

Evening work on July 29: Highland Park Way SW & SW Holden St Safety Improvements Project

WHAT'S HAPPENING

We are removing the existing traffic markings at the Highland Park Way SW and SW Holden St intersection. Removing this paint requires special equipment that is somewhat noisy, and we will be working outside our normal construction hours.

WHEN

Saturday, July 29 | 5 – 8 PM

WHAT TO EXPECT

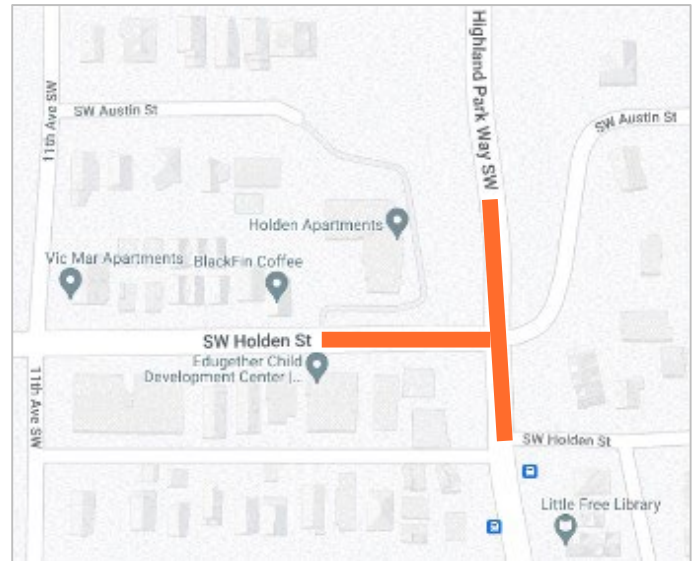

We will be running loud equipment that sounds like a giant vacuum, but no vibration or banging is expected. Noisy work will be completed by 8 PM.

Alternating traffic lanes will also be closed, but there will always be one lane open for cars to get through.

ABOUT THE PROJECT

We're making safety improvements for people walking, rolling, driving at the Highland Park Way SW and SW Holden St intersection. This work includes:

- A more durable traffic signal with metal poles that have signal lights instead of lights connected to wooden poles.
- Traffic cameras to monitor and adjust the signal in real-time, as well as vehicle detection in the pavement so the signal can recognize when a person driving is waiting at the light.
- Upgraded ADA accessible concrete curb ramps and curb bulbs at all four corners of the intersection.
- Permanent crosswalks at each crossing.

Work will take place at and near the Highland Park Way SW and SW Holden Street intersection.
