

No one wants their sewage back.

KEEP COOKING OIL, FATS, AND GREASE FROM CLOGGING YOUR PIPES!

Did you know?

Running hot water, vinegar, or soap down the drain does not reduce clogs.

Spoiled milk curdles up and clogs your pipes.
Pour spoiled or any form of milk into the compost bin.

If in doubt, scrape it out!

Cooking oil and grease build up in your pipes and cause clogs. Instead of using your drain, follow the steps below to safely discard of them.

Step 1. Let the oil or grease cool

Before discarding, let oil or grease cool down.

Step 2. Scrape or wipe off grease from dishware

Oils and greases will form into solids or liquids. Small amounts can be scraped or wiped down with paper towels and discarded into your compost.

For large amounts, pour the oil into a sealable container (like a milk carton or jar) and place it in the garbage.

Thank you for keeping waterways clean!
