## **PROJECT DESCRIPTION & VISION**

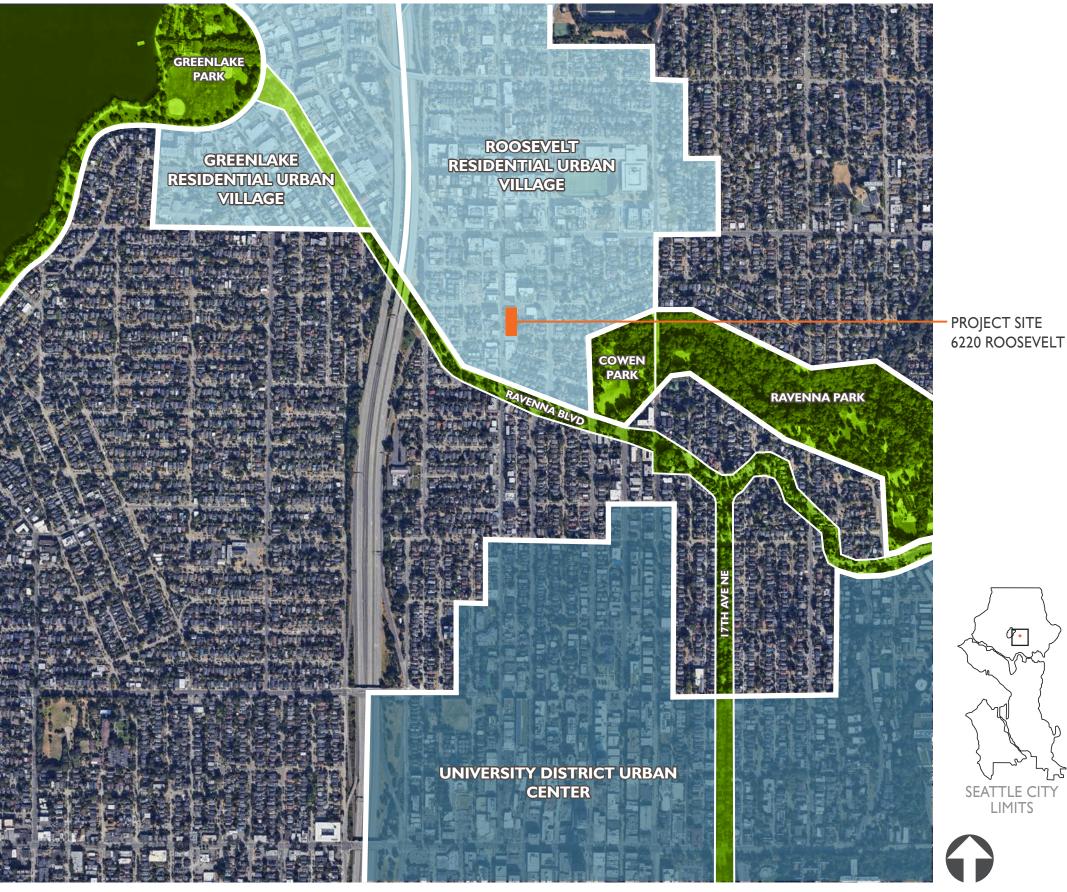

This is a neighborhood in transition, with recent upzoning and completion of the new Light Rail Station at NE 65th Street and 12th Avenue NE. The project site bridges the more urban, and dense mixed-use projects to the north, and the lower scale commercial and low rise multi-family to the south. Even with the densification of the neighborhood, strong ties to the neighborhood history and its connectivity to nearby schools, parks, and amenities remain. The site sits within a strong urban hub; responding to new and existing conditions will be important.

This project aims to enhance the connectivity with its surroundings while also responding to the residential and commercial character of the neighborhood. A primary goal of the project is to provide a timeless residential project that brings much needed housing to an already robust and evolving commercial / residential corridor.

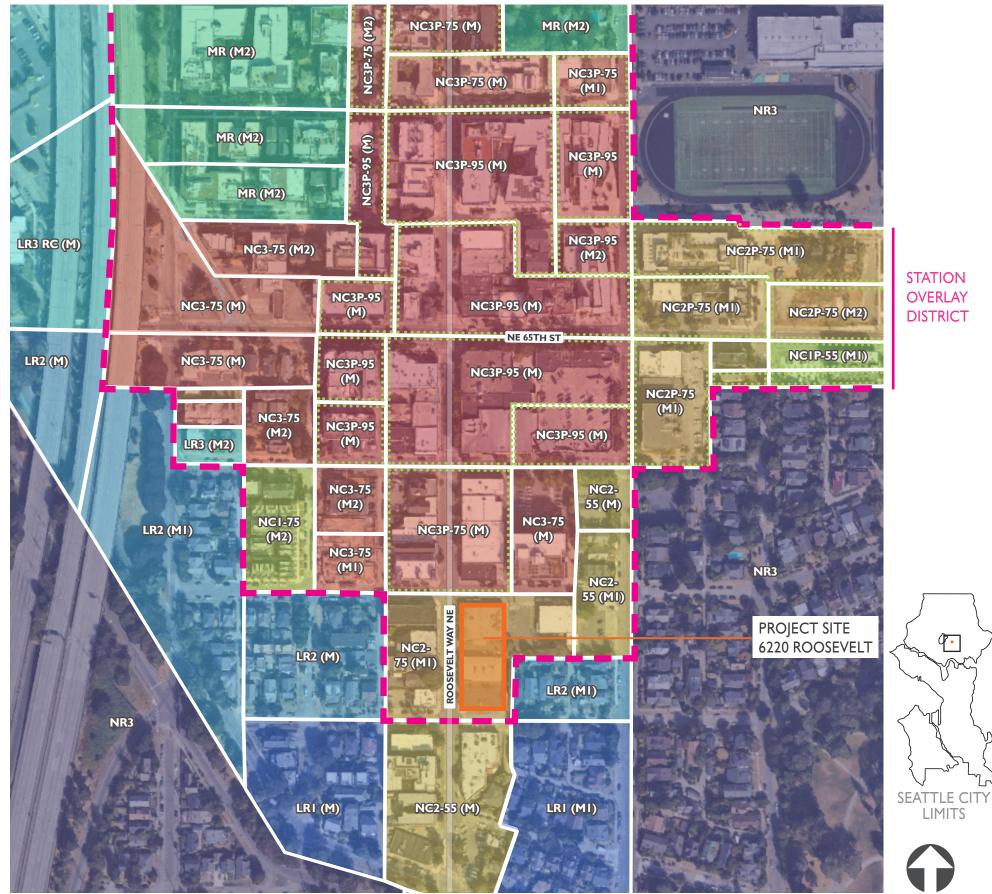

7-stories

	below grade parking
<b>147</b> units*	<b>69</b> stalls
*includes a mix of studios, open 1 bedrooms, one-bedrooms, and two- bedroom units

# REVIEW OF EDG & ADJUSTMENTS

REFERENCE	COMMENT	RESPONSE
PAGE 12	I.a. The Board discussed all massing options provided by the applicant, considered the responsiveness to the existing context, the zone transition with the lower residential scale to the east, and agreed with the applicant's preferred architectural massing Option 3. The Board appreciated Option C for its strong upper-level massing, central recessed lower-level modulation, stepped top-level with amenity room at the southern end of the building, and defined two-story corner articulations at the intersections of NE 63rd St and Ne 62nd St that helped break down the perceived height, bulk, and scale along Roosevelt Way NE. (CS1-C, CS1-III, CS2-C, CS2-D, CS2-III-iii, DC2-A)	The overall massing remains the same from EDG with only minor adjustments based on further Board comment.
PAGES 14-15, 20-21, 25, 33	Ib. The Board strongly supported the recessed balconies shown on all sides of the building on massing Option 3. The Board specifically noted that the corner balconies successfully mitigated the perceived bulk of the building in relation to the adjacent low- scaled residential structures to the east. The Board gave guidance for the applicant to retain these elements moving forward and to ensure that the depth of all balconies will be deep enough to be used and provide activation along each façade. (DC2-C, DC2-D, DC3-B-1)	The proposed design maintains recessed balconies around the buildin of which is adequate for resident use. The balconies range in size wh primarily dictated by the restrictions of the adjacent overhead powe Whenever possible, the deck is made to meet the requirements for o as outdoor amenity space. The proposed design has revisited the placement of decks at 3 of the corners. The NW corner does not abut a smaller zone and replacing with large glazing allows for a stronger architectural statement at the enhancing prominence of the NW corner near the lobby entrance per guidance I c. For consistency, the decks at the SE and SW corners were shifted to south facade. After much study of the interior apartment layout this was determined to provide the most usable deck for residents and to enhance privacy of the neighboring structure to the east. The corner focuses on providing large corner windows in place of the decks to r transparency and lightness. The design also maintains the top floor st to reduce building scale across the alley from the low rise zone.
PAGES 16-17, 34-35	I.c. Although the Board supported the overall massing approach in Option C, the Board was concerned that the main residential entry at the corner of NE 63rd St and Roosevelt Way NE lacked transparency, prominence, and potential for interaction with the right-of-way when compared to massing Option 1. Moving forward, the Board gave guidance to study ways to increase the identifiability of the main residential entry through increased transparency, operable windows with usable exterior space at grade, or other means to create a visually prominent and physically engaging main residential entry. (PL2-D, PL3-A, PL3-B, DC2-E-1)	The adjusted design includes a long stretch of continuous glazing at t along Roosevelt for increased transparency and visual connection. Th is capped by a continuous canopy and signage emphasizing the lobby The canopy wraps the northeast corner onto NE 63rd to engage peo approaching from the east. Above the pronounced masonry base wh houses the lobby, the upper mass has a strong fenestration element v creates more emphasis and distinction at the corner (DC2-E). At gra landscape design opens the sidewalk on Roosevelt to welcome pedee naturally towards the entrance (PL2-D). The entry is flanked on both by seating. Low signage wrapping the corner is specifically placed to pedestrians eyes helping draw attention to the building entry.

REFERENCE	COMMENT	RESPONSE
PAGES 13, 24, 38-41, 66	2a. The Board supported the overall ground level uses as proposed in Option 3 with its solid waste storage room accessed from NE 63rd St, corner lobby/amenity space at the corner of NE 63rd St and Rosevelt Way NE, clearly articulated fitness room along NE 62nd St, and building services accessed from the alley. However, the Board was concerned that the proposed continuous residential use and landscape buffer between the building and sidewalk along the Roosevelt Way NE street frontage minimized the potential for activation of the sidewalk, contrary to the pattern of activation that retail spaces provide along the Roosevelt Way NE street frontage to the north. The Board gave guidance for the applicant to study ways to increase the activation of the sidewalk along Roosevelt Way NE using stoops at the residential units, layered landscaping with potential seating areas, integration of a secondary residential entry, or other means to enhance the ground level and pedestrian environment. (CS2-II-ii, CS2-II-ii, PL1-B-3, PL3-B-1, PL3-B-2, PL3-II-ii, DC1-A-1, DC3-B, DC3-II-ii,DC3- III)	The updated design relocates the fitness and bike entry from NE 621 fronting on Roosevelt Way NE to better activate Roosevelt's streets (DC1-A-1). The team envisions an eye-catching art and light installat within the double height portion of this entry to make it visually as we functionally engaging. The design team studied adding exterior access to the apartment ho facing Roosevelt, but grade differences created challenges and the restairs and landings ate up quite a bit of landscaping as well as usable space (CS2-II-i). The team feels strongly that the addition of lush lan is a priority for softening the streetscape along Roosevelt (CS2-II-ii, II-ii, DC3-II-ii). We also find that residents are more likely to use ext patios when they are large (like currently planned) and secured, with on the street vs. direct access. It gives residents peace of mind for k tables and chairs on their patios when they aren't accessible from the street (PL3-B-1, PL3-B-2). When residents use their patios, it adds t activity of the streetscape and provides a better sense of community neighborhood (PL3-B). The landscape design along Roosevelt adds a midblock seating area at to the sidewalk where pedestrians can pause and generally find respit the bustling Roosevelt thoroughfare (PL1-B-3). This area creates a p activation mid block between the building lobby and secondary entry
PAGES 18-19, 42-46	2b. Although the Board supported the overall ground level uses proposed, the Board discussed whether the above-grade fitness room and semi below-grade bike amenity room with residential use above were to best uses to animate and engage with the corner of Roosevelt Way NE and NE 62nd St frontage. The Board gave guidance for the applicant to study alternative uses at this location, such as co-working or lounge spaces, and consider their relationship to grade. The resulting design should provide more active uses along both street frontages and help activate the sidewalk at this intersection. (DC1-A-1, DC3-B, DC3-II-ii, DC3-III	The updated design relocates the fitness and bike entry from NE 62 to the corner of NE 62nd and Roosevelt Way NE to better activate I streetscapes (DC1-A-1). Bike and fitness are the best uses for engag neighborhood at the south end of the development site. The interse of 62nd and Roosevelt (the southwest corner of the site) provides end access to Ravenna Park to the east, and Ravenna Boulevard to the southich links to Green Lake. Building residents will enjoy using the sour fitness amenity and entry to link their biking and exercise routines to neighborhood's greenspace amenities (DC3-B). Furthermore, becau is the low end of the site, it creates an easier entry for cyclists, helpip promote cycling (PL4-B). The convenience of the southern access enwill be regularly used by residents, while other uses are less likely to the desired ebb and flow of pedestrians or engagement between pul private space outlined by the guidance. As an amenity to both residents and the public, the streetscape incluseating and etched boulders which depict simple exercises and / or band walking maps for the neighborhood. These further link the inter exercise functions to the exterior sidewalk and neighborhood engagestreetscape.

REFERENCE	COMMENT	RESPONSE	
PAGES 18-19, 43-45	2c. The Board noted that access to the semi below-grade bike amenity space, adjacent to the vehicle access ramp on NE 62nd St, posed a safety risk to cyclists. The Board gave guidance for the applicant to study alternative locations for the bike amenity room and/or access points, including from Roosevelt Way NE, to help minimize potential conflicts between cyclists and vehicles. (PL4-B-1, PL4-B-2, DC1-B-1)	The updated design relocates the bike and fitness entry at the southwest corner of the site at the corner of NE 62nd and Roosevelt Way NE, away from the garage vehicle entry (PL4-B-1, DC1-B-1). Because this is the low end of the site, it creates an easier entry for cyclists, helping to promote cycling (PL4-B-2).	TOOSEVELT WAY NE
PAGES 16-17, 36-37	2d. The Board acknowledged Seattle Department of Transportation feedback that the alley would remain unimproved and unable to support all vehicle access to the site. The Board gave guidance for the applicant to thoughtfully incorporate the design of the solid waste storage room access doors and blank walls along NE 63rd St and the vehicle access on NE 63rd St into the over façade concept and composition. (DC1-C-2, DC1-C-4, DC2-B)	Both waste room and garage entry are located directly adjacent to the unimproved alley, where they would be anticipated by pedestrians (DCI-C-4). By splitting up the waste area from the garage vehicle access to separate facades, the design avoids large frontages of service uses that can lead to blank facades (DC2-B). Both the waste room fronting NE 63rd, and the garage entry fronting NE 62nd are clad with the same higher quality exterior material as the primary at grade residential facade fronting Roosevelt to seamlessly fit into the overall composition. At the south end of the site, the garage vehicle entry is pulled back from the sidewalk to maintain appropriate sight triangles for safety. The revised massing along the south façade de-emphasizes the vehicle entry and gives stronger presence to both the residential frontage and the bike and fitness entry at the corner (DC1-C-2).	
PAGES 13, 24, 48-52	3a. The Board gave guidance for the applicant to carefully consider the design of building and its relationship to the alley and the lower-scale residential to the east. The Board noted that careful consideration should be given to the relationship of residential patios to grade, garage door design, large expanses of transparency and lighting to promote interaction and visual connection with the alley, increasing safety for residents and pedestrians. The Board also noted that a secondary residential access from the alley could also help support activity along the alley. (PL3-B, DC1-B, DC4-C)	Although this alleyway is not being improved at this time, the proposed building does setback the required area at grade for future improvement. As context around the site continues to develop, the alley's purpose will be reinforced as a service corridor for adjacent buildings in keeping with Seattle's Right-of-Way Improvement Manual. Even today the alley is used by smaller vehicles. With this in mind, the project team sees adding pedestrian access connecting to the alley as a safety hazard, especially when safer access is readily available on the adjacent streets (DC1-B). The building design provides apartment homes with large glazing fronting the alley to provide eyes on the alley for security (PL2-B-01). The frontage is set back from the alleyway and the setback area is landscaped to appropriately buffer residents from the vehicles and noise (PL3-B). Minimal lighting is planned for safety but designed to avoid glare into neighboring properties (DC4-C).	

REFERENCE	COMMENT	RESPONSE
PAGES 12, 27-32	4a. The Board supported the overall architectural concept, 'Ravine Hierarchy, described on page 50 of the EDG packet, with its reference to the tall trees and lush undergrowth in nearby Ravenna Park. Moving forward, the Board gave guidance for the applicant to continue to develop the architectural concept and consider the application of high-quality materials with depth, texture, and richness in a way that compliments the overall architectural concept and enhances the various massing elements. The Board noted that the recessed balconies begin to successfully reinforce a verticality and therefore gave guidance to retain this aspect of the design moving forward. (DC2-B, DC2-C-1, DC2-D, DC2-II-ii, DC4-A-1, DC4-D-1)	The proposed material palette focuses on high quality materials with in locations where it can be appreciated. The design maintains the de recesses with inset balconies presented at EDG (DC2-B, DC2-C-I). these recesses the design provides a wood-look material that adds w to the overall façade and detail in a location that can be appreciated the residents using their decks. The expressed masses at grade at the sour and northwest corners are primarily clad in brick which helps them r to the existing smaller scale commercial buildings in the area. These is encompass both the primary residential lobby entrance and the fitness bike amenity entrance. In these locations the modularity and texture brick adds depth and interest to these areas of high engagement (DC DC4-A-I). The design includes canopies over all exterior doors at grade are smaller but still provide weather protection and scale (DC DC2-D-I). The landscape design around the base of the building pull inspiration from Ravenna Park. The plant palette embraces species for the park and includes large boulders, like those found in the park (DC DC4-D-I).

## MASSING OPTION 3 (PREFERRED)

#### EDG Report Comment Ia:

The board unanimously supported moving forward with the preferred option, option 3.

(See pages 8-11 for more information)

#### **EDG Report Comment 4a:**

The board liked the massing concept and wants to see high quality materials and fenestration developed in line with the concept.

#### (See pages 8-11 for more information)

#### **STATS**

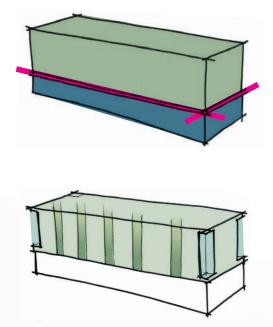

- +/- 149,300 GROSS SQUARE FEET
- 146 APARTMENT HOMES
- 69 PARKING STALLS
- Waste pick up located on 63rd. The garage vehicle entry located on 62nd.

#### **CONCEPT: RAVINE HIERARCHY**

Massing Option 3 pulls inspiration from the tall trees and lush undergrowth in nearby Ravenna Park. Using a strong datum to define the pedestrian realm, the design recesses the lower massing to maximize space at grade, while a columnar rhythm of recessed bays reminiscent of tree trunks modulates the upper massing. At the main residential lobby entry and at the southern amenity space, the lower massing extends out towards the sidewalk to better engage and activate the pedestrian realm.

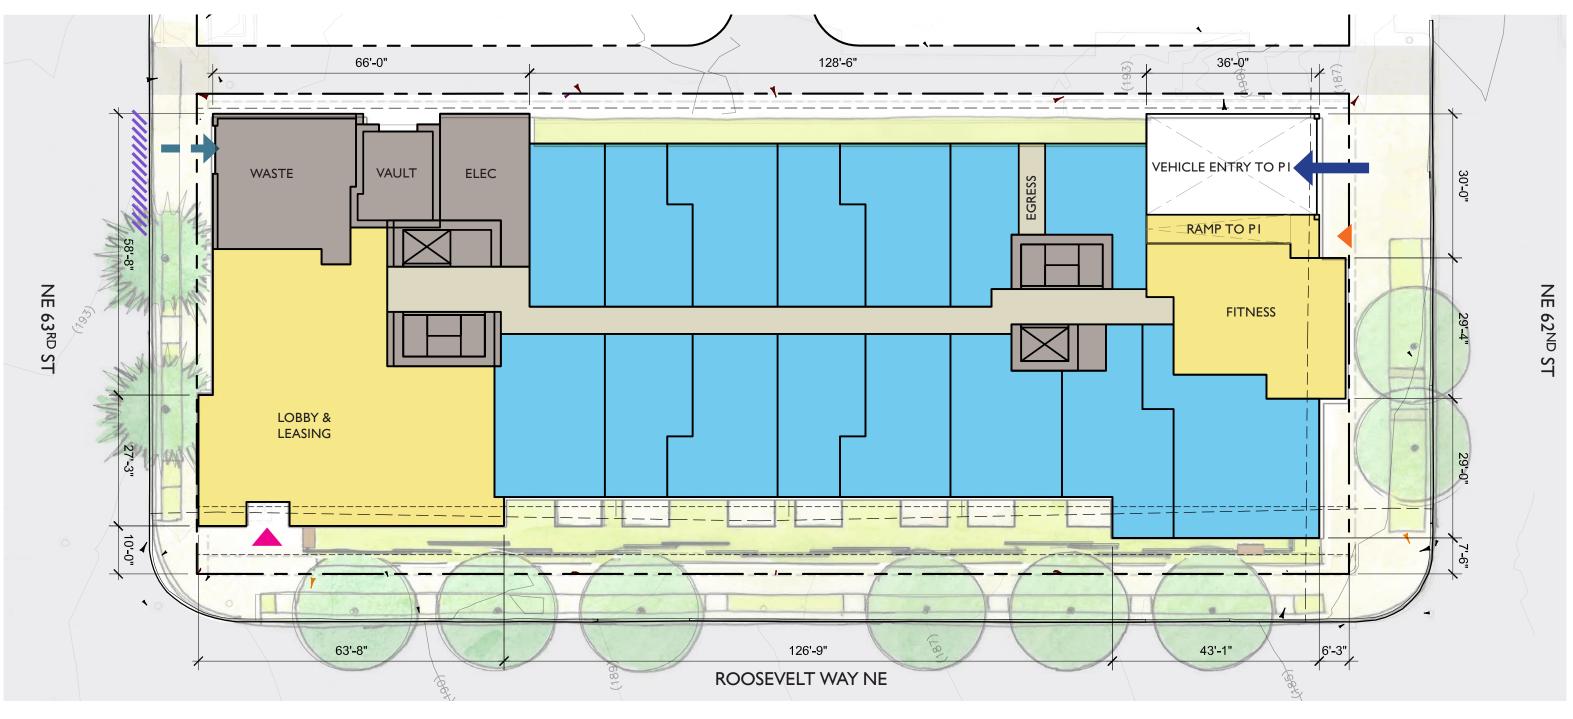

Massing steps down at southern end to respond to grade and LR2 zone to the southeast.

Allowable massing envelope of adjacent NC2-55 property.

Lower massing is set back from the property line and sidewalk providing space for landscaping and residential patios between residential frontage and sidewalk.

#### **EDG Report Comment 3:**

The board asked that the design evolution create an appropriate response to the alley that takes into account safety and promotes connectivity

(See pages 8-11 for more information)

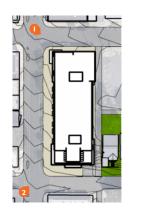

#### EDG Report Comment 2a:

The board supported the ground level uses, but wanted to study increasing activation on Roosevelt.

(See pages 8-11 for more information)

## EDG: MASSING

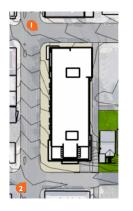

### EDG Report Comment Ib:

The board strongly supported the recessed balconies on option 3 and asked these elements be retained. They requested the balconies be deep enough for use. They also specifically noted how the corner balconies reduce the appearance of scale.

(See pages 8-11 for more information)

## MASSING ADJUSTMENTS

#### **EDG Report Comment 1b:**

The board strongly supported the recessed balconies on option 3 and asked these elements be retained. They requested the balconies be deep enough for use. They also specifically noted how the corner balconies reduce the appearance of scale.

(See pages 8-11 for more information)

This corner did not contain a balcony at The darker graphic overlay indicates where the recessed balconies noted by **CS2.III.iii.e:** Modulating recesses break down the length of the massing. Providing a different expression The revised massing maintains the recessed balconies noted by the board.

the site. -

**CS2.D.I:** This corner abuts zones with the same allowable mass. The upper mass is stepped back and relates to the scale of newer structures while the lower, protruding mass relates to older structures.

**CS2.D.I:** This corner abuts zones with similar allowable mass. The upper mass is stepped back and relates to the scale of newer structures while the lower, protruding mass relates to older structures.

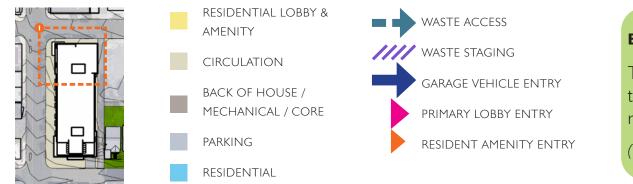

For consistency and consideration of the neighboring property, the corner balconies were relocated to the center of the southern massing. Here the exterior space does not look directly down on the neighbor.

**CS2.III.iii:** The stepped massing at the top of the building and again at level 3 help transition the massing in the NC3-75 zone to that of the neighboring site, mitigating the bulk and scale of the building adjacent to smaller context.

**CSI.C:** The stepped massing at the south end of the building follows the sloping topography of

> **CS2.D.5:** To further mitigate potential perceived bulk at the corners, the interior layouts were rearranged to allow for larger corner windows that mimic the porosity provided by the balconies. -

### EDG: RESIDENTIAL LOBBY & NE 63RD ST FRONTAGE

### EDG Report Comment Ic:

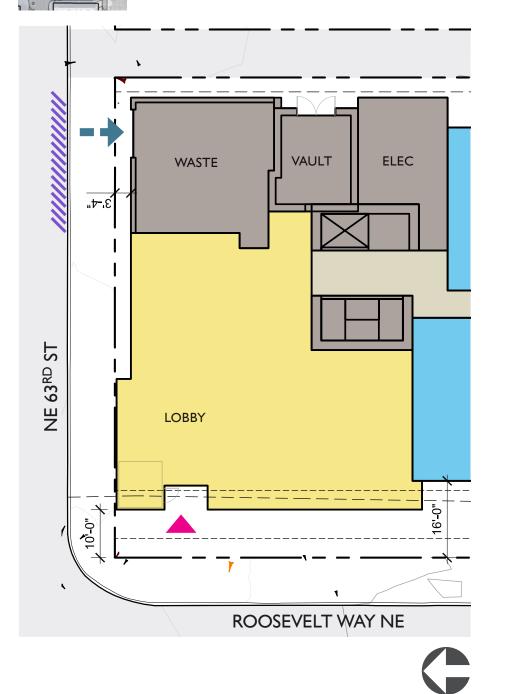

The board wanted to see more transparency and prominence at the residential lobby to better engage the street.

(See pages 8-11 for more information)

### EDG Report Comment 2d:

The board wanted to ensure the necessary utility frontages are nicely incorporated into the street facades.

(See pages 8-11 for more information)

WEBER THOMPSON

PHOENIX

### **REVISED ENTRY MASSING**

### **EDG Report Comment Ic:**

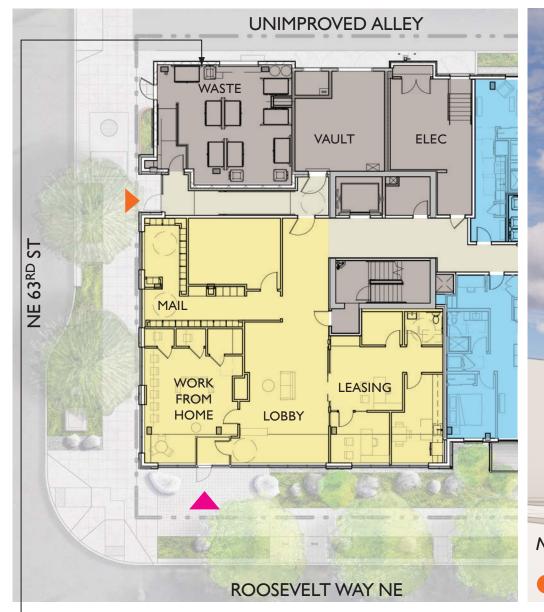

The board wanted to see more transparency and prominence at the residential lobby to better engage the street.

(See pages 8-11 for more information)

#### **EDG Report Comment 2d:**

The board wanted to ensure the necessary utility frontages are nicely incorporated into the street facades.

(See pages 8-11 for more information)

DCI.B.I / DCI.C.4: Although the alley will remain unimproved after much negotiation with SPU, waste pick up will occur just inside the alley, removing the waste room roll up door from the street facing facade and allowing for a more pedestrian friendly streetscape.

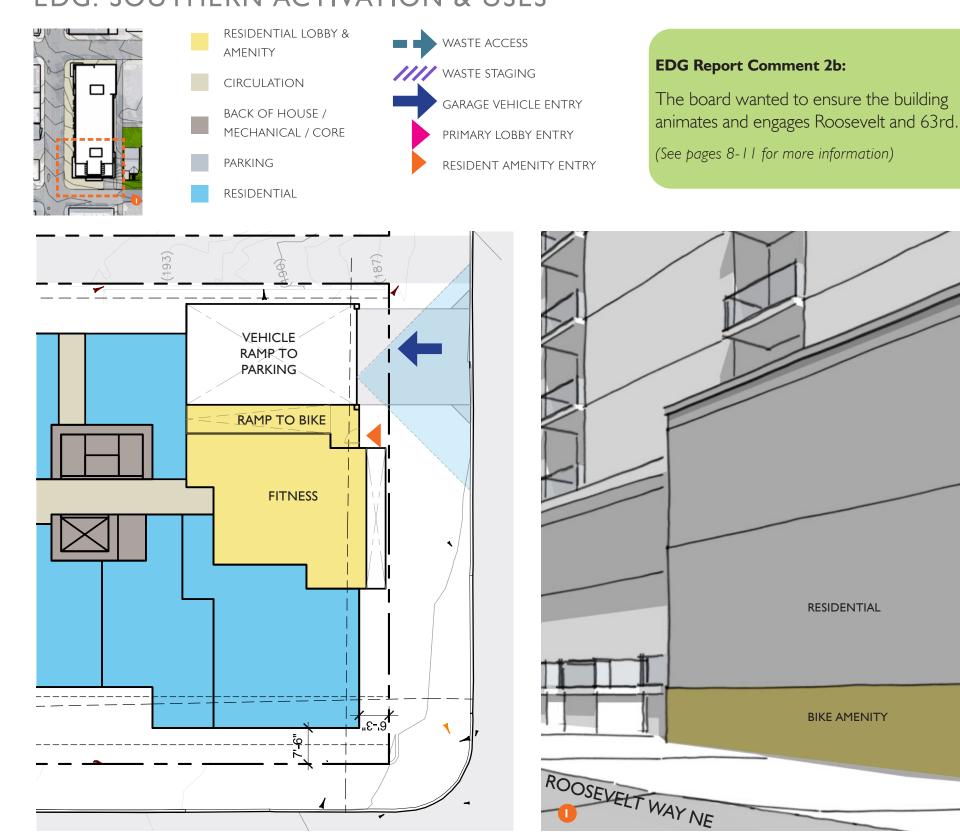

**CS2.B.2:** An additional secondary entry at the eastern end of the lobby provides better access for residents and more engagement with the street.

places more lobby glazing directly adjacent to the 63rd Street sidewalk. The revised massing also downplays the utilitarian frontage.

#### PHOENIX WEBER THOMPSON

at the entry itself, as well as in other areas of the lobby. The glazing is also less interrupted by pilasters for more continuous transparency.

### EDG: SOUTHERN ACTIVATION & USES

### **EDG Report Comment 2c:**

The board was concerned about the proximity of the bike room and pedestrian entrance to the garage vehicle entry.

(See pages 8-11 for more information)

WEBER THOMPSON

Setback line for overhead power lines. All building features must be clear of this boundary for safety.

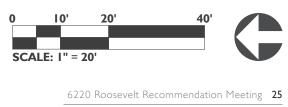

Balcony is relocated from corner to living room for functionality of both balcony and apartment home. To best respond to the massing change, the design employs corner windows to reduce the perceived bulk of massing at the corner (DC2.A.2)This change also improves privacy for the adjacent small scale structure. This adjustment also creates a more cohesive design with the northern corners.

Balconies facing south best capture sun and potential views per design guidelines CSI.III & DCI.A.4,

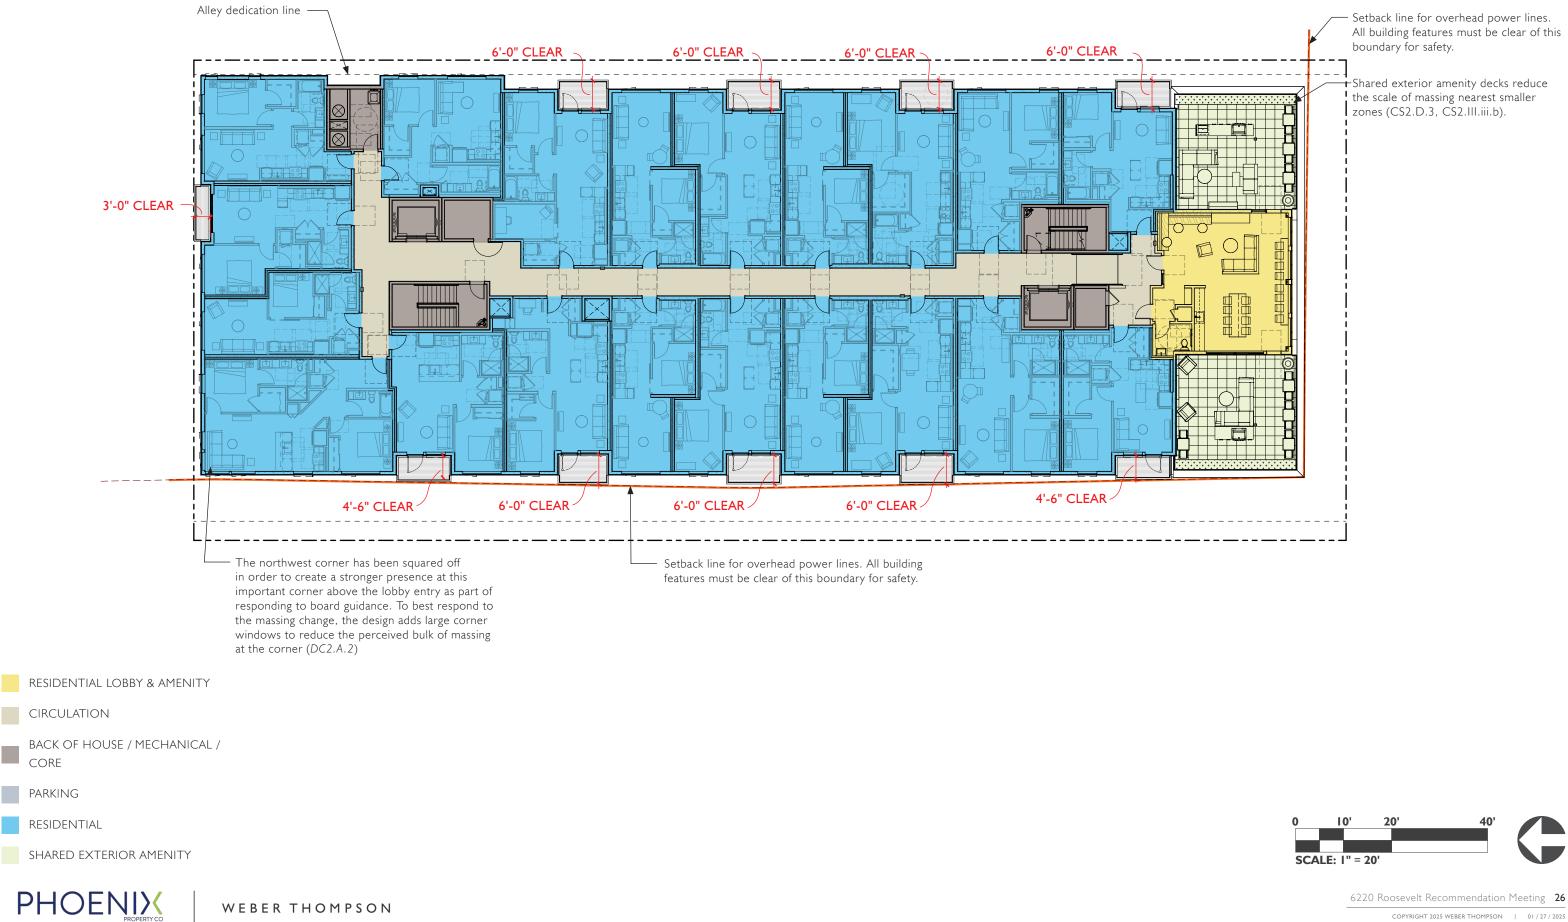

#### - 3'-0" CLEAR

Large glazed doors at balconies allow for balconies to act as extensions of the apartment living rooms increasing functionality and activation.

-Balcony is relocated from the corner bedroom to the living room for functionality of both balcony and apartment home. To best respond to the massing change, the design employs corner windows to reduce the perceived bulk of massing at the corner (DC2.A.2) This adjustment also creates a more cohesive design with the northern corners.

### LEVEL 7 FLOOR PLAN

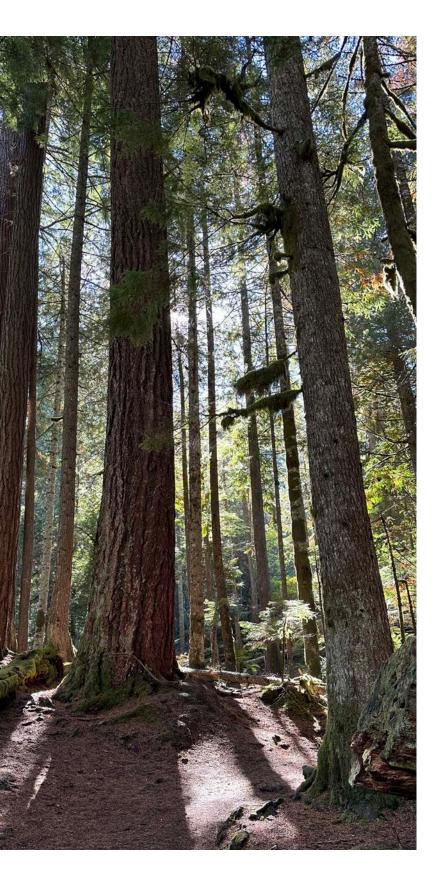

### RAVENNA PARK: NATURE SLICING THROUGH THE CITY

Disrupting the bustle and order of the city, a dense forest seeps out of Ravenna ravine. Towering trees rise from the ravine floor like massive pillars supporting the sky above. At their feet, nature creates a cozy ecosystem of lush greens, delicate flowers, and mossy boulders.

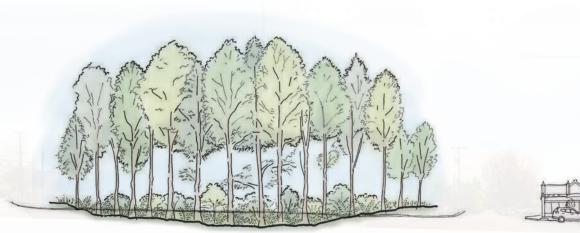

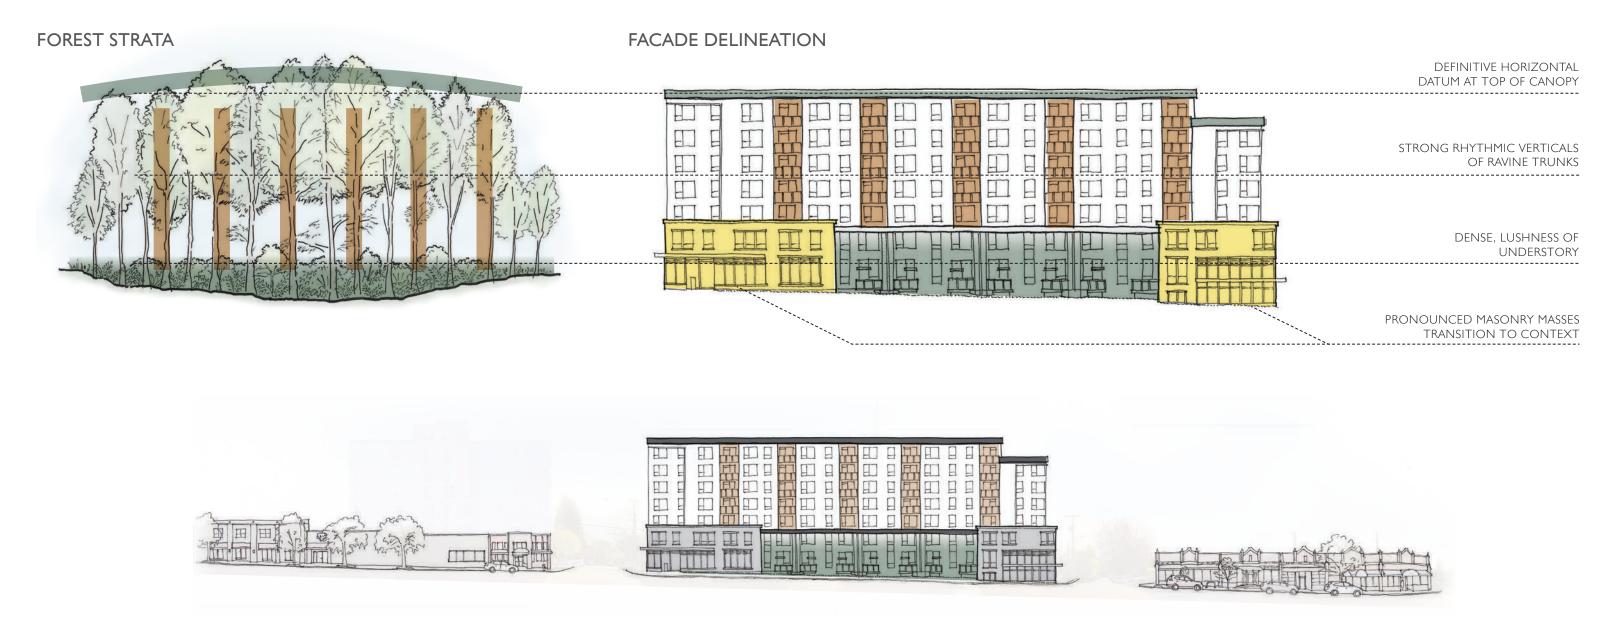

### REVITALIZING THE BLOCK'S BLEAKNESS WITH CONCEPTS FROM RAVENNA

The building design seeks to mimic Ravenna's rhythmic wood pillars and lush understory, revitalizing the austerity of this stretch of Roosevelt Way.

### CONCEPT EXPRESSION

of the older, more historic structures fronting Roosevelt. (CS3.A.1, DC4.A.1)

### MATERIAL PALETTE

### EDG Report Comment 4a:

The board liked the massing concept and wants to see high quality materials and fenestration developed in line with the concept.

(See pages 8-11 for more information)

**DC2.II.ii.b:** Masonry that relates to the historic brick structures in the neighborhood, and a high quality ceramic clad cementitious panel compose the ground level streetfacing facades.

### APPROACH ON ROOSEVELT

### **RESIDENTIAL LOBBY**

#### **EDG Report Comment Ic:**

The board wanted to see more transparency and prominence at the residential lobby to better engage the street.

(See pages 8-11 for more information)

**CS3.A.I / DC2.C3:** In keeping with the detailing on nearby older structures, the corner brick podium masses include details like brick soldier courses and expressed masonry lintels above windows.

**PL2.C:** A large canopy provides coverage at the main lobby entry. It provides weather protection over the entry call box and adjacent seating as well.

**DC2.C.I / DC4.A:** The facade around the primary entry is clad in a variegated brick atop a low concrete base enhancing durability, texture, and scale within the pedestrian realm

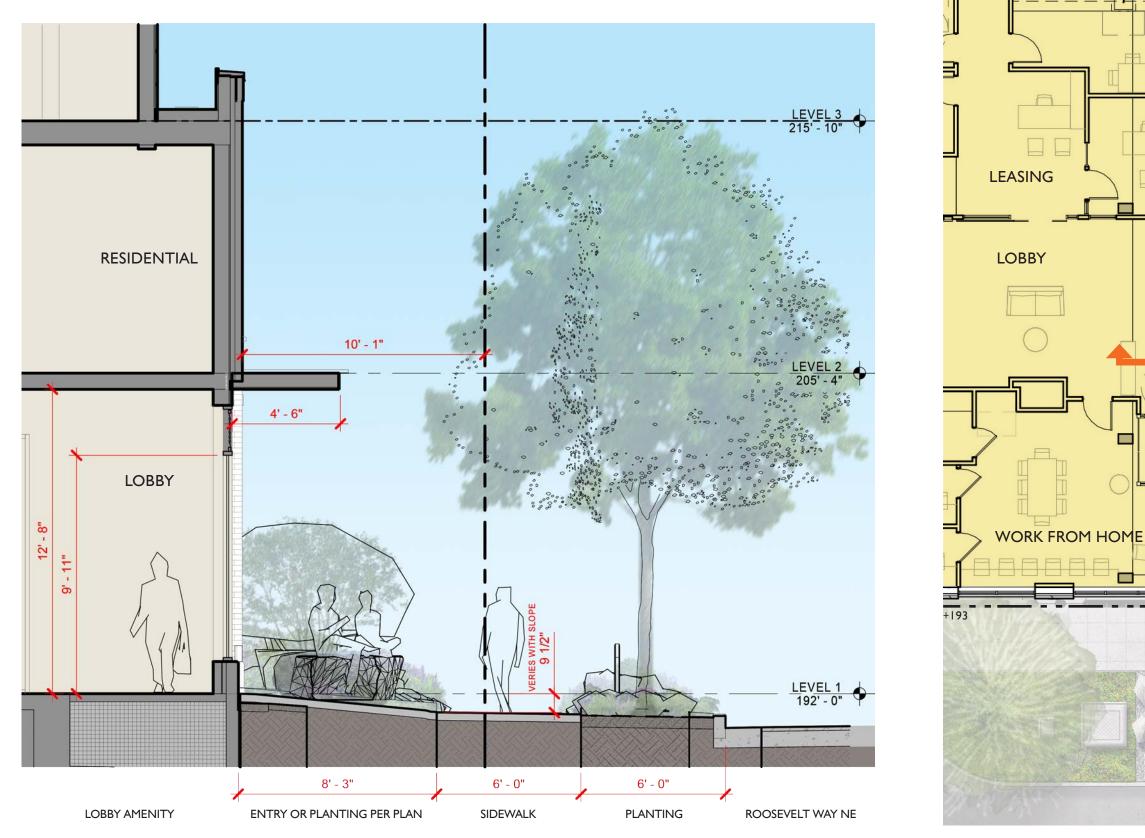

**PL2.D / PL3.A:** Significant glazing, bench seating, and the flow of the sidewalk leading to the front door provide natural wayfinding to the main lobby entry. Signage and the canopy further emphasize the entry.

**DC4.II.i:** Building identification and entry signage wrap the brick corner at Roosevelt and 63rd. The low placement of this signage is easily identifiable for pedestrians.

**PL1.A.2 / PL1.B.3:** The widened sidewalk leading to the main lobby entry with benches, canopy coverage, and landscaping creates spaces that foster interaction.

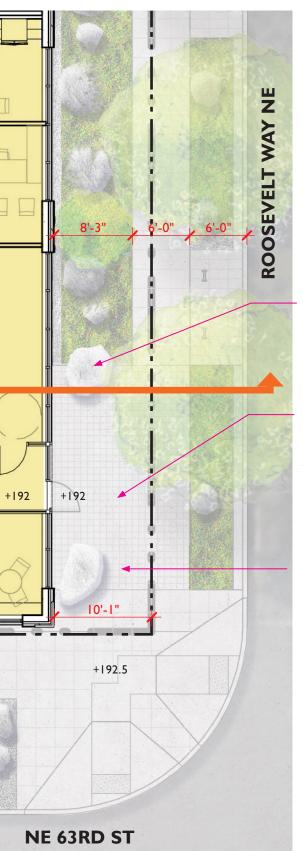

### **RESIDENTIAL LOBBY**

PEDESTRIAN SECTION AT LOBBY ENTRY

PARTIAL SITE PLAN

Halved boulders with smooth top provides seating in keeping with the natural aesthetic of the landscaping.

#### PL2.D / PL3.A:

Significant glazing, bench seating, and the flow of the sidewalk leading to the front door provide natural wayfinding to the main lobby entry.

#### PLI.A.2 / PLI.B.3:

The widened sidewalk leading to the main lobby entry with benches, canopy coverage, and landscaping create spaces that foster interaction.

## NE 63RD ST FRONTAGE

#### **EDG Report Comment 2d:**

The board wanted to ensure the necessary utility frontages are nicely incorporated into the street facades.

(See pages 8-11 for more information)

**DC2.II.ii.b:** Masonry that relates to the historic brick structures in the neighborhood, and a high quality ceramic clad cementitious panel compose the ground level street-facing facades.

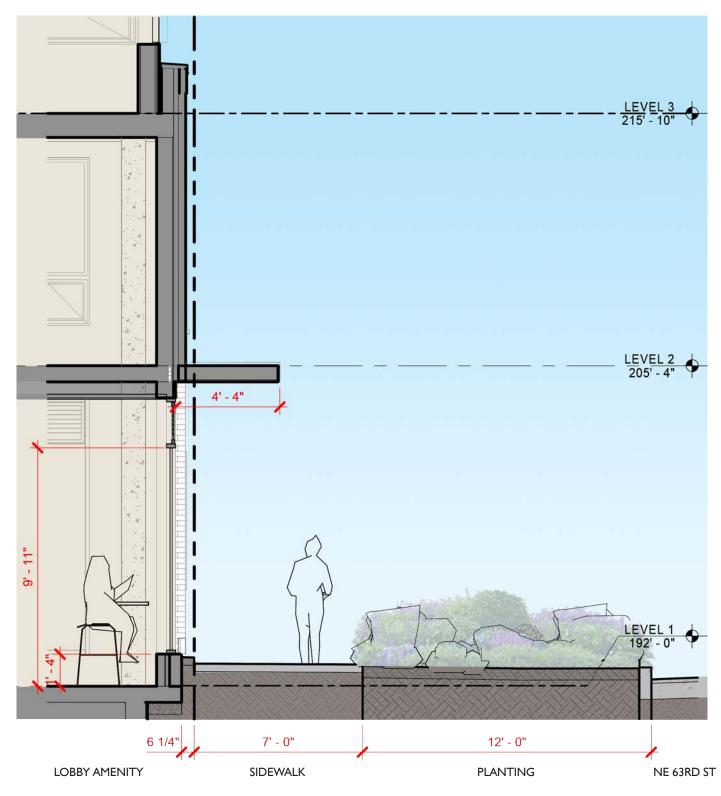

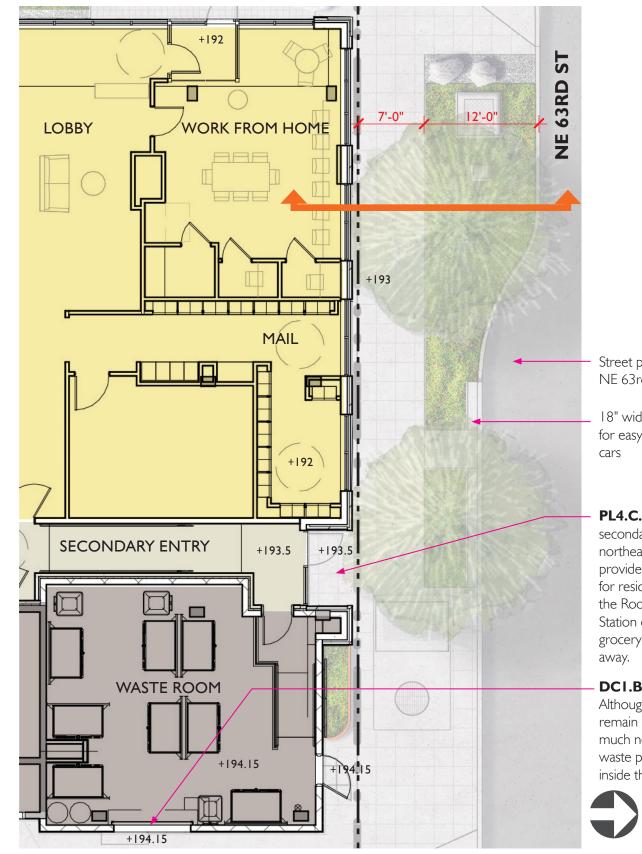

**PL4.C.3:** Adding a secondary entrance at the northeast end of the site provides a convenient entry for residents arriving from the Roosevelt Light Rail Station or arriving from the grocery just two blocks away.

**CS2.III.iii.g / DC2.B.2:** The wall mounted trellis and landscaping seamlessly incorporate the necessary utility frontage into the 63rd Street facade.

**DCI.B.I / DCI.C.4:** Although the alley will remain unimproved after much negotiation with SPU, waste pick up will occur just inside the alley, removing the waste room roll up door from the street facing facade and allowing for a more pedestrian friendly streetscape.

## NE 63RD ST FRONTAGE

PEDESTRIAN SECTION AT LOBBY AMENITY

PARTIAL SITE PLAN

Street parking provided on NE 63rd Street.

18" wide paved edge allows for easy access to parked cars

**PL4.C.3:** Adding a secondary entrance at the northeast end of the site provides a convenient entry for residents arriving from the Roosevelt Light Rail Station or arriving from the grocery just two blocks away.

#### DCI.B.I / DCI.C.4:

Although the alley will remain unimproved after much negotiation with SPU, waste pick up will occur just inside the alley.

## **ROOSEVELT RESIDENTIAL FRONTAGE**

PERFORATED BALCONY RAILING

DC2.C.I & 2: Laser cut, railings at grade add texture, pattern and detail to the facades.

**CS2.A.I:** The pattern chosen has a vertical expression that filters light similarly to sunlight filtering through leaves in keeping with the building concept.

**EXPOSED RAIN LEADER & BIORETENTION PLANTER** 

**CSI.IV:** Expressed rain leaders pouring into bioretention planters add rhythm to the facade and also express the historic drainage patterns through the neighborhood towards the ravine.

Rain leader with exposed front showcases the movement of water as it trickles down the trough.

Weathering steel bioretention planter between balconies

PRIVACY SCREENS BETWEEN PATIOS

DC2.C & D: Laser cut, weathering steel metal panels between close balconies create privacy between residents and vertically integrates plants into the facade. The laser cut pattern is the same as the railings at all balconies helping tie these elements together.

## DESIGN PRIORITIZING LANDSCAPING & USABILITY FOR ACTIVATION

This site is not within the pedestrian designated zones. Commercial uses are not required and these apartment homes are not to be used as live / work units.

**CS2.II.i:** Private open spaces are along the street frontage.

**DC2.C.2:** Canopies over doors facing Roosevelt add depth and human scale to the facade while also serving the functional purpose of weather protection and shading these west facing glass doors.

PHOENIX

**DC2.D.2:** The addition of bands of wood-look facade, and patterned railings and privacy screens between balconies adds rhythm, detail, and visual interest to the facade near grade, enhancing the pedestrian experience.

**CSI.IV:** Expressed rain leaders pouring into bioretention planters echo the historic drainage patterns in Ravenna towards the ravine and provide engaging movement on the facade.

**PL3.B.I:** Elevating the private exterior spaces both meets the zoning requirements and also helps meet the security concerns outlined in the design guidelines. The lush landscaping provides an appropriate buffer between public and private spaces.

#### WEBER THOMPSON

#### **EDG Report Comment 2a:**

The board supported the ground level uses, but wanted to study increasing activation on Roosevelt.

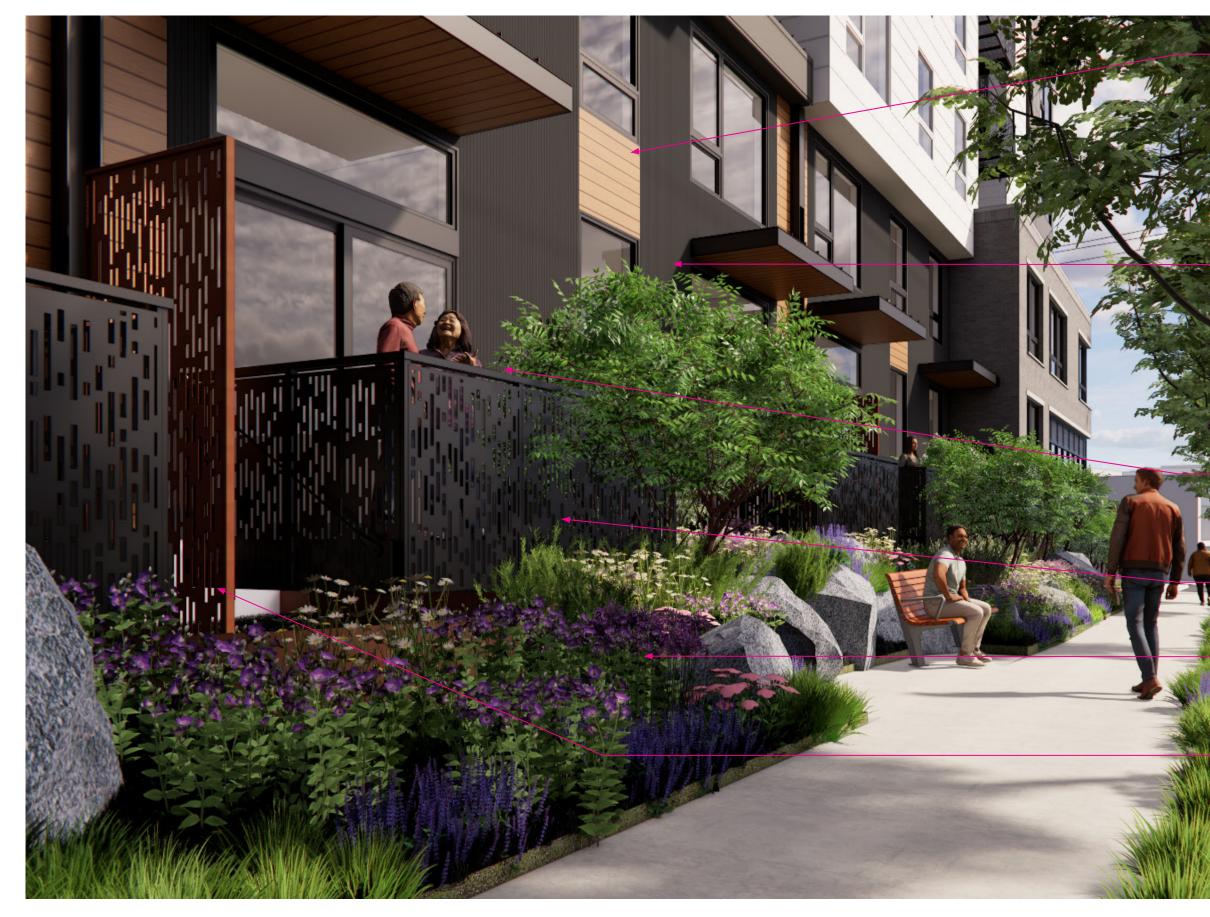

(See pages 8-11 for more information)

included between the building and street frontage in keeping with design guidelines. These are intentionally large and are secured from the sidewalk so that residents are more likely to use them. When patios provide ample space for furniture and are secured the increased activity from residents adds activation

**CS2.II.ii:** Landscaping is incorporated between the sidewalk and this multifamily structure.

## ROOSEVELT RESIDENTIAL FRONTAGE

## 

WEBER THOMPSON

**DC2.D.2:** The addition of bands of wood-look facade, and patterned railings and privacy screens between balconies adds rhythm, detail, and visual interest to the facade near grade, enhancing the pedestrian experience.

**DC2.C.I / DC4.A:** The high-quality, ceramic-clad facade material facing Roosevelt has a pronounced three dimensional texture and durable finish adding detail to the pedestrian realm.

**PL2.B.1:** Residential apartment homes, and their private balconies, provide excellent opportunity for visual surveillance of the sidewalk and streetscape.

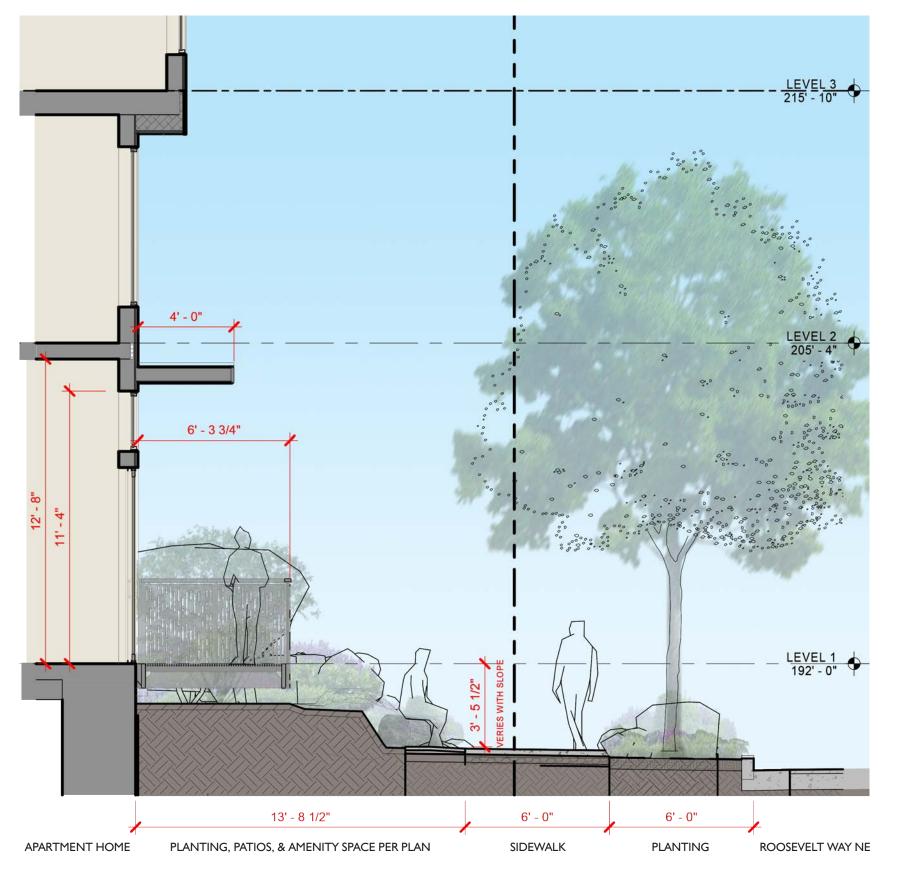

**CS2.II.i / PL3.II.ii:** Private open spaces are included between the building and street frontage in keeping with design guidelines.

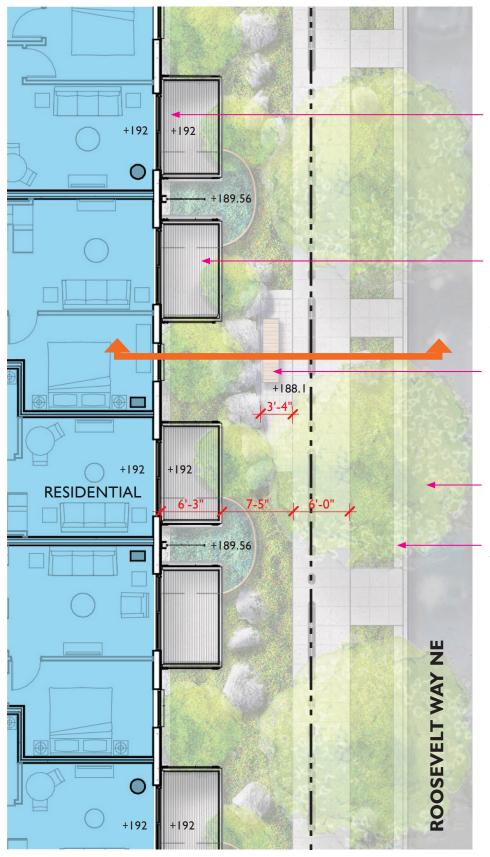

**CSI.D / DC3.C.3:** The significant vegetation provided along Roosevelt extends natural habitats for plants and animals in this previously exclusively hardscaped city block.

#### CS1.IV / DC2.C.2 / DC3.I.ii:

Expressed rain leaders pouring into bioretention planters add rhythm to the facade and echo the historic drainage patterns through the neighborhood towards the ravine.

## ROOSEVELT RESIDENTIAL FRONTAGE

PEDESTRIAN SECTION AT ROOSEVELT MIDBLOCK

PARTIAL SITE PLAN

**PL2.B.1:** Residential apartment homes, and their private balconies provide excellent opportunity for visual surveillance of the sidewalk and streetscape.

**CS2.II.i / PL3.II.ii:** Private open spaces are included between the building and street frontage in keeping with design guidelines.

**PL2.1.iii:** Seating is provided mid-block along the Roosevelt frontage as a pedestrian amenity.

Street parking provided on NE 63rd Street.

18" wide paved edge allows for easy access to parked cars.

## APPROACH FROM SOUTHWEST

## SOUTHERN AMENITY ENTRY

#### **EDG Report Comment 2b:**

The board wanted to ensure the building animates and engages Roosevelt and 63rd.

(See pages 8-11 for more information)

**DC2.C.I / DC4.A:** The facade at the corner of Roosevelt and 62nd is clad in a variegated brick atop a low concrete base enhancing durability, texture, and scale within the pedestrian realm

**CS3.A.I / DC2.C.3:** In keeping with the detailing on nearby older structures, the corner brick podium masses include details like brick soldier courses and expressed masonry lintels above windows.

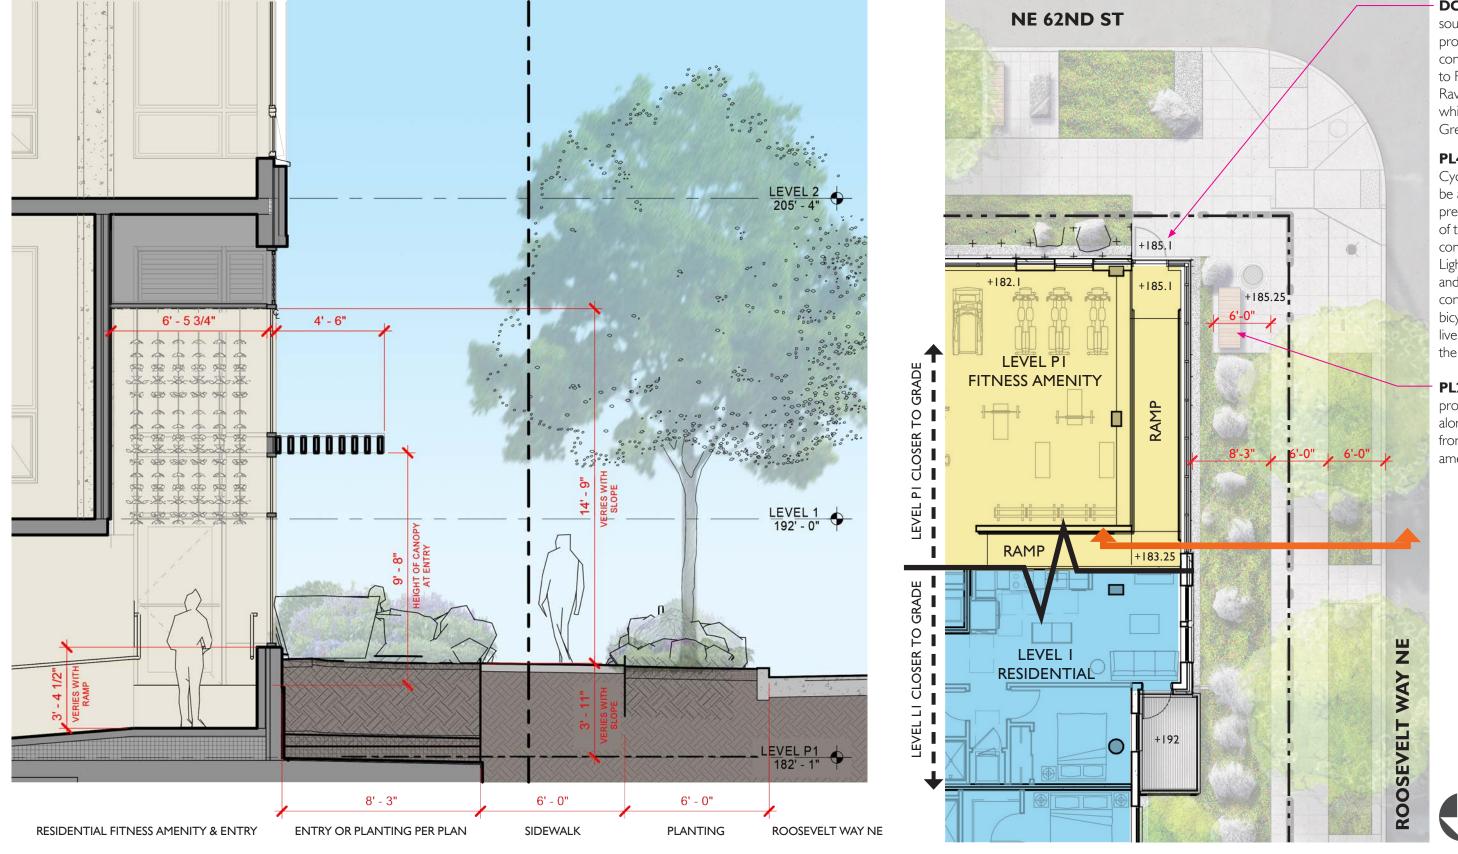

**PL2.C:** A large canopy provides weather protection at the amenity entry. Its unique slatted end over the planting allows for rain watering landscaping while keeping the pedestrian and seating area dry.

**DC3.B.3:** The southern resident entry provides the most convenient access to Ravenna Park and Ravenna Boulevard which also leads to Green Lake,

**PL4.I / PL4.B:** Cycling is likely to be a common and preferred method of transportation considering the nearby Light Rail, bicycle lanes, and parks. Providing a convenient, dedicated bicycle entry will be a lively and active part of the building program.

**PL2.1.iii:** Adjacent to this building's fitness and bicycle amenity spaces, the streetscape design includes amenities to aid in exercise.

## SOUTHERN AMENITY FRONTING ROOSEVELT

PARTIAL SITE PLAN

PEDESTRIAN SECTION AT FITNESS ENTRY (WEST FACADE)

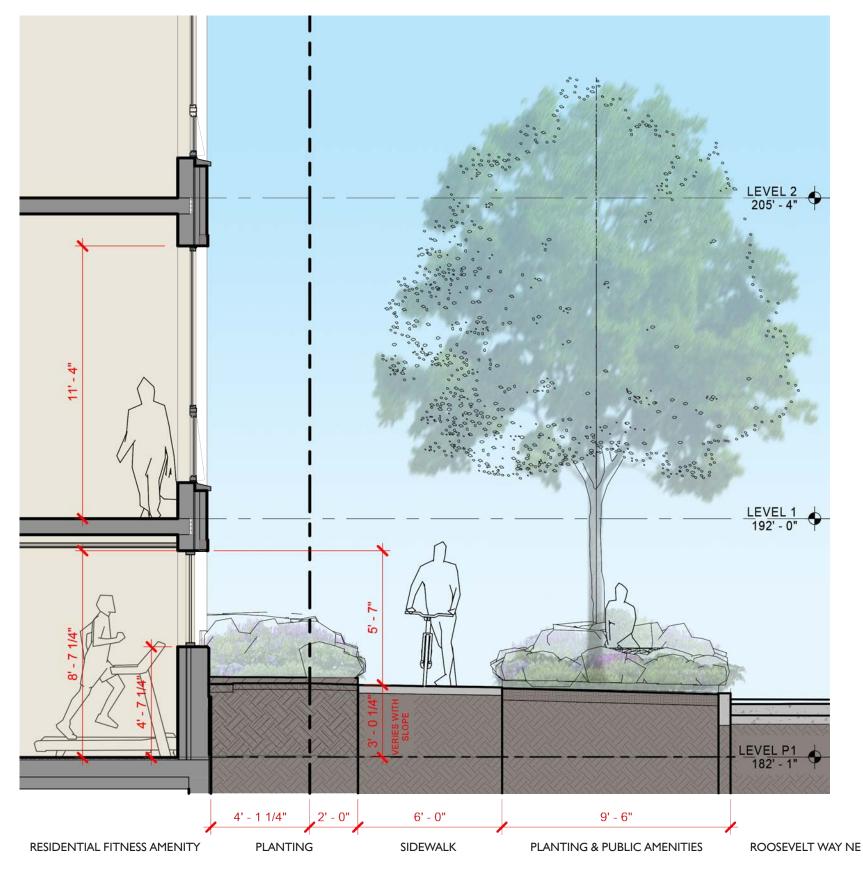

# **DC3.B.3:** The southern resident entry provides the most convenient access to Ravenna Park and Ravenna boulevard which also leads to Green Lake.

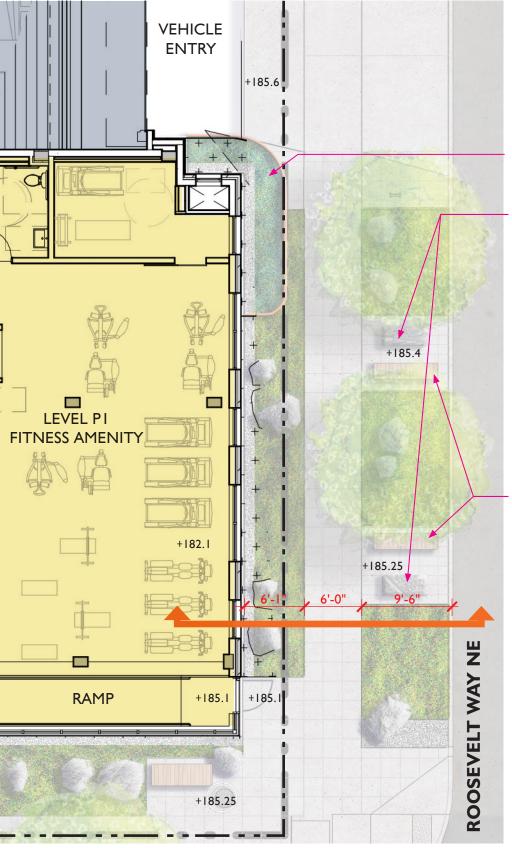

#### PL4.I / PL4.B:

Cycling is likely to be a common and preferred method of transportation considering the nearby Light Rail, bicycle lanes, and parks. Providing a convenient, dedicated bicycle entry will be a lively and active part of the building program.

**PL2.1.iii:** Seating is provided mid-block along the Roosevelt frontage as a pedestrian amenity.

## SOUTHERN AMENITY FRONTING 62ND

PEDESTRIAN SECTION AT SOUTH FACADE OF FITNESS

PARTIAL SITE PLAN

Minimally raised weathering steel planter.

- **PL3.B.4:** Etched boulders depict fitness strategies or neighborhood running / biking maps. These dualpurpose installations create natural points of interest on the sidewalk that draw attention of pedestrians and residents alike, encouraging interaction.

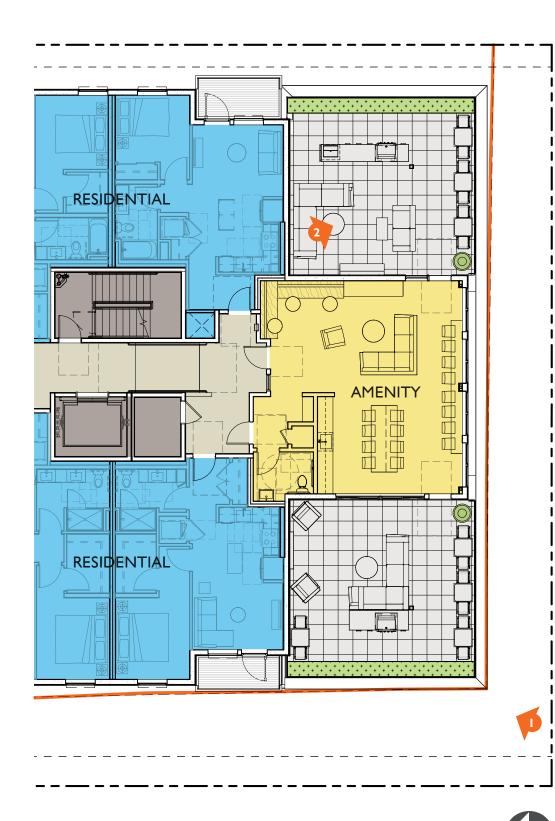

**PL2.I.iii:** Seating is provided mid-block along the Roosevelt frontage as a pedestrian amenity.

## SOUTHEAST AERIAL

## PHOEN WEBERTHOMPSON

## LEVEL 7 RESIDENT AMENITY SPACE

**I** SW AERIAL VIEW

**2** VIEW FROM THE EXTERIOR AMENITY SPACE

PARTIAL LEVEL 7 PLAN

## The exterior amenity space does more than just provide gathering spaces for residents.

**CS2.III.iii:** The stepped massing at the top of the building and again at level 3 help transition the massing in the NC3-75 zone to that of the neighboring site, mitigating the bulk and scale of the building adjacent to smaller context.

**CSI.C:** The stepped massing at the south end of the building follows the sloping topography of the site.

**DCI.A.4** Placing both the interior and exterior common amenity areas for the building at the south end of the building allow these communal spaces to capitalize on views of downtown and Rainier.

## APPROACH FROM SOUTHEAST

**DCI.A.4** Placing both the interior and exterior common amenity areas for the building at the south end of the building allow these communal spaces to capitalize on views of downtown and Rainier.

**CS2.III.iii:** The stepped massing at the top of the building and again at level 3 help transition the massing in the NC3-75 zone to that of the neighboring site.

**DC2.B.I:** The design team uses the same modulating features fronting the alley as Roosevelt in order to maintain a cohesive design around all parts of the building.

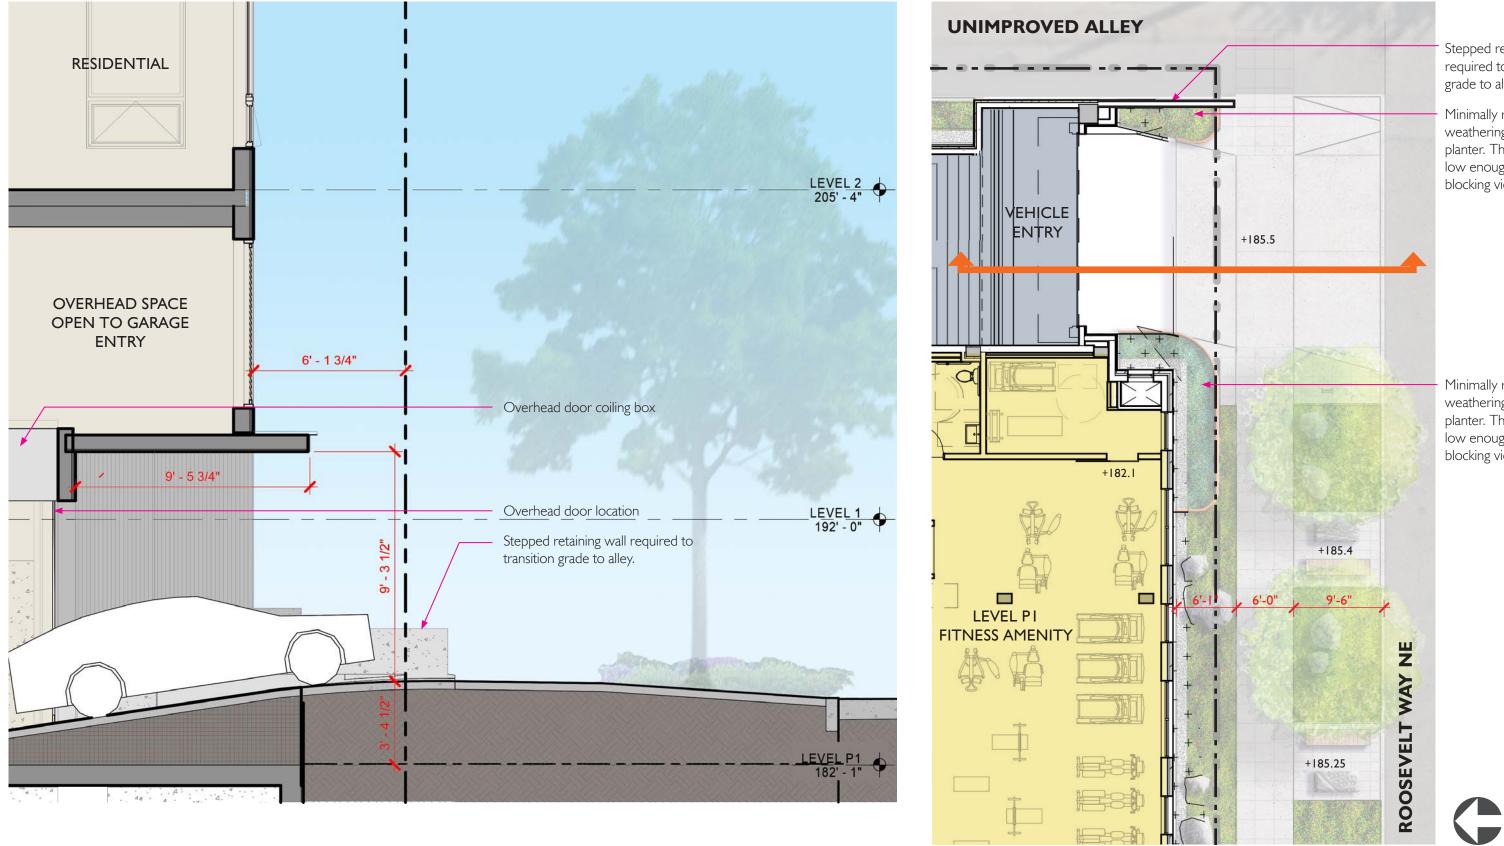

**CS2.III.iii.e:** Modulating recesses break down the length of the massing. At EDG the board appreciated that the alley facade was treated so similarly to that of the Roosevelt facade.

**DC2.B.I:** The high-quality ceramic-clad cementitious panel used on the primary facade wraps onto the alley facade to improve the view walking down the public sidewalk.

**DCI.B.I:** Although the alley will remain unimproved and not viable for vehicle entry, the project has placed the vehicle access adjacent to the alley where drivers and pedestrians anticipate cars. This is also the low end of the site helping to minimize the impact of the entry on the facade.

## GARAGE ENTRY ON 62ND

#### SECTION AT GARAGE DRIVEWAY ENTRY

PHOENIX WEBER THOMPSON

PARTIAL SITE PLAN

Stepped retaining wall required to transition grade to alley.

Minimally raised weathering steel planter. The height is low enough to avoid blocking views.

Minimally raised weathering steel planter. The height is low enough to avoid blocking views.

## ALLEYWAY

PHOENE | WEBERTHOMPSON

#### EDG Report Comment 3:

The board asked that the design evolution create an appropriate response to the alley that takes into account safety and promotes connectivity.

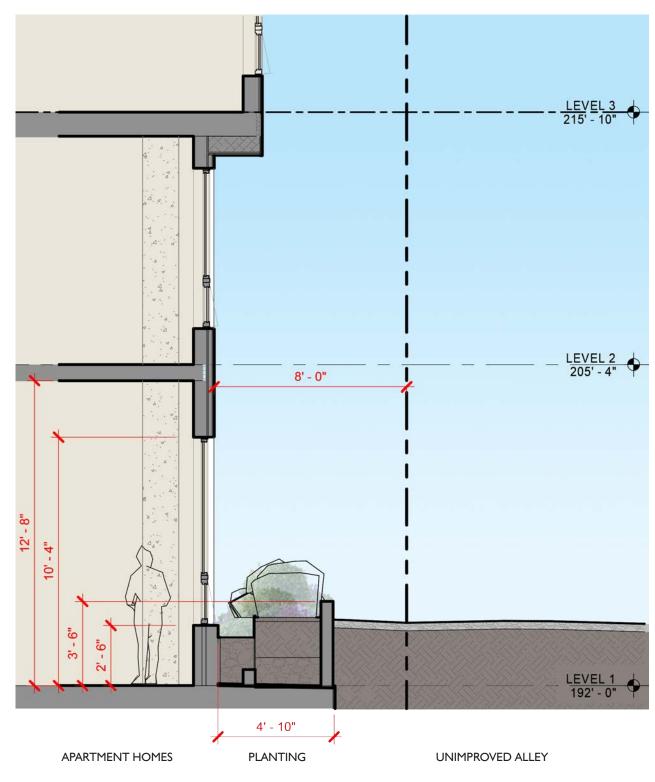

(See pages 8-11 for more information)

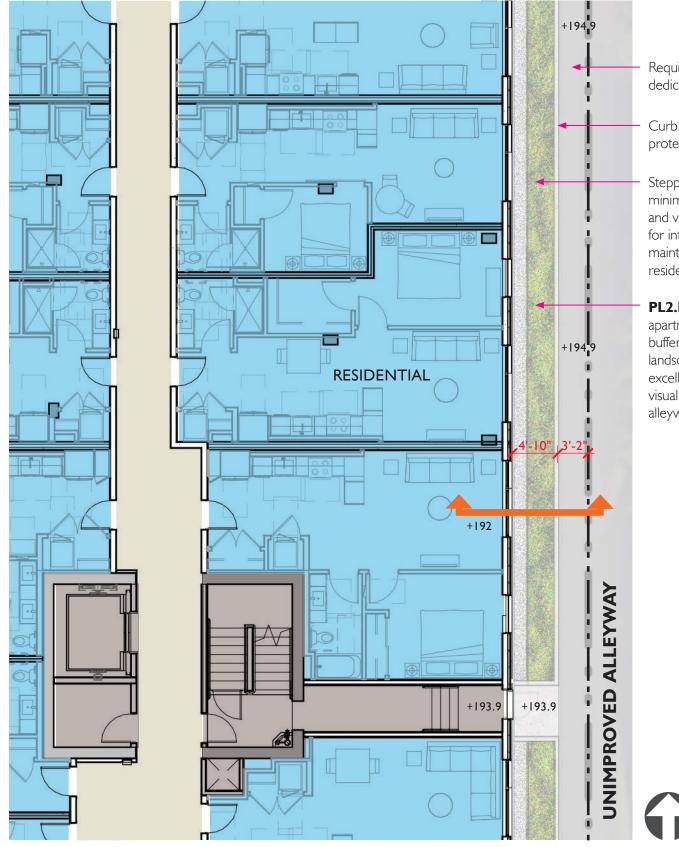

**DC2.B.I:** The design team uses similar patterns and modulations fronting the alley as Roosevelt in order to maintain a cohesive design around all parts of the building.

**DC2.D.2:** The addition of bands of wood-look facade adds rhythm, detail, and visual interest to the facade near grade.

**PL2.B.1:** Residential apartment homes, buffered with landscaping, provide excellent opportunity for visual surveillance of the alleyway. ALLEYWAY

PARTIAL SITE PLAN

PEDESTRIAN SECTION AT ALLEYWAY

- Required 3 foot alley dedication
- Curb for vehicle protection
- Stepping landscaping minimizes sunlight and view blocking for interiors while maintaining privacy for residents.
- **PL2.B.1:** Residential apartment homes, buffered with landscaping, provide excellent opportunity for visual surveillance of the alleyway.

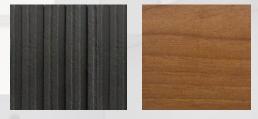

## APPROACH FROM NORTHEAST

\*Allowable massing envelope of adjacent NC2-75 property.

**DC2.B.I:** The high-quality ceramic-clad cementitious panel used on the primary facade wraps onto the alley facade to improve the view walking down the public sidewalk. Additionally a band of wood-look material extends from the roll up door adding interest to the corner facade

- **DCI.B.I / DCI.C.4:** Although the alley will remain unimproved after much negotiation with SPU, waste pick up will occur just inside the alley, removing the waste room roll up door from the street facing facade and allowing for a more pedestrian friendly streetscape.

## BOARD REQUESTED RESIDENT STOOP ACCESS STUDY

#### **EDG Report Comment 2a:**

The board supported the ground level uses, but wanted to study increasing activation on Roosevelt and requested studying direct unit access from the street.

(See pages 8-11 for more information)

**Narrative:** Providing direct access to the sidewalk from the patios fronting Roosevelt creates an undesirable condition for pedestrians. The team hoped to provide straight stairs and walkways perpendicular to the sidewalk, but the length required to accommodate grade and gates prevented straight runs. For constructibility, significant concrete is required to support the walkways and stairs creating a harsh, wall-like condition abutting the sidewalk. The lush understory atmosphere inspired by the concept is overrun with railings, and concrete.

sidewalk reduces impact of stairs and walkways. -

of bioretention planters and limit vegetation

between apartment homes and public sidewalk.

Providing direct access from the sidewalk to the residential units at grade does little to support the intent of Design Guidelines DC3-11 Landscape to Enhance the Site, DC4-D-4 Place Making, PL2-B Safety and Security, and PL3-B Residential Edges, for the following reasons:

- limitations.

Our proposed design better supports the Design Guidelines for the following reasons:

• Due to the gradual, yet significant grade change along Roosevelt, providing street-level access forces an indirect route, that is circuitous and uninviting - DC4-D-4. Straight stairs are not feasible due to the grades and ROW setback

• Providing stoops/stairs creates a wall of concrete along Roosevelt (the most viable design solution to work with constructibility/site constraints), which does little to activate the streetscape and limits landscape options -DC4-D-4 / PL2-B / PL3-B

• To provide security, gates would be required, creating another unwelcoming barrier - DC4-D-4 / PL3-B.

• Stoops used only for circulation and access, do not provide "Eyes on the Street" and may rarely be used considering residents will likely be entering the building through the main lobby or parking garage (to park and/or pick up mail on a daily basis) - DC4-D-4.

• Per SMC 23.47A.008, dwelling units at street level shall be located either 4'-0" above sidewalk grade or set back at least 10'-0". Based on the significant slope along Roosevelt, the units are setback 10'-0" to allow for a privacy buffer and ample landscaping per PL2-B / PL3-B / DC3-11 / DC4-D-4.

• Large/usable stoops will provide more activation as the stoops will be used on a more regular basis (because they are protected and off the street) - PL2-B / PL3-B.

• There is precedent in the neighborhood for the proposed design solution and the proposed design better supports the concept of providing residential respite amongst a lush landscape, which better aligns with our block that resides within a transition zone.

## PLANNER REQUESTED DESIGN STUDIES

During design evolution, the project team adjusted the massing at the corners as described earlier in this booklet to better align with the design guidelines and adjacent context, and to create a more cohesive project on all 4 sides. As part of this process, the planner suggested studying multiple options for the northwest corner. The design team studied several options and ultimately landed on the design illustrated throughout the book because it best responded to the large scale civic context at the northwest corner and provided the largest glazing in a lantern-like feature above the primary entry, while still feeling cohesive with the building as a whole. We have included these studies to show our homework and the additional effort extended to arrive at the best solution.

## STUDY I

at base of white mass

— Rearranged interior layout for more glazing at corner like other corners

Projecting fin detail at the material transition adds depth and shadow lines on the facade.

Recessed both north and west facades at corner to allow for balcony and to create distinction

Removed dark band at base of white mass

Recessed north facade to allow for narrow balcony facing north Added wood-look material similar to where other balconies occur

## STUDY I

Reduced height of cornice Continuous band at base of bays also broken to emphasize the massing pieces.

L Same cornice at all white masses Cornice is broken at recessed bays.

Continuous band at base of bays also broken to emphasize the massing pieces.

# STUDY 3

### STUDY 4

Added wood-look material similar to where other balconies occur Recessed both north and west facades at corner to allow for balcony and create to distinction

#### **PRINTED OUTREACH**

- Choice: DIRECT MAILING, HIGH IMPACT
- Requirement: Direct mailing to all residences and businesses within approximately 500-foot radius of the proposed site.
- What we did: Posters were mailed to 452 residences and businesses and shared with four neighborhood community groups. Poster, details on distribution and list of community groups who received the poster via email are in Appendix A.
- Date completed: January 2, 2024

#### **ELECTRONIC/DIGITAL OUTREACH**

- Choice: PROJECT WEBSITE, HIGH IMPACT
- Requirement: Interactive project website with public commenting function.
- What we did: Project website established and publicized via poster. Monitored daily for comments from the Website. Developed an interactive project website with project information and a public commenting function. Website included in Appendix A.
- Date completed: January 2, 2024

#### **ELECTRONIC/DIGITAL OUTREACH**

- Choice: SURVEY, HIGH IMPACT
- Requirement: Create an online survey to allow for feedback on the proposed project.
- What we did: Online survey established and publicized via poster with link to survey featured on project website. Survey text and results included in Appendix А.
- Date completed: January 2, 2024

PHOENIX

#### **DESIGN-RELATED COMMENTS**

- **Design.** When asked what is most important about the design of a new building on this property, 40 percent of survey respondents said environmentally friendly features; 40 percent said parking; 33 percent said interesting and unique design; 33 percent said relationship to neighborhood character; and 20 percent said attractive materials. Several respondents encouraged community-oriented outdoor spaces, interesting landscaping including trees on a roof deck to blend with the horizon, a welcoming and attractive entry on Roosevelt, community space and a pedestrian experience.
- **Exterior.** When asked what the most important consideration is for the exterior space on • this property, 53 percent of survey respondents said lighting and safety features; 53 percent said landscaping; 33 percent said seating options and places to congregate; and 13 percent said bike parking. Several respondents encouraged nice, well-crafted design and high-quality construction, and encouraged avoiding cheap cement board cladding. One respondent encouraged community-oriented spaces for connection and compassion.
- Sustainability. Several respondents encouraged a sustainable, low-carbon footprint project built with a green mind set.
- Safety & Security. A couple of respondents expressed the importance of safety and security and one noted that thieves often get into secure garages to target vehicles.
- Height & Scale. One respondent encouraged keeping the building tall

#### **NON-DESIGN-RELATED COMMENTS**

- **Retail.** Several respondents encouraged active ground floor uses like commercial and dining • options and encouraged affordable spaces for retail such as a hardware store, restaurant, bakery or climbing gym. One respondent expressed concern that the small business companies have to leave.
- Affordability. Several respondents expressed support for affordable housing and providing a mix of affordability options.
- Units. Several respondents encouraged having family-sized units and expressed support for density while others encouraged building efficient units.
- **Impacts.** Several respondents encouraged construction that causes minimal disruption to street parking and access while others encouraged courtesy and respect for the existing neighbors including by future residents.
- Amenities. Several respondents encouraged having a bike parking room and pet-friendly amenities including a dog run.

#### NON-DESIGN-RELATED COMMENTS, CONTINUED

- four blocks from light rail.
- Inclusion. One respondent encouraged inclusivity.

#### **MISCELLANEOUS COMMENTS**

- more housing.

#### **DESIGN TEAM RESPONSE**

The public outreach responses highlight a desire for environmentally friendly design. The project team will look for ways to incorporate sustainable features and practices into the design and construction of the development. One such way to have a positive impact on the surrounding environment is to minimize the extent and depth of below grade parking. Studies show that the excavation and concrete required to build below grade parking has significant negative impacts on global warming. The project team will also pay close attention to the handling of storm water on site, knowing there is a high water table and nearby aquifers.

Public outreach also shows neighbors care about the pedestrian and landscape experience on site. The development intends to create a safe and lush pedestrian environment with wider sidewalks, appropriate lighting and amenities, and ample landscaping.

The development will provide a mix of unit types in an effort to provide housing for a mix of needs. The owner is also considering pursuing MFTE in order to provide some affordable units.

• Parking & Traffic. Several respondents encouraged having less space for parking and lowering car dependency that puts less carbon into the environment and cares for future generations. Another suggested the project team should stop building parking as this is located

• Alleys. One respondent suggested that all alleys on this block should be paved.

• Interior. One respondent encouraged a dog-friendly design.

• **Location.** One respondent encouraged locating the project on the corner of two arterials.

• Management. One respondent encouraged good, understanding building management.

• **Residents.** One respondent encouraged opportunities for young people to stay in Seattle.

• **Support.** One respondent noted that this stretch of Roosevelt would welcome better development instead of current empty store fronts. Another expressed support for building

• **Outreach.** One respondent thanked the project team for outreach.

## ALLEY ACCESS INFEASIBILITY

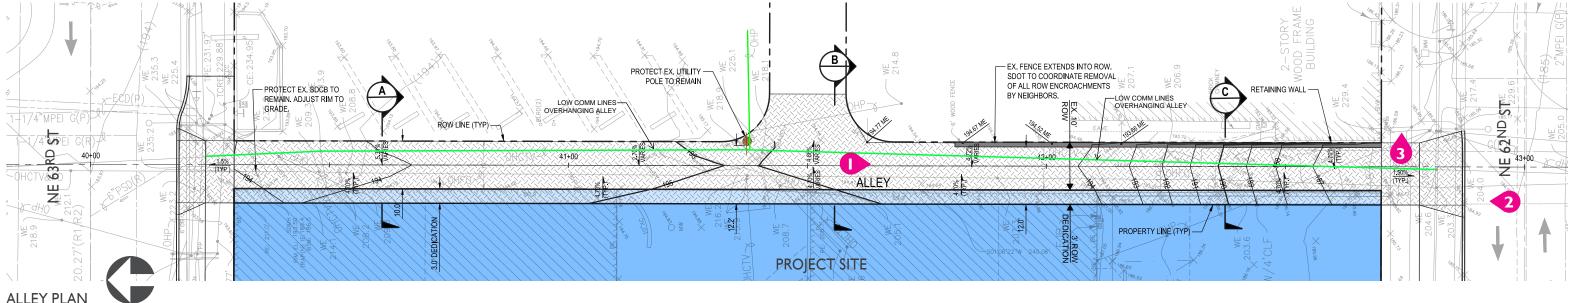

During Pre-Design, the project team underwent significant analysis of the existing alley and its viability for improvement / project access - which is typically required by zoning when a site abuts an alley, unless alley access is determined infeasible. Based on the team's analysis, it became apparent that alley access would be infeasible, for some of the reasons noted below and portrayed in the images on the following pages:

- The current alley grades are non-compliant. In order to construct a compliant alleyway, the south end of the alley must be made steeper (at 17% slope) to provide the required transition between alleyway and NE 62nd.
- Where the steep slope occurs, a retaining wall will be required along the eastern edge to support and maintain the abutting property. This wall will need structural design and geotechnical input and there is also constructability risk to the adjacent singlefamily residence, which directly abuts the alley/property line.
- The retaining wall will need to come above grade and will reduce the required width of the alley to 12' or less, negating the improvements required by SMC 23.53.030.F.

- or safer conditions (see the attached exhibit).
- garage ramp, in the alley, or onto NE 63rd St.

Based on the above, the project team worked with SDCI to determine infeasibility and received the opinion shown in the following pages.

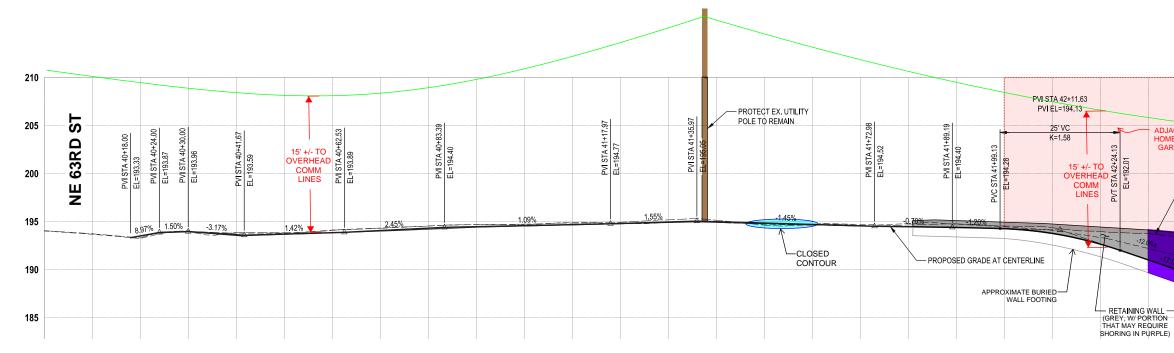

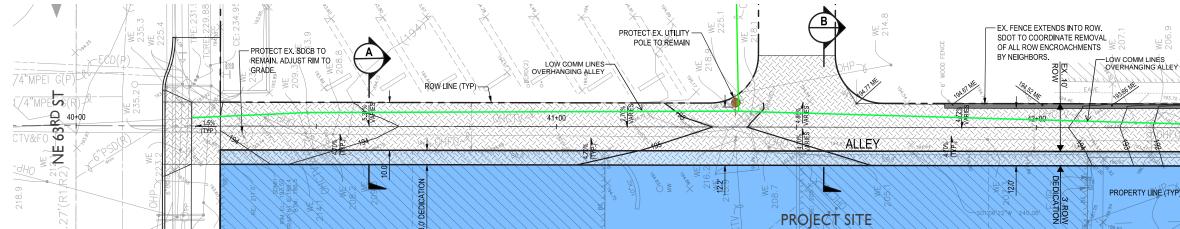

• Improvements are required to work with existing grades and once improved, the new grades/slopes do not create easier passage

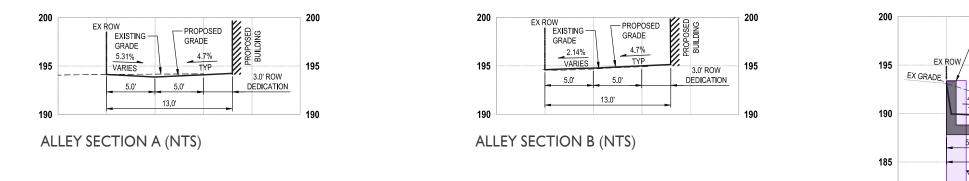

• The current alley width is 10'-0" wide and will only be increased to 13'-0" with the alley dedication. The limited width will inhibit maneuverability and will prohibit two-way traffic options (the existing narrow alley offshoot to the east is also unimproved). If garage access is from the alley most vehicles will enter and exit the garage headed north towards NE 63rd St. However, due to the limited width, vehicles will not be able to pass one another within the alley. It is likely cars would be forced to back up into the

6220 Roosevelt Recommendation Meeting 77

## ALLEY ACCESS INFEASIBILITY

March 13, 2024

Jodi Patterson-O'Hare 17479 7<sup>th</sup> Avenue SW Normandy Park, WA 98166

RE: 6220 Roosevelt Way NE: Preliminary Zoning Analysis Letter (Record Number 3041676-AN)

Dear Jodi Patterson-O'Hare,

We received your request for a Preliminary Zoning Analysis letter regarding the property addressed as 6220 Roosevelt Way NE on February 27, 2024. This site is zoned Neighborhood Commercial 2 – 75 (NC2 – 75) Mandatory Housing Affordability (M)1 and is in the Roosevelt Residential Urban Village and the Roosevelt Station Area Overlay District. The zoning to the southeast half of the center line of the alley is Lowrise (LR)2 (M1).

The north of the property is bounded by NE 63<sup>rd</sup> Street. While the required right-of-way (ROW) width is 52 feet, the existing ROW is 60 feet. The south side of the property is bounded by NE 62<sup>nd</sup> Street, a non-arterial ROW. While the required ROW width is 40 feet, the existing ROW is 60 feet. The west of the property is bounded by Roosevelt Way NE, a Principal Arterial, with a required ROW width of 68 feet. The existing ROW of Roosevelt Way NE is approximately 60 feet. An alley is on the east edge of the property which is improved with gravel. The required ROW width of the alley is 16 feet while the existing ROW is 10 feet.

You are proposing to build a new multifamily building with an underground parking garage. You have requested confirmation of three questions, which I shall address in order:

• Can the new development access the street and not the alley?

The Director of Seattle Department of Construction and Inspections (SDCI) must determine if access to parking from the alley is infeasible and may allow street access per SMC 23.47A.032.A.1.a. If the alley does not meet the standards of improvement per SMC 23.53.030.C, 12 feet wide and paved, then street access may be allowed. Since the existing alley is 10 feet wide and unpaved it does not meet the standards of improved. Therefore, alley access is infeasible and street access is acceptable for this proposal.

If street access is allowed, which street may the proposal take access?

Since street access is acceptable and this lot fronts on three streets, NE 62<sup>nd</sup> Street, Roosevelt Way NE, and NE 63<sup>rd</sup> Street, the SDCI Director must determine the front lot line per SMC 23.47A.032.C for which no access shall be taken. The Director considers the following criteria to determine the front lot line:

- 1. The extent to which each street's pedestrian-oriented character or commercial street;
- 2. The potential for pedestrian and automobile conflicts; and
- 3. The relative traffic capacity of each street as an indicator of the street's role as a principal commercial street.

Roosevelt Way NE, a one-way principal arterial with designated bike lane, includes commercial businesses, has potential for pedestrian and automobile conflicts and has the most ROW for the traffic capacity. NE 62<sup>nd</sup> and NE 63<sup>rd</sup> Streets have less commercial business, have less traffic capacity, and were previously used as the access point to this property. Roosevelt Way NE should be considered the front lot line for this property and access may cross the side street lot lines on either NE 62<sup>nd</sup> or NE 63rd Street per SMC 23.47A.032.A.1.c.

Will alley improvements including dedication be required?

The existing alley ROW is 10 feet wide and does not meet the minimum width of 16 feet per SMC 23.53.030.D. When existing alleys do not meet the minimum width and are not used for access to parking spaces, they must meet the requirements found in SMC 23.53.030.F.2. A setback equal to half the distance between the current alley right-of-way width and the minimum ROW width established (6 feet) is needed, so a 3 feet setback will be required. All structures shall be designed to accommodate the grade of the future alley ROW and a noprotest agreement to future street improvements shall also be required.

This letter reflects a preliminary opinion, based on information currently available to us, about how SDCI intends to apply the above referenced standards(s) in the case of the development that you have described. This is a Preliminary Opinion only. It is not a final decision. The opinion is subject to change based on subsequent detailed project review that will occur after the complete project application is submitted for review. Additional facts or concerns that arise in the course of our review of a project application can result in SDCI taking a different position relative to this project and this code standard. After a final decision is made on the proposal, some Title 23 or Title 25 standards addressed by this opinion letter may be challenged through the Land Use Code Interpretation or other appeal process.

If I may be of any further assistance, please contact me at emily.lofstedt@seattle.gov or 206-386-0097.

Sincerely,

EpilyLefstidt
