

BUSINESS STORMWATER POLLUTION PREVENTION

Best Management Practices: Boat Repair and Detailing

Rain that falls on streets and parking lots, also known as stormwater, can carry oils, detergents, pesticides, and other toxic chemicals from the ground and into storm drains that lead straight to lakes, streams, or Puget Sound. This can pose health and safety risks to our community and environment.

As a boat repair and detailing business, it's your duty to prevent waste, drips and spills from polluting our waters.

Take action to prevent pollution at its source to keep our waters safe and clean!

Learn more about pollution prevention requirements in [Seattle's Stormwater Code](#).

Best Management Practices (BMPs) for Boat Repair and Detailing Businesses

- ✓ Carry out maintenance, fuel mixing, painting/coating and repair activities onshore, never on docks or other over-water structures. (Manual Volume 4, BMPs 34 and 23)
- ✓ When washing, do not allow any pollutants, including soap, to enter the drainage system or receiving waterbody. (BMP 17)
- ✓ Use plastic or tarp barriers to contain and collect waste and spent materials. Clean and sweep regularly to remove debris, then dispose of solids and debris in the trash, not in drains or waterways. (BMP 34)
- ✓ If fueling vehicles, do not "top-off" tank. During the fueling operation wrap an absorbent pad around the nozzle or plug the nozzle end to prevent spills (Ecology BMP S439)

See the [next page](#) for general BMPs to prevent stormwater pollution. ►

General Best Management Practices (BMPs)

BMPs are processes that businesses, individuals and responsible parties in Seattle should implement to prevent pollutants from contaminating stormwater runoff and entering receiving waters. General BMPs are required for all real property, and additional BMPs are recommended for specific pollution generating activities.

Find and Protect Onsite Storm Drains

Find where water will flow from your work site and protect your storm drains to prevent pollutants from entering local waterways. Best practice is to move activities that could release oils, chemicals, detergents, or other pollutants away from locations that could lead to a storm drain, and properly contain pollutants.

Train Employees

Ensure your staff are properly trained in the following key practices:

- How to safely store and use chemicals and hazardous materials so they do not pollute the ground, drains, or waterways
- What can be washed and where so that soap, soil, oil, and other chemicals do not enter storm drains
- How to create a spill plan and clean all spills promptly

Prevent and Clean Up Spills

Create and follow your spill prevention and clean-up plan. A spill can be a one-time event, a continuous leak, or frequent small spills. All types must be addressed.

If you have a spill, call Seattle Public Utilities at (206) 386-1800.

Dispose of Fluids and Wastes

Responsible parties must properly dispose of solid and liquid waste, as well as contaminated stormwater and street waste. Depending on the type of waste, there are a few options for disposal:

1. Permitted centralized waste treatment facilities
2. Municipal solid waste and recycling facilities
3. Hazardous waste treatment, storage, and disposal facilities
