How to use this Tableau report

Interactivity:

- * All tables/figures are interactive
- * Click or hover on a data point or any part of a figure for more information
- * To narrow results, use filters on the left-hand side of each tab or sheet (called a "dashboard" in Tableau)
- * Click on sections of figures or tables to "highlight" that section. Click again to remove the highlight.

Note that actions can be reset and will not affect the dashboard for other viewers.

Navigation:

- * Tableau reports are organized into dashboards, which are individual sheets or tabs. This report has 8 dashboards.
- * To return to the home page dashboard, click the home button in the top right corner located on every dashboard
- * The homepage has links to all dashboards

Downloading Data, Plots, or Tables:

- * Data, plots, and tables can be downloaded using the Download button in the top right corner of each dashboard
- * Only the data used to create the displayed table or plot will be downloaded. This means downloaded data will reflect user choices, including which dashboard is open and the choices made to filter the table/plot.

About the Data

Q4
2022

Data

Critical Note:

The data in this report include estimated City contracted and self-haul tonnage plus some garbage and organics data from private stations. The data presented are not a full account of the municipal solid waste (MSW) in the City and do not include estimates of non-contracted commercial recycling and composting or activities such as home composting. In addition, this report does not exclude estimated tons of contaminants. For these reasons, the data in this report may differ from other reports published by SPU.

The data in this report are estimated and are subject to change.

Obtaining Data/Plots/Tables:

Plots, tables, and the data used to generate any tables or plot in this report can be downloaded by pressing the Download button in the top right corner of each dashboard. Note that the full data table will not be downloaded. Data will be subset based on the selections made to filter the data, such as sector and year, and the report dashboard open.

Data Sources

- Contracted tonnage data is uploaded weekly by vendors under contract with SPU to the Solid Waste Data Integration (SWDI) database.
Data undergoes a QA/QC process weekly to identify errors and missing data. Corrections are submitted, on average, within a week.
- Commercial non-contracted tonnage data come from:
 - Garbage: Vendor monthly Excel reports
"Mid-Month Report" from Waste Management and "Flow Control Report" from Republic/Lander.
 - Organics: Waste Management monthly online report (ENSPIRE) and Cedar Grove quarterly PDF report.
- Material estimate percentages come from the [SPU Waste Composition Studies](#) for the Residential Sector.
 - Garbage: [2010](#), [2014](#), [2020](#)
 - Recycling: [2010](#), [2015](#), [2020](#)

Terms

- **Municipal Solid Waste (MSW):** Includes all garbage, recycling, and organics (food and yard waste) material that Seattle customers set out for collection or haul to a City transfer station.
- **Contracted Tonnage:** Number of tons collected by vendors under contract with SPU
- **Non-contracted Tonnage:**
 - Self-haul includes only material transported by customers to SPU's transfer stations
 - Commercial garbage and organics include both contracted and non-contracted tonnage. Commercial recycling includes only the contracted portion.
- **Sector:** Residential, Commercial, Self-haul
 - **Residential:** Single family + Multifamily subsectors
 - **Single family:** Dwellings with no more than four units
 - **Multifamily:** Apartments and condominiums with five or more units
- **Contaminant:** Items that did not meet the requirements of Seattle's recycling program (as of 2014-15)
- **Stream:** Waste stream including garbage, recycling, and organics (food and yard waste)

 SPU_SW_Reports@seattle.gov

Estimated City Contracted MSW Tonnages for Material Classes in the Residential Garbage and Recycling Streams using Waste Composition Study Material Proportions

Q4
 2022 

Estimated collected tons for material classes in the Recycling stream in 2020

	Aluminum	Ferrous Metal	Glass	Mixed Paper	Newspaper	Plastic	Tin	Total Tons*
Recycling	649	346	6,473	14,098	1,082	2,219	440	25,307

*Total Tons excludes estimated tons of contaminants (Total tons Without Contaminants)

** Only years with relevant waste composition studies are provided

*** Material proportions are calculated for each study year and applied to monthly estimated City contracted MSW tons. Proportions do not change between months.
