

SEATTLE URBAN FORESTRY COMMISSION

Weston Brinkley (Position #3 – University), Chair • Steve Zemke (Position #1 – Wildlife Biologist), Vice-Chair
Sarah Rehder (Position #4 – Hydrologist) • Stuart Niven (Position #5 – Arborist – ISA)
Michael Walton (Position #6 – Landscape Architect – ISA)
Joshua Morris (Position #7 – NGO) • Steven Fry (Position #8 – Development)
Whit Bouton (Position #11 – Environmental Justice)
Jessica Jones (Position # 12 – Public Health) • Shari Selch (Position # 13 – Community/Neighborhood)

The Urban Forestry Commission was established to advise the Mayor and City Council concerning the establishment of policy and regulations governing the protection, management, and conservation of trees and vegetation in the City of Seattle

September 11, 2019

Meeting Notes

Seattle Municipal Tower, Room 2750 (27th floor)
700 5th Avenue, Seattle

Attending

Commissioners

Weston Brinkley – Chair
Steve Zemke – Vice-chair
Steven Fry
Josh Morris
Stuart Niven
Sarah Rehder
Shari Selch
Michael Walton

Staff

Sandra Pinto de Bader - OSE

Public

Nancy Penrose

Absent- Excused

Whit Bouton
Jessica Jones

NOTE: Meeting notes are not exhaustive. For more details, listen to the digital recording of the meeting at: <http://www.seattle.gov/urbanforestrycommission/meetingdocs.htm>

Call to order

Weston called the meeting to order and mentioned that Council's Finance and Neighborhoods Committee will be discussing a resolution to move forward work on tree protection. The Commission will be tracking the Committee's agenda progress to move to Council Chambers and be present during the discussion.

Public comment

Nancy Penrose – resident of Seattle for 14 years. She is very concerned about the loss of tree in the city. She wants to use energy to contribute and exploring options. She wants to learn from the UFC and thanks the Commission for its work.

UFC recruitment

Weston, Steve and Sandra participated in the interview panel for Position #9 (Economist, Financial Advisor, Realtor – UFC appointment) and are proposing appointment of Blake Voorhees.

ACTION: A motion to move forward appointment of Blake Voorhees to Position #9 was made, seconded, and approved.

Tree Regs One Pager

The Commission discussed this item and agreed that Josh would produce a second version to discuss at the next meeting.

The Commission moved to Council Chambers to support the tree protection resolution being introduced by the Finance and Neighborhoods committee. CM Bagshaw invited commissioners to sit at the table as Council Central Staff presented the resolution. The Committee voted to move the resolution forward to full Council vote. Find adopted Resolution 31902 [here](#).

Subject: Please Update Seattle's Tree Ordinance

CAUTION: External Email

Sandra Pinto de Bader,
Seattle's trees and urban forest are vital to keeping our city healthy and livable. Trees and the urban forest comprise a vital green infrastructure. Trees reduce air pollution, storm water runoff and climate impacts like heat island effects, while providing essential habitat for birds and other wildlife. They are important for the physical and mental health of our residents. Seattle's rapid growth and an outdated tree ordinance are reducing these beneficial effects as trees are removed and not replaced. It is urgent to act now to stop this continued loss of trees, particularly large mature trees and tree groves. It is important to promote environmental equity as trees are replaced.

Please update Seattle's Tree Protection Ordinance as recommended in the latest draft by the Seattle Urban Forestry Commission.

Here are the key provisions that need to be in the updated tree ordinance:

1. Expand the existing Tree Removal and Replacement Permit Program, including 2-week public notice and posting on-site, as used by the Seattle Department of Transportation (SDOT) – to cover all Significant Trees (6" and larger diameter at breast height (DBH)) on private property in all land use zones, both during development and outside development.
2. Require the replacement of all Significant Trees removed with trees that in 25 years will reach equivalent canopy volume – either on site or pay a replacement fee into a City Tree Replacement and Preservation Fund. Allow the Fund to also accept fines, donations, grants and set up easements.
3. Retain current protections for Exceptional Trees and reduce the upper threshold for Exceptional Trees to 24" DBH, protect tree groves and prohibit Significant Trees being removed on undeveloped lots.
4. Allow removal of no more than 2 Significant non-Exceptional Trees in 3 years per lot outside development
5. Establish one citywide database for applying for Tree Removal and Replacement Permits and to track changes in the tree canopy.
6. Post online all permit requests and permit approvals for public viewing.
7. Expand SDOT's existing tree service provider's registration and certification to register all Tree Service Providers (arborists) working on trees in Seattle.
8. Provide adequate funding in the budget to implement and enforce the updated ordinance.

Subject: Fees for removing Trees of Significance without a Permit -- Durland and NE105th Street

CAUTION: External Email

Firewood for grabs!

Seattle needs a stronger tree ordinance and a enforcement. Another example within a few days of each other: Cutting Trees of Significance without a Permit -- Durland and NE105th Street.

A witness observed Tony's Tree Cutting Service cutting down a cedar tree that is 3' in diameter, see pictures. Not only one wanton disregard for the tree code, but a second one of the same size was also removed without reason (See pictures.) Without city permits, Seattle relies on neighbors to tell the tree company what they believe is not allowed without a permit. Why should it be after the loss has already occurred? Yes, this tree was a designated Exceptional tree ; if not it was certainly a "tree of significance" to the neighborhood.

They refused to stop the cutting and it came down. There was no permit posted at the site and I believe that they lied when they said they had a permit. They spoke to one of the workers in Spanish to be sure that he understood what was going on and he did, but replied that the company he worked for told him to do it.

Does seattle tolerate hit-men in removing trees as long as it's paid for?

The 'service' removed two trees both of 3' diameter. These two trees easily could have been trimmed with pruning to create a window and one along 105th was blocking no view at all from the house in question.

There is a good reason for the ordinance. The reason why I like this neighborhood is it is so special for the trees that are here that provide habitat, shade, and beauty, not to mention they help with climate change. To Seattlites, this was an outrage and the City should be enforcing the law to the full extent, especially they did not stop when told this was likely against the law.

We are very concerned that we will lose the character of what we love here and valuable habitat with all this unnecessary and We believe illegal cutting. There was more than one neighbor talking to them and all were quite disturbed. The neighbors would be happy to testify if They need to do so for the City enforcement authorities.

Where are the stewards of Seattle as our urban deforestation continues without balance?

Please reply as to how much of Seattle urban heat island impacts should we tolerate? How will this be resolved to eco/balance the loss?

Thank you,
David Moehring

Subject: Keep Seattle Green + Covered!

CAUTION: External Email

Sandra Pinto de Bader,
To whom this may concern,

As a resident of Seattle, I take this issue to heart because I know what's it's like to live in a city with little to no trees. We are very lucky to have an already impressive tree cover outside the downtown area, and I hope to see a more greener Seattle instead of the opposite. Seattle's trees and urban forest are vital to keeping our city healthy and livable. Trees and the urban forest comprise a vital green infrastructure. Trees reduce air pollution, storm water runoff and climate impacts like heat island effects, while providing essential habitat for birds and other wildlife. They are important for the physical and mental health of our residents. Seattle's rapid growth and an outdated tree ordinance are reducing these beneficial effects as trees are removed and not replaced. Subject: Please Update Seattle's Tree Ordinance

CAUTION: External Email

Sandra Pinto de Bader,

Sadly, the HALA completely neglected its obligation to make commendations for livability as we add density. We need to retain our 28% tree canopy as we grow. Single-family zones have 33% tree canopy and are the only zoning that exceeds the average. Parks have only 20% tree canopy. It should be obvious that retaining trees and single-family zoning with 35% built lot coverage is the key to retaining/increasing our urban tree canopy. Also, green paint on pavement isn't "open space"!

Seattle's trees and urban forest are vital to keeping our city healthy and livable. Trees and the urban forest comprise a vital green infrastructure. Trees reduce air pollution, storm water runoff and climate impacts like heat island effects, while providing essential habitat for birds and other wildlife. They are important for the physical and mental health of our residents. Seattle's rapid growth and an outdated tree ordinance are reducing these beneficial effects as trees are removed and not replaced. It is urgent to act now to stop this continued loss of trees, particularly large mature trees and tree groves. It is important to promote environmental equity as trees are replaced.

Please update Seattle's Tree Protection Ordinance as recommended in the latest draft by the Seattle Urban Forestry Commission.

Here are the key provisions that need to be in the updated tree ordinance:

1. Expand the existing Tree Removal and Replacement Permit Program, including 2-week public notice and posting on-site, as used by the Seattle Department of Transportation (SDOT) – to cover all Significant Trees (6" and larger diameter at breast height (DBH)) on private property in all land use zones, both during development and outside development.

Subject: Save Our Trees

CAUTION: External Email

Sandra Pinto de Bader,

Seattle's trees and urban forest are vital to keeping our city healthy and livable. Trees and the urban forest comprise a vital green infrastructure. Trees reduce air pollution, storm water runoff and climate impacts like heat island effects, while providing essential habitat for birds and other wildlife. They are important for the physical and mental health of our residents.

Seattle's rapid growth and an outdated tree ordinance are reducing these beneficial effects as trees are removed and not replaced. It is urgent to act now to stop this continued loss of trees, particularly large mature trees and tree groves. It is important to promote environmental equity as trees are replaced.

The trees of Seattle are unique, and make this city unlike any other in the world. They express a spirit of harmony between the beauty of the Pacific north west and the technological innovation of our city's brightest minds. Please work to preserve them.

Please update Seattle's Tree Protection Ordinance as recommended in the latest draft by the Seattle Urban Forestry Commission.

Here are the key provisions that need to be in the updated tree ordinance:

1. Expand the existing Tree Removal and Replacement Permit Program, including 2-week public notice and posting on-site, as used by the Seattle Department of Transportation (SDOT) – to cover all Significant Trees (6" and larger diameter at breast height (DBH)) on private property in all land use zones, both during development and outside development.
2. Require the replacement of all Significant trees removed with trees that in 25 years will reach equivalent canopy volume – either on site or pay a replacement fee into a City Tree Replacement and Preservation Fund. Allow the Fund to also accept fines, donations, grants and set up easements.
3. Retain current protections for Exceptional Trees and reduce the upper threshold for Exceptional Trees to 24" DBH, protect tree groves and prohibit Significant Trees being removed on undeveloped lots.
4. Allow removal of no more than 2 Significant non-Exceptional Trees in 3 years per lot
5. Establish one citywide database for applying for Tree Removal and Replacement Permits and to track changes in the tree canopy.
6. Post online all permit requests and permit approvals for public viewing.
7. Expand SDOT's existing tree service provider's registration and certification to register all Tree Service Providers (arborists) working on trees in Seattle.
8. Provide adequate funding in the budget to implement and enforce the updated ordinance.

Subject: Vital to Strengthen Seattle's Tree Ordinance

CAUTION: External Email

Sandra Pinto de Bader,

Seattle's trees and urban forest are crucial in keeping our city healthy and livable. Trees and the urban forest comprise a vital green infrastructure. Trees reduce air pollution, storm water runoff and climate impacts like heat island effects, while providing essential habitat for birds and other wildlife. They are important for the physical and mental health of our residents.

The trees we planted 30 years ago shade our street, invite birds, keep our rooms cooler, and our neighbors seem to appreciate them too.

But Seattle's rapid growth and an outdated tree ordinance are reducing these beneficial effects as trees are removed and not replaced.

That happened across the street from us when developers, despite promises, demolished a gorgeous dogwood everyone enjoyed, especially in spring.

You must act now to stop this continued loss of trees, particularly of large mature trees and tree groves, so important in this climate crisis. It is important to promote environmental equity as trees are replaced.

Please update Seattle's Tree Protection Ordinance as recommended in the latest draft by the Seattle Urban Forestry Commission.

Here are the key provisions that need to be in the updated tree ordinance:

1. Expand the existing Tree Removal and Replacement Permit Program, including 2-week public notice and posting on-site, as used by the Seattle Department of Transportation (SDOT) – to cover all Significant Trees (6” and larger diameter at breast height (DBH)) on private property in all land use zones, both during development and outside development.
 2. Require the replacement of all Significant Trees removed with trees that in 25 years will reach equivalent canopy volume – either on site or pay a replacement fee into a City Tree Replacement and Preservation Fund. Allow the Fund to also accept fines, donations, grants and set up easements.

Subject: Trees are long term residents too.

CAUTION: External Email

Sandra Pinto de Bader,

I am a District 3 voter and a huge fan of living among trees and I am frustrated that Seattle's outdated tree ordinance and uneven enforcement has produced a massive rootball-sized gap in the number of trees removed vs. planted. Seattle must grow our urban canopy as part of reaching our carbon pollution reduction goals. Trees also reduce heat island effects and help manage storm water runoff - critical as climate change influences weather patterns in the PNW to create more heatwaves and storms. Seattle's ongoing removal of trees without replacement has been racially and socially unjust. All neighborhoods need trees, particularly mature trees who live long lives alongside residents.

When trees are removed for development and not replaced, Seattle is dropping axes on its own feet. Letting economics displace humans and trees is unethical and counterproductive to visions of an equitable and sustainable city.

I urge Seattle's leaders to pass the new Tree Ordinance provisions recommended by the Seattle Urban Forestry Commission, and to fund and implement them.

Jennifer Beetem

jcbeetem@gmail.com

915 E Harrison St Apt 110

Seattle, Washington 98102

This tulip tree that Queen Anne neighbors are trying to save is nearly 90 feet tall, with a diameter of 44 inches. That classifies it as "exceptional" by city code. (Steve Ringman / The Seattle Times)

The Hearing Examiner released his Decision* last Friday dismissing the appeal raised by volunteer citizen Appellants to save this Exceptional Tulip Tree on Queen Anne hill. Within his Decision he stated: *"The Code does not require preservation of exceptional trees and does not appear to afford them any protection where a developer indicates that removal of the tree is necessary to the project. In this respect, the exceptional tree provisions of the Code appear to be weak "protections" compared with the results desired by the Appellants."*

For shame!! This exceptional Tulip tree has been condemned to death due to the City's policies. In spite of our fighting for over a year for its life and protection, once again in Seattle the developer and his attorney have prevailed due to the collusion and policies of the Department of Construction and Inspections.

While other cities are actively planting trees to combat climate change, the City is actively allowing trees to be clear-cut all over Seattle. I have emailed the City Council and Mayor to insist that they pass the Urban Forestry Commission's Tree Protection Ordinance and protect the remaining large and exceptional trees in our City!

By the way, in our Hearing in July, Bruce Rips called you out specifically as the ONLY person in Seattle who MIGHT be tracking or have ANY knowledge about the removal and replacement of trees. Mr. Rips, a senior SDCI planner, said he had "No Idea" how many exceptional trees had been cut over the last few years (!!). Are you aware of the power that you currently hold in the City? We are depending upon you...let me know if I can assist in any way.

Suzanne Grant

Subject: Please Update Seattle's Tree Ordinance and protect our Trees Now!

CAUTION: External Email

Sandra Pinto de Bader,

Please reverse this decision to remove this legacy tree in Queen Anne now on 2813 4th Ave W. Here's yet another decision that will have long-lasting consequences in favor of rapid development without protection of trees. I have another clearcut in my neighborhood with giant trees removed for two mini- mansions, the second clear cut within a few block radius in the past three months. Why are we not saving our big canopy trees and designing our city to preserve more green, clean air and water, runoff issues? Why are we letting developers in control of our future, destroyed established canopy we need and removing the lifeblood of the land for future generations for a quick sale?

This is a smart city-- why do we have to choose between preserving environment and making low income housing possible? Can't we do both? Low income folks need trees and green too- - not just the upper class.

Let's make development smarter, preserve what can and also plan and plant more green infrastructure into the future.

Please update Seattle's Tree Protection Ordinance as recommended in the latest draft by the Seattle Urban Forestry Commission.

Here are the key provisions that need to be in the updated tree ordinance:

1. Expand the existing Tree Removal and Replacement Permit Program, including 2-week public notice and posting on-site, as used by the Seattle Department of Transportation (SDOT) – to cover all Significant Trees (6" and larger diameter at breast height (DBH)) on private property in all land use zones, both during development and outside development.
2. Require the replacement of all Significant Trees removed with trees that in 25 years will reach equivalent canopy volume – either on site or pay a replacement fee into a City Tree Replacement and Preservation Fund. Allow the Fund to also accept fines, donations, grants and set up easements.
3. Retain current protections for Exceptional Trees and reduce the upper threshold for Exceptional Trees to 24" DBH, protect tree groves and prohibit Significant Trees being removed on undeveloped lots.
4. Allow removal of no more than 2 Significant non-Exceptional Trees in 3 years per lot outside development
5. Establish one citywide database for applying for Tree Removal and Replacement Permits and to track changes in the tree canopy.
6. Post online all permit requests and permit approvals for public viewing.
7. Expand SDOT's existing tree service provider's registration and certification to register all Tree Service Providers (arborists) working on trees in Seattle.
8. Provide adequate funding in the budget to implement and enforce the updated ordinance.

Subject: Letter from Judy Bendich about SEPA appeal curtailment
Importance: High

CAUTION: External Email

Dear Chairperson Pacheco and Councilmembers Herbold, O'Brien and Gonzalez:

I cannot attend tomorrow's committee meeting. I write to express concerns with proposed legislation CB 119600, which would dramatically reduce SEPA review (and even allow developers to build pending an appeal of the hearing examiner decision) except where "significant levels of adverse environmental impacts are likely."

I find it disheartening, if not hypocritical, that a city that touts its concerns about the environment is now trying to broadly curtail protection for the environment. On the one hand we have Councilmember O'Brien stating natural gas use should be curtailed (even though he uses it in his home and possibly his rental units) and at the same time he is pushing for this anti-SEPA review legislation. Both Councilmembers Pacheco and O'Brien are lame ducks. There is plenty of time before the state's deadline to decide whether or not to incorporate state legislation. There is plenty of time to allow the incoming Council to make that decision. This push to overturn SEPA protections we now have is unseemly, a rush to judgment by councilmembers who leave office in a few months. The proposed legislation is also wrong-headed. We should be proud that unlike most parts of the country we have an environmental process in place that recognizes environmental review is among our highest priorities.

And that review has been critically important. We are seeing greater and greater decimation of our trees, the greatest natural asset we have against carbon and an amazing control for many kinds of pollution and environmental harm. Quite a few appeals to the hearing examiner have involved destruction of groves of trees and exceptional trees, as well as increased run-off and steep slope degradation due to tree removal. These appeals concern smaller projects and would not meet the threshold for "significant adverse environmental impacts."

The proposed legislation would leave broad authority to DCI, which over the years and currently has not enforced the minimal protections we now have for exceptional trees, steep slopes, and has ignored significant lack of infrastructure concerns, in some instances resulting in increased massive sewage overflows into Lake Washington, such as from Madison Valley, and other sewage overflows into Puget Sound.

The staff memo relies on current state legislation, but that legislation does not require the City to eliminate the SEPA protections it currently has. The staff memo in August, (which is no longer

available online) provided data that show that in fact the number of appeals has been minimal. There have been thousands and thousands of permits and developments over the last five years, and the number of appeals has been *de minimis*. And in at least 25% of appeals, the hearing examiner ruled in favor of the appellant and against the developer and the City. That is an extremely high error rate and actually supports why there must be continuing environmental review. The staff memo provided no information on the number of appeals that were settled prior to hearing where as the result of the appeal the developer revised the project due to the appeal.

Because of its track record, DCI should not be allowed to have any authority to set any thresholds or determinations as to what is likely to be a significant level of adverse environmental impacts, and the Council needs to adopt stronger tree protection legislation with stringent enforceable penalties before even considering any legislation that would weaken SEPA protections. And until you fund DCI and require real inspectors dedicated to protecting trees and enforcing other environmental protections, and until you enact real penalties against developers who flout with impunity even the inadequate laws we have, we will continue to use greater and greater losses to our environment, only without any remedy to rectify DCI's inaction.

A major concern I have with the premises set out in the preface to the proposed legislation is that it bars SEPA review for "infill" in UVs except where "significant levels of adverse environmental impacts are likely." What it fails to consider is the cumulative impact of these "infills" which are near environmentally critical areas or which will overwhelm our current infrastructure. Ravenna/Cowen Park is one example, but I assume that there are many others throughout the city. Ravenna-Cowen was exempted from upzoning because it became a National Historic District, but had that not occurred, at the hearing before the hearing examiner, Friends of Ravenna-Cowen presented evidence that the cumulative impact of turning a SF neighborhood that abuts the park to RSL (and higher) would have had significant negative adverse environmental impacts on the park. (The attached letter above describes these in greater detail. The hearing examiner never made a ruling on that evidence.) A Ph.D. biologist from the UW (Prof. Kern Ewing) testified about the adverse environmental impacts to the impacts to the park, and an ornithology/wildlife/tree expert discussed that the intensified development would impact flyover migration of birds and dramatically decrease tree and large shrub cover.

Additionally, the UW expert, who is also a civil engineer, testified that developing all that "infill" without the required sewer infrastructure is a disaster, particularly with the CSO sewer systems we have throughout Seattle's older neighborhoods. Seattle's combined wastewater/sewage 8" pipes (from the early 1900's) cannot handle the capacity from upzoning. West Seattle even has wooden sewers. Seattle is already under a consent decree with the federal government. Seattle's sewer system in the Madison Valley cannot handle the overflows now and has repeatedly put sewage into Lake Washington. We had another breakdown this summer contaminating Puget Sound. We have had one sewer overflow problem after the next, contaminating our water systems, and unless that is addressed first, it is inevitable we will continue to have even more as infill increases due to more impervious surfaces and fewer trees, large shrubs and other ground cover. No one in the city has taken the cumulative impacts of upzoning on sewer infrastructure seriously, and *there has been no analysis of these cumulative impacts*. Removing SEPA review while not first addressing the city's massive infrastructure problems and the cumulative impacts of development is grossly irresponsible.

Additionally, *the city has never analyzed the cumulative impact of development on potential historic resources*, which are an element of the environment under SEPA. Despite the staff's memo regarding "protections" for historic resources, these apply only to city-landmarked properties or

properties protected by section 106 of the national act on historic reservation. Since 2000, Seattle has not inventoried 17 of its 28 urban villages to determine what historic resources, cultural resources, and archaeological artifacts exist. The only remedy has been SEPA review of projects or programmatic projects, which this legislation would curtail or eliminate.

By this proposed legislation, we will continue to lose out trees, our history, and our reputation that we are a city that cherishes the environment. I urge you to take these concerns seriously because these are extremely serious problems that need to be addressed before you consider eliminating current SEPA review.

Sincerely yours,

Judith E. Bendich

Subject: Please Update Seattle's Tree Ordinance

CAUTION: External Email

Sandra Pinto de Bader,
Seattle's trees and urban forest are vital to keeping our city healthy and livable. Trees and the urban forest comprise a vital green infrastructure. Trees reduce air pollution, storm water runoff and climate impacts like heat island effects, while providing essential habitat for birds and other wildlife. They are important for the physical and mental health of our residents. Seattle's rapid growth and an outdated tree ordinance are reducing these beneficial effects as trees are removed and not replaced. It is urgent to act now to stop this continued loss of trees, particularly large mature trees and tree groves. It is important to promote environmental equity as trees are replaced.

Please update Seattle's Tree Protection Ordinance as recommended in the latest draft by the Seattle Urban Forestry Commission.

Here are the key provisions that need to be in the updated tree ordinance:

1. Expand the existing Tree Removal and Replacement Permit Program, including 2-week public notice and posting on-site, as used by the Seattle Department of Transportation (SDOT) – to cover all Significant Trees (6" and larger diameter at breast height (DBH)) on private property in all land use zones, both during development and outside development.
2. Require the replacement of all Significant Trees removed with trees that in 25 years will

reach equivalent canopy volume – either on site or pay a replacement fee into a City Tree Replacement and Preservation Fund. Allow the Fund to also accept fines, donations, grants and set up easements.

3. Retain current protections for Exceptional Trees and reduce the upper threshold for Exceptional Trees to 24" DBH, protect tree groves and prohibit Significant Trees being removed on undeveloped lots.

4. Allow removal of no more than 2 Significant non-Exceptional Trees in 3 years per lot outside development

5. Establish one citywide database for applying for Tree Removal and Replacement Permits and to track changes in the tree canopy.

6. Post online all permit requests and permit approvals for public viewing.

7. Expand SDOT's existing tree service provider's registration and certification to register all Tree Service Providers (arborists) working on trees in Seattle.

8. Provide adequate funding in the budget to implement and enforce the updated ordinance.

Subject: Please Protect Seattle's Remaining Residential Tree Canopy & Strengthen Seattle's Tree Ordinance

CAUTION: External Email

Sandra Pinto de Bader,

In an era of climate change when trees should be the city's allies, why is the Emerald City not updating a long dormant Tree Protection Ordinance? For ten years the city has been saying the ordinance will be updated. City Councilmember Sally Bagshaw is the latest council person to step into the void but we're told Mayor Durkan wants to put off the update until next year.

Meanwhile development is putting trees in the cross hairs with lots being razed for new housing and unscrupulous developers and arborists claiming existing trees are hazardous or in the way.

Housing and trees shouldn't be incompatible.

After the unnecessary clearcut of 25 majestic trees on North Seattle lot to build a new home, neighbors have come together to demand the city enact a tree protection ordinance with teeth. The campaign, "dontclearcutseattle.org" is connecting with tree protectors all over the city - Beacon Hill, Queen Anne, West Seattle, Ballard, Victory Heights - to push the Mayor to pass a new tree ordinance NOW.

Here are the key provisions that need to be in the updated tree ordinance:

1. Expand the existing Tree Removal and Replacement Permit Program, including 2-week public notice and posting on-site, as used by the Seattle Department of Transportation (SDOT) – to cover all Significant Trees (6" and larger diameter at breast height (DBH)) on private property in all land use zones, both during development and outside development.

Subject: Save Our Trees!

CAUTION: External Email

Sandra Pinto de Bader,

Dear Mayor Durkan and Members of Seattle City Council,

Will you leave a legacy for Seattle that equals the Olmsted Plan?

You can do it by passing the Urban Forestry Commission's June 2019 draft Tree and Urban Forest Protection Ordinance.

An updated tree ordinance is long overdue. Developers are logging Seattle at a rapacious pace. It takes years to replace the tree canopy that we are losing daily. Take action NOW.

This is one of the best things that you can do for our environment and future generations of Seattle residents.

- The UFC has already spent 10 years of time and energy crafting this updated Tree Ordinance. It is a complete waste of tax payer money to invest more time on researching this issue. People with the expertise on this issue have already weighed in- again and again. Seattle - the so called "Emerald City" is falling far behind other cities in placing an intrinsic value on its green infrastructure. Please pass the UFCs Tree Ordinance for all our sakes. The clock is ticking.

Subject: Adopt UFC June 2019 draft Tree and Urban Forest Protection Ordinance

CAUTION: External Email

Sandra Pinto de Bader,

Dear Mayor Durkan and Council Members:

I am a Seattle resident and I vote in every election. I am utterly dismayed to learn that you are considering opting for more studies rather than adopting the Urban Forestry Commission's carefully researched and thought out June 2019 draft Tree and Urban Forest Protection Ordinance. Seattle is losing tree canopy at a frightening rate and it is an equity issue as well as a climate crisis issue: wealthier neighborhoods are more likely to conserve trees, which provide invaluable mental and physical health contributions to quality of life in our urban environments.

You have the UFC roadmap for protecting trees in hand. Here are key provisions that must be in the updated tree ordinance:

1. Expand the existing Tree Removal and Replacement Permit Program, including 2-week public notice and posting on-site, as used by the Seattle Department of Transportation (SDOT) – to cover all Significant Trees (6" and larger diameter at breast height (DBH)) on private property in all land use zones, both during development and outside development.
2. Require the replacement of all Significant Trees removed with trees that in 25 years will reach equivalent canopy volume – either on site or pay a replacement fee into a City Tree Replacement and Preservation Fund. Allow the Fund to also accept fines, donations, grants and set up easements.
3. Retain current protections for Exceptional Trees and reduce the upper threshold for Exceptional Trees to 24" DBH, protect tree groves and prohibit Significant Trees being removed on undeveloped lots.
4. Allow removal of no more than 2 Significant non-Exceptional Trees in 3 years per lot outside development
5. Establish one citywide database for applying for Tree Removal and Replacement Permits and to track changes in the tree canopy.
6. Post online all permit requests and permit approvals for public viewing.
7. Expand SDOT's existing tree service provider's registration and certification to register all Tree Service Providers (arborists) working on trees in Seattle.
8. Provide adequate funding in the budget to implement and enforce the updated ordinance.

Thank you. I expect you to adopt the UFC Updated Ordinance rather than letting more of Seattle's trees fall to the developers' saws while you undertake another study. Time for punting on this is past. Action is required NOW.

8. Provide adequate funding in the budget to implement and enforce the updated ordinance.

To further this message, I'd like to note that I am a former tree care provider who worked at a reputable company. I believe that clear, easy to follow, and enforced regulations are highly important. This will help diminish corner cutting and illegal removals. Seattle has a reputation of being green, and of addressing climate change. Let's actually live up to that by protecting the trees we have, and planting more. No amount of housing density should sacrifice green spaces, parks, and individual trees.

Subject: With the population growth & out of control development going on in Seattle, more green space & trees are warranted. Humans don't do well in a concrete city. Trees do so much for our environment that they need to be protected. Clearly, they don't mean ...

CAUTION: External Email

Sandra Pinto de Bader,
Seattle's trees and urban forest are vital to keeping our city healthy and livable. Trees and the urban forest comprise a vital green infrastructure. Trees reduce air pollution, storm water

runoff and climate impacts like heat island effects, while providing essential habitat for birds and other wildlife. They are important for the physical and mental health of our residents. Seattle's rapid growth and an outdated tree ordinance are reducing these beneficial effects as trees are removed and not replaced. It is urgent to act now to stop this continued loss of trees, particularly large mature trees and tree groves. It is important to promote environmental equity as trees are replaced.

Please update Seattle's Tree Protection Ordinance as recommended in the latest draft by the Seattle Urban Forestry Commission.

Here are the key provisions that need to be in the updated tree ordinance:

1. Expand the existing Tree Removal and Replacement Permit Program, including 2-week public notice and posting on-site, as used by the Seattle Department of Transportation (SDOT) – to cover all Significant Trees (6" and larger diameter at breast height (DBH)) on private property in all land use zones, both during development and outside development.
2. Require the replacement of all Significant trees removed with trees that in 25 years will reach equivalent canopy volume – either on site or pay a replacement fee into a City Tree Replacement and Preservation Fund. Allow the Fund to also accept fines, donations, grants and set up easements.
3. Retain current protections for Exceptional Trees and reduce the upper threshold for Exceptional Trees to 24" DBH, protect tree groves and prohibit Significant Trees being removed on undeveloped lots.
4. Allow removal of no more than 2 Significant non-Exceptional Trees in 3 years per lot outside development
5. Establish one citywide database for applying for Tree Removal and Replacement Permits and to track changes in the tree canopy.
6. Post online all permit requests and permit approvals for public viewing.
7. Expand SDOT's existing tree service provider's registration and certification to register all Tree Service Providers (arborists) working on trees in Seattle.
8. Provide adequate funding in the budget to implement and enforce the updated ordinance.

Subject: FW: Planning, Land Use, and Zoning Committee Agenda – 9/9/19 Proposed legislation to limit SEPA review

CAUTION: External Email

Dear Ms. Pinto de Bader,

Mr. Steve Zemke suggested I forward my letter to the PLUZ Committee to the Urban Forestry Commission for you to forward to the commissioners as a comment re the proposed tree ordinance, which I and my community wholly endorse.

Sincerely,

Judith E. Bendich
1754 NE 62nd Street
Seattle, WA 98115
(206) 525-5914

Dear Chairperson Pacheco and Councilmembers Herbold, O'Brien and Gonzalez:

I cannot attend tomorrow's committee meeting. I write to express concerns with proposed legislation CB 119600, which would dramatically reduce SEPA review (and even allow developers to build pending an appeal of the hearing examiner decision) except where "significant levels of adverse environmental impacts are likely."

I find it disheartening, if not hypocritical, that a city that touts its concerns about the environment is now trying to broadly curtail protection for the environment. On the one hand we have Councilmember O'Brien stating natural gas use should be curtailed (even though he uses it in his home and possibly his rental units) and at the same time he is pushing for this anti-SEPA review legislation. Both Councilmembers Pacheco and O'Brien are lame ducks. There is plenty of time before the state's deadline to decide whether or not to incorporate state legislation. There is plenty of time to allow the incoming Council to make that decision. This push to overturn SEPA protections we now have is unseemly, a rush to judgment by councilmembers who leave office in a few months. The proposed legislation is also wrong-headed. We should be proud that unlike most parts of the country we have an environmental process in place that recognizes environmental review is among our highest priorities.

And that review has been critically important. We are seeing greater and greater decimation of our trees, the greatest natural asset we have against carbon and an amazing control for many kinds of pollution and environmental harm. Quite a few appeals to the hearing examiner have involved destruction of groves of trees and exceptional trees, as well as increased run-off and steep slope degradation due to tree removal. These appeals concern smaller projects and would not meet the threshold for "significant adverse environmental impacts."

The proposed legislation would leave broad authority to DCI, which over the years and currently has not enforced the minimal protections we now have for exceptional trees, steep slopes, and has ignored significant lack of infrastructure concerns, in some instances resulting in increased massive sewage overflows into Lake Washington, such as from Madison Valley, and other sewage overflows into Puget Sound.

The staff memo relies on current state legislation, but that legislation does not require the City to eliminate the SEPA protections it currently has. The staff memo in August (which is no longer available online) provided data that show that in fact the number of appeals has been minimal. There have been thousands and thousands of permits and developments over the last five years, and the number of appeals has been *de minimis*. And in at least 25% of appeals, the hearing examiner ruled in favor of the appellant and against the developer and the City. That is an extremely high error rate and actually supports why there must be continuing environmental review. The staff memo provided no information on the number of appeals that were settled prior to hearing where as the result of the appeal the developer revised the project due to the appeal.

Because of its track record, DCI should not be allowed to have any authority to set any thresholds or determinations as to what is likely to be a significant level of adverse environmental impacts, and the Council needs to adopt stronger tree protection legislation with stringent enforceable penalties before even considering any legislation that would weaken SEPA protections. And until you fund DCI and require real inspectors dedicated to protecting trees and enforcing other environmental protections, and until you enact real penalties against developers who flout with impunity even the inadequate laws we have, we will continue to use greater and greater losses to our environment, only without any remedy to rectify DCI's inaction.

A major concern I have with the premises set out in the preface to the proposed legislation is that it bars SEPA review for "infill" in UVs except where "significant levels of adverse environmental impacts are likely." What it fails to consider is the cumulative impact of these "infills" which are near environmentally critical areas or which will overwhelm our current infrastructure. Ravenna/Cowen Park is one example, but I assume that there are many others throughout the city. Ravenna-Cowen was exempted from upzoning because it became a National Historic District, but had that not occurred, at the hearing before the hearing examiner, Friends of Ravenna-Cowen presented evidence that the cumulative impact of turning a SF neighborhood that abuts the park to RSL (and higher) would have had significant negative adverse environmental impacts on the park. (The attached letter above describes these in greater detail. The hearing examiner never made a ruling on that evidence.) A Ph.D. biologist from the UW (Prof. Kern Ewing) testified about the adverse environmental impacts to the impacts to the park, and an ornithology/wildlife/tree expert discussed that the intensified development would impact flyover migration of birds and dramatically decrease tree and large shrub cover.

Additionally, the UW expert, who is also a civil engineer, testified that developing all that "infill" without the required sewer infrastructure is a disaster, particularly with the CSO sewer systems we have throughout Seattle's older neighborhoods. Seattle's combined wastewater/sewage 8" pipes (from the early 1900's) cannot handle the capacity from upzoning. West Seattle even has wooden sewers. Seattle is already under a consent decree with the federal government. Seattle's sewer system in the Madison Valley cannot handle the overflows now and has repeatedly put sewage into Lake Washington. We had another breakdown this summer contaminating Puget Sound. We have had one sewer overflow problem after the next, contaminating our water systems, and unless that is addressed first, it is inevitable we will continue to have even more as infill increases due to more impervious surfaces and fewer trees, large shrubs and other ground cover. No one in the city has taken the cumulative impacts of upzoning on sewer infrastructure seriously, and *there has been no analysis of these cumulative impacts*. Removing SEPA review while not first addressing the city's massive infrastructure problems and the cumulative impacts of development is grossly irresponsible.

Additionally, *the city has never analyzed the cumulative impact of development on potential historic resources*, which are an element of the environment under SEPA. Despite the staff's memo regarding "protections" for historic resources, these apply only to city-landmarked properties or properties protected by section 106 of the national act on historic reservation. Since 2000, Seattle has not inventoried 17 of its 28 urban villages to determine what historic resources, cultural resources, and archaeological artifacts exist. The only remedy has been SEPA review of projects or programmatic projects, which this legislation would curtail or eliminate.

By this proposed legislation, we will continue to lose out trees, our history, and our reputation that we are a city that cherishes the environment. I urge you to take these concerns seriously because these are extremely serious problems that need to be addressed before you consider eliminating current SEPA review.

Sincerely yours,

Judith E. Bendich

Cc: LEG_CouncilMembers <council@seattle.gov>; Pennucci, Aly <Aly.Pennucci@seattle.gov>
Subject: Finance and Neighborhoods Committee Meeting Sept. 11 2-4 pm

CAUTION: External Email

Dear Chairperson Bagshaw, Councilmembers, and Mayor Durkan:

I disfavor another resolution that goes nowhere. It has been 10 years of resolutions and doing nothing about Seattle's inadequate tree ordinance and in those 10 years Seattle is losing greater numbers of trees at a faster rate. And there has been little enforcement by SDCI of the few protections that exist. It is time to adopt an ordinance. I support the Seattle Urban Forestry Commission's proposed legislation to:

- **Expand the existing tree removal and replacement permit program, including 2-week public notice and posting**, as used by the Seattle Department of transportation (SDOT) – to cover all trees 6" DBH and larger on private property in all land use zones, both during development and outside development.
- **Require the replacement of all trees removed that are 6" DBH and larger with trees that in 25 years will reach equivalent canopy volume** – either on site or pay an in-lieu fee into a City Tree Replacement and Preservation Fund. Allow the Fund to also accept fines, donations, grants and set up easements.
- **Retain current protections for Exceptional Trees** and reduce the upper threshold for exceptional trees to 24" DBH, protect tree groves and prohibit trees over 6"DBH being removed on undeveloped lots.
- **Allow removal of no more than 2 significant non-exceptional trees** in 3 years per lot outside development
- Establish one citywide **database** for applying for tree removal and replacement permits and to track changes in the tree canopy. **Post online all permit requests and permit approvals** for public viewing.
- Expand SDOT's existing tree service provider's registration and certification to **register all tree service providers** working on trees in Seattle.
- **Provide adequate funding** in the budget to implement and enforce the updated ordinance.

Trees are the best natural protection that exists to ameliorate pollution, to "eat" carbon, to retain water and prevent run-off into our woefully inadequate sewers system as well as providing health benefits to humans, and habitat for wildlife. Seattle has been decimating its trees at a faster and faster rate. Our local NPR station had a series of articles on tree loss and trees' benefits. Let's get this done! The foot-dragging by the Council and Mayor has to stop. Please enact the proposed legislation now, not just resolution after resolution.

Sincerely yours,
Judith E. Bendich

Subject: Save Our Trees!

CAUTION: External Email

Sandra Pinto de Bader,
To Mayor Durkan and the Council:
The time to act to preserve Seattle's tree canopy is now. The Urban Forestry Commission has worked with the City for years, and has presented a detailed plan to update our inadequate Tree Code. We do not need more studies and more delays. Development has been put on a fast track, and the same must be done with preserving trees and green, open spaces. If not, we will lose one of the most valuable and appealing features of Seattle: its trees.
I urge you to adopt the recommendations/revisions of the UFC. Stronger protections of trees on private property is the only way we can reach our goal of at least 30% tree canopy, as most of our trees are there-one City estimate was 72%.
In particular, we must strengthen enforcement, as even the current Tree Code has not been adequately enforced. More staff is required, and better notification of the public about proposed removals, with a longer warning period.
As summers get hotter and the air more polluted with growing population, would it be sane not to prioritize protection of our greatest defense?
The UFC's revisions to the Code should be adopted as quickly as possible. SDIC should not be leading the job of revising the Code, but should work equally with the Office of Sustainability and Environment and the Urban Forestry Commission.
Additionally, the ruling on the exceptional tree at 2813 4th Av W in West Seattle should be reversed.
Thank you,
Susan Ward

Subject: Please Strengthen Seattle's Tree Ordinance

CAUTION: External Email

Sandra Pinto de Bader,

Please quit "studying" (read: shelve it until politically usable for reelection) the need FOR a tree ordinance that is truly protective of trees, and start protecting trees.

Seattle's trees and urban forest are vital to keeping our city healthy and livable. Trees and the urban forest comprise a vital green infrastructure. Trees reduce air pollution, storm water runoff and climate impacts like heat island effects, while providing essential habitat for birds and other wildlife. They are important for the physical and mental health of our residents. Seattle's rapid growth and an outdated tree ordinance are reducing these beneficial effects as trees are removed and not replaced. It is urgent to act now to stop this continued loss of trees, particularly large mature trees and tree groves. It is important to promote environmental equity as trees are replaced.

Please update Seattle's Tree Protection Ordinance.

In other words ∴ Quit studying how trees are removed. By the time the council and mayor are done "studying" there won't be any trees to study.

I suggest the following be included in a real tree ordinance:

1. Expand the existing Tree Removal and Replacement Permit Program, including 2-week public notice and posting on-site, as used by the Seattle Department of Transportation (SDOT) – to cover all Significant Trees (4" and larger diameter at breast height (DBH)) on private property in all land use zones, both during development and outside development.
2. Require the replacement of all Significant Trees removed with trees that in 25 years will reach equivalent canopy volume – either on site or pay a replacement fee into a City Tree Replacement and Preservation Fund. Allow the Fund to also accept fines, donations, grants and set up easements.
3. Retain current protections for Exceptional Trees and reduce the upper threshold for Exceptional Trees to 24" DBH, protect tree groves and prohibit Significant Trees being removed on undeveloped lots.

5. Establish one citywide database for applying for Tree Removal and Replacement Permits and to track changes in the tree canopy.

6. Post online all permit requests and permit approvals for public viewing.

7. Expand SDOT's existing tree service provider's registration and certification to register all Tree Service Providers (arborists) working on trees in Seattle.

8. Provide adequate funding in the budget to implement and enforce the updated ordinance.

Sandra Pinto de Bader,

As a Seattle Forest Steward it came to my attention that Seattle's trees and urban forest are vital to keeping our forests protected and our city healthy and livable. Trees and the urban forest comprise a vital green infrastructure. Trees reduce air pollution, storm water runoff and climate impacts like heat island effects, while providing essential habitat for birds and other wildlife. They are important for the physical and mental health of our residents.

Seattle's rapid growth and an outdated tree ordinance are reducing these beneficial effects as trees are removed and not replaced. It is urgent to act now to stop this continued loss of trees, particularly large mature trees and tree groves. Cutting more trees will raise temperatures which will threaten the health of all other city trees.

It is important to promote environmental equity as trees are replaced.

Please update Seattle's Tree Protection Ordinance as recommended in the latest draft by the Seattle Urban Forestry Commission.

Here are the key provisions that need to be in the updated tree ordinance:

1. Expand the existing Tree Removal and Replacement Permit Program, including 2-week public notice and posting on-site, as used by the Seattle Department of Transportation (SDOT) – to cover all Significant Trees (6" and larger diameter at breast height (DBH)) on private property in all land use zones, both during development and outside development.
2. Require the replacement of all Significant trees removed with trees that in 25 years will reach equivalent canopy volume – either on site or pay a replacement fee into a City Tree Replacement and Preservation Fund. Allow the Fund to also accept fines, donations, grants and set up easements.
3. Retain current protections for Exceptional Trees and reduce the upper threshold for Exceptional Trees to 24" DBH, protect tree groves and prohibit Significant Trees being removed on undeveloped lots.
4. Allow removal of no more than 2 Significant non-Exceptional Trees in 3 years per lot outside development
5. Establish one citywide database for applying for Tree Removal and Replacement Permits and to track changes in the tree canopy.
6. Post online all permit requests and permit approvals for public viewing.
7. Expand SDOT's existing tree service provider's registration and certification to register all Tree Service Providers (arborists) working on trees in Seattle.
8. Provide adequate funding in the budget to implement and enforce the updated ordinance.

Subject: Keep Seattle Livable!

CAUTION: External Email

Sandra Pinto de Bader,

In the 3 years I have lived in Seattle I have seen many large trees in my Pinehurst neighborhood be cut down. I thought Seattle was supposed to be a green environmentally concerned city but I find the cutting of such trees to be horrible; there are no replacement trees visible on the latest bare lots. Will this be a GREEN city in the future? Not at this rate. It will be a brown city of stumps controlled by developers. We do need housing but there are ways to build with conserving and enhancing the green canopy.

Ten years ago the Urban Forest Commission started trying to get an amendment to the tree ordinance to strengthen it and allow it to be enforced, but evidently the Seattle City Council over and over fails to enact an amendment to try to preserve trees. Please be the ones to keep and increase Seattle's green canopy.

Please update Seattle's Tree Protection Ordinance as recommended in the latest draft by the Seattle Urban Forestry Commission.

Here are the key provisions that need to be in the updated tree ordinance:

1. Expand the existing Tree Removal and Replacement Permit Program, including 2-week public notice and posting on-site, as used by the Seattle Department of Transportation (SDOT) – to cover all Significant Trees (6" and larger diameter at breast height (DBH)) on private property in all land use zones, both during development and outside development.

CAUTION: External Email

Sandra Pinto de Bader,

Last month, on 6th Ave between W. Crockett and McGraw, a large tree with a diameter of probably 3 feet at it's widest part was cut down and all vestige of its stump ground out within 48 hours. When I called City government to see if there was any way this could be stopped, I found out there were no real protections unless the tree had been designated as a very significant one.

The time to act to protect our trees is now; we do not need further study.

Seattle's trees and urban forest are vital to keeping our city healthy and livable. Trees and the urban forest comprise a vital green infrastructure. Trees reduce air pollution, storm water runoff and climate impacts like heat island effects, while providing essential habitat for birds and other wildlife. They are important for the physical and mental health of our residents. Subject: Please Protect Seattle's Trees

CAUTION: External Email

Sandra Pinto de Bader,

I have lived here in NE Seattle for 38 years. In these many decades people here have tried to get a tree protection ordinance that truly protects the urban forest in our city. Decade after

decade, the City Counsel and Mayor have not followed through and have "kicked the can" down the road for others to deal with. ENOUGH! IT'S TIME FOR YOU TO PASS SEATTLE'S TREE PROTECTION ORDINANCE NOW!

Seattle's trees and urban forest are vital to keeping our city healthy and livable. Trees and the urban forest comprise a vital green infrastructure. Trees reduce air pollution, storm water runoff and climate impacts like heat island effects, while providing essential habitat for birds and other wildlife. They are important for the physical and mental health of our residents. Seattle's rapid growth and an outdated tree ordinance are reducing these beneficial effects as trees are removed and not replaced. CAUTION: External Email

Sandra Pinto de Bader,

I work in health care and study public health, and I am truly alarmed by the number and size of the trees being removed throughout the city. Our health, our children's health and the health of our neighbors depend on this vital green infrastructure. "Make room for our neighbors" is a great approach to make our city more inclusive and provide housing for all, but it is a false dichotomy to say we need to remove our tree canopy to do this. Please don't let us turn into Phoenix Arizona! We can build smarter and more strategically by leaving a little room on each lot for a tree!

Seattle's trees and urban forest are vital to keeping our city healthy and livable. Trees and the urban forest comprise a vital green infrastructure. Subject: Please Strengthen Seattle's Tree Ordinance

CAUTION: External Email

Sandra Pinto de Bader,
Greetings- I write to urge you in the strongest terms I can of the profound importance of protecting our tree canopy here in Seattle. I have watched as Seattle has lost more than half of our canopy of trees in the last 20 years. This loss is having a profound effect on our climate too: see the NY Times article in the last couple of days measuring 20 degrees of difference in the temperatures in different areas of Washington DC depending on whether trees and greenery were present. This is part of a new developing survey of American cities that is beginning.

As we will never be able to grow these giant trees again I hope you can see what an incredibly important mitigating factor our big trees will have in the future. This is the Emerald City! I feel heartsick when I see big trees cut down, to see these magnificent life forms destroyed. I fervently hope you will do all you can to protect what makes Seattle so unique an environment: the trees are part of our home and our safety and our life.

Please act on this issue-everyone I know is extremely concerned about this, but I don't think they know how important it is to let you know how they feel...Most people thought that the trees were already protected.

Seattle's trees and urban forest are vital to keeping our city healthy and livable. Trees and the urban forest comprise a vital green infrastructure. Trees reduce air pollution, storm water runoff and climate impacts like heat island effects, while providing essential habitat for birds and other wildlife. They are important for the physical and mental health of our residents. Seattle's rapid growth and an outdated tree ordinance are reducing these beneficial effects as trees are removed and not replaced. It is urgent to act now to stop this continued loss of trees, particularly large mature trees and tree groves. It is important to promote environmental equity as trees are replaced.

Please update Seattle's Tree Protection Ordinance as recommended in the latest draft by the Seattle Urban Forestry Commission.

Here are the key provisions that need to be in the updated tree ordinance:

1. Expand the existing Tree Removal and Replacement Permit Program, including 2-week public notice and posting on-site, as used by the Seattle Department of Transportation (SDOT) – to cover all Significant Trees (6" and larger diameter at breast height (DBH)) on private property in all land use zones, both during development and outside development.
2. Require the replacement of all Significant Trees removed with trees that in 25 years will reach equivalent canopy volume – either on site or pay a replacement fee into a City Tree

Replacement and Preservation Fund. Allow the Fund to also accept fines, donations, grants and set up easements.

3. Retain current protections for Exceptional Trees and reduce the upper threshold for Exceptional Trees to 24" DBH, protect tree groves and prohibit Significant Trees being removed on undeveloped lots.
4. Allow removal of no more than 2 Significant non-Exceptional Trees in 3 years per lot outside development
5. Establish one citywide database for applying for Tree Removal and Replacement Permits and to track changes in the tree canopy.
6. Post online all permit requests and permit approvals for public viewing.
7. Expand SDOT's existing tree service provider's registration and certification to register all Tree Service Providers (arborists) working on trees in Seattle.
8. Provide adequate funding in the budget to implement and enforce the updated ordinance.

Subject: We need more trees! Please strengthen Seattle's Tree Ordinance

CAUTION: External Email

Sandra Pinto de Bader,

Dear Councilmembers:

Why do you hate our trees so much??? You prioritize putting in affordable housing everywhere, and have little interest in saving our trees. We can do both, but you refuse to do so. You talk out of both sides of your mouths. On the one hand you say you care about climate change, yet on the other, you allow legacy and old growth trees to be cut down by greedy developers. It's all about the developers in this city. This ultra-liberal, we care only about low-income/affordable housing policy is obsessive and extreme.

Yes, we need urban density to protect surrounding farmland and wilderness areas AND we also need to preserve our urban green spaces, large trees, groves and canopy. It's that simple. We need to get more creative with how we develop, make smaller homes, use less resources etc or we simply can't survive. At the rate we are going, our world won't be prettier, healthier, safer or more comfortable with all this concrete, asphalt, toxic pollution and heat. I am saddened beyond belief in your latest decision to cut down the legacy tulip tree in Queen Anne now on 2813 4th Ave W. Shame on you. This is yet another decision that will have long-lasting consequences in favor of rapid development without protection of trees. Why are we not saving our big canopy trees and designing our city to preserve more green, clean air and water, runoff issues? Why are we letting developers control our future by destroying established canopy we need and removing the lifeblood of the land for future generations for a quick profit sale? Why are you trying to turn over parks and golf courses to developers?

Stop it, please. You are not making Seattle more livable, but are destroying its character along with our trees.

This is a smart city-- why do we have to choose between preserving environment and making low income housing possible? Can't we do both? Low income folks need trees and green too- - not just the upper class.

Let's make development smarter, preserve what we can and also plan and plant more green infrastructure into the future.

And lastly, please update Seattle's Tree Protection Ordinance as recommended in the latest draft by the Seattle Urban Forestry Commission. Here are the key provisions that need to be in the updated tree ordinance:

1. Expand the existing Tree Removal and Replacement Permit Program, including 2-week public notice and posting on-site, as used by the Seattle Department of Transportation (SDOT) – to cover all Significant Trees (6" and larger diameter at breast height (DBH)) on private property in all land use zones, both during development and outside development.
2. Require the replacement of all Significant Trees removed with trees that in 25 years will reach equivalent canopy volume – either on site or pay a replacement fee into a City Tree Replacement and Preservation Fund. Allow the Fund to also accept fines, donations, grants and set up easements.
3. Retain current protections for Exceptional Trees and reduce the upper threshold for Exceptional Trees to 24" DBH, protect tree groves and prohibit Significant Trees being removed on undeveloped lots.
4. Allow removal of no more than 2 Significant non-Exceptional Trees in 3 years per lot outside development
5. Establish one citywide database for applying for Tree Removal and Replacement Permits and to track changes in the tree canopy.
6. Post online all permit requests and permit approvals for public viewing.
7. Expand SDOT's existing tree service provider's registration and certification to register all Tree Service Providers (arborists) working on trees in Seattle.

For the trees,

Subject: Save our Trees!

CAUTION: External Email

Sandra Pinto de Bader,

Seattle's trees and urban forest are vital to keeping our city healthy and livable. Trees and the urban forest comprise a vital green infrastructure. Trees reduce air pollution, storm water

runoff and climate impacts like heat island effects, while providing essential habitat for birds and other wildlife. They are important for the physical and mental health of our residents. Seattle's rapid growth and an outdated tree ordinance are reducing these beneficial effects as trees are removed and not replaced. It is urgent to act now to stop this continued loss of trees, particularly large mature trees and tree groves. It is important to promote environmental equity as trees are replaced.

Please update Seattle's Tree Protection Ordinance as recommended in the latest draft by the Seattle Urban Forestry Commission.

Here are the key provisions that need to be in the updated tree ordinance:

1. Expand the existing Tree Removal and Replacement Permit Program, including 2-week public notice and posting on-site, as used by the Seattle Department of Transportation (SDOT) – to cover all Significant Trees (6" and larger diameter at breast height (DBH)) on private property in all land use zones, both during development and outside development.
2. Require the replacement of all Significant trees removed with trees that in 25 years will reach equivalent canopy volume – either on site or pay a replacement fee into a City Tree Replacement and Preservation Fund. Allow the Fund to also accept fines, donations, grants and set up easements.
3. Retain current protections for Exceptional Trees and reduce the upper threshold for Exceptional Trees to 24" DBH, protect tree groves and prohibit Significant Trees being removed on undeveloped lots.
4. Allow removal of no more than 2 Significant non-Exceptional Trees in 3 years per lot outside development
5. Establish one citywide database for applying for Tree Removal and Replacement Permits and to track changes in the tree canopy.
6. Post online all permit requests and permit approvals for public viewing.
7. Expand SDOT's existing tree service provider's registration and certification to register all Tree Service Providers (arborists) working on trees in Seattle.
8. Provide adequate funding in the budget to implement and enforce the updated ordinance.

Subject: Immediately, Right Now, Today, Stop the Paralysis: Please Update Seattle's Tree Ordinance

CAUTION: External Email

Sandra Pinto de Bader,

Dear All,

You know this: Seattle has been losing its tree canopy mostly to the advantage of developers and mostly to the disadvantage of citizens and the health of all living things. Global warming exists. Trees are vital to the environment and the city's livability and identity. Please take action and make the changes in alignment with your department's professed concerns.

Please update Seattle's Tree Protection Ordinance as recommended in the latest draft by the Seattle Urban Forestry Commission. Enough said.

Please let me know if I can help.

Subject: Please Update Seattle's Tree Ordinance

CAUTION: External Email

Sandra Pinto de Bader,
Sept. 11, 2019
Dear Councilmembers,

Trees represent community, shelter, mental health and survival. The first white settlers in Seattle cleared the trees without much thought of this impact for future generations. Over 130 years now some of those trees were replanted, but with declining habitat and and the impending doom of global warming as well as the enormous data gathered on the benefits of retaining our trees to solve our climate crisis— it boggles my mind why Seattle government and our developers continue to approve so many projects that involve removal of giant trees and entire groves of trees. Why is Seattle government not promoting and requiring better designs and planning to incorporate more trees and save our remaining trees?

Four months ago, I filed a complaint to DCI about one of the latest clearcut developments in my neighborhood of an entire lot removing 25 trees in lieu of building 2 mini-mansions. The Department of Construction and Inspections told me that “developers in Seattle have the right to make as much money as they can.” How can our current permitting process allow developers carte blanche to make as much money as they can despite the costs to our declining habitat. How can we continue to uphold short-sited development practices for handling our precious remaining resources in the city and for combating global warming? 100-year-old trees are not easily replaced— simply put: Because of our current development practices, our children will ever see those heritage trees or groves of trees like this in their lifetime.

While the DCI may be doing the best they can, I have been researching how our current tree ordinance fails miserably to protect our trees - our tree ordinance has not been updated in 10 years and even the current ordinance not been enforced because of many loopholes for developers. DCI and the developer community should not be in charge of drafting our tree protection ordinance since this would be a blatant conflict of interest since they are funded from development fees. Their input of course is needed and I urge you to adopt the tree ordinance drafted by the Urban Forestry Commission and particularly make sure that city must develop a DEPARTMENT- WIDE policy for tree policy like all other cities do.

We need more low income housing and planned density, and we need to demand a stronger tree protection ordinance that push for future designs from our developers, city officials and planners that use and remove less of our natural resources, make smaller footprints to incorporate more trees and habitat, provide apartments and low income housing with tree and

green spaces to protect our streams and watersheds, cool our city and beautify our urban landscapes.

Below are the chief points that could be adopted right now if we hope to have a livable Seattle for the future:

1. Expand the existing Tree Removal and Replacement Permit Program, including 2-week public notice and posting on-site, as used by the Seattle Department of Transportation (SDOT) – to cover all Significant Trees (6” and larger diameter at breast height (DBH)) on private property in all land use zones, both during development and outside development.
2. Require the replacement of all Significant Trees removed with trees that in 25 years will reach equivalent canopy volume – either on site or pay a replacement fee into a City Tree Replacement and Preservation Fund. Allow the Fund to also accept fines, donations, grants and set up easements.
3. Retain current protections for Exceptional Trees and reduce the upper threshold for Exceptional Trees to 24” DBH, protect tree groves and prohibit Significant Trees being removed on undeveloped lots.
4. Allow removal of no more than 2 Significant non-Exceptional Trees in 3 years per lot outside development
5. Establish one citywide database for applying for Tree Removal and Replacement Permits and to track changes in the tree canopy.
6. Post online all permit requests and permit approvals for public viewing.
7. Expand SDOT’s existing tree service provider’s registration and certification to register all Tree Service Providers (arborists) working on trees in Seattle.
8. Provide adequate funding in the budget to implement and enforce the updated ordinance.

Thank you for your service and for including trees in your vision of Seattle’s future planning.
Sincerely,

Annie Thoe

Subject: 13058 39TH AVE NE subdivision in ECA

CAUTION: External Email

Example of unenforced tree retention at Address: **13058 39TH AVE NE** (Seattle Cedar Park community)

SDCI Project: 3034128-LU

Project Description: Land use application to subdivide one parcel into two parcels of land. Existing buildings to remain.

Comments may be submitted to PRC@Seattle.gov through: 09/23/2019

Dear Public Resource Center,

Please keep TreePAC informed of this project and request that the Department **provide a certified arborist report** for the proposed subdivision at the largely forested (73% tree canopy cover*) and steep slopes (dropping 96 feet in elevation in the eastern 200 feet of the 440-foot long lot.)

* <http://web6.seattle.gov/dpd/ParcelData/Parcel.aspx?pin=1454100530>

The Seattle Municipal Code requires that subdivisions of land meet 9 specific requirements, and one of those nine criteria include the **maximum retention of trees** while another requires evaluation of environmentally critical areas including steep slopes and potential landslide areas. (ECA1 and ECA2).

<http://web6.seattle.gov/dpd/edms/default.aspx?ref=3017317>

With this common example, we see that Seattle needs a stronger tree protection ordinance.

It has been proven though appeals to the office of the Hearing Examiner that the existing code for lot subdivisions is not being enforced. How so? Even though a lot short subdivision criteria is to maximize the retention of existing trees, the developers have argued (and the Hearing Examiner has agreed) that tree removal or retention IS NOT an issue that may be enforced at the time of the division of land. They only look at the invisible lines on a site plan and do not look at the physical ramifications of the development that seeks a subdivision. The Hearing Examiner argues that the Type II discretionary decision for lot subdivision does not consider what will be built on that lot or, as a consequence, how many trees will be removed (Exceptional, significant, or groves) from the lot. Instead, we see lots subdivided, and then cleared of all vegetation.

*A **stronger tree ordinance** will required the Department to include SEPA AND DEVELOPMENT implications from all permit applications submitted for a development. Current practices to compartmentalize one development application into multiple permitting 'silos' is a waste of Department and city resources that ultimately promotes land-use violations to the code intent.*

Regards,

David Moehring AIA
