order to effectively fund the System.

This section illustrates two key points:

- 1. As mentioned throughout this report, the current AVA is deferring a net loss. As a result, if no actuarial asset gains or losses were to occur over the next several years (i.e., the market return equals 7.50%), the minimum actuarially required contribution rate would be projected to increase slightly (and the Funding Ratio would be projected to decrease) as the remaining deferred losses are fully phased in.
- Currently, the City is expected to contribute a total rate of 25.32% of payroll (employer and member) beginning January 1, 2017, on the basis of the current valuation report. The actual contribution rate needed will vary in the future. We have shown projections to roughly quantify the potential impact of good and bad experience.

Projection of Minimum
Actuarially Required
Contribution Rate

We have performed a five-year projection of the minimum actuarially required contribution rate under three different scenarios:

- 1. Assuming that the investment return assumption of 7.50% is met in each future year.
- 2. Assuming that the assets return at the 5th percentile.
- 3. Assuming that the assets return at the 95th percentile.

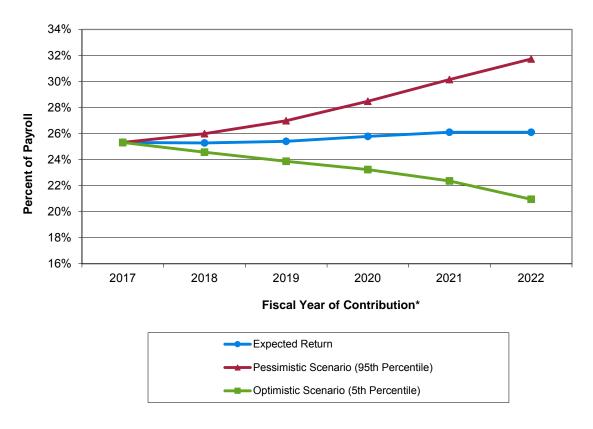

The result is effectively a 90% confidence interval (based on asset returns) of the projected contribution rates in these years. Note that in each scenario, all other actuarial assumptions are assumed to be met.

The projections assume the City contributes the minimum actuarially required contribution rate each year in the future. This rate is based on a 27-year closed amortization period as of January 1, 2016 and includes a 0.50% population growth assumption. Future returns at the 5th and 95th percentile are based on Milliman's capital market assumptions and SCERS's target asset allocation as of January 1, 2016.

Table 13 provides the results of these projections.

Table 13 Projected Total Contribution Rates

| Project | Projected Minimum Actuarially Required Total Contribution Rate | | | | | | | | |
|-----------------------|--|-------------------------------|-----------------------------------|--|--|--|--|--|--|
| Contribution Year* | n If Asset Return at 95th Percentile | Assuming 7.50% Future Returns | If Asset Return at 5th Percentile | | | | | | |
| 2017 | 25.32% | 25.32% | 25.32% | | | | | | |
| 2018 | 25.99% | 25.28% | 24.56% | | | | | | |
| 2019 | 26.98% | 25.40% | 23.87% | | | | | | |
| 2020 | 28.47% | 25.78% | 23.24% | | | | | | |
| 2021 | 30.14% | 26.10% | 22.36% | | | | | | |
| 2022 | 31.73% | 26.10% | 20.95% | | | | | | |

^{*} Contribution year lags calculation year by one year. For example: Contribution Year 2017 is based on the 2016 valuation results, amortized over 27 years beginning in 2016, if the increase takes place in 2017.

Assumed Returns for **Projection**

The projection above uses the 5th and 95th percentile returns based on SCERS' target asset allocation and Milliman's January 1, 2016 capital market assumptions. These percentile returns vary by the number of years of return; for example, the Contribution Year 2017 number assumes one year of return at the one-year 5th or 95th percentile rate; the Contribution Year 2018 number assumes two years of return at the two-year 5th or 95th percentile rate.

The percentile rates assumed for this analysis are shown in the table below:

| Compounded Average | ge Return for F | Period |
|--------------------|-----------------|--------|
| | Percen | tile |
| | 95th | 5th |
| 1-Year Period | -11.5% | 26.6% |
| 2-Year Period | -6.7% | 20.1% |
| 3-Year Period | -4.5% | 17.4% |
| 4-Year Period | -3.2% | 15.8% |
| 5-Year Period | -2.3% | 14.7% |

Contribution Decreases

The current contribution rate would need to be increased in order to be projected to perfectly amortize the UAAL over a 27-year period as of the valuation date. As of January 1, 2017, a minimum actuarially required contribution rate of 25.32% is projected to be needed in order to amortize the UAAL over a 27-year period beginning January 1, 2016.

This represents a increase of 0.06% of pay compared with the current 25.26% of pay being contributed (by the employer and members combined) based on a target of a 100% Funding Ratio by January 1, 2043. Note that due to the future recognition of deferred asset losses, this amount is expected to increase in the next valuation, if all assumptions are met.

This page intentionally left blank.

Section 9 Projection of Benefit Payments and Contribution Dollars

Projection of Benefit Payments and Contribution Dollars This section of the January 1, 2016 actuarial valuation illustrates projected SCERS benefit payments and dollar contributions over a 10-year period following the actuarial valuation.

These projections assume all actuarial assumptions, including 7.50% investment returns (on a market basis) in each future year, are met in the future.

The projection of contribution dollars makes the following three additional key assumptions:

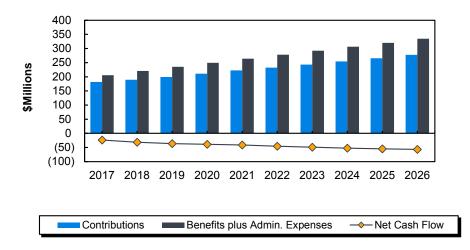

- Valuation payroll is assumed to grow with both wage inflation of 4.00% and annual population growth of 0.50% (per current SCERS assumptions).
- 2. The City is assumed to make the minimum actuarially required contribution rate calculated in each projection year.
- 3. Future recognition of currently deferred asset gains or losses is reflected in the projection.

Table 14 shows the results of these projections.

Table 14 10-Year Projection of Benefit Payments and Contributions*

| Year | Projected Payroll | | Projected Admin. Expenses | | Projected Benefit Payments | | Projected Total Cash Outflow | | Projected Total Contributions | | Projected Net Cash Flow |
|----------------|----------------------|----|---------------------------------|----|----------------------------------|----|------------------------------------|----|-------------------------------------|----|-------------------------------|
| 2017 \$ | 717.7 | \$ | 4.3 | \$ | 201.3 | \$ | 205.6 | \$ | 181.7 | \$ | (23.9) |

| 2019 | 784.1 | | 4.7 | | 230.5 | | 235.2 | | 199.1 | | (36.1) |
| 2020 | 819.5 | | 4.9 | | 244.6 | | 249.5 | | 210.8 | | (38.7) |
| | | | | | | | | | | | , |
| 2021 | 856.6 | | 5.1 | | 258.7 | | 263.8 | | 222.5 | | (41.3) |
| 2022 | 895.3 | | 5.4 | | 272.9 | | 278.3 | | 232.6 | | (45.7) |
| 2023 | 935.8 | | 5.6 | | 286.6 | | 292.2 | | 243.1 | | (49.1) |
| 2024 | 978.1 | | 5.9 | | 300.4 | | 306.3 | | 254.1 | | (52.2) |
| 2025 | 1,022.3 | | 6.1 | | 314.1 | | 320.2 | | 265.6 | | (54.7) |
| 2026 | 1,068.5 | | 6.4 | | 328.0 | | 334.4 | | 277.6 | | (56.8) |

Cash Flow Projections

^{*} Benefit payments do not include administrative expenses. Contributions include employer and member contributions.

Appendix A Actuarial Procedures and Assumptions

This section of the report describes the actuarial procedures and assumptions used in this valuation. The assumptions used in this valuation were adopted by the SCERS Board at its May 2014 meeting. They are based on Milliman's Investigation of Experience for the period ending December 31, 2013. Further discussion and the rationale for the assumptions are shown in that report.

The actuarial assumptions used in the valuation are intended to estimate the future experience of the members of the System and of the System itself in areas that affect the projected benefit flow and anticipated investment earnings. Any variations in future experience from that expected from these assumptions will result in corresponding changes in the estimated costs of the System's benefits. Table A-1 summarizes the actuarial assumptions.

Table A-2 presents expected annual salary increases for various years of service. Tables A-3 through A-6 show rates of decrement for service retirement, disability, mortality, and other terminations of employment. Table A-7 shows probabilities of refund upon termination.

Actuarial Cost Method

The actuarial valuation was prepared using the entry age actuarial cost method. Under this method, the actuarial present value of the projected benefits of each individual included in the valuation is allocated as a level percentage of the individual's projected compensation between entry age and assumed exit. The portion of this actuarial present value allocated to a valuation year is called the normal cost. The portion of this actuarial present value not provided for at a valuation date by the sum of (a) the actuarial value of the assets, and (b) the actuarial present value of future normal costs is called the unfunded actuarial accrued liability or UAAL. The UAAL is amortized as a level percentage of the projected salaries of present and future members of the System.

Records and Data

The data used in the valuation consist of financial information; records of age, sex, service, salary, contribution rates and account balances of contributing members; and records of age, sex, and amount of benefit for retired members and beneficiaries. All of the data were supplied by the System and are accepted for valuation purposes without audit.

Replacement of Terminated Members

The ages at entry and distribution by sex of future members are assumed to average the same as those of the present members they replace. If the number of active members should increase, it is further assumed that the average entry age of the larger group will be the same, from an actuarial standpoint, as that of the present group. Under these assumptions, the normal cost rates for active members will not vary with the termination of present members.

City Contributions

The City contribution rate is determined as of the prior year's valuation such that the combined member and City contribution rate is sufficient to amortize the UAAL over a closed 30-year period beginning January 1, 2013. The amortization payment is based on a level percent of pay.

Administrative Expense

The annual contribution assumed to be necessary to meet general administrative expenses of the system, excluding investment expenses, is 0.60% of members' salaries. This figure is included in the calculation of the normal cost rate.

Valuation of Assets

The assets are valued using a five-year smoothing method based on the difference between the expected market value and the actual market value of the assets in each year. The expected market value is the prior year's market value increased with the net increase in the cash flow, all increased with interest during the past fiscal year at the expected investment return rate assumption.

Investment Earnings

The annual rate of investment earnings of the assets of the System is assumed to be 7.50%. This rate is compounded annually and is net of investment expenses.

Postretirement Benefit Increases

Postretirement benefit increases include:

- Automatic 1.5% Annual COLA This benefit applies to all members.
- 65% Restoration of Purchasing Power (ROPP) The member's benefit is the greater of 65% of the annual initial benefit adjusted for CPI or their applicable benefit. This minimum benefit is available to all retirees and beneficiaries. The financial impact of the ROPP benefit is valued assuming an annual price inflation rate of 3.25%.

Additional contingent COLA increases that were adopted in 2001, but not effective until the System reaches at least a 100% funding ratio, are not included in the valuation results.

Valuation Services

The projected salary for the valuation year is equal to the member's hourly pay rate multiplied by 2088 with the following adjustments:

- Increased by 4.04% to reflect a 2% cost-of-living increase for 2016 and a retro 2% increase for 2015.
- Annualized pay for members who entered in year preceding valuation year.
- Multiplied hourly pay rate by minimum of 1,040 and actual hours worked in prior year for part-time employees.

Future Salaries

Table A-2 illustrates the rates of future (after the valuation year) salary increases assumed for the purpose of the valuation. In addition to increases in salary due to promotions and longevity, this scale includes an assumed 4.00% per annum rate of increase in the general wage level of the membership.

Service Retirement

Table A-3 shows the annual assumed rates of retirement among members eligible for service retirement or reduced retirement. Separate rates are also used during the first year a member is eligible for service retirement.

Disability

The rates of disability used in this valuation are illustrated in Table A-4. It is assumed that one-third of all disabilities are duty related and two-thirds occur while off duty.

Mortality

The mortality rates used in this valuation are illustrated in Table A-5. A written description of each table used is included in Table A-1.

Other Terminations of Employment

The rates of assumed future withdrawal from active service for reasons other than death, disability, or retirement are shown for representative ages in Table A-6. Note that this assumption only applies to members who terminate and are not yet eligible for retirement.

Probability of Refund

Terminating members may forfeit a vested right to a deferred benefit if they elect a refund of their accumulated contributions. Table A-7 gives the assumed probability, at selected ages, that a terminating member will elect to receive a refund of his accumulated contributions instead of a deferred benefit.

If a member terminates with more than 20 years of service, there is assumed to be a 20% probability that the member will elect a refund.

Note that the probability of refund assumption only applies to members who terminate with a vested benefit and are not yet eligible for retirement.

Interest on Member Contributions

Interest on member contributions made prior to January 1, 2012 is assumed to accrue at a rate of 5.75% per annum, compounded annually. Interest on member contributions made on or after January 1, 2012 is assumed to accrue at 4.75%.

Portability

The cost of portability with other public retirement systems is not included in this valuation.

Probability of Marriage

We assumed 60% of the active members are married or have a registered domestic partner.

Commencement for Terminated Vested Members

Vested members who terminate but elect to leave their contributions in the System are assumed to commence receiving benefits at age 62.

| 29 to 30 | 0.4 | 0.5 |
| 30 or more | 0.5 | 0.5 |

Table A-7 Probability of Refund

| Age | Probabilities of Refund upon Termination* |
|-----|---|
| 25 | 70.0% |
| 30 | 65.0 |
| 35 | 55.0 |
| 40 | 48.0 |
| | |
| 45 | 43.0 |
| 50 | 38.0 |
| 55 | 36.0 |
| 60 | 40.0 |

^{*} If service is 20 or more years at termination, probability of refund is equal to 20%.

Appendix B Provisions of Governing Law

All actuarial calculations are based upon our understanding of the provisions governing the Seattle City Employees' Retirement System, Chapter 4.36 of the Seattle City Code. The benefit and contribution provisions are summarized briefly below, along with corresponding references to the City code. This summary encompasses the major provisions of the System; it does not attempt to cover all of the detailed provisions.

Effective Date

The effective date of the retirement system was July 1, 1929. (Section 4.36.080)

Members' Contribution Rate

The members' contribution rate is 10.03% of salary as of January, 2012. Certain members who were contributing at a lower rate on June 23, 1972 continue to contribute at a lower rate.

(Section 4.36.540A)

City Contribution Rate

The City contribution rate is the amount that is actuarially determined to be necessary to fund that portion of the retirement allowances not covered by the members' contributions. This amount shall be at least the members' contribution rate. (Section 4.36.545)

Final Compensation

Final compensation is based on highest average compensation (excluding overtime) during any consecutive 24 months. (Sections 4.36.040 and 4.36.050)

Service Retirement

Eligibility
30 years of service;

Age 52 and 20 years of service;

Age 57 and 10 years of service; or

Age 62 and 5 years of service.

Normal Form
Straight life benefit.

Optional Forms

Actuarial equivalent according to the mortality and interest basis adopted by the Retirement Board for such purposes.

Service Retirement (continued)

Amount of Allowance

The total monthly allowance is generally 2% times final compensation times total years of creditable service.

However, if the member does not qualify in one of the following ways, the 2% factor is reduced by 0.1% for each year that retirement precedes the earliest date the member would be:

- (a) Any age with 30 years of service.
- (b) Age 51-59, providing the member's age and years of service total 80 or more.
- (c) Age 60 or older with 20 years of service.
- (d) Age 65 or older with five years of service.

The reduction is somewhat less than 0.1% for members with less than 20 years of service.

For those hired on or after January 1, 1988, creditable service excludes the first six months of service.

Maximum Allowance

The formula-based retirement allowance (as described above) of any member shall be limited to 60% of final compensation, except where the minimum allowance described below applies.

Minimum Allowance

A monthly benefit based on twice the actuarial value of accumulated member contributions. This is not subject to the 60% of final compensation maximum. (Sections 4.36.600, 4.36.605, 4.36.610 and 4.36.640)

Note: Effective January 1, 2011, the conversion of the contributions to an annuity benefit in the minimum allowance reflects option factors that use the new mortality rates.

Disability Retirement

Eligibility

Ten years of service credited within the 15 years preceding disability retirement. If disability occurs in the course of City employment, there is no service requirement.

Normal Form

Modified cash refund annuity. An optional survivor's benefit is available if the spouse is the beneficiary.

Amount of Allowance

The total monthly disability allowance is the greater of:

- (a) 1.5% times final compensation times completed years of creditable service.
- (b) 1.5% times final compensation times total years of creditable service that could have been earned to age 62, but not to exceed one-third of final compensation.

Maximum Allowance

The maximum disability allowance is 60% of final compensation.

Minimum Allowance

The minimum disability allowance is \$140 per month.

(Sections 4.36.645 and 4.36.650)

Death Benefits

Retired Members

Death benefits to retired members are payable according to the form of retirement allowance elected.

Active Members

- (a) Payment to the beneficiary of accumulated contributions, including interest: or
- (b) If the member had completed 10 years of service at the time of death, a surviving spouse or a registered domestic partner may elect to receive, in place of (a) above, either:
 - (1) A monthly allowance for life equal to the benefit the spouse would have received had the member just retired with a 100% contingent annuitant option in force; or
 - (2) A cash payment of no more than one-half of the member's accumulated contributions, along with a correspondingly reduced retirement allowance.

(Section 4.36.680)

Withdrawal Benefits

Form

Payment of accumulated contributions, with interest.

(Section 4.36.665A)

Vested Withdrawal

Eligibility

Benefits Five years of service.

Amount of Allowance

Same as service retirement benefit.

Benefits Commence

Age 52, if 20 or more years of service; Age 57, if 10-19 years of service; or Age 62, regardless of years of service.

(Section 4.36.665)

Postretirement Benefit Increases

Provisions

Effective January 1, 2007, the City Council adopted a 65% Restoration of Purchasing Power benefit and an automatic 1.5% annual COLA to all members.

If the System reaches a 100% Funding Ratio, the restoration amount increases to

70%.

(Section 4.36.615)

Death Benefit System

Eligibility

Mandatory for all active members; optional for retired members.

Benefits

\$2,000 upon the death of an active member or a participating retired member.

Assessment

Members pay an assessment of \$12 per year; the City pays a matching amount. If these assessments are not adequate, additional amounts may be transferred from the interest earnings in the retirement fund.

(Sections 4.36.690 and 4.36.695)

Additional Contributions

Provisions

Members may voluntarily make contributions in excess of the regular rate; these

are make-up contributions that apply only in specific situations.

Retirement Benefit

A monthly annuity which is the actuarial equivalent of accumulated additional

contributions with interest.

Other Benefits

Accumulated additional contributions, with interest, generally become payable

upon termination other than retirement.

(Sections 4.36.030 and 4.36.540A)

Appendix C Valuation Data

This valuation is based upon the membership of the system as of January 1, 2016. Membership data were supplied by the System and accepted for valuation purposes without audit. However, extensive tests were performed to ensure that the data are sufficiently accurate for valuation purposes.

The data for all contributing members, former contributing members, and their survivors are summarized in Table C-1.

Tables C-2 through C-4 present distributions of members receiving service retirement benefits, members receiving disability retirement benefits, and survivors receiving benefits. Shown in the tables are the numbers of persons receiving benefits, the total annual benefits received (including payments for the annual bonus), and the average annual benefit per recipient.

Table C-5 contains summaries of the data for contributing members. Values shown in the tables are the numbers of members and their total and average annual salaries.

The valuation also includes liabilities attributable to members who have terminated employment but have neither retired nor withdrawn their contributions.

Table C-1 **Summary of Membership Data**

| | | Contributing Member | ers | Annuitants | | | | | | |
|-----------------|--------|-----------------------|--------------------|------------|-----------------------|--------------------|--|--|--|--|

Appendix D Glossary

The following definitions are largely excerpts from a list adopted in 1981 by the major actuarial organizations in the United States. In some cases the definitions have been modified for specific applicability to the Seattle City Employees' Retirement System. Defined terms are capitalized throughout this Appendix.

Accrued Benefit

The amount of an individual's benefit (whether or not vested) as of a specific date, determined in accordance with the terms of a pension plan and based on compensation and service to that date.

Actuarial Accrued Liability That portion, as determined by a particular Actuarial Cost Method, of the Actuarial Present Value of pension plan benefits and expenses which is not provided for by future Normal Costs.

Actuarial Assumptions

Assumptions as to the occurrence of future events affecting pension costs, such as: mortality, withdrawal, disability, and retirement; changes in compensation, rates of investment earnings, and asset appreciation or depreciation; procedures used to determine the Actuarial Value of Assets; and other relevant items.

Actuarial Cost Method

A procedure for determining the Actuarial Present Value of pension plan benefits and expenses and for developing an actuarially equivalent allocation of such value to time periods, usually in the form of a Normal Cost and an Actuarial Accrued Liability.

Actuarial Gain (Loss)

A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions during the period between two Actuarial Valuation dates, as determined in accordance with a particular Actuarial Cost Method.

Actuarial Present Value

The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of Actuarial Assumptions.

Actuarial Valuation

The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a pension plan.

Actuarial Value of Assets The value of cash, investments and other property belonging to a pension plan, as used by the actuary for the purpose of an Actuarial Valuation.

Actuarially Equivalent

Of equal Actuarial Present Value, determined as of a given date with each value based on the same set of Actuarial Assumptions.

Amortization Payment

That portion of the pension plan contribution that is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability (UAAL).

Entry Age Actuarial Cost Method

A method under which the Actuarial Present Value of the Projected Benefits of each individual included in an Actuarial Valuation is allocated on a level basis over the earnings of the individual between entry age and assumed exit ages. The portion of this Actuarial Present Value allocated to a valuation year is called the Normal Cost. The portion of this Actuarial Present Value not provided for at a valuation date by the Actuarial Present Value of future Normal Costs is called the Actuarial Accrued Liability.

Funding Ratio

The Actuarial Value of Assets divided by the Actuarial Accrued Liability. May also be calculated as the Market Value of Assets divided by the Actuarial Accrued Liability, in which case it is indicated that the Funding Ratio is shown on a Market Value basis.

Normal Cost

That portion of the Actuarial Present Value of pension plan benefits and expenses which is allocated to a valuation year by the Actuarial Cost Method.

Projected Benefits

Those pension plan benefit amounts which are expected to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such items as the effect of advancement in age and past and anticipated future compensation and service credits.

Surplus Funding

The excess of the Actuarial Value of Assets over the Actuarial Accrued Liability.

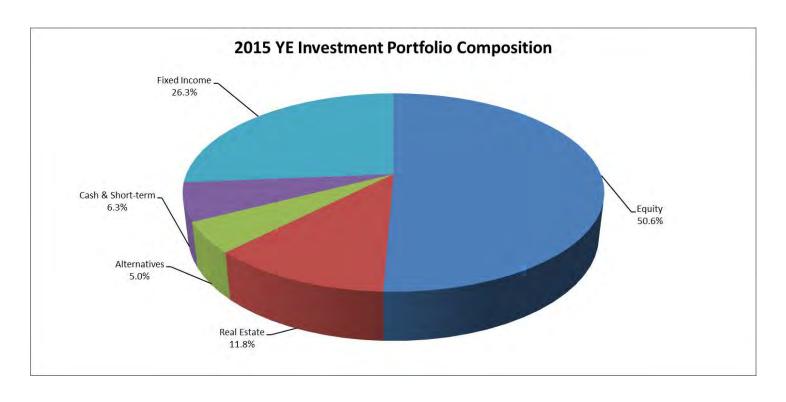

Unaccrued Benefit

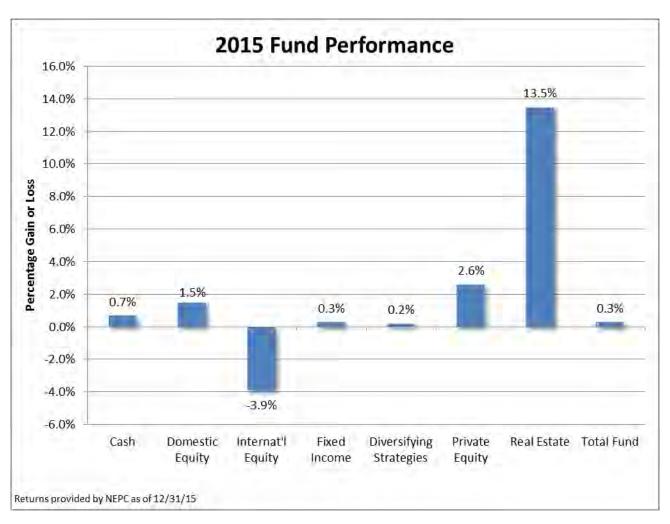

The excess of an individual's Projected Benefits over the Accrued Benefits as of a specified date.

Unfunded Actuarial Accrued Liability

The excess of the Actuarial Accrued Liability over the Actuarial Value of Assets.

^{*} Employee Contributions reflected above are representative for the overall majority of active members. There are a small percentage of active members whose employee contribution rate is "grandfathered" at a slightly lower rate

^{**} Employer Contributions reflected as a percentage of covered payroll.

^{***} Beginning with 1993, the investment income reflects unrealized gains (losses) required by GASB 25.

SEATTLE CITY EMPLOYEES' RETIREMENT SYSTEM SCHEDULE OF EXPENSES BY TYPE

DEATH BENEFIT SYSTEM

For The Year Ended December 31, 2015

All active members and those retired members who so elect are covered by the Death Benefit System. The Death Benefit System is similar to a life insurance policy and pays \$2,000 to the beneficiary of an active or retired member.

The annual premium for each member is \$12, with the City matching this amount. Any additional funds needed to fund the Death Benefit System come from the undistributed earnings of the Retirement System.

There were 10 payouts for deaths in active service and 142 claims from retired employees - a total of 152 claims. This compares with 3 deaths in active service in 2014, and 157 claims from retired employees - a total of 160. The claims totaled \$304,000 in 2013 and \$280,000 in 2014.

| Income | from Active and Retired Employees: | | \$ 149,145 |
|--------|---|--------------|---------------|
| Income | from Employers: | | |
| | Seattle City Light | \$ 32,755 | |
| | General Fund | 31,328 | |
| | Seattle Public Utilities | 22,025 | |
| | Seattle Parks Department | 15,257 | |
| | Transportation | 12,797 | |
| | Library | 9,672 | |
| | Administrative Services | 10,307 | |
| | Seattle Center | 5,199 | |
| | Planning and Development | 6,097 | |
| | King County/Metro | 3,324 | |
| | Employees' Retirement System | 384 | |
| | Total from Employer Funds | | \$ 149,145 |
| | Total paid into Death Benefit Reserve | | \$ 298,290 |
| | <u>Less</u> : Death Benefit Claims – 2015 | | \$ 212,500 |
| | Total 2015 Addition to Operating Fund Balance | | \$ 85,790 |

UNUSED SICK LEAVE

At the time of retirement, some members may elect to receive a cash payment equal to 25% of the monetary value of their "unused sick leave." The monetary value is developed by multiplying the number of hours of unused sick leave by the hourly rate, and is calculated and paid to the employee by the employing department when the person retires immediately following employment. Vested members retiring at a future date do not receive a sick leave payout. This may not apply to certain represented positions.

The member may elect to write a check payable to the City, and deliver it to the Retirement System, for the amount of the sick leave payout, and this amount will be placed in an account to be used to pay health care premiums for self and spouse. Since the health care premiums are paid from the Health Care Fund, these funds do not accrue interest. If the retiree dies before the credit is exhausted, the surviving spouse may use the remaining credit to pay for health care coverage.

In the event of the death of an active employee eligible for sick leave benefits, the employing department will pay the beneficiary an amount equal to 25% of said employees' accumulated unused sick leave.

Of the 377 service retirements during 2015, there were no retirees that deposited the value of their sick leave payout to an account that will be used to pay their medical premiums.

Benefit Calculation

In accordance with the Seattle Municipal Code, the retirement benefit is the higher of the results of the two formulas shown below:

Service Retirement Formula: (years of City service) x (yearly percentage factor) x (average of the highest 52 consecutive pay periods of pay). The maximum years of service used by the formula is 30.

Contribution-Based Formula (2 Times Match): The employee contribution plus interest multiplied by two, used to purchase a lifetime annuity.

These calculations determine the "straight" or unmodified benefit. There are retirement options that offer a lower benefit amount in exchange for different kinds of guaranteed payments. See the retirement handbook at www.seattle.gov/retirement for more information.

Note that there are two kinds of service used in the above calculations:

City service is the retirement-eligible hours you earn during your employment with the City. This includes all regular hours and excludes overtime. City service is used in the Service Retirement Formula.

Eligibility service is your City service together with any service you have earned from a system that has portability with SCERS. Portable systems include the cities of Spokane and Tacoma, and most systems operated by the Washington State Department of Retirement Systems. Eligibility service is used to determine the percentage factor for the service retirement formula.

The table below shows how the yearly percentage factor in the *Service Retirement Formula* is determined based on the number of years of retirement eligibility service credit and age at retirement.
