Art in High Point: Your salmon designs on SW Graham St and 31st Ave SW

Earlier this summer, a local artist created salmon drawings that High Point community members filled in with their own designs. Our goal is to install your salmon designs this fall on High Point streets!

ABOUT THE PROJECT

This artwork is part of the High Point Healthy Street project, which provides more space for people to walk, bike, and roll on neighborhood streets.

Each salmon will be about 6 feet long and made with a strong material, helping them last about 7 to 10 years with little or no maintenance. The salmon will "leap" along SW Graham St and 31st Ave SW, leading to the intersection.

The salmon will be installed in the middle of the street. People can still drive on the them and they won't be covered by people parking on the side of the street.
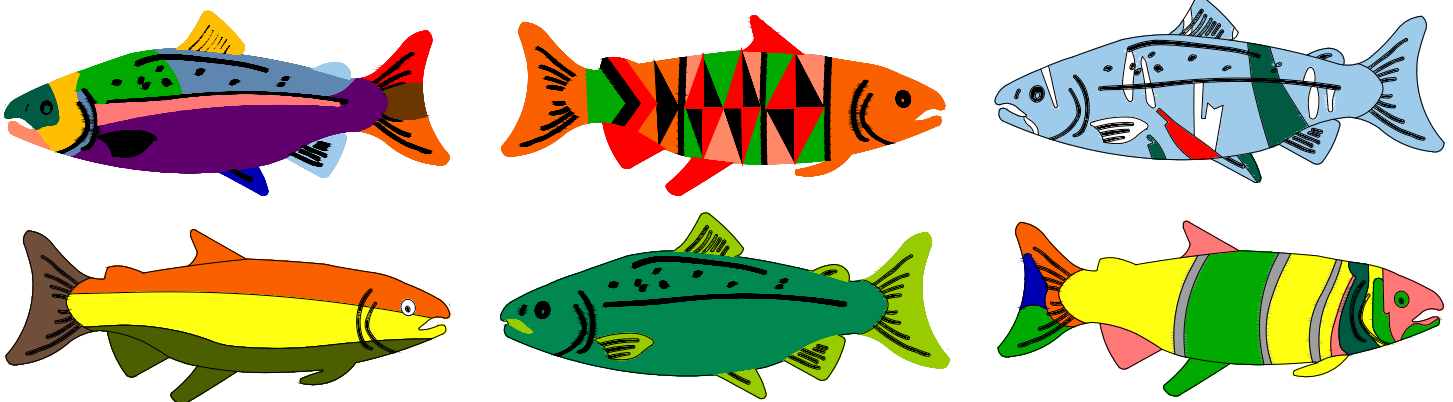

SCHEDULE

We expect to start this project as early as mid-October and have it done by December. The timing of this work depends on the weather. If we are not able to install by the rainy season in Seattle, we'll install the salmon in spring 2023.

Thank you, High Point community, for your involvement in this project.

WHAT TO EXPECT DURING INSTALLATION

- If you are driving on these streets during installation, we will direct you around the work area by using a detour or directing traffic to one side of the street.
- People walking, biking, and rolling should use the sidewalks to get around the work area.
- We will have temporary parking restrictions and will place "no parking" signs on the street 72 hours before installation.
- You can expect typical construction equipment, materials, noise, workers, dust, and activity in the area during this work.
- Work hours are weekdays from approximately 9 AM to 3 PM to avoid peak commute times and weekends from approximately 8 AM to 5 PM.
