

Rainier Valley Transportation Improvements Open House

Project Managers:
Emily Ehlers, Michael James, & Jim Curtin
July 30, 2015

Our mission, vision, and core values

Mission: deliver a high-quality transportation system for Seattle

Vision: connected people, places, and products

Committed to **5 core values** to create a city that is:

- Safe
- Interconnected
- Affordable
- Vibrant
- Innovative

Presentation overview

- Vision Zero
- Rainier Valley North-South Neighborhood Greenway
- Accessible Mt. Baker
- Rainier Ave S Road Safety Corridor
- Q&A
- Open house
- Adjourn

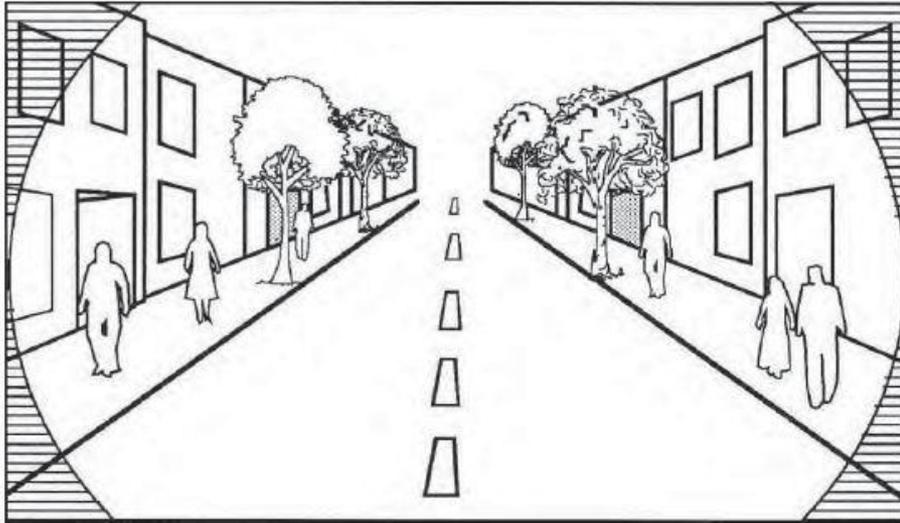

Vision Zero

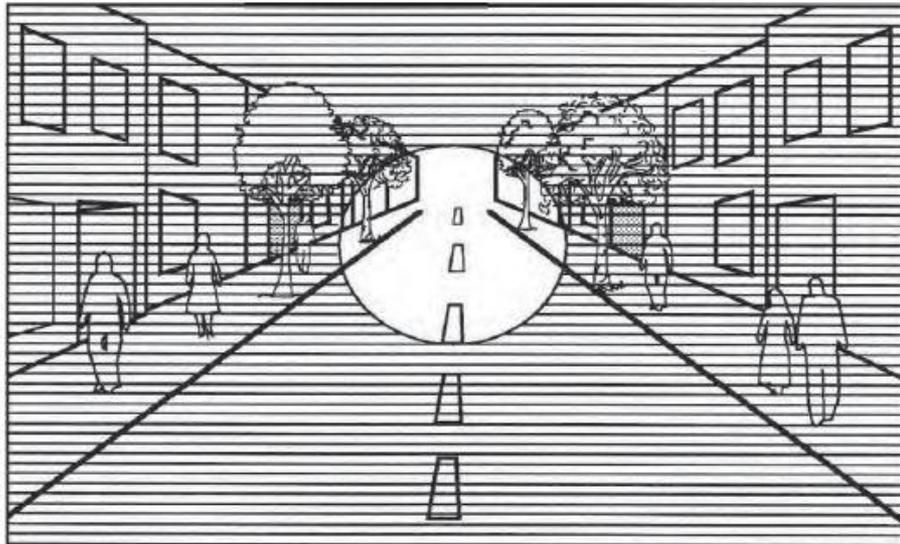

Zero traffic fatalities
or serious injures by 2030

www.seattle.gov/visionzero

Why speed matters

Drivers' field of vision
15 mph

Drivers' field of vision
30 mph

Why speed matters

HIT BY A VEHICLE
TRAVELING AT:

20
MPH

9 out of 10 pedestrians survive

HIT BY A VEHICLE
TRAVELING AT:

30
MPH

5 out of 10 pedestrians survive

HIT BY A VEHICLE
TRAVELING AT:

40
MPH

Only 1 out of 10 pedestrians survives

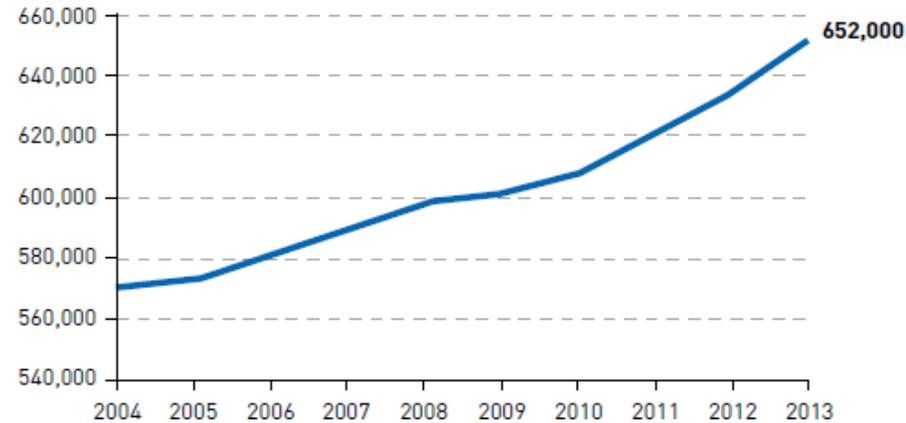

Speed is especially critical for vulnerable travelers like people walking and biking.

Citywide trends

- Seattle's population is growing rapidly
- Traffic volume dropping
- More people are walking, biking and using transit

seattle.gov/transportation/reports.htm

SEATTLE POPULATION

AVERAGE DAILY TRAFFIC IN SEATTLE

AVERAGE ANNUAL EMPLOYMENT - SEATTLE, TACOMA, BELLEVUE

Rainier Valley North-South Neighborhood Greenway

What is a neighborhood greenway?

A safer, calm residential street for you and your family

Greenway design elements

Slow Speeds and Stop Signs

- Calm traffic entering and crossing the greenway
- Drivers better able to stop and prevent collisions

Speed Humps

- Slow motorists and people riding bikes
- Reduce cut-through traffic

Placemaking

- Promote the activation of public space

Safer Crossings at Busy Streets

- Easier for seniors and children to cross
- Make motorists aware of people walking and biking

Signs and Markings

- Direct people walking and biking to and along the greenway
- Help motorists know people walking and biking are present

Smooth Sidewalks and Pavement

- Safer for you and your family to walk and ride bikes
- Help people in wheelchairs or with strollers

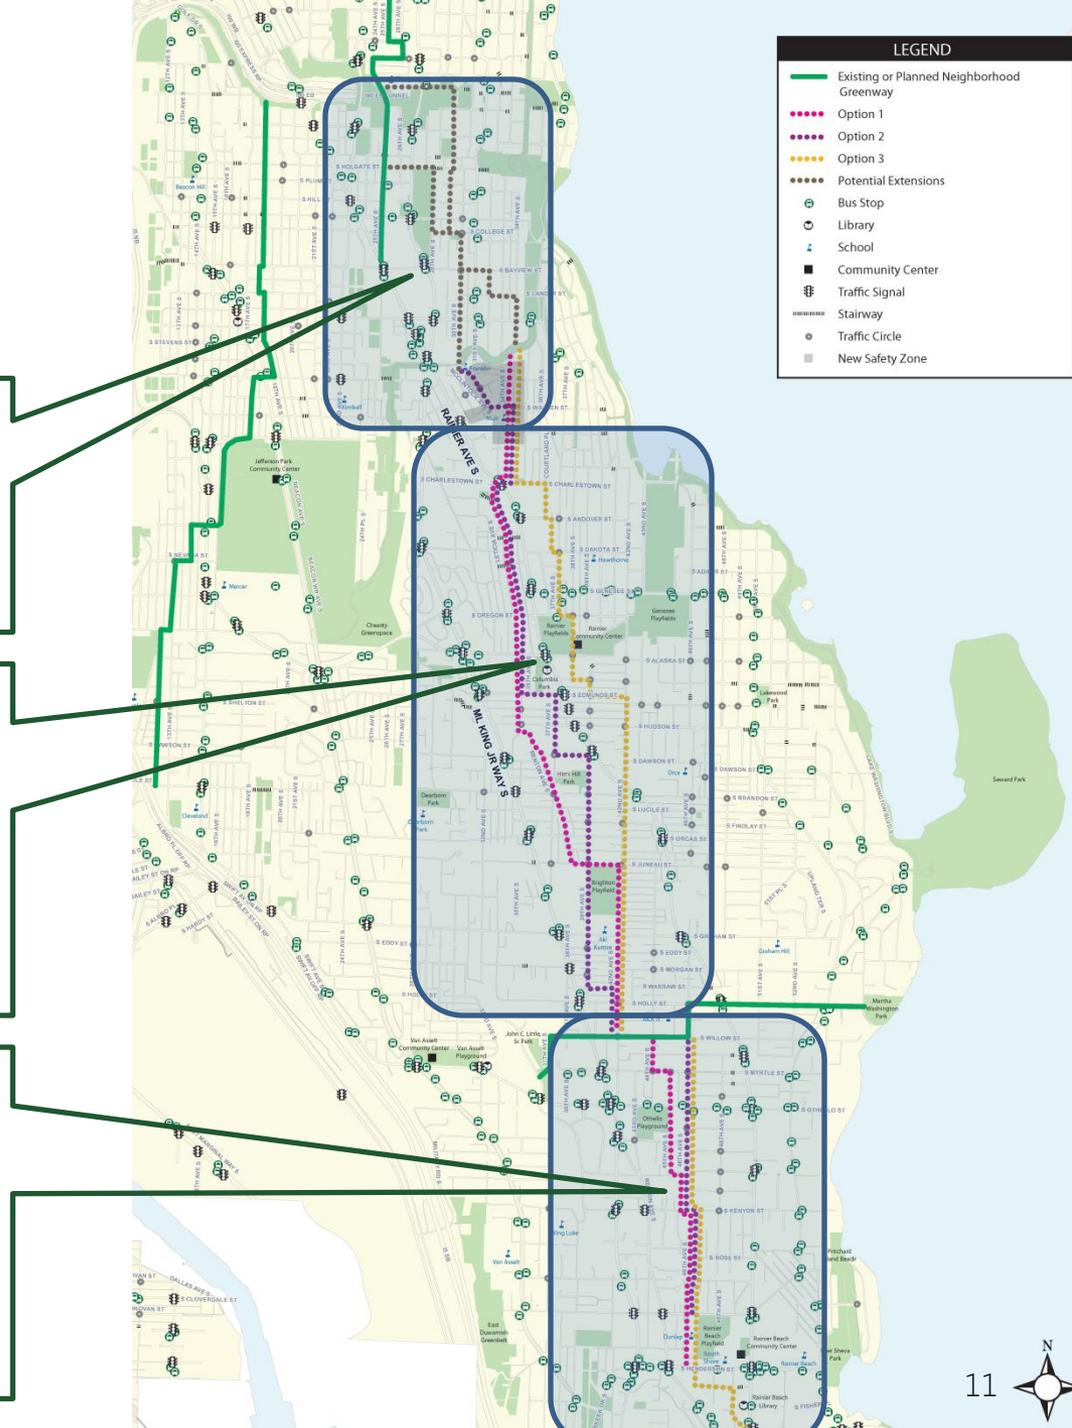

Potential alternatives

Group 1
I-90 to S Mt Baker Blvd

Group 2
S Mt Baker Blvd to
S Holly St

Group 3
S Holly St to S
Henderson St

Most promising route

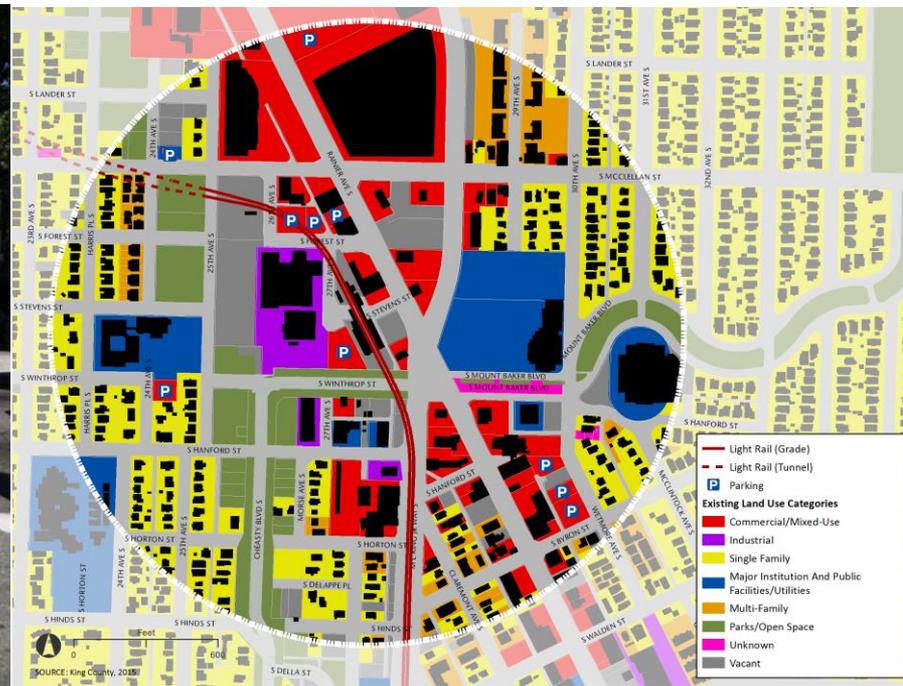

Next steps

| Date | Activity |
|-----------|----------------|
| July 2015 | Open house #2 |
| 2016 | Implementation |
| 2017 | Evaluation |

Accessible Mt. Baker

Project Purpose

- Identify and implement safety improvements
- Develop a long term, integrated plan to improve access at the Mt. Baker station area

Guiding Principles

- Improve access to neighborhood destinations consistent with the neighborhood plan
- Create a network of streets, paths, and open space
- Respect the existing character and assets
- Establish a neighborhood and regional destination

Guiding Principles (cont)

- Prioritize modes within the station area:
 1. **Ped/Bike**: Safety and comfort
 2. **Transit**: Reliable and frequent
 3. **Freight**: Access and reliability
 4. **Auto**: Calm and predictable
- Ensure diverse voices and traditionally underrepresented communities are heard and considered

Long-term sketch concept

Key Elements:

- Improve pedestrian crossing of MLK / Rainier
- Eliminate the intersection bottleneck
 - Allow space for sidewalk and bike facilities
 - Predictable through movements for all users
- Improve Bus / Rail connections
- Reconnect the Olmstead Greenbelt
- Integrate open space
- Support neighborhood plan and Town Center

Build-to Line
(no driveways)

S Forest St

Mt Baker Blvd

Fire
Station

Bus Stop for
Routes 14 & 48

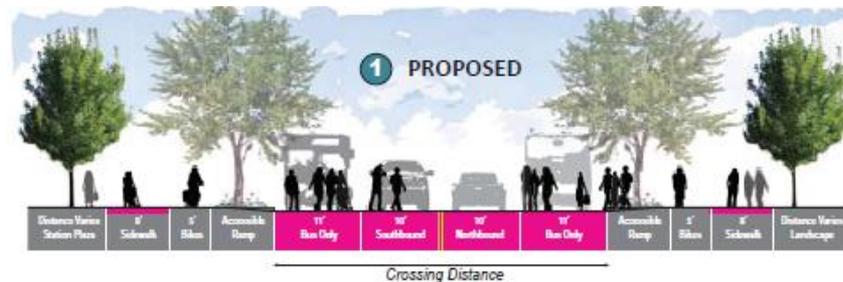

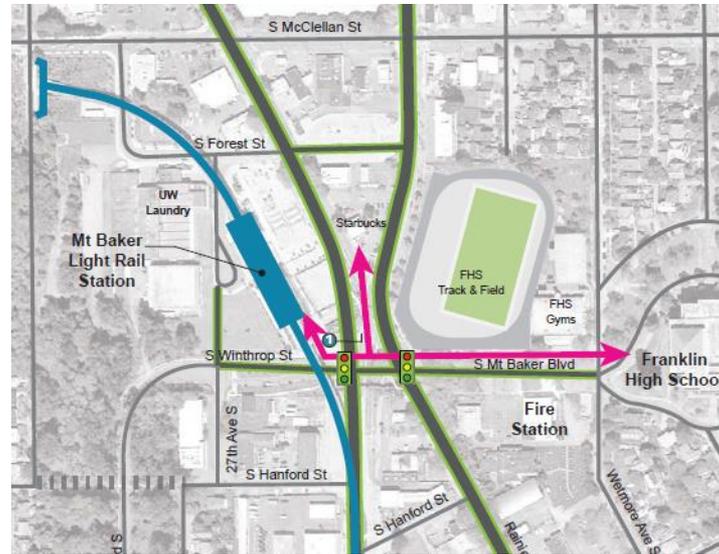

Transit and Emergency
Vehicles only

TS

Walk Example – *What it could look like...*

KEY HIGHLIGHTS

- Shorter crossing distances
- Direct and easy to navigate routes
- Less wait – fewer signal phases
- Ample space for safe movement and waiting
- Improved and protected sidewalks and cycle lanes
- All at-grade (no pedestrian bridge)
- Tree-lined streetscape

Rainier Ave. S.

Concept Refinement

- Refining the bike and pedestrian connections
- Metro bus coordination
- Traffic analysis
- Coordination with property owners and Sound Transit
- Coordination with Rainier Ave S Pilot & N/S Greenway

Accessible Mt. Baker Open House

October 1, 2015 - 6 pm to 8 pm

Kings Hall

2929 27th Ave S.

Seattle, WA

(located west of the Mt. Baker light rail station)

- Review the draft implementation plan
- Comment and inform
- Hope to see you there!

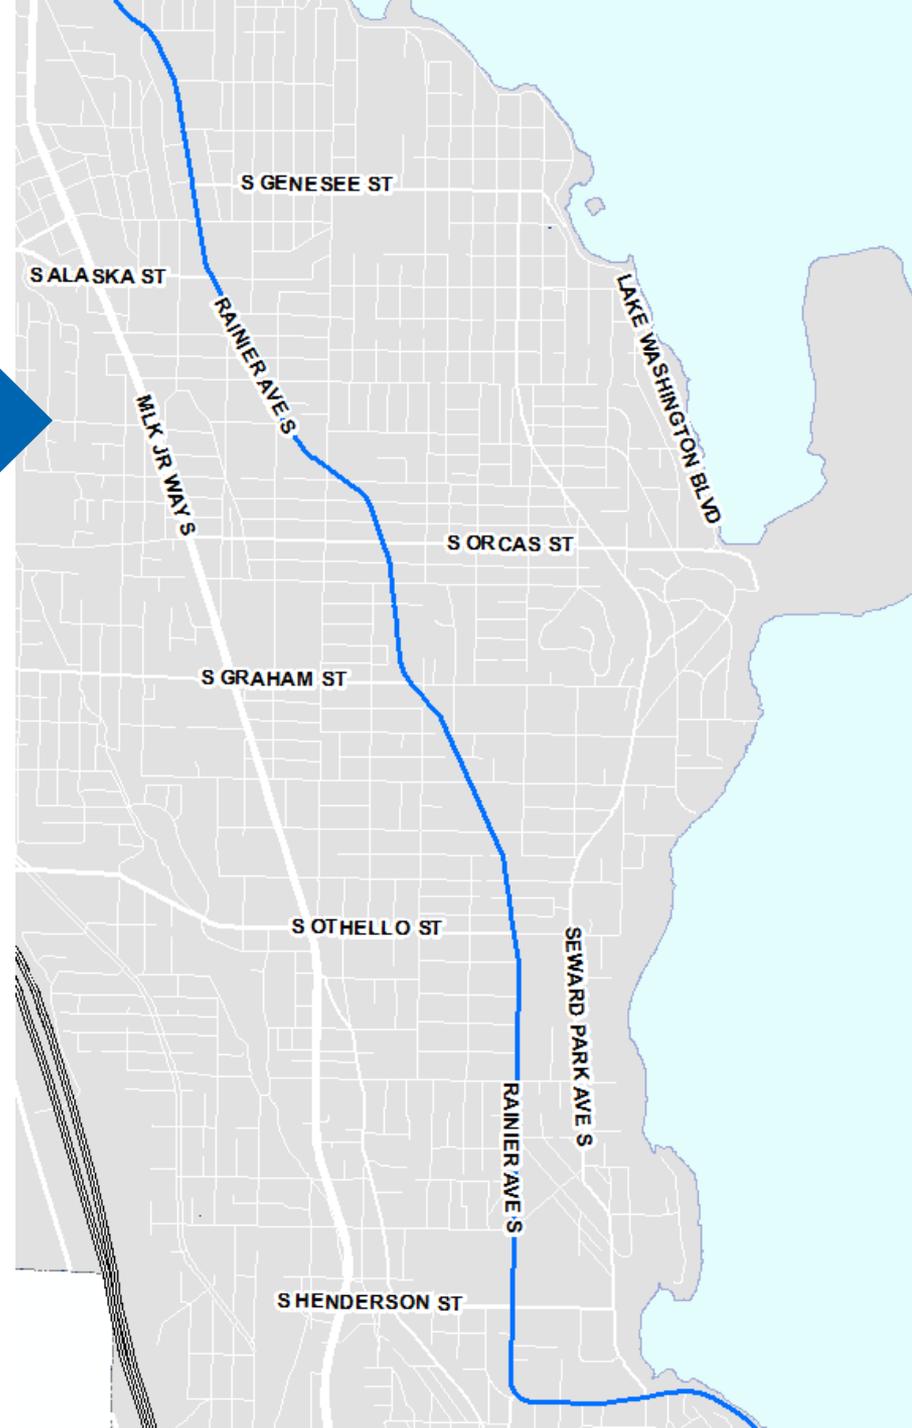

Rainier Ave S Road Safety Corridor

Project area

Rainier Avenue S, between
Letitia Avenue S and
Seward Park Avenue S

Roadway characteristics

- Principal arterial
- 4 to 5 lane street
- 50-54 feet wide
- Served by multiple transit routes
- Emergency response route

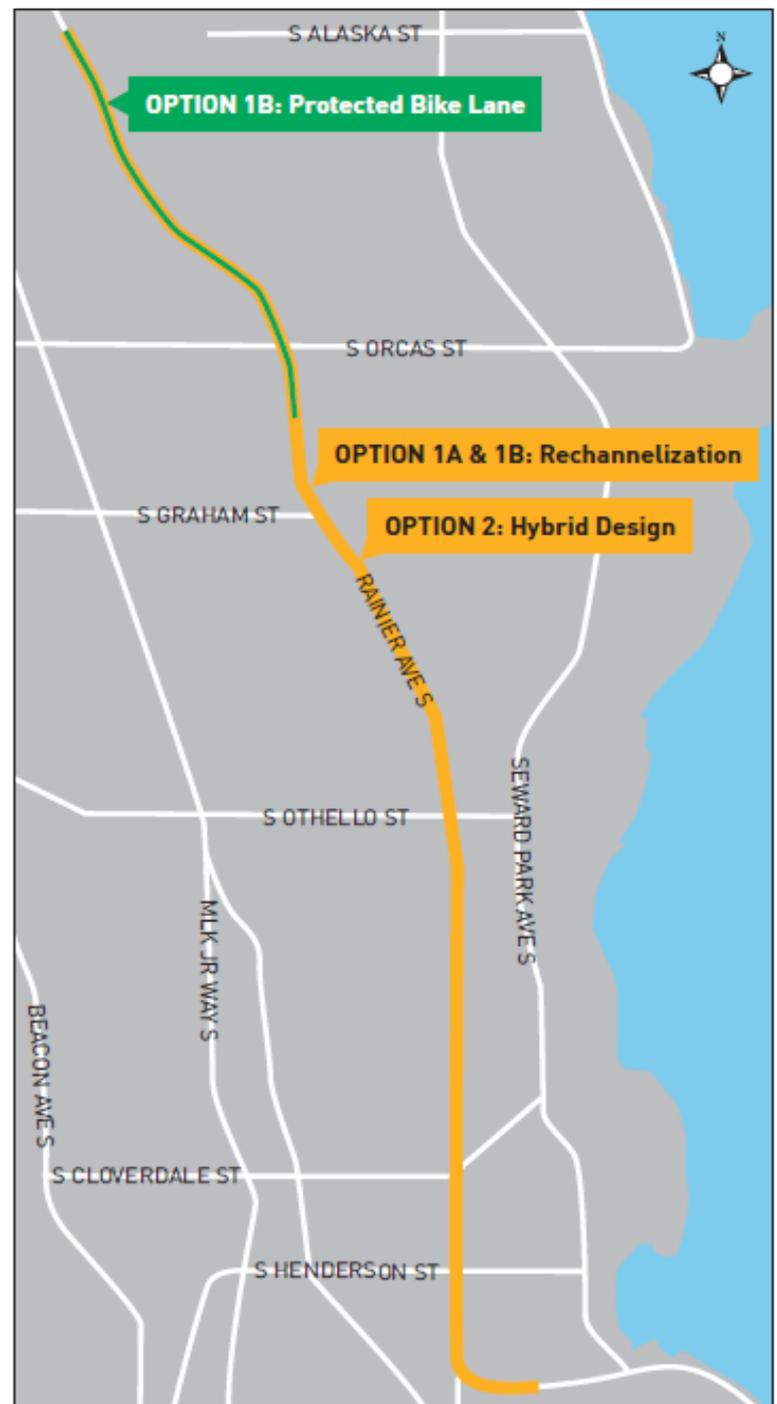

Project review

Goals

- Make Rainier safer for everyone
- Reduce speeds
- Improve conditions for pedestrians
- Maintain efficient transit service
- Improve intersection safety
- Reduce injuries

Outreach

- Four public meetings
- Tours
- Community and business briefings
- Design alternatives released March 2015

Speed studies

Posted speed limit on Rainier is 30 miles per hour (mph)

| Location | 85 th percentile speed | Average number of high-end speeders (10+ mph over posted speed limit) |
|---------------------------|-----------------------------------|---|
| S Hudson Street | 35 mph | 611/weekday |
| 42 nd Avenue S | 38 mph | 1812/weekday |
| S Holly Street | 37 mph | 1083/weekday |
| S Cloverdale Street | 36 mph | 1083/weekday |

Collision data

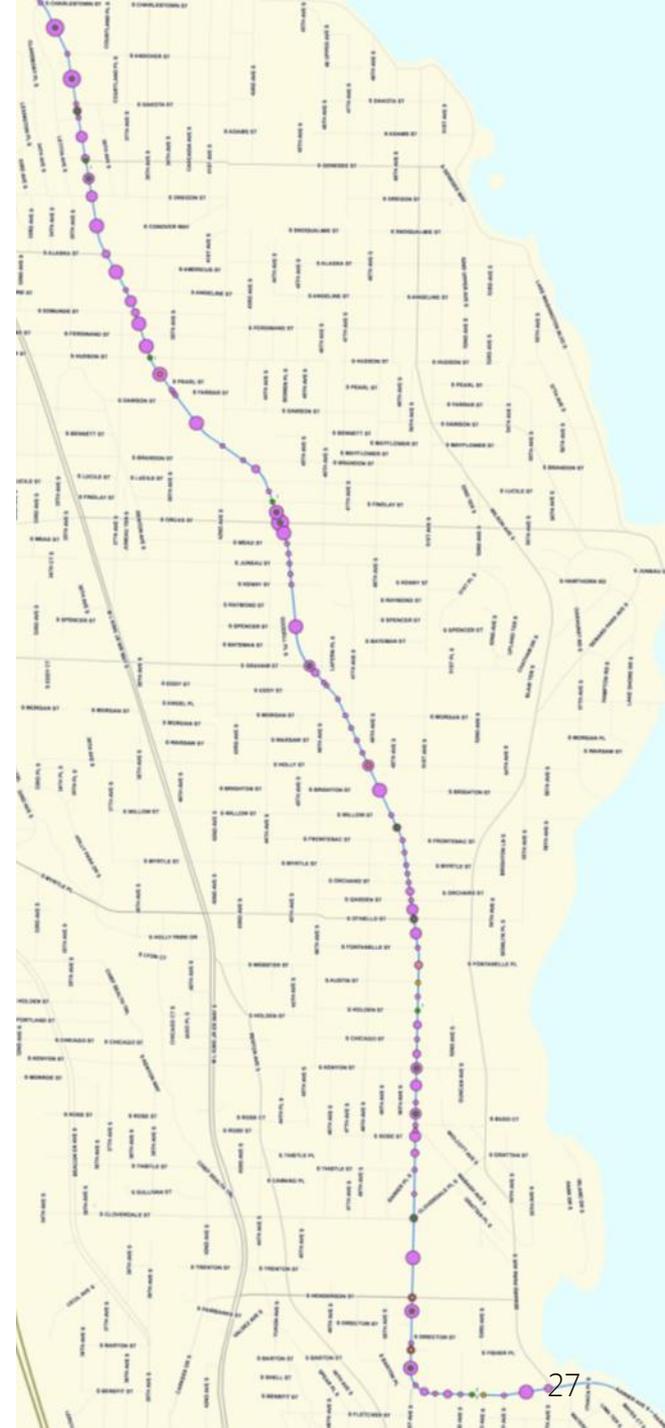

Average of 1 crash/day on Rainier

Last 3 years

- 1243 total collisions
- 630 injuries
- 2 fatalities

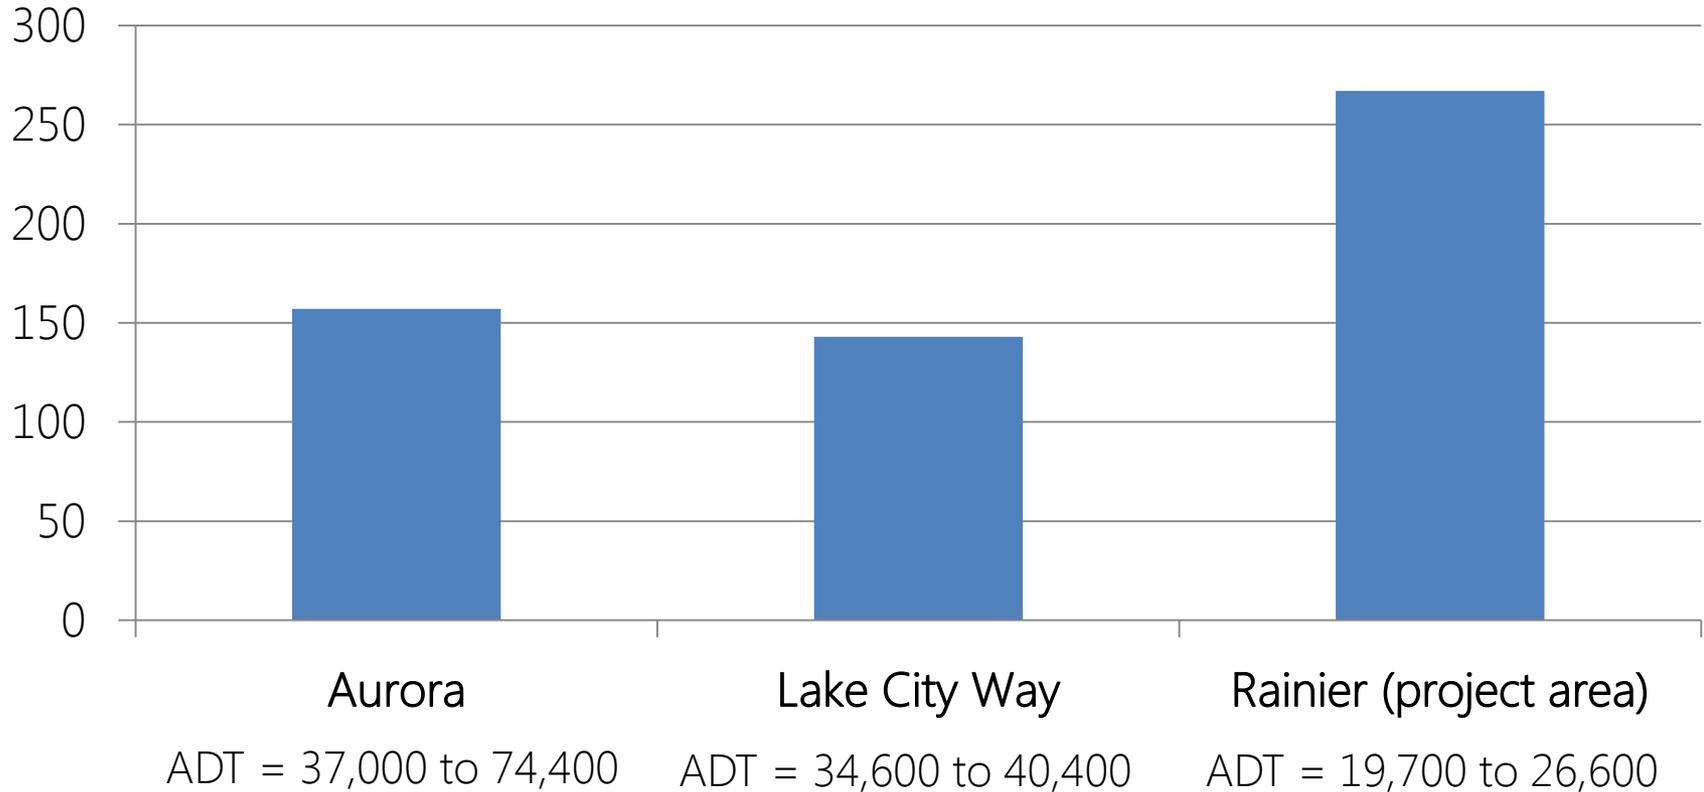

Last 10 years

- Nearly 3600 total collisions
- 1700+ injuries
- 11 fatalities

Collision data

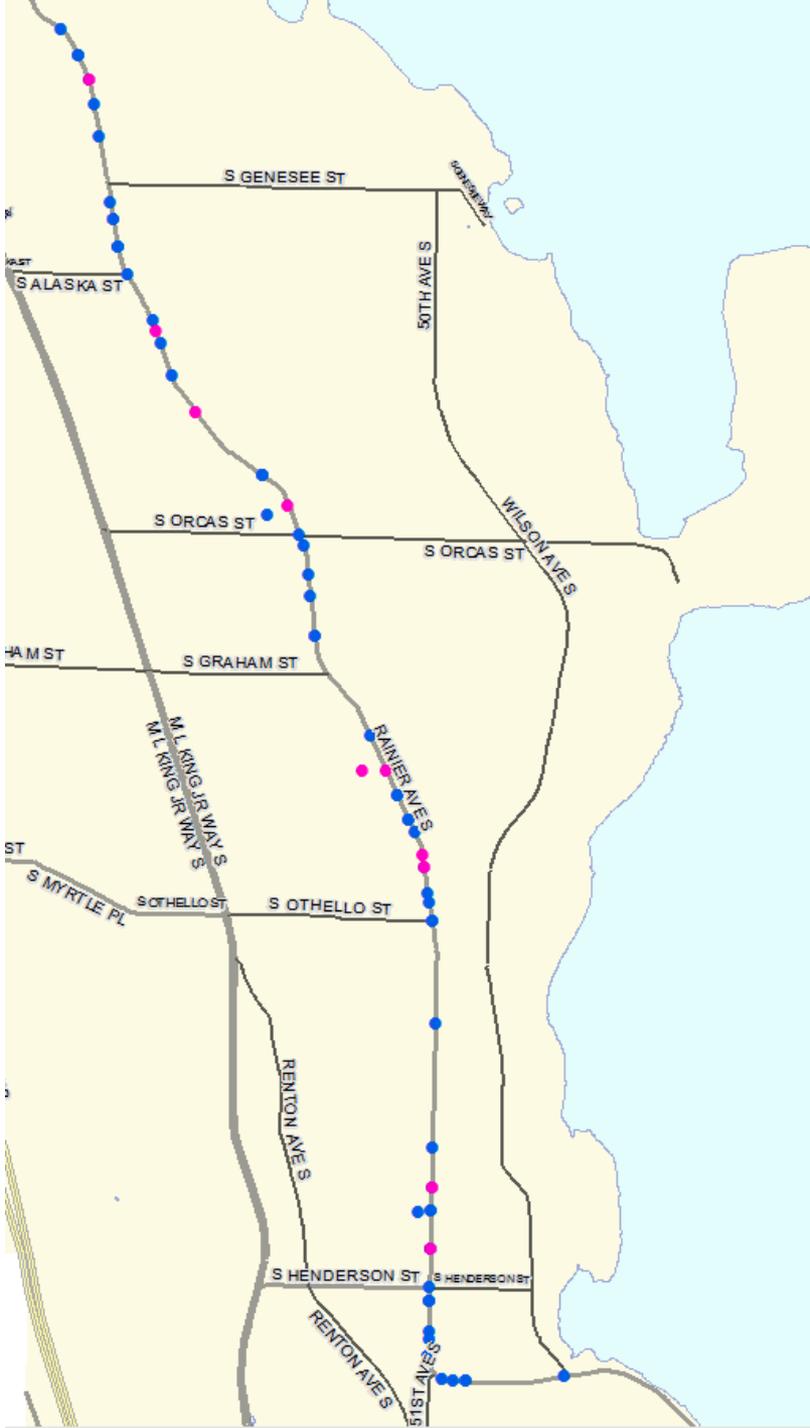

Crashes per mile

Collision data

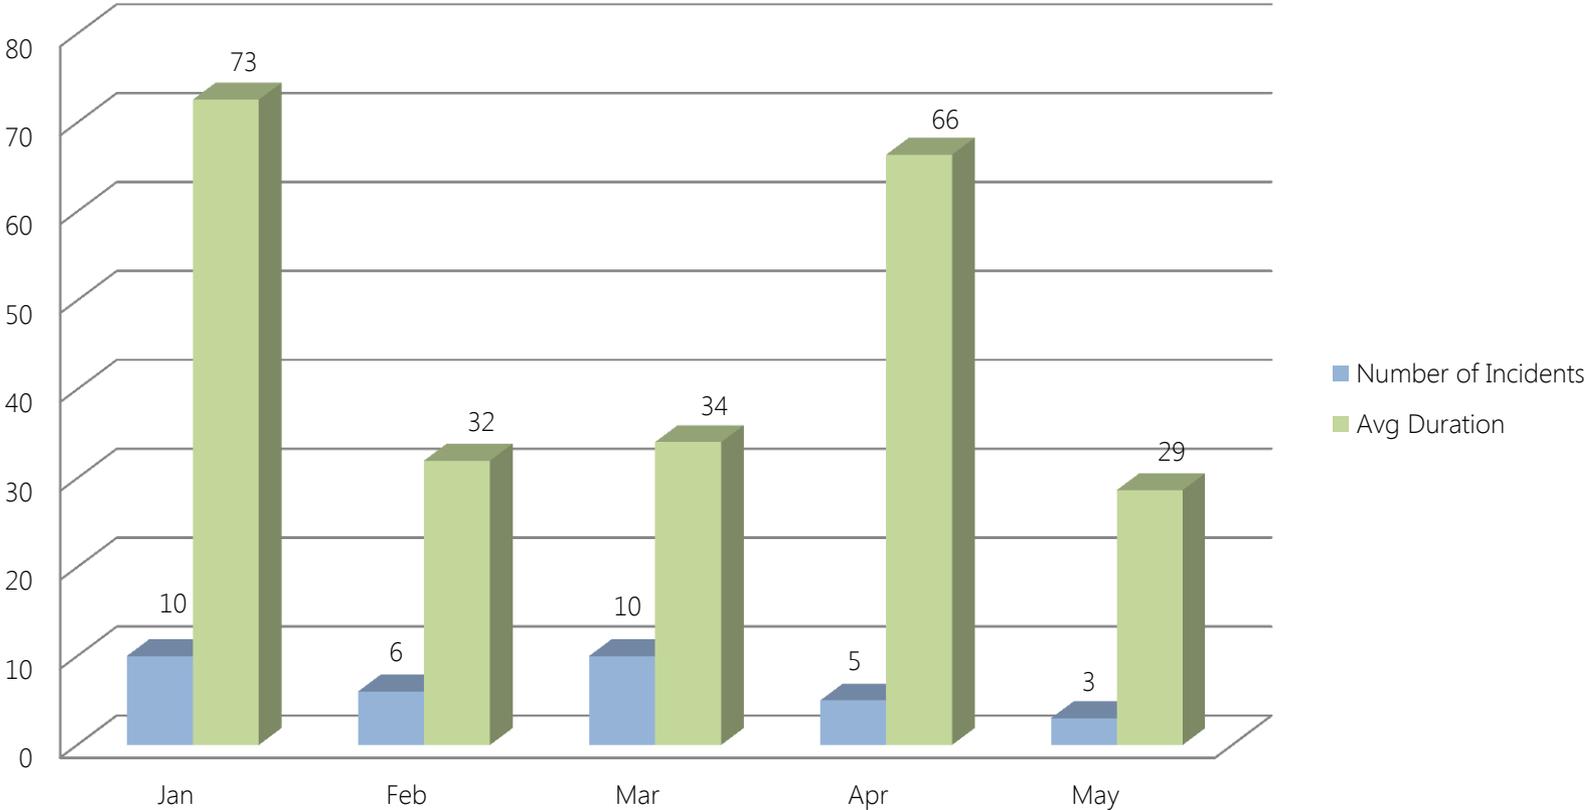

Fatal and serious injury crashes within project area last 10 years

- Fatal collisions
- Serious injury collisions

Collision data

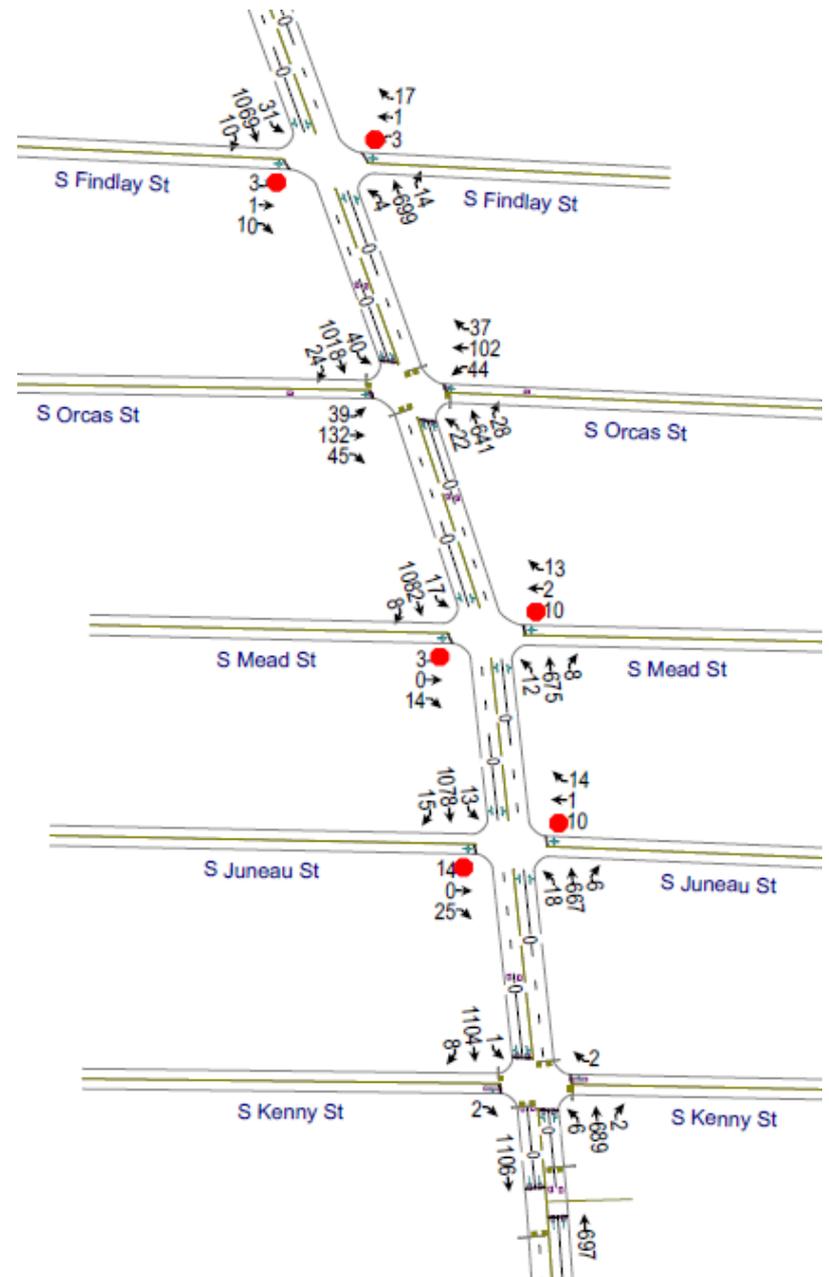

Rainier Incidents Responded to by Traffic Operations Center
Average Incident Duration / Month (6 AM to 10 PM only)

- Average time to clear incidents = 47 minutes

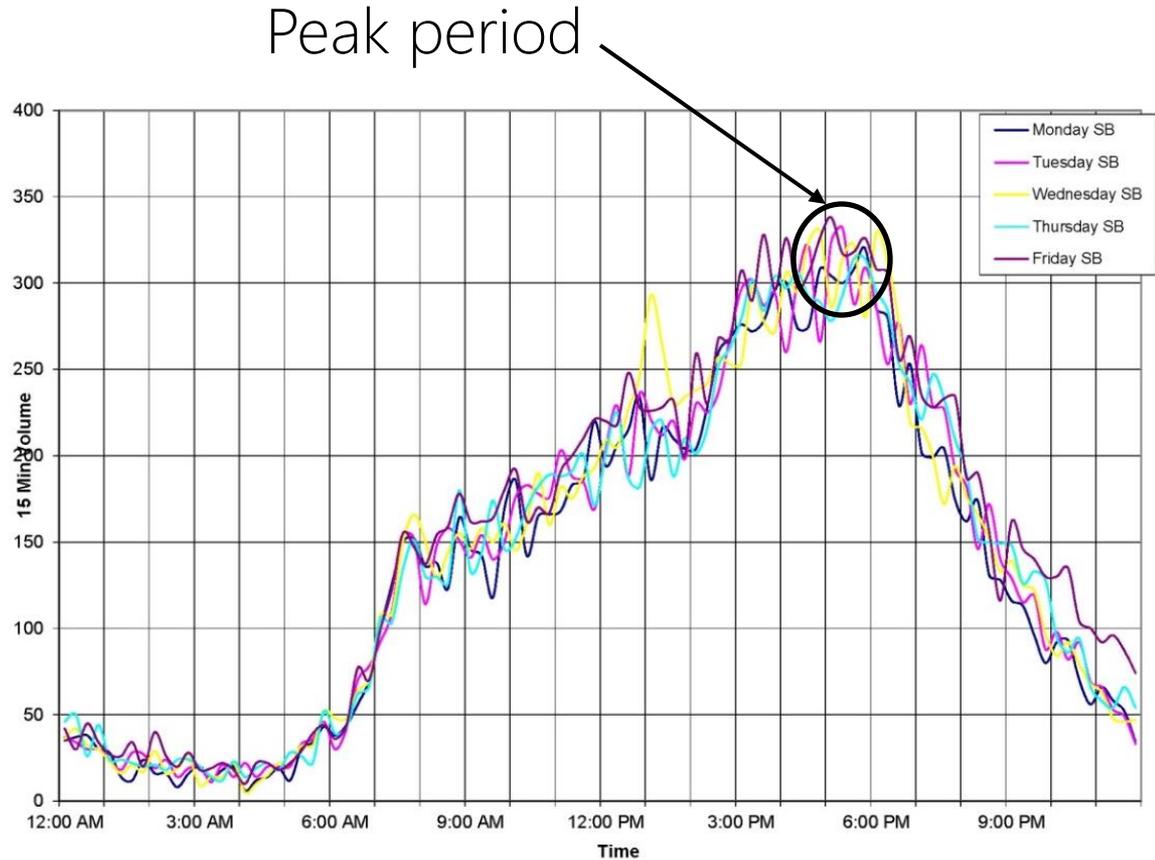

Data collection

- Updated volumes on Rainier and nearby arterials
- Turning movement counts collected at every intersection
 - During AM peak, off-peak, and PM peak hours
 - Includes counts of pedestrians, bicyclists, freight and transit
- Recorded corridor travel times
- Reviewed detailed transit data

Traffic modeling

- Modeled the “peak” period – the hour of the day where recorded traffic volumes were the highest

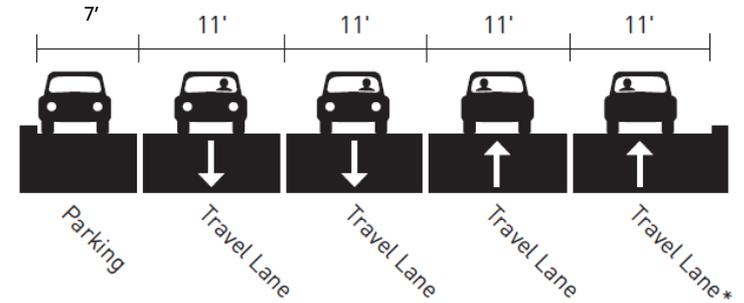

Change is coming to Rainier Ave S

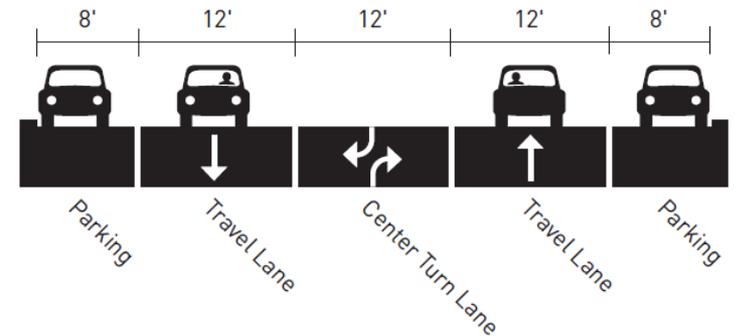

2015 implementation plan

- Rainier “Pilot” Rechannelization
 - Option 2 – hybrid design
 - S Alaska Street to S Kenny Street (0.9 miles)
 - One lane in each direction with center turn lane
 - 25 mph speed limit
 - Longer pedestrian crossing time at all signals
 - Leading Pedestrian Interval at Rainier and Ferdinand
 - New parking spaces and more space to park on Rainier

TYPICAL CROSS SECTION (EXISTING)

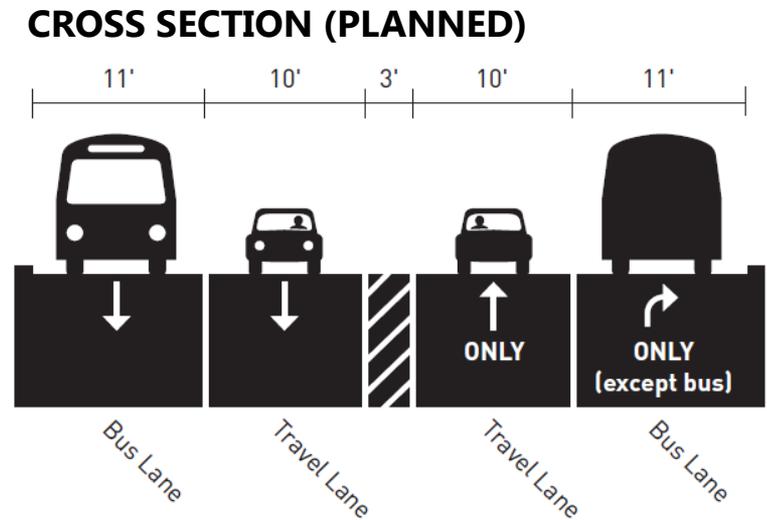

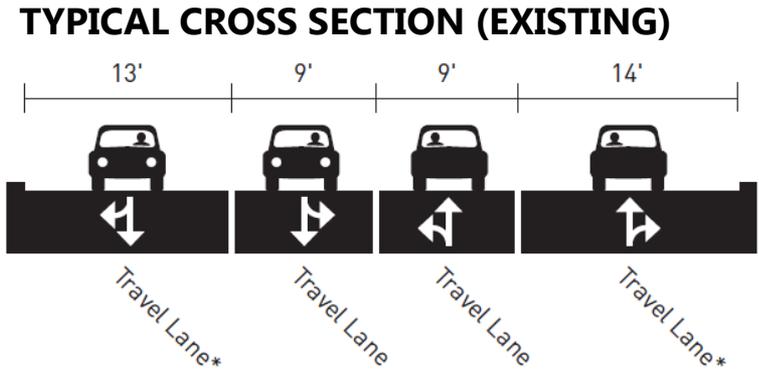

TYPICAL CROSS SECTION (PLANNED)

*Parking available at some locations

2015 implementation plan

- Bus and turn lanes between Edmunds and Alaska
- Southbound transit queue jump at Edmunds
- Southbound left turns to be restricted at Edmunds
- Left turns will be permitted at Angeline and PCC entrance
- Turn restrictions at Safeway

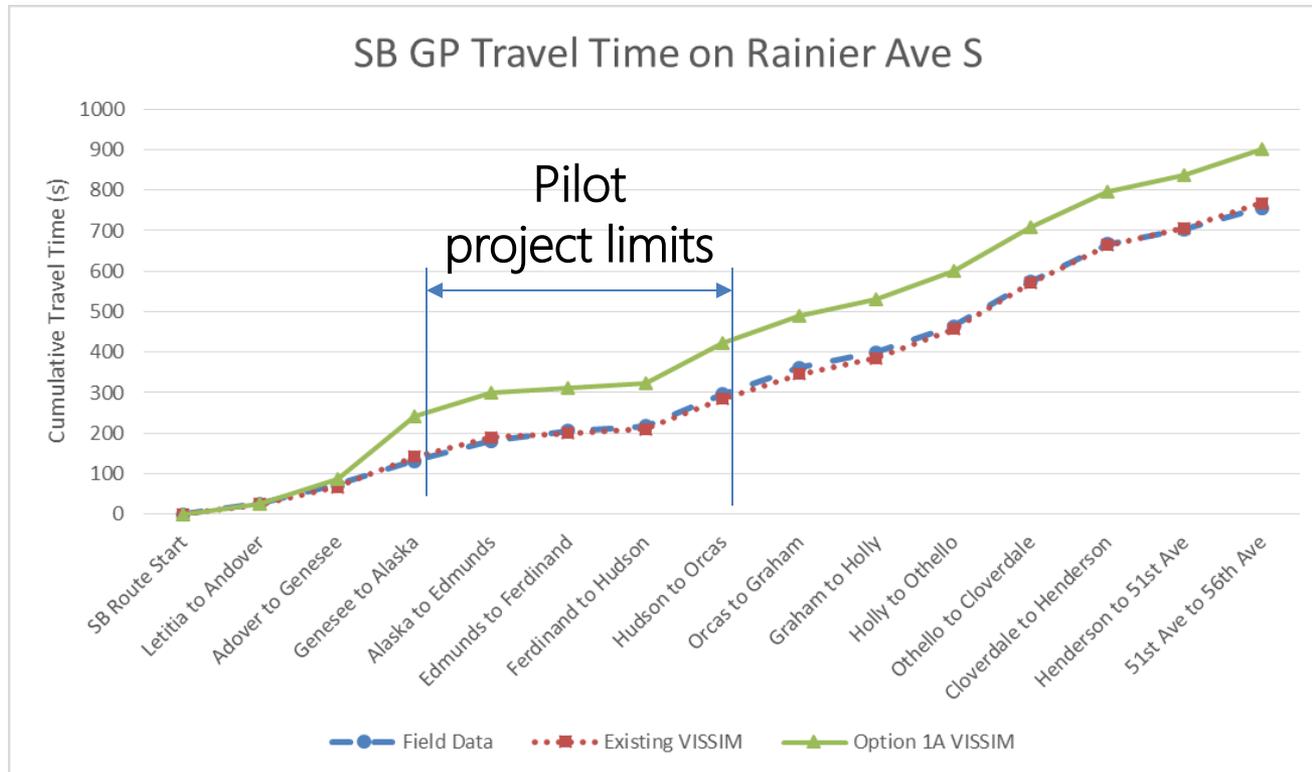

Rainier at S Edmunds Street

Travel times (PM peak)

Rainier Avenue S between Letitia and Seward Park Ave S

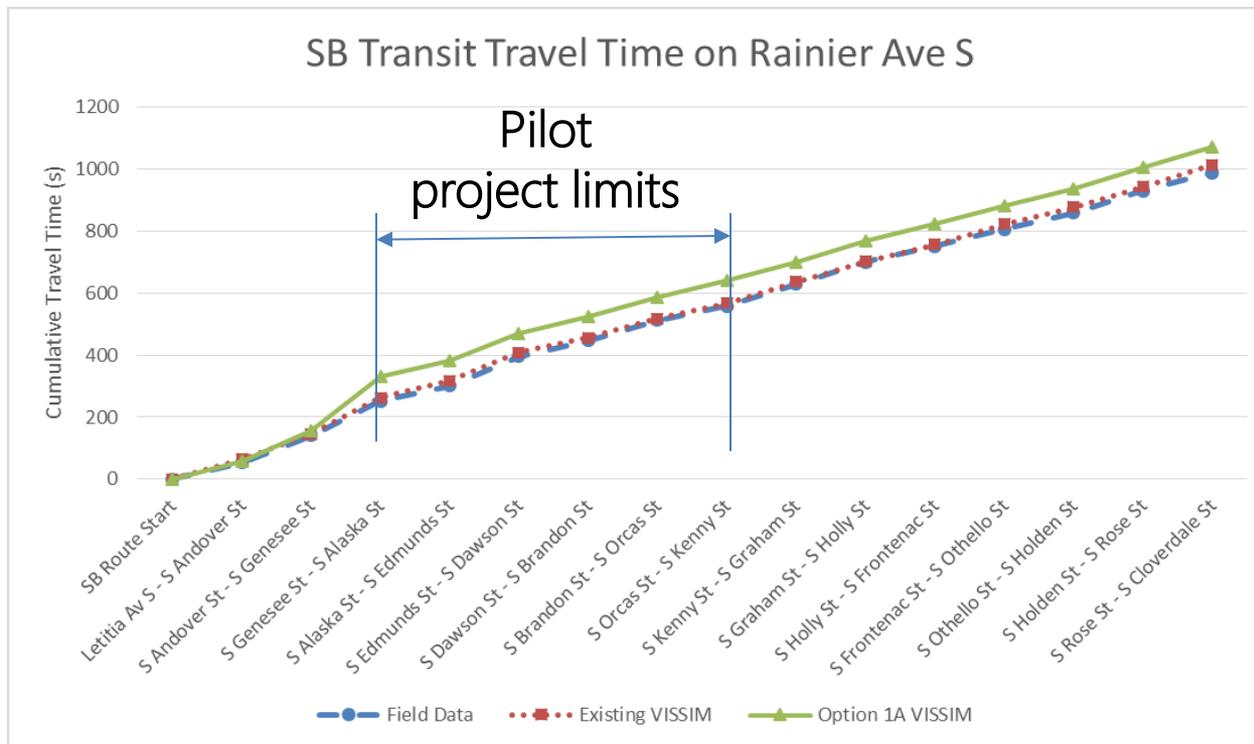

| Direction | Existing | Anticipated | Change |
|------------|------------------|-----------------|------------------|
| Northbound | 10 mins, 43 secs | 11 mins, 6 secs | +33 seconds |
| Southbound | 12 mins, 36 secs | 15 mins, 1 sec | +2 mins, 25 secs |

Transit travel times (PM Peak)

Rainier Avenue S between Letitia and Seward Park Ave S

| Direction | Existing | Anticipated | Change |
|------------|------------------|------------------|----------|
| Northbound | 22 mins, 9 secs | 22 mins, 28 secs | +19 secs |
| Southbound | 16 mins, 27 secs | 17 mins, 27 secs | +1 min |

Design details

- Efficiency of design and longer signal cycles substantially offset loss of travel lanes

| Location | AM | | Off | | PM | |
|----------------|----------|----------|----------|----------|----------|----------|
| | Existing | Proposed | Existing | Proposed | Existing | Proposed |
| S Edmunds St | 60 | 120 | 60 | 60 | 65 | 130 |
| S Ferdinand St | 60 | 120 | 60 | 60 | 65 | 130 |
| S Hudson St | 60 | 120 | 60 | 60 | 65 | 130 |
| 39th Ave S | 60 | 60 | 60 | 60 | 65 | 65 |
| Brandon St | 60 | 60 | 60 | 60 | 65 | 65 |
| S Orcas St | 60 | 120 | 60 | 60 | 65 | 130 |
| S Kenny St | 60 | 60 | 60 | 60 | 65 | 65 |

Signal cycle lengths

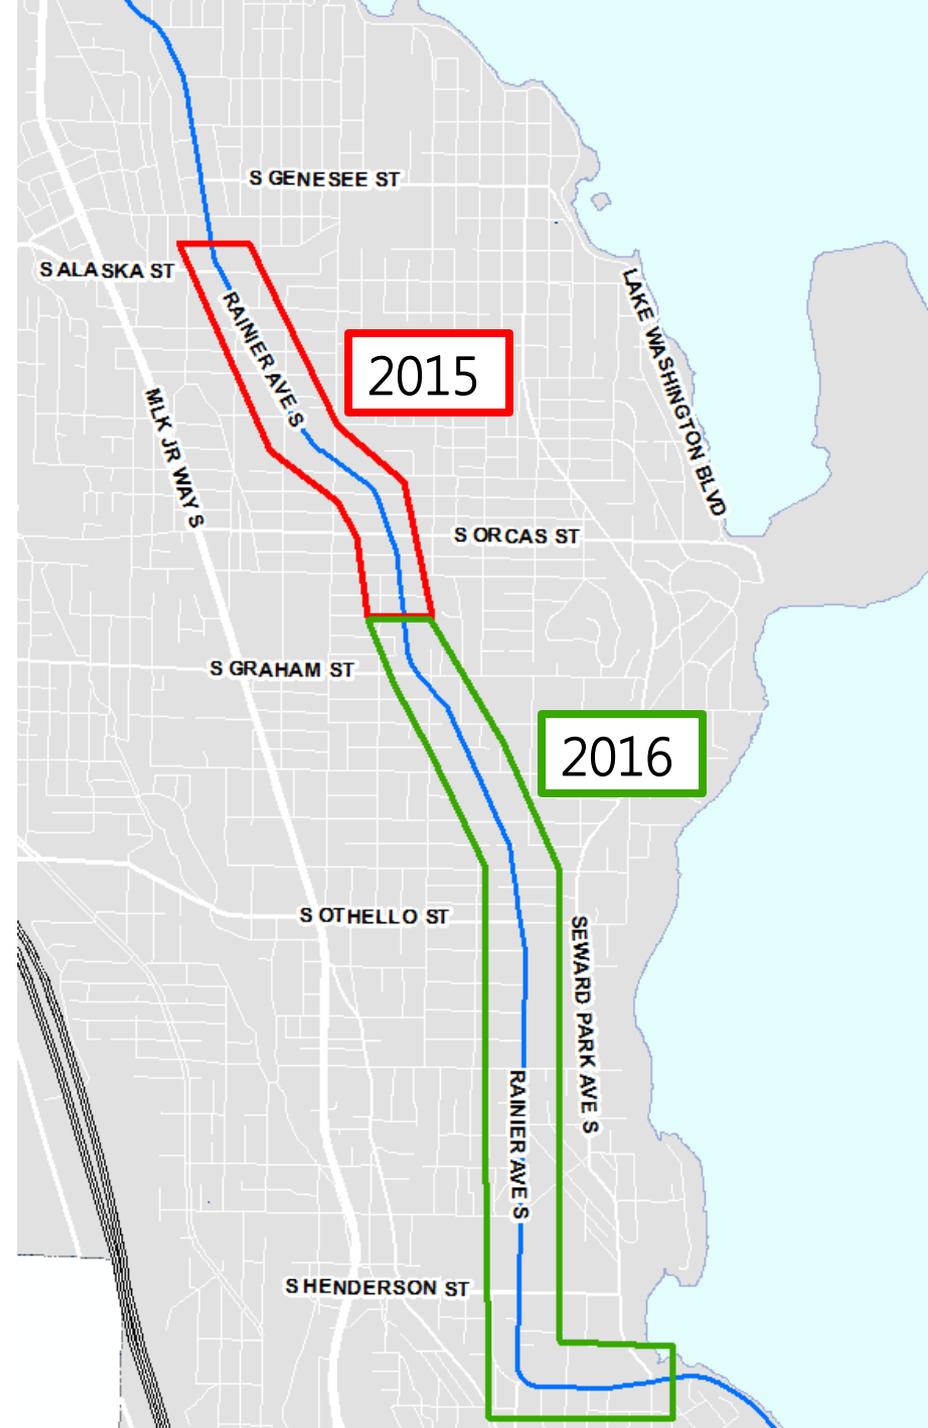

Evaluation

- Evaluation to begin upon project completion
- Fine tune traffic signal timings
- Monitor travel times for vehicles and transit
- Monitor traffic volumes on Rainier and nearby arterials
- Monitor collisions
- Economic analysis review

2015 - 2016

- Continue Vissim analysis of design alternatives
- Community design meetings
- Engineering changes from south to north
- Coordination with Greenway implementation and Accessible Mt. Baker project
- Pedestrian signal design changes at Rainier and Oregon

Enforcement

- Increased enforcement efforts
 - SeaStat-Vision Zero patrols
 - Grant funded pedestrian emphasis patrols

Benefits

- Reduction in crash frequency
- Lower speeds, fewer severe crashes
- Improves parking conditions
- Addresses correctable collision patterns
- Less exposure for pedestrians
- Potential low cost crossing improvements
- Easier turns to and from Rainier
- Transit efficiency treatments
- Minimal impact to traffic

Benefits

- Rechannelization is a FHWA-recognized proven measure to reduce speeds and collisions
- Local results confirm that rechannelization is an effective countermeasure

| Street | Collisions | 85% speed | 10+ mph speeders | Volume change |
|-------------------------|------------|-----------|------------------|---------------|
| Nickerson St | -23% | -21% | -94% | -1% |
| Fauntleroy Way SW | -31% | -1% | -13% | +0.3% |
| NE 125 th St | -10% | -8% | -69% | +4% |
| NE 75 th St | -50% | -13% | -75% to 79% | +3% |

Next steps

| | |
|---------------|-----------------------------------|
| August 3 – 14 | Phase 1 implementation |
| | Evaluation begins upon completion |
| Winter 2016 | Project information sessions |
| Summer 2016 | Phase 2 implementation begins |
