1.0 INTRODUCTION

1.1 Purpose

The purpose of the Phase I Environmental Site Assessment (ESA) is to identify, to the extent feasible pursuant to the process prescribed in American Society for Testing and Materials (ASTM) E 1527-13, *recognized environmental conditions (RECs)* in connection with the subject property. A REC is defined as the presence or likely presence of hazardous substances or petroleum products in, on, or at a property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The ASTM E 1527-13 practice constitutes all appropriate inquiries (defined under 40 Code of Federal Regulations [CFR], Part 312) for the purpose of Landowner Liability Protections, under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

The Phase I ESA Standard also includes *controlled RECs (CRECs)* and *historical RECs (HRECs)* that may be associated with a site.

The term CREC means:

A REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

The term HREC means:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the regulatory authority, without subjecting the property to any required controls.

The terms REC and CREC are not intended to include *de minimis* conditions that generally do not present a threat to human health and the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not RECs or CRECs.

This report reflects the observations, information, and data collected by EHS-International, Inc. (EHSI) in October 2016.

1.2 Detailed Scope of Services

EHSI prepared this Phase I ESA based upon our contract agreement with City of Seattle Financial and Administrative Services, Real Estate Division (Client). The Client intends to sell the subject property. The contract for the assessment was approved by the Client on October 5, 2016.

This Phase I ESA was performed in accordance with ASTM E 1527-13 (Standard Practice for ESAs: Phase I ESA Process) and consisted of the following tasks:

- Review environmental and regulatory records;
- Review historical information (topographic maps, aerial photographs, Sanborn fire insurance maps, and city directories);
- Review subject property tax records;
- Review of chain-of-title information;
- Conduct a detailed site reconnaissance of the subject property plus a cursory survey of adjacent properties;
- Conduct interviews with the owners and others;
- Review user provided information per the ASTM Standard; and
- Prepare a summary report.

Per the ASTM-13 Standard, EHSI's scope of services **did not include** non-scope considerations as listed in Section 13 of the ASTM-13 Standard and summarized below:

- Biological Agents;
- Cultural and Historic Resources;
- Ecological Resources;
- Endangered Species;
- Health and Safety;
- Indoor Air Quality;
- Industrial Hygiene;
- Lead in Drinking Water;
- Mold;
- Radon;
- Regulatory Compliance; and
- Wetlands.

1.3 Significant Assumptions

Information regarding the subject property was reasonably ascertainable and therefore, no significant assumptions have been made, unless otherwise noted in a specific section of the report.

1.4 Limitations and Exceptions

The findings within this ESA utilized information that was practically reviewable per ASTM E 1527-13, meaning that only relevant data relating to the subject property has been incorporated into the findings, disregarding extraordinary analysis of irrelevant data. The investigation conducted for this ESA was limited to data that was reasonably ascertainable, meaning that the information obtained was publicly available, obtainable within the cost and time constraints under the scope of services for this project, and practically reviewable.

EHSI does not warrant that there are no toxic or hazardous materials or contamination, nor does EHSI accept any liability if such are found at some future time, or could have been found if sampling or additional studies were conducted. EHSI does not assume responsibility for other environmental issues that may be associated with the subject property.

In view of the rapidly changing status of the environmental laws, regulations, and guidelines, EHSI cannot be responsible for changes in laws, regulations, or guidelines that occur after the study has been completed and that may affect the subject property.

1.5 Special Terms and Conditions

The findings of the ESA are limited and based on the completeness and accuracy of the data and conditions of the subject property as of the dates of the subject property investigation and when publicly obtained information was reviewed as described within this report.

1.6 User Reliance

This report was prepared solely for the use of the Client and authorized users, and is not intended for use by third parties. Unauthorized third parties shall indemnify and hold EHSI harmless against any liability for any loss arising out of, or related to, reliance by any third party on any work performed hereunder, or the contents of this report.

2.0 SUBJECT PROPERTY DESCRIPTION

2.1 Subject Property Location

The subject property consists of one vacant, commercial parcel located at 2765 Harbor Avenue SW, in Seattle, WA 98126 (Figure 1). The subject property is comprised of one tax lot associated with the following parcel number and legal description:

- 6911200225 (PROSPECT TRACTS POR OF C WLY OF HARBOR AVE SW LESS S 150 FT PLAT BLOCK: PLAT LOT: C)

A map showing the subject property in relation to surrounding parcels is presented in Figure 2.

2.2 Current Use of the Subject Property

The subject property is vacant and undeveloped, and densely overgrown with vegetation. Tree species include bigleaf maple, poplar, and holly, with blackberry thickets, ivy, sword fern, and horsetail understory.

2.3 Description of Subject Property Structures, Roads and Improvements

2.3.1 Existing Structures

No occupied structures or storage structures exist on the subject property. The western third of the south property line is shored by a low retaining wall structure.

2.3.2 Existing Roads

Harbor Avenue SW forms the east boundary of the subject property. SW Harbor Lane and Fauntleroy Avenue SW approach the subject from the south, but terminate south of the south-adjacent parcel development.

2.3.3 Utilities

The subject property is not connected to any utility services. According to Seattle Department of Construction & Inspections' (SDCI) Side Sewer Cards and Maps website, no side sewer stubs are associated with the sewer main in the 2700 Block of Harbor Avenue SW (SDCI 2016a).

Additional utility services available from the adjoining right-of-way include municipal water (Seattle Public Utilities), power (Seattle City Light), and natural gas (Puget Sound Energy) utilities, and communications infrastructure.

2.4 Current Use of Adjoining Properties

The following developments and land uses were noted adjacent to the subject property:

- The north-adjacent parcel consists of a vacant, undeveloped parcel overgrown with vegetation;
- Harbor Avenue SW forms the east boundary of the subject property. Across Harbor Avenue SW is a 25.7-acre tract of land owned by the Port of Seattle that encompasses a greenway that follows the Alki Trail and Marine Terminal 5. The former West Seattle Landfill occupies undeveloped land between the Alki Trail and the Port facility;
- The eastern third of the south-adjacent parcel is developed with an existing office building at 2775 Harbor Avenue SW. The western two-thirds of the south-adjacent parcel consist of steep, densely vegetated hillside; and,
- The west-adjacent land consists of the undeveloped Fauntleroy Avenue South right-of-way, which is steep and overgrown with vegetation.

3.0 SUBJECT PROPERTY INFORMATION

3.1 Title Records

EDR prepared a chain-of-title report summarizing property ownership history from the present day back to January 1, 1940 (EDR 2016). According to the report, the City of Seattle acquired the subject property from King County on August 6, 1959, through Treasurer's Deed. King County acquired the property prior to 1940. No leases were identified in the report. A copy of the chain-of-title report is included in Appendix A.

3.2 Environmental Liens or Activity and Use Limitations

No environmental liens or activity use limitations were reported for the subject property (Environmental Data Resources [EDR], 2016). The environmental lien/activity use limitation report is included in Appendix B.

3.3 Specialized Knowledge

The term "specialized knowledge" means information regarding the environmental condition of the subject property that would not be available in public records or other sources as referenced in this report and could only be obtained from disclosure by the owner, occupants, or operators on the subject property from personal experience.

The Client is not aware of any personnel who possess specialized knowledge of the subject property (Bretzke, 2016a).

3.4 Valuation Reduction for Environmental Issues

The subject property valuation is being reviewed as a part of the Client's disposition process (Bretzke, 2016b).

3.5 Owner, Property Manager, and Occupant Information

The subject property is undeveloped and unoccupied. Owner information is summarized in Section 6.0 of this report.

3.6 Reason for Performing the Phase I ESA

This Phase I ESA is being performed for a purchase and sale agreement in compliance with industry standards for a reasonable due diligence level of environmental investigation, and to meet the requirements for CERCLA Landowner Liability Protection. EHSI understands that the Client intends to sell the subject property.

4.0 RECORDS REVIEW

4.1 Physical Setting Sources

4.1.1 Topography

Overall topography in the vicinity of the subject property slopes steeply downhill toward the east. EDR reports that the average elevation of the subject property is 38 feet above sea level. SDCI's Geographic Information System (GIS) website indicates that site elevations range from approximately 20 feet at street level to approximately 94 feet at the west end (SDCI 2016b).

4.1.2 Groundwater

The direction of groundwater flow is unknown, but likely flows east toward Elliott Bay, consistent with surface topography. EDR's Geo-Check search for groundwater wells indicates that the closest publicly available groundwater data points are located between one-quarter and one-half mile northwest of the subject property, in a filled tideland area of Elliott Bay, and date to the early 1990s. These data points are not considered representative of groundwater conditions beneath the subject property.

4.1.3 Soils

The soil types mapped in the subject property area include gravelly sandy loam (EDR 2016). The Geologic Map of Seattle – A Progress Report indicates that the sloping property is underlain by several different glacial and interglacial deposits, and artificial fill at the eastern end (United States Geological Survey [USGS] 2005). Anticipated soil types beneath the subject property include interbedded sands, silty sands, clays, and silts.

4.1.4 Sensitive Receptors and Environmentally Critical Areas

There are no known sensitive receptors in the immediate vicinity of the subject site. Mid-century regrading, dredging, and industrial development activities shifted the shoreline of Elliott Bay from the east end of the property to position over one-half-mile east of the subject property.

SDCI's GIS website indicates two small wetland areas one to two blocks north of the subject property, in unfilled areas west of the Harbor Avenue road embankment (SDCI 2016b). The configuration of the hillside and the street drainage network prevents surface water runoff from the subject property from flowing in the direction of the mapped wetland areas.

SDCI's GIS website indicates that several categories of Environmentally Critical Areas (ECA) are mapped at the subject property:

- Abandoned landfill (proximity to Harbor Avenue Landfill/West Seattle Landfill)
- Slopes over 40%
- Potential slide area
- Liquefaction potential
- Wildlife preservation area

The ECA condition named "abandoned landfill" applies to land area located at or within a 1,000-foot radius of an abandoned landfill. The entire subject property is situated inside the 1,000-foot radius distance from an abandoned municipal landfill variously known as the West Seattle Landfill and the Harbor Avenue Landfill. Other than proximity to the abandoned landfill, the site-specific ECA conditions are geotechnical or ecological in nature. No other ECA conditions, such as known wetland areas, are mapped on the subject property.

4.2 Environmental Record Sources

A Radius Map report was obtained from EDR for use in preparation of this Phase I ESA. The EDR report was obtained to fulfill the requirements pertaining to standard environmental record sources as well as supplementary information considered here as additional environmental records. A copy of EDR's Radius Map report is presented in its entirety in Appendix C.

The following federal, state and tribal environmental databases were reviewed as part of this investigation.

- Federal National Priority List (NPL)
- Federal Delisted NPL List
- Federal Comprehensive Environmental Response, Compensation, and Liability Act Information System (CERCLIS)
- Federal Institutional Controls/Engineering Controls Registries
- Federal Emergency Response Notification System (ERNS) List
- State and Tribal Leaking Storage Tank Sites
- State and Tribal Registered Storage Tank Lists
- State and Tribal Voluntary Cleanup Sites

- Local Lists of Landfill/Solid Waste Disposal Sites
- Local Lists of Hazardous Waste/Contaminated Sites
- Local Land Records
- Records of Emergency Release Reports
- Federal CERCLIS No Further Remedial Action Planned (NFRAP) Sites List
- Federal Resource Conservation and Recovery Act (RCRA) Information System-Corrective Action (CORRACTS) Facilities List
- Federal RCRA Non-CORRACTS Transporters, Storage, and Disposal (TSD) Facilities List
- Federal RCRA Generators List
- State- and Tribal-Equivalent NPL
- State- and Tribal-Equivalent CERCLIS
- State and Tribal Landfill and/or Solid Waste Disposal Sites Lists
- State and Tribal Institutional Control/Engineering Control Registries
- State and Tribal Brownfields Sites
- State Tacoma Smelter Plume
- Local Brownfields Lists
- EDR High Risk Historical Records
- Other Ascertainable Records

4.2.1 Subject Property

The subject property is not listed on the EDR database report.

4.2.2 Adjacent Properties

The EDR report listed 3 sites located in the immediate vicinity of the subject property that were either release sites or sites of potential concern. Details in regards to these sites and their potential to impact the subject property are presented below.

Import Auto Service, 2783 Harbor Avenue South, Seattle, WA

EDR's Historical Auto Salons database identified an auto repair business activities at 2783 Harbor Avenue South in 1966. This address is located approximately 50 feet south of the subject property and south of the south-adjacent office building at 2775 Harbor Avenue SW. The potential for a release from former auto repair activities at this facility to impact the subject property is considered low risk due to distance and cross-gradient position.

2700 Harbor Avenue SW/Harbor Avenue Landfill, Harbor Avenue SW & South Florida Street, Seattle, WA

The unnamed facility located at 2700 Harbor Avenue SW corresponds to the east-adjacent Harbor Avenue Landfill, which is located across Harbor Avenue SW from the subject property between the 2500 Block and the 3000 Block of Harbor Avenue SW. The Harbor Avenue Landfill facility is included on Ecology's Hazardous Sites List (HSL) and CSCSL databases, and EPA's Facility Index System (FINDS) and Enforcement and Compliance History Online (ECHO) databases. The landfill has been capped and

methane controls have been installed. Cleanup of organic contaminants, priority pollutant metals, unspecified petroleum products, and polychlorinated biphenyls (PCBs) has begun at the landfill.

The Harbor Avenue Landfill, also known as the West Seattle Landfill, received municipal garbage between 1939 and 1966, was used by the Seattle Fire Department for oil-fire training, and also received industrial wastes from fertilizer, creosote plant, and steel mill operations [Seattle-King County Department of Public Health, (SKCDPH) 1984]. The landfill has been filled to elevation 40 to 42 feet, which is approximately 20 to 22 feet higher than the surface elevation of Harbor Avenue next to the subject property (SDCI 2016b).

According to Ecology's report titled *Periodic Review, Southwest Harbor Project Remediation Area 3 – Seattle Steel Site, Harbor Avenue and SW Hanford Street, Seattle, Washington, FSID# - 2386*, the landfill closure was managed as a Method C Industrial MTCA-compliant cleanup under EPA Consent Decree, subject to the jurisdictions of EPA's RCRA and Toxics Substances Control Act programs. The closure of the Harbor Avenue Landfill comprised Remedial Area RA-3 of the Port of Seattle's Southwest Harbor Project. A landfill gas management system was installed at the site and Ecology's Periodic Review in 2012, confirmed that landfill gas had been detected in monitoring points located on the west side of Harbor Avenue SW and that the former landfill remains subject to a long-term monitoring program (Ecology 2012). Ecology provided the following summary of the groundwater monitoring program:

> *"Overall, the chemicals of interest identified in the landfill and the solid materials overlying the Site were chemicals that are not particularly mobile in the environment. PCBs and weathered hydrocarbons all have low solubilities and a high tendency to adsorb onto organics and fine-grained soils. It was determined that metals were not likely to leach under the neutral groundwater conditions, particularly with the reduction of infiltration through capping of the Site. This lack of mobility of the chemicals of concern was confirmed by the scattered detections in groundwater data even prior to the implementation of the presumptive remedy" (Ecology 2012).*

Although the landfill has been filled to an elevation approximately 20 feet higher than the lowest elevation on the subject property, the dominant flow direction of the mobile groundwater media is toward the west, away from the subject property. The potential for a release from the former landfill to impact groundwater media beneath the subject property is considered low risk due to its downgradient position. Landfill gas has been detected in the unsaturated vadose zone above the groundwater table on the west side of Harbor Avenue. The potential for landfill gas to migrate to the subject property exists; City of Seattle's building code imposes a presumptive remedy to mitigate potential risks associated with new construction on land areas, such as the subject property, that are located within a 1,000-foot-radius of a former landfill.

<u>Sea Way Marine 2501 Harbor Avenue SW, Seattle, WA</u>

Sea Way Marine is a marina located approximately one-eighth of a mile north of the subject property. The marina facility is included on Ecology's Local Source Control (LSC) database for source control activities/efforts between July 2009 and March 2012. No regulatory violations are associated with this

facility. The potential for a release from marina activities at this facility to impact the subject property is considered low risk due to distance and downgradient position.

4.2.3 Vapor Encroachment Screen

EHSI evaluated the potential for vapor encroachment involving past and present activities occurring on the subject property and off the subject property In general, current and historical business operations in the approximate vicinity of the subject property are or were situated over 100 feet from the subject property, and are not interpreted to pose a vapor encroachment concern. As indicated in Section 4.1.4 above, the subject property is classified as an ECA due to its location within a 1,000-foot radius of an abandoned landfill. Historical landfill activities pose a landfill gas and vapor encroachment concern on the subject property; City of Seattle's building code imposes presumptive remedies to mitigate potential risks associated with new construction on environmental critical land areas, such as the subject property, that are located within a 1,000-foot-radius of a former landfill. The remedies depend on land use and building construction type, but may include one or more of the following active or passive engineering controls: vapor barrier, extra ventilation, positive-pressure ventilation, and/or occupancy restrictions for lower levels.

4.3 Historical Use – Subject Property and Adjoining Properties

The following discussions are presented for the purpose of compiling historical information on the activities that occurred on the subject property and adjacent properties.

4.3.1 Aerial Photographs

Historic aerial photographs dated 1936, 1944, 1953, 1956, 1956, 1969, 1977, 1980, 1985, 1990, 2006, 2009, and 2011 were reviewed as part of this assessment. Copies of the historical aerial photos are presented in Appendix D. The results of this review are included in the following table.

Table 4.3.1: Aerial Photograph Review

Year	Subject Property Use	Adjacent Property Use
1936	The subject property is vacant and undeveloped, and treed. The east margin of the property next to Harbor Avenue appears vegetated but has been cleared of trees.	Adjacent lands to the north, west, and south are vacant, undeveloped, and treed. Harbor Avenue SW borders the subject property to the east. Open waters of Elliot Bay exist on the far, east side of the Harbor Avenue SW right-of-way. The closest development consists of a group small, pitched- roof buildings clustered around the intersection of SW Harbor Lane and Harbor Avenue SW, approximately one hundred feet south of the subject property.
1944	No changes to the subject property are apparent.	No changes to adjacent properties are apparent. Tidelands east of Harbor Avenue SW are being filled in. SW Harbor Lane connects with Fauntleroy Avenue SW southwest of the subject property.
1953	The subject property remains vacant, undeveloped, and treed.	The eastern third of the south-adjacent parcel appears to have been cleared of vegetation. No changes to west- or north-adjacent properties are apparent. A rectangular, flat-roofed structure has been constructed along the north side of the SW Harbor Lane neighborhood. Filling of the tidelands east of Harbor Avenue SW now extends as far north as the eastward projection of SW Harbor Lane.
1956	Photographic resolution is poor. No changes are discernable since 1953.	Photographic resolution is poor. Other than continued filling of tidelands east of Harbor Avenue SW, no changes are discernable since 1953.
1965	No changes to the subject property are apparent.	No changes to adjacent properties are apparent. Filling of former tidelands across Harbor Avenue SW continues.

Table 4.3.1: Aerial Photograph Review		
Year	**Subject Property Use**	**Adjacent Property Use**
1969	No changes to the subject property are apparent.	No changes to adjacent properties are apparent.
1977	The subject property remains vacant, undeveloped, and treed.	No changes to the adjacent properties are apparent. The flat-roofed rectangular building about one hundred feet south of the subject property is no longer discernable, either removed or concealed by the tree canopy. The filled tidelands across Harbor Avenue SW to the east are undergoing development, with the construction of railroads and railroad spurs.
1980	No changes to the subject property are apparent.	No changes to adjacent properties are apparent, except the east margin of the north-adjacent parcel appears to have been cleared of trees. No further improvements to the tidelands are apparent, but the surface of the filled area appears hummocky and heterogeneous; it appears that the rail spurs are for landfilling the tidelands between South Florida Street and Harbor Avenue SW.
1985	No changes to the subject property are apparent.	No changes to adjacent properties are apparent. Landfilling continues between, with hummocky and discolored ground surface extending south closer to the latitude as the subject property.
1990	The subject property remains vacant, undeveloped, and treed.	No changes to adjacent properties are apparent. The former tidelands northeast of the intersection of Harbor Avenue SW and SW Harbor Lane appear to be landfilled with heterogeneous materials, while the area southeast of that intersection appears to be filled with consistently colored and sized stockpiles of light-colored fill material.
2006	No changes to the subject property are apparent.	No changes to adjacent properties are apparent. The former tidelands/landfill area to the east has been graded flat and/or paved. The Alki Trail and associated landscaping has been constructed along the east side of the Harbor Avenue SW right-of-way.
2009	No changes to the subject property are apparent.	The office building at 2775 Harbor Avenue SW has been constructed on the eastern third of the south-adjacent parcel; otherwise, no changes to adjacent properties are apparent.
2011	No changes to the subject property are apparent.	No changes to adjacent properties are apparent.

4.3.2 Fire Insurance Maps

Historic Sanborn fire insurance maps were not available for the subject property. EDR certifies the subject site as unmapped property. A copy of the of the fire insurance map report is presented in Appendix E.

4.3.3 Local Street Directories

The following city directories were reviewed by EHSI: R.L. Polk Publishers from 1920 through 1996, Pacific Northwest Bell Telephone Company in 1971, and Cole Information Services from 2005 through 2013 (EDR, 2016). No listings were encountered for the subject property. Numerous residences with Harbor Avenue street addresses in the 2600 and 2700 Block of Harbor Avenue SW are listed between 1920 and 1970; according to King County Assessor's Parcel Viewer website, and the 1936 aerial basemap, the Harbor Avenue street numbers that are closest to the subject property are 2787 and 2783, each of which is located two parcels to the north and south of the subject property (King County Parcel Nos. 6911200205 and 6911200245), respectively (King County 2016a). The street address associated with the east-adjacent parcel, currently Port of Seattle marine terminal and previously the West Seattle Landfill, is 3001 28th Avenue SW, which is outside the city directory search radius. A summary of the city directory review is presented below with the full listings included in Appendix F.

Table 4.3.3: City Directory Review			
Source	**Date**	**Occupants Listed at Subject Property**	**Adjacent Occupants/Closest Street Numbers**

4.3.4 Historic Topographic Maps

Historic topographic maps dated 1894, 1895, 1897, 1908, 1909, 1968, 1973, 1983, and 2014 were reviewed (EDR, 2016). A summary of the review is presented below with copies of the maps in Appendix G.

Table 4.3.4: Historic Topographic Maps Review		
Year	**Subject Property Use**	**Adjacent Property Use**
1894	The subject property is vacant and undeveloped. Topography slopes downhill toward the east between Elevation 100 and intersects with the marine shoreline of Elliott Bay.	No roads or structures are indicated in the vicinity of the property. There is a cluster of buildings at the south end of Young's Cove, over one-quarter mile south of the subject property. California Avenue SW has been constructed north-south along the crest of the ridgeline a quarter mile west of the site, to access a 20-block neighborhood at Duwamish Point, over one mile north of the subject property.
1895	No changes to the subject property are apparent.	No changes to adjacent properties are apparent.
1897	No changes to the subject property are apparent.	No changes to adjacent properties are apparent.
1908	The subject property remains vacant and undeveloped, with the east margin extending beyond the shoreline.	No changes to adjacent properties are apparent, and no structures exist in the vicinity. Harbor Avenue SW has been constructed through mapped tidelands. Open water is mapped on both sides of Harbor Avenue.
1909	No changes to the subject property are apparent.	No changes to adjacent properties are apparent.
1968	The subject property remains vacant and undeveloped. Former tidelands at the east end of the subject property and west of Harbor Avenue SW have been filled in to approximately Elevation 25 feet. The subject property and vicinity are color-coded green to indicate forested conditions.	Former tidelands at the east ends of the north- and south-adjacent parcels have been filled in. Former tidelands between Harbor Avenue SW and South Florida Street have been filled in. A cluster of structures have been constructed south of the subject property around the intersection of Harbor Avenue SW and SW Harbor Lane. A second cluster of buildings is visible north of the subject property, in an area that is color-coded green due to forested conditions. Harbor Island and the Southwest Harbor port facilities have been constructed in Elliot Bay east of the subject property.
1973	No changes to the subject property are apparent.	No changes to adjacent properties are apparent.
1983	No changes to the subject property are apparent.	No changes to adjacent properties are apparent. The cluster of buildings north of the subject property are no longer indicated on the map.
2014	No changes noted; individual structures are no longer identified.	No changes to the adjoining properties; individual structures are no longer identified.

4.3.5 Tax Assessor Archives

EHSI reviewed pre-1972 King County Assessor field records for the subject property and adjacent parcels at Puget Sound Regional Archives in Bellevue, Washington. As of 1972, the subject parcel, and north-and south-adjacent parcels were vacant and undeveloped. No records are available for the west-adjacent Fauntleroy Avenue SW right-of-way. A copy of the field record for the subject property is included in Appendix H.

4.4 Agency File Review

EHSI requested available records from Ecology for the 2700 Harbor Avenue SW Facility and the Harbor Avenue Landfill. Ecology responded that they were unable to find any existing records for this facility.

Ecology's Toxic Cleanup Program does maintain a Sitepage for the Harbor Ave Landfill; the Sitepage states that "This site ….is currently in the state cleanup process" (Ecology, 2016a). The "Documents" link on the website indicates "No records to display".

On November 14, 2016, ESHI contacted Mr. Min Soon Yim at Seattle Public Utilities (SPU) for information regarding the status of landfill gas monitoring at Harbor Avenue Landfill. Mr. Yim indicated that SPU monitors the Kent Highlands, Genesee, Interbay, and South Park Landfills, but not the Harbor Avenue Landfill (Yim 2016). Mr. Yim referred EHSI to Mr. Jeff Neuner at SPU, who further explained that SPU had declined Port of Seattle's request to provide landfill monitoring services at Harbor Avenue; the Port of Seattle subsequently hired CH2MHill, an engineering firm, to perform monitoring services (Neuner 2016).

On November 14, 2016, EHSI submitted an on-line request for information to the Port of Seattle, seeking current information on the scope and status of landfill-closure monitoring at Harbor Avenue Landfill/Terminal 5 RA-3 (Port of Seattle 2016a). Mr. Brick Spangler from the Port of Seattle replied on November 22, 2016. He indicated that the Port of Seattle actively monitors landfill gas monthly and submits reports to Ecology quarterly (Spangler 2016). Mr. Spangler forwarded a copy of the Port of Seattle's Third Quarter 2016 submittal to Ecology, which concludes that "landfill gas collection parameters are stable and the system is removing methane from previously targeted areas" (Port of Seattle 2016b).

Mr. Spangler added that the Port of Seattle has requested permission from Ecology to shut down the active landfill gas collection system and implement a passive monitoring program (Spangler 2016). He added that no groundwater monitoring has taken place since the date of Ecology's most recent five-year review report (Spangler 2016, Ecology 2012). A copy of the Port of Seattle's most recent monitoring report is included in Appendix I.

5.0 SUBJECT PROPERTY RECONNAISSANCE

5.1 Methodology and Limiting Conditions

An EHSI environmental professional conducted a site reconnaissance on October 12, 2016, and returned on October 13, 2016 to take supplemental photographs. The site reconnaissance consisted of a site walk to visually inspect readily accessible areas of the subject property. Due to dense vegetation, the ground surface generally wasn't visible beneath downed logs, brambles and ivy, and the southwest portion of the property was not readily accessible. Weather conditions at the time of the site reconnaissance were sunny with temperatures in the 50s Fahrenheit.

The subject property was observed for evidence of surface and subsurface disturbances including waste accumulations and debris, discolored soil, stressed vegetation, unusual mounds or depressions, pipes, standing water, and other indicators of potential contamination. A Subject Property Visit Checklist was filled out to document subject property conditions and is included in Appendix J. Key features of the subject property and neighboring parcels were photographed.

5.2 General Subject Property Setting

The subject property consists of one vacant, commercial parcel located on a steep, overgrown hillside.

5.3 Exterior Observations

The subject property is vacant and undeveloped, and densely overgrown with vegetation. Tree species include big leaf maple, poplar, cottonwood and holly with bramble, ivy, sword fern, and horsetail understory. The following information documents key exterior observations:

- The eastern 50 feet of the subject property has been filled to match the adjacent street grade, and is readily accessible on foot.
- A one- to five-foot retaining wall separates the eastern 50 feet of the subject property from the south adjacent office parking lot.
- Several 1.5-inch PVC pipes stuck into the ground at irregular intervals indicate the approximate north property line.
- The western 300 to 350 feet of the subject property slopes steeply uphill toward the west, and is overgrown with dense vegetation.
- Trees exhibit curved growth patterns, indicating unstable slope conditions.
- Although the approximate west property line was not inspected, the property reconnaissance did encircle the hillside west of the subject property to rule out foot and vehicle access routes from the north and west.

5.4 Interior Observations

Other than the above-described retaining wall, there are no structures on the subject property.

5.5 Adjacent Properties

The land west of Harbor Avenue SW is characterized by steep, undeveloped, overgrown hillsides interspersed with scattered residential and commercial developments. The surrounding land use is summarized below:

- A monitoring well has been installed next to the north entrance driveway to the south-adjacent property, approximately 15 feet south of the subject property. A review of Ecology's Well Log website did not identify a well log in the closest quarter-sections that could be attributed to the south-adjacent parcel (Ecology 2016b); the screen interval, depth to groundwater, and owner's identity are unknown.
- The eastern third of the south-adjacent parcel is developed with the 4-story East Peak Office Building with lower level parking. According to the King County Parcel Viewer website, the office building was constructed in 2009 (King County 2016b).
- The heavily vegetated north-adjacent parcel is similar in character to the subject property. The north-adjacent parcel has been accessed and explored with heavy equipment recently enough to allow foot traffic to access the hillside.
- The Fauntleroy Avenue SW right-of-way is undeveloped densely vegetated west-adjacent to the subject property. The developed right-of-way terminates approximately 75 feet southwest of the subject property.

- Harbor Avenue SW forms the east boundary of the subject property. The Alki Trail and associated greenscape meanders along the east side of the Harbor Avenue SW right-of-way. Beyond the Alki Trail to the east is the former Harbor Avenue Landfill.

6.0 INTERVIEWS

6.1 Interview with Owner

EHSI forwarded a standard interview questionnaire to Mr. Daniel Bretzke, the Client representative, asking if a Client representative was familiar enough with the subject property to respond to the interview questions. Mr. Bretzke indicated that City of Seattle personnel know very little about the subject property (Bretzke 2016a).

6.2 Interview with Occupant

The subject property is vacant and undeveloped; an occupant interview was not performed.

6.3 Interviews with Others

On October 13, 2016, EHSI conducted an informal interview with the occupant of the residence located at 3004 Fauntleroy Ave SW. She was seeking information on Seattle Parks & Recreation's on-going maintenance activities on the hillside above the Fauntleroy right-of-way. She remarked that Seattle Parks & Recreation personnel periodically access the hillside from her address to spray herbicides for blackberry control and to revegetate the hillside west of and above the subject property to improve slope stability. Her familiarity with the hillside did not extend beyond adjacent parcels and hillside the above the Fauntleroy right-of-way. She noted that a foot trail leads from her house at the north end of Fauntleroy and continues west-northwest all the way to Fairmont, well above the subject property. She indicated that the trail was a popular encampment area.

7.0 DATA GAPS

A data gap is defined by ASTM E 1527-13 as a lack of or inability to obtain information required by this practice despite good faith efforts by the Environmental Professional to gather such information. Data gaps may result from the incompleteness in any of the activities required by this practice including, but not limited to, the subject property reconnaissance, interviews, and historical research. Failure to achieve the historical research objectives identified in the standard is termed a data failure and is a type of data gap. For this project, we have identified the following data gaps:

- The southwest portion of the subject property and the approximate west property line were not directly observed due to dense vegetation and steep slopes. The property reconnaissance did encircle the hillside west of the subject property to rule out alternate foot and vehicle access routes.

8.0 CONCLUSIONS AND RECOMMENDATIONS

EHSI has performed a Phase I ESA in conformance with the Scope and Limitations of ASTM Practice E 1527-13 for the subject property consisting of the vacant, commercial parcel at 2765 Harbor Avenue SW

(Tax Parcel Nos. 6911200225). Any exceptions to, or deletions from, this practice are described in Sections 7.0 and 9.0 of this report. This assessment has revealed no evidence of RECs in connection with the subject property, except for the following:

8.1 Subject Property

- The eastern 50 feet are likely underlain by undocumented fills that were placed following construction of Harbor Avenue SW, sometime between 1908 and 1936. Approximately 25 feet of fill could have been placed beneath the east margin of the subject property to raise grades from sea level or below to match modern street grades at Elevation 22 feet. The fill material is of unknown origin and composition.
- The subject property meets the City of Seattle's definition of an ECA due to proximity to an abandoned landfill. Development of the subject property is subject to City of Seattle Building Code and Seattle-King County Health Department requirements for developments within a 1,000-foot radius of methane-producing landfills.

8.2 Potential Off-site Sources

- Approximately 20 acres of former tideland area across Harbor Avenue SW to the east were landfilled from approximately 1939 through at least 1966. The former landfill, known as the West Seattle Landfill/Harbor Avenue Landfill, was filled to an elevation at least 20 feet higher than adjacent street grades in Harbor Avenue. The former landfill has been capped and a landfill gas management system has been installed (Ecology 2012).

8.3 Recommendations

Due to proximity of the subject property to an abandoned landfill, municipal code will require certain mitigation measures in connection with property development, for the protection of future occupants. The requirements depend on land use and building construction type, but may include one or more of the following active or passive engineering controls: vapor barrier, extra ventilation, positive-pressure ventilation, and/or occupancy restrictions for lower levels.

Further assessment of undocumented fill soils beneath the subject property is warranted to investigate the thickness and composition of undocumented fill soils beneath the east end of the property, assess the potential for buried debris; this next step of the site assessment could be performed in conjunction with an investigation of the geotechnical ECA conditions at the subject property (steep slopes, liquefaction potential). If desired, presence or absence of landfill gas may be evaluated in connection with the geotechnical investigation.

9.0 DEVIATIONS

No subject property-specific conditions were encountered that required deviation from the scope of services addressed in Section 1.2 of this report.

EDR Chain of Title

The EDR Chain of Title Report tracks a line of successive owners from the present back to 1940 of a particular parcel of property, linked together by recorded transactions which pass title. Available nationwide, this report provides a summary of a property's ownership history and is a valuable source for determining the prior uses of a property.

A network of professional abstractors following established procedures, uses client supplied address information to locate:

- Historical Chain of Title research
- Leases and Miscellaneous

Thank you for your business.

No. 37526

Treasurer's Deed

State of Washington, County of King } ss.

THIS INDENTURE, Made this 6th day of August, 1959

between A.A.Tremper as Treasurer of King County, State of Washington, the party of the first part and The City of Seattle, a municipal corporation, party of the second part.

WITNESSETH: Whereas, King County is the owner and holder of the hereinafter described property which was bid in by and sold to said County at a sale for general taxes; and

WHEREAS, said property is subject to Local Improvement Assessment liens levied by said City; and

WHEREAS, said City has paid to party of the first part the face of the general taxes and costs for which said property was sold to party of the first part and has made application for a deed to said property pursuant to the provisions of Chapter 170, 1925 Laws of Washington, extraordinary session;

Now THEREFORE, Know ye that I, A.A.Tremper, County Treasurer of said County of King, State of Washington, for and in consideration of the sum of

One Thousand Three Hundred Twenty-Three and 50/100 ($1,323.50) Dollars

lawful money of the United States of America to me in hand paid, the receipt of which is hereby acknowledged, do hereby grant and convey unto the City of Seattle, a municipal corporation, the following described property located in King County, Washington, to-wit:

Lots 5 & 6, less street, Block 9; Tract 6, except portion condemned and Tract "C", less portion for street, less South 150 feet measured at right angles to South line of said Tract "C", and less portion lying East of Harbor Avenue S.W., of Prospect Tracts.

BEST IMAGE AVAILABLE

as fully and completely as the said County can convey the same.

Given under my hand and seal the day, month and year in this instrument first above written.

A.A.Tremper, County Treasurer.

By Charles B. Wright, Deputy.

State of Washington, County of King } ss.

I, the undersigned, a Notary Public in and for the State of Washington, do hereby certify that on this 10th day of August, 19 59, personally appeared before me CHARLES B. WRIGHT known to me to be the Deputy Treasurer of King County and the individual who signed the within instrument and acknowledged that he signed the same and affixed his official seal thereto, as his free and voluntary act and deed, for the uses and purposes therein mentioned.

Given under my hand and official seal the day in this certificate above written.

Robert Lee Tate

Notary Public in and for the State of Washington, residing at Seattle.

EDR Environmental Lien and AUL Search

The EDR Environment Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- Search for parcel information and/or legal description;
- Search for ownership information;
- Research official land title documents recorded at jurisdiction agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- Access to copy of deed;
- Search for environmental encumbering instrument(s) associated with the deed;
- Provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- Provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 03/07/2016 has revealed that there are 3 NPL sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
WYCOFF CO WEST SEATT	***2801 SW FLORIDA ST***	***NNE 1/4 - 1/2 (0.255 mi.)***	***C8***	***25***
LOCKHEED WEST SEATTL	***3443 W. MARGINAL WAY***	***SE 1/2 - 1 (0.581 mi.)***	***34***	***217***
HARBOR ISLAND (LEAD)	***MOUTH OF DUWAMISH RI***	***E 1/2 - 1 (0.938 mi.)***	***50***	***608***

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
WYCOFF CO WEST SEATT	***2801 SW FLORIDA ST***	***NNE 1/4 - 1/2 (0.255 mi.)***	***C8***	***25***

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of

assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

ZANDT BRASS FOUNDRY	*3400 HARBOR AVE SW*	*SSE 1/4 - 1/2 (0.353 mi.)*	*18*	*144*

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/27/2016 has revealed that there are 4 CORRACTS sites within approximately 1 mile of the target property.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 05/09/2016 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
WYCOFF CO WEST SEATT	*2801 SW FLORIDA ST*	*NNE 1/4 - 1/2 (0.255 mi.)*	*C8*	*25*

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 05/09/2016 has revealed that

there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

State- and tribal - equivalent NPL

HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the HSL list, as provided by EDR, and dated 02/18/2016 has revealed that there are 14 HSL sites within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the CSCSL list, as provided by EDR, and dated 04/01/2016 has revealed that there are 31 CSCSL sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Ecology's Leaking Underground Storage Tanks Site List.

A review of the LUST list, as provided by EDR, has revealed that there are 2 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

ICR: These are remedial action reports Ecology has received from either the owner or operator of the site. These actions have been conducted without department oversight or approval and are not under an order or decree.

A review of the ICR list, as provided by EDR, and dated 12/01/2002 has revealed that there are 3 ICR sites within approximately 0.5 miles of the target property.

State and tribal Brownfields sites

BROWNFIELDS: A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

A review of the BROWNFIELDS list, as provided by EDR, and dated 04/19/2016 has revealed that there is 1 BROWNFIELDS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the CSCSL NFA list, as provided by EDR, and dated 04/19/2016 has revealed that there are 2 CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/21/2016 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

The West Seattle wood treating plant of Pacific Sound Resources PSR) is located at 2801 Southwest Florida Street in Seattle, King County, Washington. The 20-acre property is in an industrial area on the shore of Elliott Bay and Puget Sound,near the Duwamish River. Wood treating operations at the plant date to 1906. PSR has owned and operated the facility since 1964. Another turn-of-the-century wood treating facility owned and operated by PSR formerly the Wyckoff Co.) since 1964 was placed on the NPL in 1987 as part of the Wyckoff Co.-Eagle Harbor site. Operations at the two facilities have been similar. The primary wood preservatives used were creosote, which consists primarily of polyaromatic hydrocarbons PAHs) and pentachlorophenol PCP). Each was mixed with fuel oil. In addition, substantial quantities of chemonite, which contains copper, arsenic, and inc, were also used. Wood treatment operations at the West Seattle plant have contaminated soil, ground water, and Puget Sound sediments with creosote, PCP, fuel oil, and chemonite metals. A significant source of contamination was a transfer table, where containers were loaded and unloaded. The transfer table was located ina shallow unlined earthen pit known as the transfer table pit. Numerous investigations of the pit, including one by EPA in 1989, have documented contamination with arsenic, chromium, copper, inc, and PAHs. In August/September 1990, PSR excavated approximately 450 cubic yards of soils and sludge from the pit, placed them in a containment box on the northeast end of the site, and covered the box with a 3-inch layer of concrete over wire mesh. Another source of ha ardous substances at the site is an area adjacent to Elliott Bay where three aboveground tanks were formerly used to store creosote. A major leak occurred at one of the tanks in 1970. In addition, numerous spills occurred over the years from pipelinesleading to the tanks. Heavy metals and PAHs were found in Elliott Bay by the Washington Department of Ecology and EPA in 1988. Ha ardous substances from the site can flow overland from the site to Elliott Bay through storm drains, directsurface runoff, flooding, and accidental spills or drips. The bay is a fishery, a critical migratory corridor for anadromous fish, and a subarea identified in the Comprehensive Conservation and Management Plan for the Puget Sound National Estuary. In July/August 1991, EPA found heavy metals and PAHs in onsite soil and air downwind of the site. An estimated 150 people live within 0.25 mile of the site, and 175,000 within 4 miles. Since 1984, EPA has issued several administrative orders against Wyckoff under CERCLA, the Resource Conservation and Recovery Act RCRA), and the Clean Water Act CWA) requiring investigation and cleanup at the site. In 1985, Wyckoff and officials no longer associated with PSR, pleaded guilty to violations of RCRA for storing ha ardous waste at the West Seattle plant without a RCRA permit and violations of CWA for discharging wood preserving residues into the West Waterway of the Duwamish River. The description ofthe site release) is

WYCOFF CO WEST SEATTLE (Continued) **1000271660**

based on information available at the time the site was scored. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequentFR notices.)

Site Description: The Pacific Sound Resources (PSR) facility, formerly known as the Wyckoff West Seattle Wood Treating facility, was located on the south shore of Elliott Bay in Puget Sound at 2801 S.W. Florida Street, Seattle, Washington. Wood-treating operations were conducted at the site from 1909 to 1994. The wood-treating facility occupied approximately 25 upland acres. The southern portion of the facility (10 acres) was used primarily for treated wood storage, and the northern portion of the facility (15 acres) was used for processing. All retorts, product storage tanks and piping were located on the northern portion of the facility. The wood-treating chemicals used at the PSR site included creosote, pentachlorophenol, and various metals-based solutions. Soil, groundwater and off-shore marine sediments have all been impacted by the facility's operation. The wood-treating plant started as a pile-supported facility over the Duwamish River estuary. The shoreline and intertidal area was filled in at various times throughout the last 100 years, and the facility was eventually entirely located on fill-material that created an upland. This in-filling resulted in the border between the upland and off-shore area being a steep riprap bank. The site is located in an industrial area on the south shore of Elliott Bay. EPA conducted two phases of early cleanup actions on the upland portion of the site. The first phase focused on site stabilization and demolition of on-site structures. The second phase focused on controlling on-going sources to Elliott Bay, addressing contaminated soil, and preparing the site for reuse by the Port of Seattle (Port). During the first phase in 1995, the entire wood treatment facility was demolished and approximately 4,000 cubic yards of highly contaminated soil and process sludge were removed from the site. During the second phase, which began in 1996, a subsurface physical containment barrier (slurry wall) was installed to prevent light non-aqueous phase liquid (LNAPL) migration to Elliott Bay, and to reduce the influence of tidal fluctuation at the site. The slurry wall is 1,200 feet in length and it extends from the ground surface to a depth that averages 40 feet below ground surface. An LNAPL recovery trench was installed in conjunction with the barrier wall to intercept any LNAPL. In addition, a low-permeability asphalt cap was constructed over a layer of clean fill placed at the site. This cap was designed to prevent direct soil exposure to on-site workers, prevent runoff of contaminated soil to Elliott Bay, and minimize infiltration of storm water to groundwater. The cap was completed in 1998. The Upland Unit remedial

WYCOFF CO WEST SEATTLE (Continued) **1000271660**

investigation/feasability study (RI/FS) began in 1994 and focused on groundwater, including non-aqueous phase liquid (NAPL) contamination. The Marine Sediments Unit RI/FS began in 1996 and focused on marine sediment contamination. Human health and ecological risk assessments were conducted for both the upland and off-shore areas. The PSR site was added to the National Priorities List in May 1994. A Record of Decision addressing both units was signed in September 1999.

Handler Activities Summary:
U.S. importer of hazardous waste: No

WYCOFF CO WEST SEATTLE (Continued) **1000271660**

Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 02/24/2011
Site name: WYCOFF CO WEST SEATTLE
Classification: Small Quantity Generator

. Waste code: F032
. Waste name: WASTEWATERS, PROCESS RESIDUALS, PRESERVATIVE DRIPPAGE, AND SPENT FORMULATIONS FROM WOOD PRESERVING PROCESSES GENERATED AT PLANTS THAT CURRENTLY USE, OR HAVE PREVIOUSLY USED, CHLOROPHENOLIC FORMULATIONS [EXCEPT POTENTIALLY CROSS-CONTAMINATED WASTES THAT HAVE HAD THE F032 WASTE CODE DELETED IN ACCORDANCE WITH SECTION 261.35 (I.E., THE NEWLY PROMULGATED EQUIPMENT CLEANING OR REPLACEMENT STANDARDS), AND WHERE THE GENERATOR DOES NOT RESUME OR INITIATE USE OF CHLOROPHENOLIC FORMULATIONS]. (THIS LISTING DOES NOT INCLUDE K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATER FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL.)

. Waste code: F035
. Waste name: WASTEWATERS, PROCESS RESIDUALS, PRESERVATIVE DRIPPAGE, AND SPENT FORMULATIONS FROM WOOD PRESERVING PROCESSES GENERATED AT PLANTS THAT USE INORGANIC PRESERVATIVES CONTAINING ARSENIC OR CHROMIUM. THIS LISTING DOES NOT INCLUDE K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATER FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL.

. Waste code: U051
. Waste name: CREOSOTE

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110000489757

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air

SEAFAB METALS CO (Continued) **1015732102**

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: WSQG
. Waste name: A placeholder to allow BR submission to validate. In WA State, Conditionally Exempt Small Quantity Generators (Called SQG in WA) are not required to report waste streams, so no valid State or Fed codes are available for reporting to BR.

Historical Generators:

Waste Stream Comments:
Facility ID: 2031
Data Year: 2006
Comments: We assumed an assortment of waste from one of our customers, NOAA, during a renovation project. They had a mix of different wastes to be disposed of by our company.

Facility ID: 2031
Data Year: 2006
Comments: This waste stream is from Lead Abatement projects associated with paint removal during repair work. All potentially contaminated materials were disposed of.

Facility ID: 2031
Data Year: 2007

TODD PACIFIC SHIPYARDS (Continued) **S109524656**

Comments: Add EPA Waste Codes D010, D035, F003, F005 for this waste stream

Facility ID: 2031
Data Year: 2007
Comments: Material was spent from one of our customers. We handled the material for ships crew. The material was used for flooring repair in the galley.

Facility ID: 2031
Data Year: 2007
Comments: Add EPA Waste Codes D010, D035, F003, F005 for this waste stream

Facility ID: 2031
Data Year: 2007
Comments: Waste oil drum was accidentially contaminated with MEK cleaning solution.

Facility ID: 2031
Data Year: 2007
Comments: Add EPA codes D010, D035, F003, F005

Summary Details:

Conditions at listing December 1982): The Harbor Island Lead) site covers about 350 acres and is an industrial area in Seattle, Washington, at the mouth of the Duwamish Waterway where it empties into Elliott Bay. Air monitoring has recorded lead at levels several times the national standard established to protect human health. There is also concern that run-off has carried lead-laden dust and accumulations of lead in the Harbor Island soil into nearby surface water and, by percolation, into ground water. Status July 1983): The City of Seattle has paved areas where concentrations of airborne lead are the highest. In addition, one company that is a source of airborne lead has taken measures to reduce fugitivelead-laden dust and emissions of lead from its process. The City is paving more areas and will then evaluate if additional paving is still needed. More information is required to determine how much of the lead problem on Harbor Island is caused by current emissions from one or more industrial sources and how much by re-suspension of accumulated lead in soil. EPA recently completed a draft Remedial Action Master Plan outlining the investigations needed to determine the full extent of cleanup required at the site. It will guide further actions at the site.

Site Description: Harbor Island, Soil and Groundwater Operable Unit (S&G OU), Seattle, Washington. Harbor Island is located approximately one mile southwest of downtown Seattle, in King County, Washington, and lies at the mouth of the Duwamish River on the southern edge of Elliot Bay. The island is approximately 400 acres in size and is bordered by the east and west waterways of the Duwamish River. EPA has divided the Site into five operable units: 1) the petroleum storage tank facilities operable unit, 2) the marine sediment operable unit, 3) the shipyard sediment operable unit, 4) the Lockheed Shipyard facility operable unit, and 5) the soil and groundwater operable unit which covers the rest of the island. A ROD addressing the S&G OU was completed in September 1993. An ESD (ESD #1) was completed for this OU in 1994. A ROD Amendment was completed for this OU in 1996. Current ESD (ESD #2) addresses the S&G OU (OU 2).Harbor Island, Soil and Groundwater Operable Unit (S&G OU), Seattle, Washington. Harbor Island is located approximately one mile southwest of downtown Seattle, in King County, Washington, and lies at the mouth of the Duwamish River on the southern edge of Elliot Bay. The island is approximately 400 acres in size and is bordered by the east and west waterways of the Duwamish River. EPA has divided the Site into five operable units (OUs): 1) the petroleum storage tank facilities operable unit, 2) the marine sediment operable unit, 3) the shipyard sediment operable unit, 4) the Lockheed Shipyard facility operable unit, and 5) the soil and groundwater operable unit which covers the rest of the island. Operable Unit 1: EPA completed a Phase I Remedial Investigation of Harbor Island in 1990. EPA initiated a Phase II investigation in May, 1991, and completed the RI/FS reports for the soil and groundwater operable unit in February, 1993. A Proposed Plan for this unit was issued in June 1993, and the Record of Decision (ROD) for this unit was completed in September 1993. On May 2, 1994, EPA sent special notice letters to 55 Potentially Responsible Parties (PRPs) for the soil and groundwater operable unit requesting that they perform the remedy selected in the ROD. EPA intends to sign a Consent Decree with these PRPs by September 1994. An

HARBOR ISLAND (LEAD) (Continued) **1000164322**

Explanation of Significant Differences addressing Operable Unit 01 (OU01) of Harbor Island was completed in July 1994. A ROD Amendment was completed for this OU in 1996. Current ESD (ESD #2) addresses the S&G OU (OU 2). OU 7: Since 1959, the Lockheed Shipyard Sediment Operable Unit has been used as a shipyard for construction and maintenance of Naval ships. Shipyard activities ceased in 1986, and the property was purchased by the Port of Seattle8 in 1996. Presently, the Lockheed Shipyard Sediment Operable Unit consists of four piers and three shipways in declining condition built upon Washington State marine sediments leased to Lockheed from the Washington Department of Natural Resources. It is EPA's understanding that the Port of Seattle acquired the Lockheed uplands and docks from Lockheed in 1997. Following acquisition, the Port has allowed a tenant's contractor to use the northern docks in conjunction with bringing over 500,000 tons of aggregate to Harbor Island for use in the redevelopment and expansion of Terminal 18. The uplands area of the former Lockheed property has been used as a staging and storage area for this project, which is now nearing completion. Absent demolition of the docks for cleanup for the Lockheed Shipyard Sediment Operable Unit, the Port reasonably anticipates continued use of the upland property and the dock areas for maritime commerce subject to necessary repair, replacement and/or upgrade of the docks and pier structure. By removing the docks and pier structure for sediment remedial action, EPA does not intend to impair the value of the Port's property or the Port's ability to use its property for maritime commerce. EPA will consider the Port's plans for future use of the site and how these plans may be implemented in conjunction with the remedial design and remedial action for the site and will ensure that these plans are consistent with the remedy and schedule for the Lockheed Shipyard Sediment Operable Unit. An ESD addressing OU 7 was completed in February 2002. An ESD addressing LSSOU was completed in March 2003. The Todd Shipyard Sediment Operable Unit (TSSOU) consists of contaminated near shore sediments within and adjacent to the Todd Shipyard on Harbor Island. Harbor Island is located approximately one mile southwest of downtown Seattle, in King County, Washington, and lies at the mouth of the Duwamish River on the southern edge of Elliott Bay. The island is manmade, approximately 430 acres in size, and used for industrial purposes. Todd Shipyard is located at the northwest corner of Harbor Island and faces Elliott Bay to the north and the West Waterway of the Duwamish River to the west. Harbor Island and the surrounding estuarine environment are highly industrialized. Prior to 1905, the area consisted of tide flats with a few piling-supported structures (mainly railroad trestles). The island was created between 1903 and 1905 with dredged material from the construction of the East and West Waterways and the main navigational channel of the Duwamish River. Since construction, the island has been used for commercial and industrial activities. Todd Shipyards initiated shipbuilding activities on the island in 1916. Todd Shipyards is currently a ship repair, construction, and conversion facility that services approximately 275 vessels a year, including Navy vessels, Coast Guard vessels, passenger ferries, barges, fishing vessels, cruise ships, tank vessels and tug boats. The shipyard operates three dry-docks at Piers 4, 5, and 6 for vessel repair and maintenance. A west sloping building berth is located on the West Waterway of the Duwamish River at Piers 1A and 1 for construction and launching of new vessels. Moorage berths are located along Piers 1, 2, 3, 4, 5, and 6. The existing facilities at Todd Shipyards include bulkheads, riprap protection of buttress fill slopes, pile-supported piers, floating dry-docks, a pile-supported building berth, a pile supported side launching way, and miscellaneous access ramps. Harbor Island was listed by EPA as a Superfund site in 1983. EPA issued the Record of Decision (ROD) in November 1996, for the remediation of contaminated sediments adjacent to both the Todd and the former Lockheed Shipyards. EPA determined that cleanup actions were necessary because of unacceptable risks to benthic organisms and to

HARBOR ISLAND (LEAD) (Continued) **1000164322**

subsistence fishers. An Explanation of Significant Differences (ESD) addressing TSSOU was completed in March 2003. OU 8: The West Waterway OU was established after the sediments with the highest chemical concentrations in the West Waterway were designated for clean up under EPA's 1996 Record of Decision for the Shipyard Sediment OU (Todd and former Lockheed Shipyards). The former Lockheed Shipyard is located in the West Waterway and the Todd Shipyard is located in both West Waterway and Elliott Bay. These shipyard sediments and related cleanups remain part of the Todd and Lockheed Shipyard Sediment OUs, and this ROD does not change the remediation for these OUs. The shipyard sediments are distinct from other contaminated sediments at Harbor Island because they are predominately contaminated with hazardous substances and shipyard wastes released by shipbuilding and maintenance operations at the shipyards. In 1999, the Shipyard Sediment OU was separated into the Lockheed Shipyard Sediment OU and the Todd Shipyard Sediment OU for implementation of remedial design and remedial action. The West Waterway OU does not include: sediments associated with the Lockheed and Todd Shipyard Sediment OUs; sediments in a portion of the waterway that are considered native, post-dredge sediments near Terminal 5, which is an area that was dredged in 1998 for navigational purposes by the Port of Seattle under the Puget Sound Dredged Disposal Analysis (PSDDA) program; and sediments in the northwest portion of the waterway that are located within the boundaries of Ecology's Lockheed (Yard 2) Aquatic Area site, which is a sediment site being addressed by Ecology's Toxics Cleanup Program. The West Waterway OU is located within the boundaries of the federally adjudicated Usual and Accustomed Fishing Area for the Muckleshoot Indian Tribe. In 1999, EPA released a Proposed Plan for the West Waterway OU that indicated that sediments did not pose unacceptable risks to human health or the environment, and recommended that no remedial action was necessary. In 2002, EPA completed a technical memorandum that used new information that became available between 1999 and 2002 to reevaluate the human health risk assessment characterization for the West Waterway OU. EPA concluded that the re-evaluations did not change the conclusions presented in the 1999 Proposed Plan. Other marine sediment studies performed within the West Waterway, but outside the boundaries of the West Waterway OU, include activities associated with the Todd and Lockheed Shipyard Sediment OUs of the Harbor Island Superfund site, the completed Port of Seattle's Terminal 5 project, and the Ecology Lockheed (Yard 2) Aquatic site. In 1995, the fund-lead Harbor Island RI/FS identified four "prioritized cleanup areas" for the sediment within the Harbor Island Superfund site. These four areas included the West Waterway, East Waterway, Northwest Harbor Island, and Northeast Harbor Island. Subsequently, an Administrative Order on Consent between participating PRPs and EPA was signed in 1995 to conduct additional sediment investigations prior to issuing a Proposed Plan and proposing a remedy for Harbor Island sediments. The objective of this supplementary Remedial Investigation was to collect supplemental data to the original RI to be used by EPA to determine areas requiring active remediation, natural recovery, or no further action. As an example, sediment toxicity test data were not available from the original RI and were collected as part of the supplementary RI. After reviewing supplementary RI data, EPA determined that the majority of the Northeast Harbor Island area was in compliance with state sediment standards and would not require remediation. EPA also determined that the highest concentrations of chemicals in the West Waterway were associated with the "shipyard sediments." In 1996, EPA issued a Record of Decision (ROD) for the Shipyard Sediment OU of the Harbor Island Superfund site. This ROD selected a remedy for contaminated sediments adjacent to the former Lockheed Martin shipyard, which was located in the West Waterway prioritized cleanup area, and sediments adjacent to the active Todd Shipyard, which was located in a portion of both the West Waterway and Northwest Harbor Island prioritized cleanup

HARBOR ISLAND (LEAD) (Continued) **1000164322**

areas. In 1999, the Shipyard Sediment OU was separated into the Lockheed Shipyard Sediment OU and the Todd Shipyard Sediment OU and since then EPA has issued four Explanation of Significant Differences for these two OUs. Based on the 1996 Shipyard Sediment OU ROD, the Northwest Harbor Island and West Waterway areas were redefined. The Northwest Harbor Island area essentially became the Todd Shipyard portion of the Shipyard Sediment OU, and the remaining waterway sediments not included within the Shipyard Sediment OU became part of the West Waterway prioritized cleanup area (which is currently defined as the West Waterway OU). In 1998, a second Administrative Order on Consent between three respondents and the EPA was entered into to collect and analyze additional sediment and tissue data associated with the West and East Waterways. The primary focus of the work was to collect supplemental data to assess ecological and human health risks associated with three bioaccumulative chemicals (mercury, PCBs, and TBT). No removals or early actions were completed in the West Waterway OU. A ROD addressing OU 8 was completed in September 2003.

HARBOR ISLAND (LEAD) (Continued) **1000164322**

Lead Smelter Sites:

Site ID:	1000949
Facility Region Id:	10
Latitude:	+47.579400
Longitude:	-122.352200
CoC Ind:	Y
Contaminant Name:	1,1,1-TRICHLOROETHANE
FF Ind:	N
NAI:	Y
Non-Primary Site-Sub Type:	Not reported
NPL:	Currently on the Final NPL
Primary Site-Sub Type:	Batteries/scrap metals/secondary smelting/precious metal recovery (Recycling)
Special Initiative:	Unrecognized Smelter per 2001 Report

Site ID:	1000949
Facility Region Id:	10
Latitude:	+47.579400
Longitude:	-122.352200
CoC Ind:	Y
Contaminant Name:	ANTIMONY
FF Ind:	N
NAI:	Y
Non-Primary Site-Sub Type:	Not reported
NPL:	Currently on the Final NPL
Primary Site-Sub Type:	Batteries/scrap metals/secondary smelting/precious metal recovery (Recycling)
Special Initiative:	Unrecognized Smelter per 2001 Report

Site ID:	1000949
Facility Region Id:	10
Latitude:	+47.579400

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/07/2016

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/13/2015

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/21/2016

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Last EDR Contact: 09/07/2016
Next Scheduled EDR Contact: 12/19/2016
Data Release Frequency: Semi-Annually

State- and tribal - equivalent CERCLIS

CSCSL: Confirmed and Suspected Contaminated Sites List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: Solid Waste Facility Database

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 09/07/2016

State and tribal Brownfields sites

BROWNFIELDS: Brownfields Sites Listing
A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

TACOMA/PIERCE COUNTY:

Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Version Date:	2014
West Map:	6005529 DUWAMISH HEAD, WA
Version Date:	2014

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

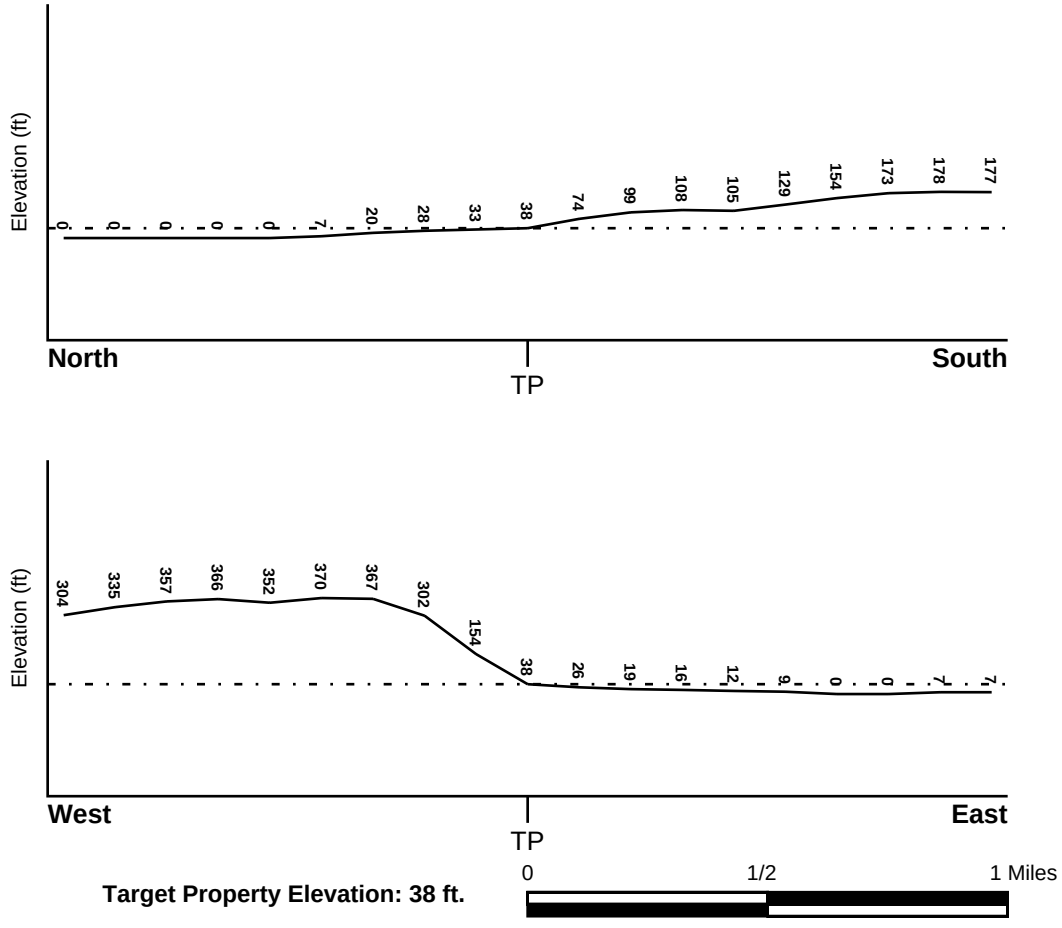

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 38 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
53033C0630F	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
53033C0610F	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SEATTLE SOUTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile SSE
Site Name:	ZANDT BRASS FOUNDRY
Site EPA ID Number:	WAD009252321
Groundwater Flow Direction:	NOT AVAILABLE
Inferred Depth to Water:	less than 20 feet
Hydraulic Connection:	Shallow ground water may be in hydraulic connection with the Duwamish Waterway. It is not known if shallow ground water at the site is brackish or fresh.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
A1	1/4 - 1/2 Mile NE	NW
5	1/2 - 1 Mile East	Not Reported
7	1/2 - 1 Mile ENE	Varies
8	1/2 - 1 Mile ENE	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	ALDERWOOD
Soil Surface Texture:	gravelly - sandy loam
Hydrologic Group:	Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.
Soil Drainage Class:	Moderately well drained. Soils have a layer of low hydraulic conductivity, wet state high in the profile. Depth to water table is 3 to 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	7 inches	gravelly - sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 6.00 Min: 2.00	Max: 6.50 Min: 5.10
2	7 inches	35 inches	very gravelly - loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 6.00 Min: 2.00	Max: 6.50 Min: 5.10
3	35 inches	39 inches	cemented	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
very gravelly - sandy loam

Surficial Soil Types: silt loam
very gravelly - sandy loam

Shallow Soil Types: very gravelly - loam

Deeper Soil Types: very gravelly - coarse sand
stratified
very gravelly - loamy sand
very gravelly - sand

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Ecology
Telephone: 360-407-6121

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by EHS International, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EXECUTIVE SUMMARY

DESCRIPTION

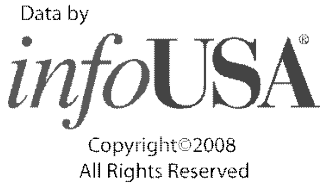

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR is licensed to reproduce certain City Directory works. Reproduction of City Directories without permission of the publisher may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by EHS International, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

Appendix I

Port of Seattle Records

October 28, 2016

Ms. Sunny Becker
Washington State Department of Ecology
3190 160th Avenue SE
Bellevue, WA 98008-5452

Subject: Third Quarter 2016 Progress Report, Southwest Harbor Project Remediation Areas 1, 2, 3, and 5
Ecology Facility/Site Numbers 2384, 2385, 2127, and 2383

Dear Sunny:

This letter contains the combined quarterly progress report for the Ecology-led portions of the Southwest Harbor Project (SWHP) for remediation areas (RAs) 1, 2, 3, and 5 and covers July, August, and September, 2016. This report satisfies the reporting requirement stipulated in the consent decrees for these sites.

A. List of on-site activities that have taken place during the quarter.

Monthly Landfill Monitoring: The landfill gas treatment system was fully operational and was operated continuously during the third quarter of 2016. The gas concentrations in the system remained consistent with historical trends and no methane was detected from the sampling ports located along Harbor Avenue SW. See Attachment 1 for a summary of the findings from the monthly monitoring events throughout the third quarter of 2016.

B. Detailed description of any deviations from the required tasks not otherwise documented in project plans or amendment requests.

Repairs were completed at sample port SP-08 in August after the riser broke during the July monitoring event. The details are outlined in Attachment 1.

C. Description of all deviations from the schedule during the current quarter and any planned deviations in the upcoming quarter.

There have been no deviations during the past quarter and no deviations are planned in the upcoming quarter.

D. For any deviations in schedule, a plan for recovering lost time and maintaining compliance with the schedule.

No deviations are anticipated.

E. All raw data (including laboratory reports) received by the Port during the past quarter and an identification of the source of the sample.

Landfill gas monitoring is performed monthly during the monitoring periods. Cumulative results are presented in Attachment 2.

The monthly monitoring includes data from the gas collection system and includes blower vacuum, conveyance flow, system effluent methane, system effluent carbon dioxide, system effluent oxygen, system temperature, and general conditions; sample port monitoring of methane, carbon dioxide, and oxygen; conveyance piping pressure and temperature; and routine maintenance and observations.

Landfill gas vapor samples collected from the process vapor ports BV-3 (before carbon canisters) and BV-4 (after carbon canisters) located on the landfill gas recovery system are analyzed by a laboratory on a semi-annual basis. The laboratory report for the March 2016 semiannual system process gas vapor samples is included in Attachment 2A.

F. A list of deliverables and activities for the upcoming quarter.

The Port will continue to perform monthly monitoring at the landfill gas collection system and treatment plant at the former landfill site. The semiannual inspection of site pavement caps, drainage, ballast cover areas, fencing, and warning signs is scheduled for the fourth quarter 2016 event.

The next deliverable will be a letter summarizing the monthly monitoring performed during the fourth quarter of 2016 and will be titled, *Fourth Quarter 2016 Progress Report, Remediation Areas 1, 2, 3, and 5*.

Please contact me at (206) 787-3193 if you have any questions or comments about our activities at the SWHP site.

Sincerely,

Brick Spangler
Environmental Program Manager

Terminal 5 Landfill Gas Collection and Treatment System

Monthly Monitoring Results Memorandum

Third Quarter 2016

September 27, 2016
Mr. Brick Spangler
Port of Seattle
Environmental Services

RE: Terminal 5 Landfill Gas Collection and Treatment System
Monthly Monitoring Results –Third Quarter 2016

Dear Mr. Spangler:

This letter accompanies records of monitoring conducted July 13, August 10, and September 13, 2016, at the Terminal 5 Remediation Area 3 Landfill Gas Collection and Treatment System.

Landfill System Monitoring

Terminal 5 (T5) monitoring tasks discussed in this report are associated with the 2015 Port of Seattle/Hart-Crowser Long Term Commitments Terminal 5 Agreed Order Services agreement. Tasks include monitoring activities at the landfill gas treatment system, across the piping network, and at four off-site soil gas probe locations along Harbor Avenue. Historical landfill system monitoring records through 2009 were available for comparison with current measurements. Landfill system monitoring was not performed from January through April 2010 due to contracting changes.

Field activities were completed in conformance with Port guidance. Gas concentrations were obtained in the field using an LMS-40 gas analyzer. Measured values are recorded monthly on a landfill monitoring form. Jamalyn Green of Hart Crowser, Inc. managed the data record and provided laboratory coordination.

Attachment 2, Terminal 5 Monthly Monitoring Data, summarizes field parameters recorded since July 2014 at monitored locations, including field measurement tables for methane, carbon dioxide, and oxygen, pressure, and temperature, as well as a series of site visit comments.

System Operating Time

The methane treatment system was operating normally during each monthly site check this quarter. Blower-B was placed in continuous operation mode on August 25, 2014, pending Blower-A repair.

Operation hours were not available, as Blower-B is not wired to a system timer. The third quarter 2016 included 97 days or approximately 2328 hours.

Summary of Field Records

The following summary compares averages of current field measurements with those obtained in the previous quarter and third quarter of 2015.

Gas Collection System

The landfill gas recovery system vacuum (Blower-B) averaged 0.3 inches Hg of vacuum. The conveyance flow meter averaged 64 cubic feet per minute (cfm).

System effluent methane concentrations recorded during the July, August, and September site visits averaged 10.1 percent, and compares with 12.9 percent in the previous quarter and 12.5 percent in third quarter 2015. The carbon dioxide concentrations recorded during the July, August, and September site visits averaged 8.1 percent, compares with 6.8 percent in the previous quarter and 8.3 percent in third quarter 2015. The landfill gas treatment oxygen concentrations recorded during the July, August, and September site visits averaged 8.3 percent, and compares with 8.8 percent in the previous quarter and 6.1 percent in third quarter 2015.

Landfill treatment system vapor temperature differences were measured at points upstream and downstream of the blower. T-1 (upstream) averaged 72°F, and T-2 (downstream) averaged 89°F. The temperature difference appears to be within normal operating range for the blower.

No adjustments were made in conveyance piping, network flow valves, or treatment system controls during third quarter 2016.

System Process Gas Sample Laboratory Results

Laboratory results for two landfill gas vapor samples collected September 13, 2016 are attached to this report. These routine "dry season," samples were obtained from process vapor ports BV-3 (before carbon canisters) and BV-4 (after carbon canisters) located on the landfill gas recovery system. Each sample was collected in a laboratory-supplied 6-liter Summa canister and submitted to Fremont Analytical in Seattle, Washington, for EPA Method 25C, determination of non-methane organic compounds (NMOC) in landfill gases.

Laboratory analytical results of 37.3 mg/m^3 at BV-3 and 43.9 mg/m^3 at BV-4 are consistent with results reported in March 2016, the concentrations are within range of values reported since 2010. The laboratory report is included in Attachment 2A.

Sample Port Monitoring

The 2016 third quarter sample port average landfill gas field measurement concentrations were: were methane at 11.9 percent, carbon dioxide at 7.8 percent, and oxygen at 5.6 percent. Methane measurements ranged from 0 to 28.0 percent, carbon dioxide ranged from 0 to 18.0 percent, and oxygen ranged from 0 to 20.6 percent. Results for each monitoring location are included in Attachment 2.

A field gauge was used to measure conveyance piping pressure across the site against barometric pressure. Pressure readings ranged from -0.24 inches of water at SP-01 to non-detect readings (0 inches of water). Pressure measured at SP-09, SP-11, and SP-12 were non-detect throughout the quarter.

The conveyance piping temperature inferred from measurements at sample port vaults ranged from 70 to 94°F. Sample port vault temperatures were monitored with a handheld thermometer using an infrared detector.

No methane was detected at the off-site monitoring probes (SG-302, SG-303, SG-304, and SG-329) on Harbor Avenue. Oxygen levels were generally lower for the on-site monitoring points and higher for the off-site probes.

Routine maintenance and observations included:

- Repairs were completed at sample port SP-08 in August after the PVC riser broke during the July site check. The PVC riser broke off about six feet below ground surface at the connection to the horizontal vapor treatment pipe. The repair consisted of inserting a 2-inch expansion plug at the location of the break. This plug had sample tubing installed through the plug to the surface of the vault for continued monthly monitoring.

- New black sealant was observed on surface cracks near the landfill treatment system compound, during the September site check.

Summary

The landfill gas recovery system currently operates using the backup Blower-B, repair of primary Blower-A is pending. No system shutdowns were noted during the third quarter.

Comparisons of July, August, and September 2016 field measurements of gas stream sample port concentrations, flow rate, pressure, and temperature indicate the landfill gas collection parameters

are stable and the system is removing methane from previously targeted areas. Conveyance piping locations and off-site probes were also monitored and showed gas concentrations, temperature, and pressure readings were comparable to values recorded under previous Blower-B operations.

Consistent field measurements were recorded at collection/treatment system monitoring points, indicating system containment. No odors were detected at ground level and the system exhaust stack appears to be operating as designed.

Follow-up Actions and Concerns

- Support repair or replacement of Blower-A with effective shutdown notification device.
- Support repair or replacement of condensate drum.
- Monitor treatment system and condensate drum repair status.
- Monitor treatment system winterization status.

Sincerely,

Timothy Fitzgerald Consultant (206) 271-2100

CC: Jamalyn Green, Hart Crowser

Seattle, WA 98121

RE: Port Seattle T5 Landfill Methane
Lab ID: 1609156

September 20, 2016

Attention Jamalyn Green:

Fremont Analytical, Inc. received 2 sample(s) on 9/13/2016 for the analyses presented in the following report.

NMOCs by EPA Method 25C (MOD)

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Mike Ridgeway
Laboratory Director

Date: *09/20/2016*

CLIENT: Hart Crowser, Inc.
Project: Port Seattle T5 Landfill Methane
Lab Order: 1609156

Work Order Sample Summary

Lab Sample ID	Client Sample ID	Date/Time Collected	Date/Time Received
1609156-001	T5_VPR_BV3_13Sep2016	09/13/2016 12:30 PM	09/13/2016 4:22 PM
1609156-002	T5_VPR_BV4_13Sep2016	09/13/2016 1:00 PM	09/13/2016 4:22 PM

Note: If no "Time Collected" is supplied, a default of 12:00AM is assigned

Case Narrative

WO#: **1609156**
Date: **9/20/2016**

CLIENT: Hart Crowser, Inc.
Project: Port Seattle T5 Landfill Methane

WorkOrder Narrative:
I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Air samples are reported in ppbv and ug/m3.

The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Standard temperature and pressure assumes 24.45 = (25C and 1 atm).

Note: The average molecular weight of 78.1 g/mol was used for the unit conversion and is to be considered an estimate.

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

Site Visit Checklist

EHS-International, Inc.

SITE VISIT CHECKLIST

GENERAL INFORMATION

Date: 10.12.2016 Arrival Time: 1142 Departure Time: 1231
Weather Conditions: SUNNY, CLEAR, 62°F
Inspector (Name, Title): DEE GARDNER
Site Contact (Name, Title): NA (VACANT PARCEL)

The source (Name/Agency/Publication) of all data should be provided with the data.

1.0 PHYSICAL SITE DESCRIPTION

Facility/Project Name: 27- VACANT PARCEL
Address: 2765 HARBOR AVE SW
City, State, Zip: SEATTLE, WA
County: KING

Property Boundaries (Street names, development, woods, lakes, etc.)

North: VACANT, OVERGROWN

South: CONDOMINIUM AT 2775 HARBOR AVE SW; OTHERWISE VACANT AND OVERGROWN

East: HARBOR AVE SW

West: VACANT, OVERGROWN

Methods of Investigation (Walk, drive, perimeter, etc.): MACHETED UP NORTH PROPERTY LINE, MACHETED THROUGH BRAMBLES AROUND WEST END, WALKED EAST END (SIDEWALK) AND ~~EASTERN~~ WESTERN 100+ FEET OF THE SOUTH PROPERTY LINE
Accessed/Did Not Access: WESTERN PORTION OF SOUTH PROP LINE (STEEP, OVERGROWN)

2.0 GENERAL PHYSICAL CONDITIONS

Size of Site (Acres/sqft): 0.46 ACRES
Shape of Site: TRAPEZOID
Number of Parcels: ONE (APN 6911200225)

Land Use

Present Use (Agriculture, residential, commercial, industrial): VACANT, OVERGROWN

Zoned: INDUSTRIAL BUFFER (IB/U 85)
Percentage of Occupancy: ZERO
Tenant Life (Use): NA

Land Cover: DENSE VEGETATION

Number of Buildings: ZERO

SITE VISIT CHECKLIST

Number of Stories: NA
Age of Buildings: NA
Size of Buildings: NA
Materials Building Constructed of: NA

Condition and Cleanliness of Buildings and Surrounding Area (Debris, dumps, equipment clutter): NA

Warnings, Notices and Permits Displayed (Type): NONE NOTED

Evidence of Past Use (Disturbed areas/patched pavement/demolition remains): NONE NOTED

Odors

Description (Gasoline, paint, chemical): NONE NOTED

Location:

Spills

Location: NONE NOTED

Description (Size, composition):

Staining (On walls, ceilings, floors, ground, soil, etc.)

Location: NONE NOTED

Color:

Description (Size, composition):

Vegetation

Ground Cover (Trees, grass, crops, bare): DENSE, OVERGROWN

Discoloration (Description/location/probable cause): NA

Bare Spots (Location/probable cause): WEST END, DUE TO SLOPE INSTABILITY

Stunted Vegetation Growth (Location/description): UNSTABLE GROUND

Increased Vegetation Growth (Location/description): NA

Topography

Relief (Flat, gently rolling, sloping, hilly, karst): EASTERN 50+ FEET IS STREET LEVEL, REMAINDER OF SITE SLOPES STEEPLY UPHILL TOWARD THE WEST

Regional and Local Slope:

Elevation:

Depression/pits/lagoons (Description/location): NONE NOTED

Evidence of Fill (Changed topography, immature vegetation, mining activities-description/location): NONE NOTED

Source of Fill (Source of information): NA

Hydrology

Ponds, Streams, Ditches, etc. (Location, direction, distance): NONE NOTED

Wetlands (Detailed study required?): JUST HORSETAILS

Source of Water (Where water in streams, rivers, ditches is flowing from: NONE NOTED

Discharge Points of Water: NONE NOTED

Site Receives/Surface Water Run-off from. (Direction): WEST

Run-off from Site Flows to (Direction into inlets, street, adjacent land): EAST, HARBOR AVE SW

Wastewater Discharge: NA

Flood Plain: NA

Geology and Hydrogeology (Record Review)

Soil Type. (Clay, sand, loam): SILT
Drainage (Good, fair, poor): POOR
Depth of Bedrock: UNKNOWN, OVER 100'
Groundwater Depth/Flow Direction: EAST

3.0 STORAGE

USTs

Evidence of On-Site/Adjacent Site UST's (Pipes, vents, pump islands, fill caps, patching): NA
