

NE 130TH ST & NE 125TH ST MOBILITY AND SAFETY PROJECT

Project Overview

Sound Transit is opening the NE 130th St Infill Station at NE 130th St near I-5 in 2026. The new station will bring an estimated 3,300-3,700 daily riders with 90% of them arriving by walking, biking, rolling, or transit. To provide better access to the new light rail station, we're making improvements along NE 130th St, Roosevelt Way NE, and NE 125th St between 1st Ave NE and Lake City Way NE. These improvements will make it easier and more comfortable for people walking, biking, rolling, and taking transit.

Planned improvements include:

- Protected bike lanes throughout the project area, including a new shared use path for walking, biking, and rolling on the north side of NE 130th St
- New bus stops at 8th Ave NE and 10th Ave NE and upgrading selected existing bus stops to prepare for King County Metro's planned new service
- Installing bus lanes and other bus priority features to improve frequency and reliability
- Updating street and intersection designs to reduce fatal and serious injury crashes
- Updating street designs to minimize conflicts between vehicles and people biking
- Crossing improvements such as leading pedestrian intervals to give people walking a head start, new signalized crossings, and restricting right turns on red
- Sidewalk repairs and new accessible curb ramps in selected locations
