Seattle City Light

Material Standards

Volume 2 of 2

December 2015

Welcome to your 2015 edition of the Material Standards.

Seattle City Light construction, design, and material standards, as well as our stock catalog, define the utility's best practices. Compliance with standards is mandatory for all City Light employees and contractors. Your cooperation in this compliance is essential to our shared success.

A handwritten signature in black ink that reads "Phil West". The signature is written in a cursive, flowing style.

Phil West, Customer Services and Energy Delivery Officer

**Seattle City Light
Material Standards 2015**

MATERIAL STANDARDS VOLUME 2 (6800–8999)

Arresters, IWCBs, Limiters, Cutouts, and Fuses

6800–6859

6800.1 3 kV Heavy Duty Distribution Class Metal Oxide Surge Arrester 1
6801.3 21 kV Intermediate Class, Porcelain, Metal-Oxide Surge Arrester..... 3
6801.40 1 kV Heavy Duty Distribution Class, Polymer, Metal-Oxide Surge Arrester..... 5
6801.60 21 kV Intermediate Class, Polymer, Metal-Oxide Surge Arrester..... 7
6802.20 Station Class, Polymer, Metal-Oxide Surge Arrester for 26 kV Systems 9
6802.40 Station Class, Polymer, Metal-Oxide Surge Arrester for 34.5 kV Systems.....12
6802.60 Station Class, Polymer, Metal-Oxide Surge Arrester for 115 kV Systems.....15
6802.80 Station Class, Polymer, Metal-Oxide Surge Arrester for 230 kV Systems.....18
6808.11 Insulator Brackets for IWCB.....21
6808.12 Bus Tie Switch Connector Plate22
6808.60 Connector Plate for 8-Inch IWCB.....23
6808.7 Insulator Plate for 6" and 8" IWCB25
6808.80 Current Transformer Connector Plate for 8" x 8" IWCB.....27
6808.9 Accessories for IWCB Assembly.....29
6820.10 Fuse Cutout, Enclosed31
6820.90 27 kV Cutout, Open Type, Porcelain32
6820.95 27 kV Cutout, Open Type, Polymer35
6828.1 Fuses, Holders, and Mountings, 26 kV Unit Substations and Heavy Industrial Substations40
6836.2 Limiter, 600 Volt, Copper Cable to Bus Bar.....41
6836.3 Limiter, 600 Volt, Copper Cable to Copper Cable42
6836.50 Limiter, 600 Volt, Aluminum Cable to Bus Bar.....43
6836.6 Limiter, 600 Volt, Aluminum Cable to Aluminum Cable44
6837.10 Links, Distribution Fuse45
6840.1 Fault Limiter, General Purpose Current-Limiting Fuse.....46
6840.11 Fault Limiter, General Purpose Current-Limiting Fuse, Type "ET"48
6840.2 Fault Limiter, Backup Current Limiting Fuse50
6849.1 Connector Bar.....52
6849.5 Fuse Holder and Mounting Rack, Submersible, Single-Phase, 15.5 kV, 100 Ampere53
6850.00 Overhead Fault Indicators.....55
6855.05 Fuse, General Purpose, Non-Current Limiting, 250 and 600 Volt.....58
6855.07 Dummy Neutrals, 250 Volt61
6855.10 Fuse, Dual-Element, Time-Delay, 250 Volt63
6855.15 Fuse, Dual-Element, Time-Delay, Plug Type, 125 Volt, S- and T-Series.....65

6855.25	Fuse, Time-Delay, 480 Volt	67
6855.35	Fuse, Time-Delay, 125 Volt	69
6855.40	Fuse, Fast-Acting, 125 Volt, With Pin Indication	71
6855.50	Fuse, Fast-Acting, Current-Limiting, 600 V, 40 A	73
6855.55	Fuse, Rejection-Type, Fast-Acting, Current-Limiting, 600 V	76
6855.65	Fuse, Electronic, Small Dimension, Glass.....	79
6857.05	Fuse Holders, In-Line, Water-Resistant, and Insulating Boots.....	81
6857.07	Fuse Holders, Rejection-Type, In-Line, Non-Breakaway, Waterproof, Crimp-Terminal	86
6857.10	Fuse Holders, Panel-Mount, 250 Volt.....	89
6857.15	Fuse Holders, Block Type, Non-Rejection, 600 Volt	90

Separable Connectors, Cable Terminations, and Accessories

6860–6899

6862.0	Bracket, Terminator (for Pat 1802, 1872, Aluma Form CS-820.....	92
6862.01	Adapter Plate and Gasket for Single-Phase G&W 1/C, 27 kV Terminator Replacement.....	93
6862.10	Straight Apparatus Bushing with Boltable Adapter Plate for 13 kV Network Transformer	94
6862.2	Gasket for Terminator Adapter Plate.....	95
6862.3	Terminator Adapter Plate to Replace 3/C, 27 kV Pothead G&W TRA 3855C.....	96
6862.4	Terminator Adapter Plate, 3/C, 34.5 kV Pothead G&W TRA 3925C	97
6862.5	Weld-In Adapter Ring and Gasket for 13 kV PATR 1701 Terminator Replacement	98
6862.6	Bushing, Adapter Plate, and Gasket for 26 kV Single-Phase G&W PATR 1802 Terminator Repl. ...	100
6862.7	Gaskets, Silicone Sponge Rubber	103
6862.8	Adapter Ring and Gasket for 90° Apparatus Bushing on 13 kV Network Transformer	105
6862.9	Adapter Plate for 90° Apparatus Bushing (26 kV Network Transformer)	106
6863.10	Compression Connectors, All-Aluminum Type.....	107
6863.15	Separable Connector, Deadbreak, Dielectric Components, 125 kV BIL	109
6863.16	Separable Connector, Bolted Type, Deadbreak, Cable Joint Parts and Kits, 125 kV BIL, 600 A	113
6863.17	Accessories, Separable Connector, 600 A, 125 kV BIL, Deadbreak.....	120
6863.25	Separable Connector, Deadbreak, Dielectric Components, 150 kV BIL	129
6863.27	Accessories, Separable Connector, 600 A, 150 kV BIL, Deadbreak.....	132
6863.30	Compression Connectors, All Copper Type	135
6863.34	Separable Connector, Deadbreak, Cooper Power Systems T-OP II, Kits, 900 A, 125 kV BIL	137
6863.37	Accessories, Separable Connector, 900 A, 125 kV BIL, Deadbreak.....	140
6863.5	Apparatus Bushing, 90 Degree, 600 Ampere	143
6864.00	Compression Connectors, Bi-Metallic Type, for 200 A Elbows.....	145
6864.03	Cover, Loadbreak Elbow	147
6864.05	Separable Connector (Elbow), 200 A, Loadbreak.....	148
6864.07	Accessories, Separable Connector (Elbow), 200 A, 125 kV BIL, Loadbreak	151
6864.15	Separable Connector (Elbow), 200 A, Deadbreak.....	157
6864.17	Accessories, Separable Connector (Elbow), 200 A, 125 kV BIL, Deadbreak	161
6865.10	Terminators, High Voltage Cables	169
6867.50	Bracket for Pole Riser Conduit	171
6867.9	Gasket, Transformer to Network Protector.....	173
6871.3	Splices, 15 kV through 69 kV, Heat Shrinkable.....	174
6871.4	Splices, 15 kV through 25 kV, Cold Shrink	176
6873.11	Heat Shrink Splices, Straight, 110 kV BIL, Tyco.....	177

6877.3	Autotransformer, 100 VA, 277/125V.....	180
6880.00	Bracket Assembly, Vertical Cable Support.....	181

Insulators, Clamps, and Accessories

6900–6999

6900.10	Insulator, Insulator, Porcelain, Guy Strain.....	182
6900.50	Insulator, Guy Strain.....	184
6901.10	Insulator, Porcelain, Guy Strain.....	187
6901.30	Insulator, Vertical Line-Post, Porcelain, Tie-Top, for Distribution Systems.....	189
6901.31	Stud Bolts for Line Post Insulators.....	191
6901.40	Insulator, Vertical Line Post, Porcelain, Clamp Top, for Distribution Systems.....	192
6901.55	Insulator, Horizontal Line Post, Polymer, for 115 kV Nominal Systems.....	194
6901.57	Insulator, Horizontal Line Post, Polymer, for 230 kV Nominal Systems.....	199
6901.60	Insulators, Horizontal Line Post, Porcelain, Clamp Top, for Distribution Systems.....	202
6901.80	Insulator, Station Post Type, Porcelain.....	204
6901.95	Insulator, Station Post, Polymer, for 115 kV Nominal Systems.....	206
6901.97	Insulator, Station Post, Polymer, for 230 kV Nominal Systems.....	208
6902.30	Insulator, Suspension, Polymer, for 26.4 kV Systems.....	211
6902.35	Insulator, Suspension, Polymer, for 115 kV Nominal Systems.....	214
6902.37	Insulator, Suspension, Polymer, for 230 kV Nominal Systems.....	216
6902.5	Insulators, Suspension, Porcelain Ball and Socket Type.....	218
6904.10	Insulator, Porcelain, Spool, and Clevises.....	220
6904.20	Bracket with Secondary Spool Insulator, Assembled.....	223
6907.1	Reinforced Porcelain Wireholders.....	225
6908.0	Insulator, Phenolic Spool, Neutral Bus Support.....	226
6908.1	Insulator, Bus Bar Support, Underground Vault.....	227
6908.2	Base, Neutral Bus Support.....	228
6910.10	Wildlife Protection Products, Assorted.....	229
6910.30	Split, Silicone Rubber, Insulating Hose.....	234
6910.40	Self-Amalgamating, Silicone Rubber, Insulating Tape.....	236
6912.07	Plastic Bird Spikes.....	238
6933.1	Clamps, Deadend, Quadrant Strain, Forged Steel and Malleable Iron.....	240
6937.1	Clamps, Aluminum Deadend, Quadrant Strain.....	241
6939.10	Clamps, Deadend, Straight Line, Malleable or Ductile Iron.....	242
6942.2	Clamps, Aluminum Deadend Strain, Straight-Line, Hot Line Operable.....	246
6950.1	Clamps, Angle.....	247
6950.2	Clamps, Malleable Iron Suspension.....	248
6951.1	Clamps, Aluminum Suspension.....	249
6951.5	Clamps, Trunnion, Line Post Insulator.....	250
6955.1	Fittings, Forged Steel Insulator.....	251
6955.2	Fittings, Strain Insulator.....	252
6960.2	Fittings, Socket Eye, Strain Insulator.....	253
6966.15	Anchor Shackles, Round Pin.....	254
6966.17	Anchor Shackles, Screw Pin.....	256
6968.1	Supports, Secondary Bus Insulator.....	258
6970.15	Yoke Plate Assembly, Deadend Strain.....	259

Conduit, Pipe, and Accessories

7000–7199

7015.05	Schedule 40 PVC Conduit and Fittings	262
7015.80	Conduit Spacers for PVC and FG Conduit	270
7017.05	Directional Drilling Conduit Systems.....	271
7020.05	Schedule 80 PVC Conduit and Elbows.....	273
7024.05	Fiberglass Fittings, Heavy-Wall, Four-Inch IPS.....	278
7025.05	Fiberglass Conduit and Fittings, Medium Wall, Five-Inch IPS	283
7030.05	Steel Electric Metallic Tubing (EMT)	290
7040.05	Conduit and Fittings, Rigid Aluminum.....	291
7050.05	Zinc-Coated Steel Conduit and Fittings	292
7050.09	Conduit Fitting, Cable Protector.....	296
7050.17	Condulets for Aluminum or Galvanized Steel-Threaded Rigid Conduit.....	297
7050.19	Connector, Hub, Watertight with O-Ring Gasket	299
7051.03	Steel Couplings, Five-Inch, Set-Screw Type	300
7055.09	DB120, PVC Conduit Fittings	302
7100.0	Pipe Fittings, PVC Plastic, DWV and Schedule 40.....	303
7134.25	Pipe Fittings, Malleable Iron, Threaded	304
7134.5	Strap, One-Hole, Malleable	309
7134.6	Spacer, Pipe-Strap, One-Hole, Malleable Iron	310
7134.7	Straps, Pipe, Two-Hole	311
7140.05	Fiber Optic Outdoor Duct Cable	312
7140.10	Duct, Aerial, Self-Supporting	314
7150.00	Fluidized Thermal Backfill.....	316

Vaults

7200–7204

7201.00	Acceptance Criteria for the Installation of New Precast Concrete Distribution Facilities	320
7203.01	Precast Reinforced Concrete Handholes, General.....	322
7203.04	3030 Handhole, Precast, Secondary.....	328
7203.08	231 and 233 Handholes, Precast, Secondary and Streetlight, Detailed.....	333
7203.10	Type 1 and Type 2 Open Bottom Handhole, Precast, Secondary and Streetlight.....	339
7203.12	Handhole, Secondary, Composite Fiberglass, Reinforced Plastic Type	344
7203.20	Polymer Concrete Handhole, Secondary and Streetlight.....	345
7203.21	Precast Reinforced Concrete Structures, General.....	349
7203.26	444 Electric Vault, Primary Service.....	359
7203.31	504 Electric Vault, Primary Service.....	365
7203.36	507 Electric Vault, Primary Service.....	370
7203.41	577 Electric Vault, Primary Service.....	375
7203.46	712 Electric Vault, Primary Service.....	381
7203.51	814 Electric Vault, Primary Service.....	394
7203.56	818 Electric Vault, Primary Service.....	421
7203.61	644 Electric Vault, Primary Service.....	446
7203.66	687 Electric Vault, Primary Service.....	450
7203.76	Precast Reinforced Concrete Transformer Pads.....	457

7203.81	Precast Reinforced Concrete Panel Vaults.....	460
7204.15	Cover Slabs and Risers for Electric Vaults.....	473
7204.3	Hatch Assembly, Sidewalk Type, 4'6" x 8'0" Opening, Frame - Grating - Precast Slab.....	481
7204.70	Frames and Covers, 42-Inch Round, Iron.....	483

Miscellaneous II

7205–7799

7205.1	Cabinet, Terminating for 26 kV Loadbreak Junctions.....	487
7206.06	Cable Cleat and Liner.....	488
7206.09	Adapter Bracket, Four-Inch.....	490
7206.10	Bracket, Cable Support for #1 and 350 kcmil 28 kV Cable.....	491
7206.11	Support Bracket, 600 Amp Splice and Tap.....	492
7206.12	Bracket Assembly, Horizontal Cable Support.....	493
7206.2	Hooks, Cable Rack, Steel.....	495
7206.3	Hazeltine Transmitter Support Rack.....	496
7206.5	Bracket, Cable Support.....	497
7216.7	Racks, Underground Cable.....	498
7217.5	Porcelain Enamel Nameplates.....	499
7217.80	Survey Stakes.....	500
7226.6	Hinge, Continuous, Undrilled, Stainless Steel.....	501
7240.80	Survey and Construction Marking Spray Paint.....	502
7261.1	Compound, Oxide Inhibiting and Lubricating (No Grit).....	504
7261.12	Compound, Oxide-Inhibiting, Synthetic Base (No Grit).....	505
7261.5	Cleaner, Electrical Insulation (Replacement for 1,1,1 Trichloroethane).....	506
7261.8	Compound, Oxide-Inhibiting, Synthetic Base (With Grit).....	507
7262.2	Lubricant, Cable-Pulling.....	508
7263.3	Absorbent Material, Oil and Water (for Floors and Decks).....	509
7264.1	Sulfur Hexafluoride.....	510
7268.1	Bags, Heavy Duty Paper.....	512
7272.2	Rope, Synthetic Fiber.....	513
7273.10	Steel Alloy Chain, Grade 100.....	514
7276.9	Gasket Material, Cork and Synthetic (Buna N) Rubber Composition.....	517
7303.01	Fluorescent Lamps.....	518
7303.68	Lamps, Compact Fluorescent, 68 W.....	523
7314.15	Service Entrance Caps, PVC.....	526
7314.4	Caps, Service Entrance.....	531
7326.0	Junction Box for Network Protector Fire Protection Retrofit.....	532
7330.0	Receptacles (Outlets).....	538
7331.0	Plugs, Lampholders, and Extension Cords.....	540
7333.0	Switches, Toggle-Flush.....	542
7345.7	Fittings for Underground Use, PVC.....	543
7353.6	Cable Wrap, Polytetrafluorethylene.....	544
7358.1	Straps, Adjustable Plastic Tie.....	545
7364.70	Tape, Sealing and Insulating Mastic.....	546
7364.80	Putty, Electrical Insulation.....	547
7365.20	Tape, Fire-Retardant, Electric Arc Proofing.....	550

7365.22	Tape, Electrical Shielding	552
7365.24	Tape, Silicone Rubber, Electrical	555
7365.31	Tape, Insulating, Electrical	558
7365.54	Tape, Semiconducting, Electrical	561
7365.56	Tape, Adhesive-Backed, Copper Foil	565
7365.58	Tape, Glass, Cloth, Electrical	567
7365.81	Tape, Acrylic Foam, Double-Sided, High-Bond	570
7366.35	Tape, Corrosion Protection	573
7366.41	Tape, Cotton Fabric, Friction	576
7366.55	Tape, Vinyl, Electrical	580
7366.71	Tape, Vinyl, Color Coding	585
7367.1	Tape, Masking, Pressure Sensitive	590
7374.5	Splice Covers, Cable Caps, and Boots; Heat Shrinkable	591
7374.65	Tubing, Heat Shrink Type, Thin Wall	593
7374.70	Tubing, Heat Shrink Type, Medium Wall	595
7374.75	Splice Covers, Heat Shrink Type, Heavy Wall	597
7374.80	Cable Breakout Boots, Heat Shrink Type	600
7374.85	Sealing Caps, Heat Shrink Type	602
7375.85	Sealing Caps, Cold Shrink Type	604
7392.8	Cast Iron Sump Pump	607
7403.4	Babbitt Metal	609
7510.44	Lubricant, Switch Contact	610
7601.1	Bag, Canvas, Line Hose	611
7601.3	Bags, Glove	612
7604.6	Hacksaw Blades, Hand, High Speed, Bi-Metal	613
7607.1	Bag, Canvas, Tool	614
7609.30	Wheel Chocks, Aluminum	615
7611.10	Traffic Safety Cones, Standard Profile	616
7615.1	Twist Drills, High-Speed Steel, Straight Shank, Jobbers Length (Fractional Sizes)	618
7616.1	Twist Drills, High-Speed Steel, Straight Shank, Jobbers Length (Wire Gage Sizes)	619
7624.10	Flag, Warning	620
7624.11	Staff, Warning Flag	621
7633.3	Blankets, Rubber Insulating	622
7634.17	Gloves, General Purpose, Leather	623
7634.20	Protectors, Leather, for Class 0 Rubber Insulating Gloves	625
7634.21	Protectors, Leather, for Class 1 and 2 Rubber Insulating Gloves	627
7634.3	Liners, Cotton, Knit, for Rubber or Leather Gloves	629
7634.60	Gloves, Insulating, Rubber, Class 0	630
7634.61	Gloves, Insulating, Rubber, Class 1	632
7634.62	Gloves, Insulating, Rubber, Class 2	634
7638.1	Hammers, Hand, Fiberglass Handle	636
7638.2	Handle, Hickory, Striking Tool (Replacement)	637
7644.20	Wood Ladders, Single and Extension, Extra Heavy Duty	638
7645.40	Mandrels, Proofing	640
7650.07	Reflective Letters and Numbers, Pressure-Sensitive, 2-7/8 in x 1-3/4 in, and Panel	643
7650.13	Number Tags, Aluminum, Embossed, 7/8 in x 1-5/8 in Bar Code, and Holder	645
7651.19	Signs, Danger Hazardous Voltage, 10 in x 14 in, Rigid	648

7651.21	Signs, Danger Hazardous Voltage, 14 in x 20 in, Rigid	651
7651.23	Signs, Danger Hazardous Voltage, 7 in x 10 in, Rigid	654
7651.25	Sign, Equipment Transportation Agreement.....	657
7651.27	Signs, Danger Hazardous Voltage, 7 in x 10 in, Adhesive	659
7651.29	Signs, Danger Keep Out, 10 in x 14 in, Adhesive	663
7651.31	Signs, Warning Hazardous Voltage, 10 in x 14 in, Rigid	667
7651.33	Signs, Warning Hazardous Voltage, 7 in x 10 in, Rigid	670
7651.35	Signs, Warning Hazardous Voltage, 7 in x 10 in, Adhesive	673
7651.8	Sign, Traffic Control.....	677
7652.4	Sign, Tower/Circuit Identification, 6" x 20"	678
7652.5	Sign, "Danger, High Voltage - Keep Off," 14" x 20"	680
7653.16	Recording Card.....	681
7653.22	Operations Tags.....	682
7654.5	Slings, Wire Rope.....	688
7654.80	Slings, Nylon.....	689
7658.5	Embossing Tool, Hand.....	691
7659.03	Funnels, Polyethylene, General Purpose	692
7659.09	DOT Type II Safety Cans	693
7659.21	Flashlight, LED Type.....	695
7660.24	Alkaline Batteries	696

Fasteners

7800–8999

7800.7	Anchors, Light-Duty Screw	698
7800.95	Bolts, Expansion Anchor, Stainless Steel	699
7800.96	Bolts, Expansion Anchor, Carbon Steel, Standard Duty	703
7800.97	Bolts, Expansion Anchor, Carbon Steel, Light Duty.....	707
7801.10	Anchor, Flush-Mount, Internal-Threaded	710
7801.4	Anchors - Spring Toggle Bolt	711
7804.1	Carriage Bolt with Nut.....	712
7804.12	Carriage Bolts, High Strength.....	714
7804.60	Carriage Bolt Assembly	717
7807.1	Square Head Machine Bolt with Square Nut.....	719
7807.32	Bolts, Galvanized, Double-Arming.....	722
7807.41	Bolts, Galvanized, Oval Eye.....	725
7808.15	Eye Nuts	728
7808.19	Nuts, Clevis.....	731
7820.0	Belleville Spring Washer Bolt Assembly Kits and Parts Stainless/Aluminum.....	734
7829.90	Steel Nuts	736
7830.00	Steel Wing Nuts	739
7833.3	Silicon Bronze Hex Nut	741
7845.1	Silicon Bronze Hex Head Cap Screw	742
7846.10	Aluminum Hex Head Cap Screw, Heavy.....	745
7846.15	Aluminum Hex Nut, Heavy	747
7847.1	Steel Hex Bolt.....	749
7847.2	Steel Hex Cap Screw, High Strength.....	753

7852.10 Lag Screws..... 755
7880.2 Copper Alloy Washers, Plain and Lock..... 758

The Standards org runs four committees: Looped Radial, Network, Grounding, and Streetlight. If you have a standards-related question or problem, please bring it to the attention of the Chair or Clerk.

Be aware that security requires those without keycard rights to obtain a pass on the 32nd floor to reach City Light offices and meeting rooms.

Looped Radial

The Looped Radial Standards Committee discusses and solves problems related to design, construction methods, and material used to construct and maintain our overhead and underground distribution systems.

Date: Second Tuesday of each month

Time: 9:00 a.m. to 11:30 a.m.

Location: Confirm with the Standards org

Chair: John Shipek, (206) 684-3950

Clerk: Quan Wang, (206) 386-1785

Network

The Network Standards Committee discusses and solves problems related to design, construction methods, and material used to construct and maintain our network distribution systems.

Date: Third Tuesday of each month

Time: 9:00 a.m. to 11:00 a.m.

Location: Confirm with the Standards org

Chair: Brett Hanson, (206) 684-3726

Grounding

The Grounding Standards Committee discusses and solves problems related to design, construction methods, and material used to construct and maintain our grounding system.

Date: Third Tuesday of each month

Time: 10:00 a.m. to 11:30 a.m.

Location: Confirm with the Standards org

Chair: Brett Hanson, (206) 684-3726

Streetlight

The Streetlight Standards Committee discusses and solves problems related to design, construction methods, and material used to construct and maintain our streetlight system.

Date: Second Wednesday of each month

Time: 10:00 a.m. to 12:00 p.m.

Location: Confirm with the Standards org

Chair: Yaochiem Chao, (206) 684-3076

Online Access

Internal

Employees can access all City Light standards at <http://sclweb/engstds/> ("The Red Page").

External

The public can access all standards, except design standards, at <http://www.seattle.gov/light/engineerstd/> ("The Blue Page")

Recent Revisions

New standards and revisions are published regularly on both the internal and external sites. Be sure to check there for the most recent version of any standard.

You can also view a chronological list of recent revisions at <http://sclweb/engstds/revDate.aspx>.

Corrections and Additions

To submit corrections or additions to City Light standards, please see SCL 0010.07, "How to Mark Up and Submit a Standard for Revision."

Book Distribution

Print

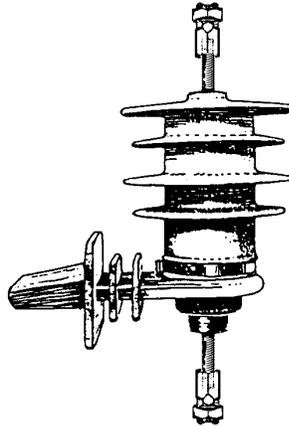

We provide printed books to internal users who place advance orders. A limited supply of printed books will be available for those who missed the order deadline.

Digital

We publish digital versions of all Standards books on the internal City Light Standards page ("The Red Page") at <http://sclweb/engstds>.

Important: We update standards and stock catalog pages throughout the year. As a result, print and digital books might not reflect the most recent revisions. Visit The Red Page to view the latest revision of a standard or stock catalog entry.

**3 kV HEAVY DUTY DISTRIBUTION CLASS
 METAL-OXIDE SURGE ARRESTER**

680002

1. Scope

This Material Standard applies to surge arresters used on a 4160GrdY/2400 volt power system. Surge arresters will be installed on riser poles to protect underground cable and equipment.

2. Industry Standards

Surge arresters shall meet all applicable requirements of the following national standard:

IEEE C62.11-1999, Standard for Metal-Oxide Surge Arresters for AC Power Circuits (> 1 kV)

3. Electrical Requirements

Class (recognized by IEEE C62.1 1): Heavy Duty Distribution

Subclass (recognized by industry): Riser Pole

Type: Metal-Oxide

Duty-Cycle Rating: 3 kV rms

Maximum Continuous Operating Voltage (MCOV): 2.55 kV rms

Maximum Front-of-Wave Voltage Cresting in 0.5 Microseconds for 10 kA Wave: 10.3 kV crest

Maximum Discharge Voltage for 8 X 20 Microsecond 5 kA Wave: 8.6 kV crest

Maximum Discharge Voltage for 8 X 20 Microsecond 20 kA Wave: 10.4 kV crest

Minimum Symmetrical RMS Fault-Current Withstand Rating: 20 kA rms

Minimum Temporary Overvoltage Capability for Three Seconds at 60 Degrees Centigrade Ambient and No Prior Energy Absorption (Overvoltage/MCOV): 1.4 per Unit

STANDARDS COORDINATOR	STANDARDS SUPERVISOR	UNIT DIRECTOR
 John Shipek	 John Barnett	 Hardev Jui

SEATTLE CITY LIGHT
MATERIAL STANDARD

STANDARD NUMBER: **6800.1**

PAGE: 2 of 2

SUPERSEDING: October 27, 2004

EFFECTIVE DATE: June 9, 2006

4. Construction

Housing Material: Polymer.

Housing Material/Hanger Bracket Color: Gray.

Ground Lead Isolator: Required.

Terminal - Top: 3/8-16" stainless steel stud with Penn Union STS-4, Burndy KF-23, or Dossert DGG-6 connector (Stock No. 668872).

Terminal - Bottom: 3/8-16 stainless steel stud with Penn Union STS-4, Burndy KF-23, or Dossert DGG-6 connector (Stock No. 668872).

Nameplate: Required per IEEE C62.11-1999, Section 10.1 Identification data.

6. Marking and Packaging

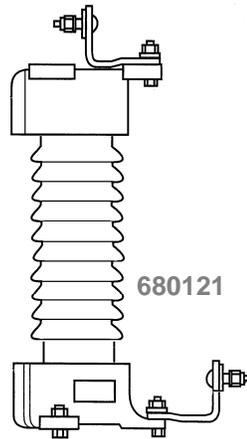

Surge arresters shall be packaged fully assembled, one per cardboard box. Each package shall be legibly marked with manufacturer's name or symbol, product description, and quantity contained. Shipping containers shall be marked with manufacturer's name or symbol and Seattle City Light's purchase order number. A packing slip shall be included with each shipment.

7. Stock Unit: EA

8. Stock Number 680002

Approved Manufacturers	Type	Catalog Number

Joslyn Manufacturing Co.	ZJP	ZRP003-0000000

**21 KV INTERMEDIATE CLASS, PORCELAIN,
METAL-OXIDE SURGE ARRESTER**

1. Scope

This Material Standard applies to 21 kV duty-cycle rating, intermediate class, porcelain-housed, metal-oxide surge arresters.

2. Application

Intermediate class surge arresters are intended for use on maximum 26400GrdY/15240 Volt power systems in areas where the fault duty is nominally between 20 kA and 40 kA rms symmetrical.

Porcelain surge arresters are used to construct terminal riser poles.

In situations where vertical pole space is limited, refer to Material Standard 6801.6 - 21 kV Intermediate Class, Polymer, Metal-Oxide Surge Arrester.

In areas where the fault duty is less than 20 kA, refer to Material Standard 6801.4 - 21 kV, Heavy Duty Distribution Class, Polymer, Metal-Oxide Surge Arrester.

Surge arresters designed with gaps (6801.4) offer slightly better electrical performance than surge arresters designed without gaps (6801.3 and 6801.6). Intermediate class arresters are not available with gaps.

3. Industry Standards

Surge arresters shall meet all applicable requirements of the following national standard:

IEEE C62.11-1999, Standard for Metal-Oxide Surge Arresters for AC Power Circuits (> 1 kV)

STANDARDS COORDINATOR	STANDARDS SUPERVISOR	UNIT DIRECTOR
<i>Goldshield</i>	<i>John Schinner</i>	<i>Hardee Juy</i>

MATERIAL STANDARD

21 kV Intermediate Class, Porcelain,
Metal-Oxide Surge Arrester

4. Electrical Requirements

Class (recognized by IEEE C62.11): intermediate
 Type: metal-oxide
 Duty-Cycle Rating: 21.0 kV rms
 Maximum Continuous Operating Voltage (MCOV): 17.0 kV rms
 Maximum Front-of-Wave Voltage Cresting in 0.5 Microseconds for
5 kA Wave: 60.6 kV crest
 Maximum Discharge Voltage for 8 X 20 Microsecond **5 kA** Wave: 50.8 kV crest
 Maximum Discharge Voltage for 8 X 20 Microsecond **20 kA** Wave: 61.8 kV crest
 Minimum Symmetrical RMS Fault-Current Withstand Rating: 40 kA rms
 Minimum Temporary Overvoltage Capability for Three Seconds at 60
 Degrees Centigrade Ambient and No Prior Energy Absorption
 (Overvoltage/MCOV): 1.4 per unit

5. Construction

Housing Material: porcelain
 Housing Material/Hanger Bracket Color: gray
 Ground Lead Isolator: not required or desired
 Terminal – Top: metal with three 0.625 inch diameter
 holes on 8.75 inch bolt circle
 Terminal – Bottom: metal with three 0.625 inch diameter
 holes on 8.75 inch bolt circle
 Height: 23 inches, +/- 1 inch
 Cantilever Strength (minimum): 5,000 in-lbs.
 Nameplate: required per IEEE C62.11-1999,
 Section 10.1 identification data

7. Marking and Packaging

Surge arresters shall be packaged fully assembled, one per cardboard box or wood crate. Each package shall be legibly marked with manufacturer's name or symbol, product description, and quantity contained. Shipping containers shall be marked with manufacturer's name or symbol and Seattle City Light's purchase order number. A packing slip shall be included with each shipment.

21 KV HEAVY DUTY DISTRIBUTION CLASS, POLYMER, METAL-OXIDE SURGE ARRESTER

680115
Riser Pole Type

680117
Pad Mount Type

1. Scope

This Material Standard applies to 21 kV duty-cycle rating, heavy duty distribution class, polymer-housed, metal-oxide surge arresters.

2. Application

Heavy duty distribution class surge arresters are intended for use on maximum 26400GrdY/15240 Volt power systems in areas where the nominal fault duty is less than 20 kA rms symmetrical.

In areas where the fault duty is greater than 20 kA, refer to Material Standard 6801.60 - 21 kV, Intermediate Class, Polymer, Metal-Oxide Surge Arrester.

Surge arresters designed with gaps (6801.40) offer slightly better electrical performance than surge arresters designed without gaps (6801.3 and 6801.60). Intermediate class arresters are not available with gaps.

This Material Standard applies to two types of surge arresters. The first type of surge arrester is installed on riser poles to protect underground cable and equipment. The second type is installed inside pad mount switches. These two surge arresters differ only in their bottom terminal hardware.

Station Class, Polymer, Metal-Oxide Surge Arrester for 26 kV Systems

1. Scope

This standard details requirements for 21 kV duty-cycle rating, station class, polymer-housed, metal-oxide surge arresters.

This standard applies to Seattle City Light (SCL) stock number 013533.

2. Application

Station class surge arresters are intended for use on a nominal 26 kV, grounded, wye-connected, 60 Hz power system.

Arresters are intended for upright or horizontal mounting in substations.

Arresters are intended for direct connection to the substation ground grid.

3. Industry Standards

Surge arresters shall meet all the applicable requirements of the following national standard:

IEEE C62.11 – 2012, Standard for Metal-Oxide Surge Arresters for AC Power Circuits (> 1 kV)

Standards Coordinator
Tanya Panomvana

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

4. Requirements

Class (recognized by IEEE C62.11)	Station
Type	Metal oxide
Duty-Cycle Rating	21 kV rms
Maximum Continuous Operating Voltage (MCOV)	17 kV rms
Maximum Front-of-Wave Voltage Cresting in 0.5 Microseconds for 10 kA Wave	58 kV crest
Maximum Discharge Voltage for 8 x 20 Microsecond 10 kA Wave	53 kV crest
Maximum Discharge Voltage for 8 x 20 Microsecond 20 kA Wave	59 kV crest
Maximum Discharge Voltage for 500 A Switching Surge	43 kV crest
Minimum Temporary Overvoltage (TOV) Capability, No Prior Duty ,	
1 sec	1.42 per MCOV
10 sec	1.35 per MCOV
Minimum Energy Capability	8.7 kJ/kV of MCOV
Minimum Pressure Relief Rating	63 kA rms
Minimum Cantilever Strength,	
Ultimate	21,000 in-lb
Maximum design (40% of ultimate)	8,400 in-lb

5. Construction

Housing Material	Silicone rubber; To qualify as silicone type, housing material must be composed of at least 33% silicone by weight; "EP/silicone alloys" do not qualify
Housing Color	Gray
Terminal – Top	4-hole NEMA vertical pad
Terminal – Bottom	Ground clamp suitable for #4 AWG to 250 kcmil stranded copper conductor
Mounting	Three 1/2-in mounting holes spaced 120 degrees from each other on an 8.75 to 10 in-diameter bolt circle
Height, nominal	14 ± 2 in, measured from bottom of mounting base to just underneath terminal pad
Minimum Leakage Distance	30 in

6. Marking and Packaging

Surge arresters shall be packaged individually in wood crates to protect against physical damage that could occur during shipping, handling, or long-term outside storage. Crates shall be secured to pallets for handling by forklift.

Crates shall be marked with the manufacturer's name or symbol, catalog number, SCL stock number, and purchase order number.

Station Class, Polymer, Metal-Oxide Surge Arrester for 115 kV Systems

1. Scope

This standard details requirements for 96 kV duty-cycle rating, station class, polymer-housed, metal-oxide surge arresters.

This standard applies to Seattle City Light (SCL) stock number 013548.

2. Application

Station class surge arresters are intended for use on a nominal 115 kV, grounded, wye-connected, 60 Hz power system.

Arresters are intended for upright or horizontal mounting in substations.

Arresters are intended for direct connection to the substation ground grid.

3. Industry Standards

Surge arresters shall meet all the applicable requirements of the following national standard:

IEEE C62.11 – 2012, Standard for Metal-Oxide Surge Arresters for AC Power Circuits (> 1kV)

Standards Coordinator
Tanya Panomvana

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

4. Requirements

Class (recognized by IEEE C62.11)	Station
Type	Metal oxide
Duty-Cycle Rating	96 kV rms
Maximum Continuous Operating Voltage (MCOV)	76 kV rms
Maximum Front-of-Wave Voltage Cresting in 0.5 Microseconds for 10 kA Wave	250 kV crest
Maximum Discharge Voltage for 8 x 20 Microsecond 10 kA Wave	230 kV crest
Maximum Discharge Voltage for 8 x 20 Microsecond 20 kA Wave	252 kV crest
Maximum Discharge Voltage for 500 A Switching Surge	184 kV crest
Minimum Temporary Overvoltage (TOV) Capability, No Prior Duty ,	
1 sec	1.42 per MCOV
10 sec	1.35 per MCOV
Minimum Energy Capability	8.7 kJ/kV of MCOV
Minimum Pressure Relief Rating	63 kA rms
Minimum Cantilever Strength,	
Ultimate	21,000 in-lb
Maximum design (40% of ultimate)	8,400 in-lb

5. Construction

Housing Material	Silicone rubber; To qualify as silicone type, housing material must be composed of at least 33% silicone by weight; "EP/silicone alloys" do not qualify
Housing Color	Gray
Terminal – Top	4-hole NEMA vertical pad
Terminal – Bottom	Ground clamp suitable for #4 AWG to 250 kcmil stranded copper conductor
Mounting	Three 1/2-in mounting holes spaced 120 degrees from each other on an 8.75 to 10 in-diameter bolt circle
Height, nominal	41 ± 2 in, measured from bottom of mounting base to just underneath terminal pad
Minimum Leakage Distance	143 in

6. Marking and Packaging

Surge arresters shall be packaged individually in wood crates to protect against physical damage that could occur during shipping, handling, or long-term outside storage. Crates shall be secured to pallets for handling by forklift.

Crates shall be marked with the manufacturer's name or symbol, catalog number, SCL stock number, and purchase order number.

7. Issuance

Station Class, Polymer, Metal-Oxide Surge Arrester for 230 kV Systems

1. Scope

This standard details requirements for 192 kV duty-cycle rating, station class, polymer-housed, metal-oxide surge arresters.

This standard applies to Seattle City Light (SCL) stock number 013549.

2. Application

Station class surge arresters are intended for use on a nominal 230 kV, grounded, wye-connected, 60 Hz power system.

Arresters are intended for upright or horizontal mounting in substations.

Arresters are intended for direct connection to the substation ground grid.

3. Industry Standards

Surge arresters shall meet all the applicable requirements of the following national standard:

IEEE C62.11 – 2012, Standard for Metal-Oxide Surge Arresters for AC Power Circuits (> 1kV)

Standards Coordinator
Tanya Panomvana

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

4. Requirements

Class (recognized by IEEE C62.11)	Station
Type	Metal oxide
Duty-Cycle Rating	192 kV rms
Maximum Continuous Operating Voltage (MCOV)	152 kV rms
Maximum Front-of-Wave Voltage Cresting in 0.5 Microseconds for 10 kA Wave	505 kV crest
Maximum Discharge Voltage for 8 x 20 Microsecond 10 kA Wave	465 kV crest
Maximum Discharge Voltage for 8 x 20 Microsecond 20 kA Wave	509 kV crest
Maximum Discharge Voltage for 500 A Switching Surge	382 kV crest
Minimum Temporary Overvoltage (TOV) Capability, No Prior Duty ,	
1 sec	1.42 per MCOV
10 sec	1.35 per MCOV
Minimum Energy Capability	8.7 kJ/kV of MCOV
Minimum Pressure Relief Rating	63 kA rms
Minimum Cantilever Strength,	
Ultimate	21,000 in-lb
Maximum design (40% of ultimate)	8,400 in-lb

Connector Plate for 8-Inch IWCB

1. Scope

This standard covers the fabrication requirements for aluminum alloy connector plates.
This standard applies to Seattle City Light (SCL) Stock No. 680860.

2. Application

Connector plates are bolted to integral web channel bus (IWCB) to create attachment points for electrical connectors. Bus of this type is used exclusively in the network system.

3. Requirements

Product shall be fabricated from aluminum plate of one of the following the alloys:

6061-T6
6061-T651

Note: Seattle City Light stocks aluminum plate meeting these requirements (Stock No. 630052).

Finished product shall be free of sharp edges, sharp corners and burrs.

Product shall be fabricated according to Figure 1.

Maximum allowable tolerances shall be as cited in Figure 1.

4. Packaging

Each standard package shall be legibly marked with the following information

- Fabricator's identification
- Seattle City Light's stock number
- Quantity contained.

Each shipping container shall be legibly marked with the following information

- Fabricator's identification
- Seattle City Light's purchase order number
- Seattle City Light's stock number.

5. Issuance

Stock Unit: EA

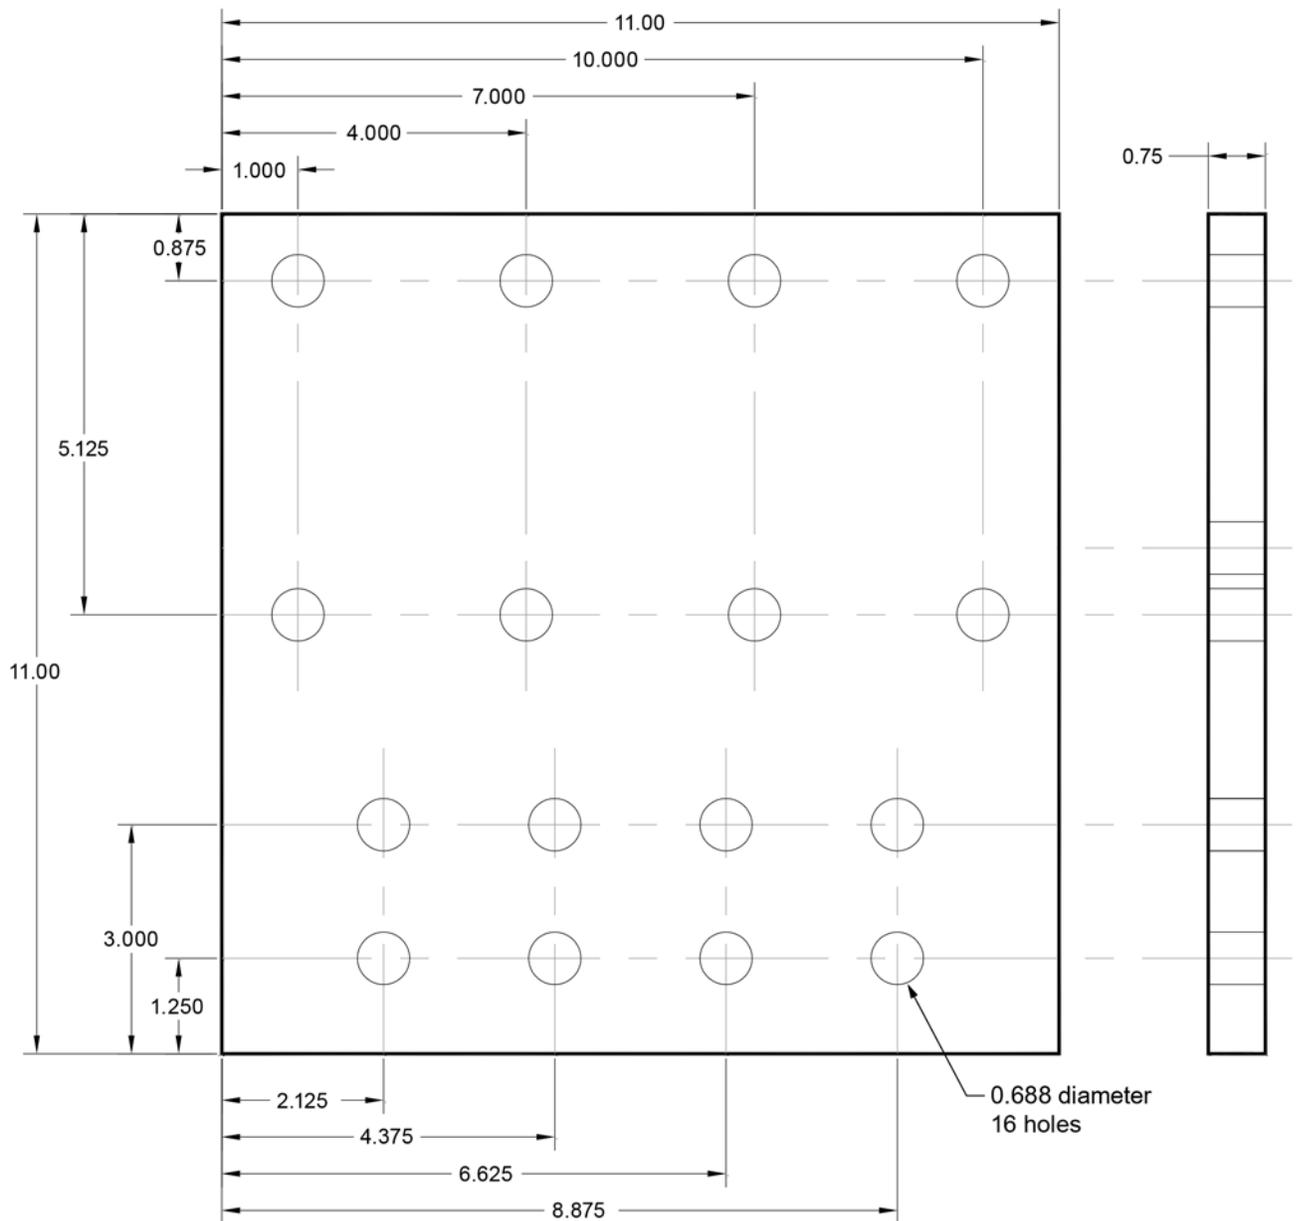

6. Approved Manufacturers

Seattle City Light's Machine Shop is an approved fabricator.

Seattle City Light Material Control personnel may identify and approve alternate, external fabricators.

Figure 1. Connector Plate Dimensions

Notes

1. All dimensions are in inches.
2. Maximum allowable tolerances are as follows:
 - Length, width: ± 0.063 in
 - Thickness, edge radius easing, hole diameter: ± 0.031 in

MATERIAL STANDARD

INSULATOR PLATE FOR 8" X 8" IWCB

1. Foreword

1.1 Scope

This material standard covers the fabrication requirements for aluminum alloy mounting plates.
 This material standard applies to the following Seattle City Light Stock Number: 680874

1.2 Application

Insulator mounting plates are used to mount standard ANSI insulators to integral web channel bus (IWCB).
 Bus of this type is used exclusively in the network system.

2. Fabrication

2.1 Common Requirements

Product shall be fabricated from aluminum plate of one of the following alloys: 6061-T6
 6061-T651

Note: Seattle City Light stocks aluminum plate meeting these requirements; it is identified by Stock Number 630053.

Finished product shall be free of sharp edges, sharp corners, and burrs.

2.2 Detailed Requirements

Product shall be fabricated according to Figure 1.
 Maximum allowable tolerances shall be cited in Figure 1.

3. Packaging

Each standard package shall be legibly marked with the following information

- Fabricator's identification
- Seattle City Light's Stock Number
- Quantity contained

Each shipping container shall be legibly marked with the following information

- Fabricator's identification
- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

4. Shipping

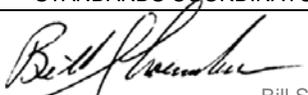

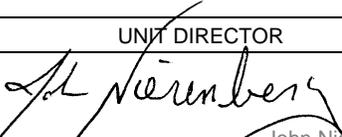

Product shall be shipped to the address specified on the Purchase Order.

5. Issuance

Stock Unit: EA

6. Approved Manufacturers

Seattle City Light's Machine Shop is an approved fabricator.
 Seattle City Light Material Control personnel may identify and approve alternate, external fabricators.

Current Transformer Connector Plate for 8" x 8" IWCB

1. Scope

This material standard covers the fabrication requirements for aluminum alloy current transformer mounting plates.

This material standard applies to the following Seattle City Light Stock Number: 680885

2. Application

Current transformer mounting plates are used to mount current transformers to integral web channel bus (IWCB). Bus of this type is used exclusively in the network system.

3. Requirements

Product shall be fabricated from aluminum plate of one of the following the alloys: 6061-T6
6061-T651

Note: Seattle City Light stocks aluminum plate meeting these requirements; it is identified by Stock Number: 630052.

Finished product shall be free of sharp edges, sharp corners, and burrs.

Product shall be fabricated according to Figure 1.
Maximum allowable tolerances shall be as cited in Figure 1.

4. Packaging

Each standard package shall be legibly marked with the following information

- Fabricator's identification
- Seattle City Light's Stock Number
- Quantity contained

Each shipping container shall be legibly marked with the following information

- Fabricator's identification
- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

5. Issuance

Stock Unit: EA

6. Approved Manufacturers

Seattle City Light's Machine Shop is an approved fabricator.

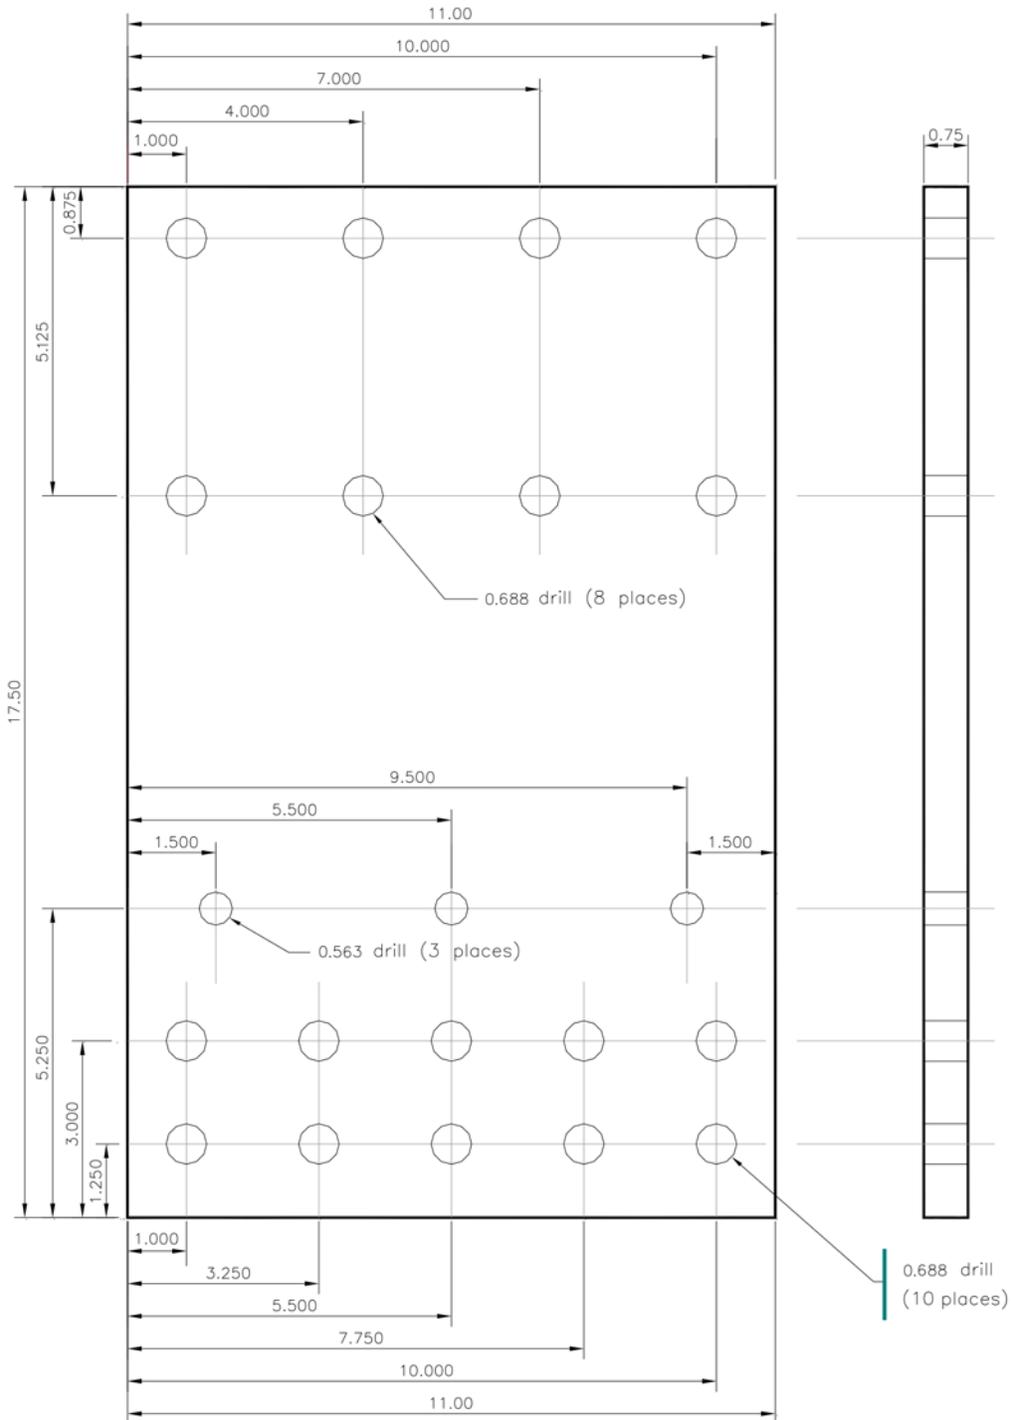

Seattle City Light Material Control personnel may identify and approve alternate, external fabricators.

FUSE CUTOUT, ENCLOSED

1. Scope

This material standard covers the requirements for 2.6 kV, totally-enclosed, porcelain, fuse cutouts, SCL Stock No. 682047.

2. Application

Enclosed fuse cutouts described here are for use on the 2400/4160Y volt overhead primary distribution system.

3. Industry Standards

These enclosed fuse cutouts shall meet the applicable requirements of the following industry standards:

ANSI C37.41-1981 –Standard Design Tests for High-Voltage Fuses, Distribution Enclosed Single-Pole Air Switches, Fuse Disconnecting Switches, and Accessories

ANSI C37.42-1981 – Switchgear – Distribution Cutouts and Fuse Links - Specifications

NEMA SG-2 (1986) – National Electrical Manufacturers Association; January 1, 1993

4. Ratings and attributes

Continuous current rating, RMS amperes, minimum:	100
Interrupting rating, 2.6 kV, five-shot, RMS asymmetrical amperes, minimum:	8,000
Interrupting rating, 2.6 kV, one-shot, RMS asymmetrical amperes, minimum:	14,000
Cutout enclosure material:	porcelain
Cutout enclosure color:	gray
NEMA "A" crossarm mounting bracket:	not required or desired

5. Tests and Test Reports

Data that establishes compliance with the requirements of ANSI C37.41, ANSI C37.42, and this material standard shall be provided upon request.

6. Marking

The cutout door of each assembly shall be permanently marked with the device's nameplate rating.

7. Packaging

Each fuse cutout shall be packaged to prevent damage during shipping, storage, and casual handling prior to installation.

Each package shall be marked with Seattle City Light's Stock Number.

27 KV CUTOUT, OPEN TYPE, PORCELAIN

1. Scope

This material standard covers the requirements for 27 kV, open type, porcelain cutouts and their related accessories.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Description
682099	cutout with fuseholder tube
682297	replacement fuseholder tube
682278	300 A, blade disconnect

2. Application

27 kV cutouts provide overcurrent protection for Seattle City Light's 26.4 kV primary distribution circuits and visible indication of fuse operation.

27 kV cutouts should not be installed in areas where the available fault current exceeds 10,600 A (RMS) symmetrical.

Note: The cutouts specified in this standard have undergone additional electrical testing and have a higher interrupting rating than is published in manufacturer's standard literature or marked on the unit's nameplate.

Note: When evaluating protective devices, be careful not to confuse symmetrical rms ratings with asymmetrical rms ratings.

Disconnect blades, Stock Number 682278, are used to convert fuse cutouts to 300 A disconnect switches.

Figure 2, 300 A, blade disconnect

27 kV cutouts, fuseholder tubes, and accessories are designed to be electrically and mechanically interchangeable between different manufacturers.

Fuse links appropriate for use with this cutout are specified in Material Standard 6837.10.

standards coordinator	standards supervisor	unit director
 Yaochiem Chao	 John Shipek	 Darnell Cola

MATERIAL STANDARD

27 kV Cutout, Open Type, Porcelain

standard number: **6820.90**

superseding: May 14, 2010
 effective date: January 30, 2015
 page: 2 of 3

3. Industry Standards

Cutout, fuseholder tube, and accessories shall meet the applicable requirements of the following industry standards:

ANSI C37.42-1996 - Specification for High-Voltage Expulsion Type Distribution Class Fuses, Cutouts, Fuse Disconnecting Switches and Fuse Links

IEEE C37.41-2008 - Standard Design Tests for High-Voltage (>1000 V) Fuses, Fuse and Disconnecting Cutouts, Distribution Enclosed Single-Pole Air Switches, Fuse Disconnecting Switches, and Fuse Links and Accessories Used with These Devices

4. Attributes

Cutout with fuseholder installed shall have the following ratings and attributes:

Cutout type	Open, distribution class	
Fuse type	Expulsion	
Rated maximum voltage, kV	27	
Rated continuous current, A (rms)	100	
Rated interrupting current (breaking capacity), kA (rms)	symmetrical	10.6
	asymmetrical	16
Basic impulse insulation level (BIL), kV	150	
Cutout material	One-piece, solid porcelain	
Color	Gray	
Leakage distance, in	17	

Cutout shall be provided with attachment hooks for use with an S&C Electric Company load-break tool.

Cutout shall be provided with two parallel-groove connectors, each capable of accepting two conductors 0.162 to 0.447 inches in diameter.

Bottom connector shall be field rotatable over 90 degrees and lockable in either position. Refer to Figure 4 for one example of an acceptable bottom connector.

Figure 4, Example of acceptable bottom connector

5. Testing and Test Reports

Data that establishes compliance with the requirements of IEEE C37.41, ANSI C37.42, and this material standard shall be provided upon request.

6. Marking

Cutouts shall be marked according to the requirements of ANSI C37.42, Section 3.6. This information shall include, but not be limited to:

- Manufacturer's name or symbol
- Manufacturer's type or identification number
- Rated continuous current
- Rated maximum voltage
- Rated interrupting current

7. Packaging

Cutouts, fuseholder tubes, and accessories shall be packaged to prevent damage during shipping, handling, and storage.

27 kV Cutout, Open Type, Polymer

1. Scope

This standard covers the requirements for 27 kV, open type polymer cutouts and related accessories.

This standard applies to the following Seattle City Light (SCL) stock numbers:

Stock No.	Description
013739	Cutout with fuseholder tube
682297	Replacement fuseholder tube
682278	Disconnect blade, 300 A

2. Application

27 kV polymer cutouts provide overcurrent protection for the SCL 26.4 kV primary distribution circuits and visible indication of fuse operation.

See SCL 9065.11, "Primary Fuse Selection and Applications," for detailed application information.

Standards Coordinator
Bob Kephart

Standards Supervisor
John Shipek

Unit Director

Disconnect blades, Stock No. 682278, are used to convert fuse cutouts to 300 A disconnect switches.

Figure 2. Disconnect Blade, 300 A

27 kV polymer and porcelain cutouts and accessories are designed to be electrically and mechanically interchangeable between different manufacturers.

Fuse links appropriate for use with this cutout are specified in SCL 6837.10.

3. Industry Standards

The cutout and accessories shall meet the applicable requirements of the following industry standards:

IEEE C37.41-2008; "IEEE Standard Design Tests for High-Voltage (>1000V) Fuses, Fuse and Disconnecting Cutouts, Distribution Enclosed Single-Pole Air Switches, Fuse Disconnecting Switches, and Fuse Links and Accessories Used with These Devices"

IEEE C37.42-2009; "IEEE Standard Specifications for High-Voltage (>1000V) Expulsion-Type Distribution-Class Fuses, Fuse and Disconnecting Cutouts, Fuse Disconnecting Switches, and Fuse Links, and Accessories Used with These Devices"

4. Requirements

Cutouts and their accessories shall meet the following requirements:

Cutout type	Open, distribution class
Fuse type	Expulsion
Rated maximum voltage, kV	27
Rated continuous current, A (rms)	100
Rated interrupting current (breaking capacity), kA (rms)	
Symmetrical	8
Asymmetrical	12
Basic impulse insulation level (BIL), kV	150
Cutout insulator material	Silicone
Color	Gray
Leakage distance, in	≥18

Cutouts shall be provided with attachment hooks for use with an S&C Electric Company load break tool.

Cutouts shall be provided with two parallel-groove connectors, one upper and one lower, each capable of accepting two conductors 0.162 to 0.447 inches in diameter.

The bottom connector shall be field-rotatable over 90° and lockable in either position. Refer to Figure 4 for one example of an acceptable bottom connector.

Figure 4. Example of an Acceptable Bottom Connector

5. Testing

Data that establishes compliance with the requirements of IEEE C37.41, IEEE C37.42, and this standard shall be provided upon request.

6. Marking

Cutouts shall be marked according to the requirements of IEEE C37.42, Section 3.6.4, which includes:

- Manufacturer's name or symbol
- Manufacturer's type or identification number
- Rated continuous current
- Rated maximum voltage
- Rated lightning impulse withstand voltage (BIL)
- Identifying date code (month and year)

Fuseholders shall be marked according to the requirements of IEEE C37.42, Section 3.6.1, which includes:

- Manufacturer's name or symbol
- Manufacturer's type or identification number
- Rated continuous current
- Rated maximum voltage
- Rated interrupting current
- Identifying date code (month and year)

Disconnect blades shall be marked according to the requirements of IEEE C37.42, Section 3.6.3, which includes:

- Manufacturer's name or symbol
 - Rated continuous current
 - Identifying date code (month and year)
-

7. Packaging

Cutouts with fuseholders (Stock No. 013739) shall be packaged as a single unit to prevent damage during shipping, handling, and storage.

Replacement fuseholders (Stock No. 682297) and disconnect blades (Stock No. 682278) shall be individually protected to prevent damage during shipping, handling, and storage. Each package shall contain no more than 10 fuseholders or disconnect blades.

Shipping containers shall be legibly marked with the SCL purchase order number.

LIMITER – 600 VOLT, COPPER CABLE TO BUS BAR

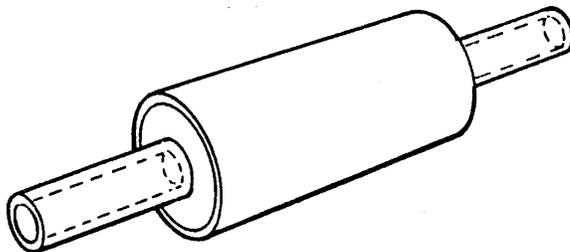

- Cable Limiters** of the configuration shown are intended to protect copper cables on 277/480, 120/208, or 120/240 volt, 1-phase or 3-phase, underground or overhead, distribution or network systems.
- Interrupting Duty:** The cable limiter shall have an AC interrupting duty of 200,000 amperes rms symmetrical at 600 volts or less, and shall clear faults within its duty range without any visible external physical damage to the cable or limiter. No ionized gases or volatilized metal shall be emitted.
- Terminals:** Terminal "A" shall be plated copper bar of size and drilling meeting all applicable requirements of NEMA CC 1 (ANSI C 119.3).
 Terminal "B" shall be plated copper meeting all applicable requirements of NEMA SG 8.1. Terminal "B" shall meet the tool and die requirements listed below, and shall have durable markings showing the conductor size, either on the terminal or on the limiter body.
- Insulating Sleeves:** Not desired.
- Reference Specifications:**

LIMITER - 600 VOLT - COPPER CABLE TO COPPER CABLE

1. **Application:** Cable Limiters of the configuration shown are intended protect copper cables on 277/480, 120/208, or 120/240 volt, 1-phase or 3-phase, underground or overhead, distribution or network systems.
2. **Interrupting Duty:** The cable limiter shall have an AC interrupting duty of 200,000 amperes rms symmetrical at 600 volts or less, and shall clear faults within its duty range without any visible external physical damage to the cable or limiter. No ionized gases or volatilized metal shall be emitted.
3. **Terminals:** Both terminals shall be plated copper. The terminals shall have durable markings showing the conductor size, either on the terminals or on the limiter body.
4. **Stock Unit:** EA

LIMITER – 600 VOLT, ALUMINUM CABLE TO BUS BAR

- Cable Limiters** of the configuration shown are intended protect aluminum cables on 277/480, 120/208, or 120/240 volt, 1-phase or 3-phase, underground or overhead, distribution or network systems.
- Cable Class:** The cable limiters shall coordinate with the insulation damage curves of L-260 (See AIEE Paper 59-27.).
- Interrupting Duty:** The cable limiter shall have an AC interrupting duty of 200,000 amperes rms symmetrical at 600 volts or less, and shall clear faults within its duty range without any visible external physical damage to the cable or limiter. No ionized gases or volatilized metal shall be emitted.
- Terminals:** Terminal "A" shall be plated copper bar of size and drilling meeting all applicable requirements of NEMA CC 1.
 Terminal "B" shall be aluminum meeting all applicable requirements of NEMA CC 3. Terminal "B" shall be factory-filled with a measured amount of oxide-inhibiting compound that will not affect the dielectric strength or power factor of cables insulated with butyl, polyvinyl chloride, polyethylene, or cross-linked polyethylene. Terminal "B" shall meet the tool and die requirements listed below, and shall have durable body markings showing the conductor size, either on the terminal or on the limiter body.
- Insulating Sleeves:** Not desired.
- Reference Specifications:**
 AIEE Paper 59-27, June 1959, No. 42, pages 129-416, *Power Apparatus and Systems*.

Links, Distribution Fuse

- Distribution Fuse Links** shall be the universal, removable buttonhead type for use in enclosed cutouts, and shall conform to the requirements of ANSI C37.42 except as modified herein.

Auxiliary tubes shall be firmly affixed to the ferrule to prevent loosening after installation. All fuse elements shall be of solderless construction. The fusible element shall be made of silver in the 6-ampere to 100-ampere fuse links, inclusive.

The threaded portion of the buttonhead shall be 1/4-28 UNF, Class 2A in accordance with ANSI B1.1, *Unified Inch Screw Threads*.

The fuse rating shall be legibly stamped on the head or shoulder of the ferrule so the rating may be read if the washer is removed.

- Industry Standards**

Distribution fuse links shall meet the applicable requirements of the following industry standards:

B1.1 – “Unified Inch Screw Threads”; ANSI, *Edition 95*

C37.42 – “Specification for High-Voltage Expulsion Type Distribution Class Fuses, Cutouts, Fuse Disconnecting Switches and Fuse Links”; ANSI; 1996

- Melting Time-Current Characteristics** shall be EEI-NEMA Type K (except the 3-ampere*). The fuse shall have a suitable time-current characteristic to allow for energization surges of the applicable distribution transformers listed in the table below, and be of the approved manufacturer's type listed below.

**FAULT LIMITER
 GENERAL PURPOSE CURRENT-LIMITING FUSE, "TYPE X"**

Description

This standard applies to high-voltage general purpose current-limiting fuses and accessories for use on an AC-grounded wye 27/15.5 kV system. These current-limiting fuses are to be used both in single-phase and three-phase applications.

The fuse shall be a non-expulsion silver element fuse and shall comply with the latest revision of ANSI C37.47 except as amended by this material specification.

This general purpose current-limiting fuse will be mounted in SMU-20 fuse holders in pad mount switchgear or SMD-20 overhead cutouts. The fuse will be used to protect distribution transformers and equipment against low-impedance, high current faults.

Construction

Weight: 12 pounds maximum

Housing: The fuse shall be sealed for outdoor use. The tube shall be reinforced fiberglass, coated with an ultraviolet-resistant two-part epoxy paint, and have an EPDM rubber-skirted sleeve. The fuse must have no external element solder joints.

Terminals: The top and bottom end terminals shall be suitable to retrofit the fuse for mounting in existing S&C Electric 27-kV SMU-20 fused units. The fuse must operate the indicator mechanism on the SMU-20 live parts after operation. A terminal bottom end fitting adapter shall be supplied with each fuse unit.

Electrical Specifications

Voltage Rating	15.5 kV phase-to-neutral and 27-kV three-phase on solidly-grounded wye system
Rated Continuous Current	The fuse must meet ANSI 65E definition, ANSI 40E definition, or ANSI 25E definition as specified
Interrupting Rating	Shall be a minimum of 50,000 amperes RMS symmetrical
Basic Insulation	The BIL rating of the fuse shall be 125-kV
Radio Influence	The RIV of the complete device, fuse and fittings, shall not be greater than 30 microvolts at 1 megahertz when energized at 17.4 kV
Leakage Distance	The leakage distance of the fuse and assembly shall be equivalent to 19 inches of porcelain and shall be a material of proven dielectric integrity.

Labeling

In addition to the fuse markings as required under Section 6.2 of ANSI C37.47-1981, the manufacturer shall provide an identifying part number for the fuse and a part number for the end fitting, the date of manufacture, and the BIL rating. The fuse markings shall be legible and permanently installed on both the fuse and carton. The carton label shall also include the City Light stock number.

Packaging

Each fuse shall be packaged one to a carton, with the end fitting adapter attached to the bottom end terminal and instructions for mounting the fuse with S&C SM-20 fittings.

<i>Jim S. Horn</i>	<i>Charles L. Shaffer</i>	<i>John Chinner</i>	<i>Betty Robin</i>

MATERIAL STANDARD**FAULT LIMITER
GENERAL PURPOSE CURRENT-LIMITING FUSE****Test Requirement**

The fuses must be 100% electrically tested before shipment to withstand 95% minimum melt energy without damage.

Data To Be Submitted for Qualification as an Approved Manufacturer

The manufacturer shall indicate any exceptions to this material specification and/or any test requirements as outlined in the latest revision of ANSI C37.47.

- a. Time-Current characteristic graphs on standard-size transparencies
- b. Maximum developed switching surge voltage
- c. Maximum let-through Ampere-Squared-Seconds
- d. Weight, dimensions, outside body material, and leakage distance
- e. Test data on contaminated insulator performance. The test shall be as suggested in Seattle City Light Standard 6840.3, *A Suggested Method for Contaminated Insulator Performance Test for 27-kV System Voltage*, or a City Light approved equivalent test method.
- f. Certified test data on 15.5 kV interrupting tests at critical current (that current which allows maximum energy let-through)
- g. Certified test data on interruption at 15.5 kV where the applied voltage immediately rises to 27 kV and is held for 10 minutes
- h. Certified test data on interrupting three-phase and phase-to-phase faults
- i. End fitting terminal adapter drawings
- j. Part number for fuse and part number for bottom end fitting retaining nut

Warranty

The manufacturer shall warrant the fault limiter to be free of defects of workmanship and materials when used for the applications as stated in this specification (three-phase operation at 27 kV) for a period of five years from the date of shipment.

**FAULT LIMITER
 GENERAL PURPOSE CURRENT-LIMITING FUSE, TYPE "ET"**

Description

This standard applies to high-voltage general purpose current-limiting fuses and accessories for use on an AC-grounded wye 27/15.5 kV system. These current-limiting fuses are to be used both in single-phase and three-phase applications.

The fuse shall be a non-expulsion silver element fuse and shall comply with the latest revision of ANSI C37.47 except as amended by this material specification.

This general purpose current-limiting fuse will be mounted in a air insulated submersible fuse holder and be used to protect distribution transformers and equipment against low-impedance, high current faults.

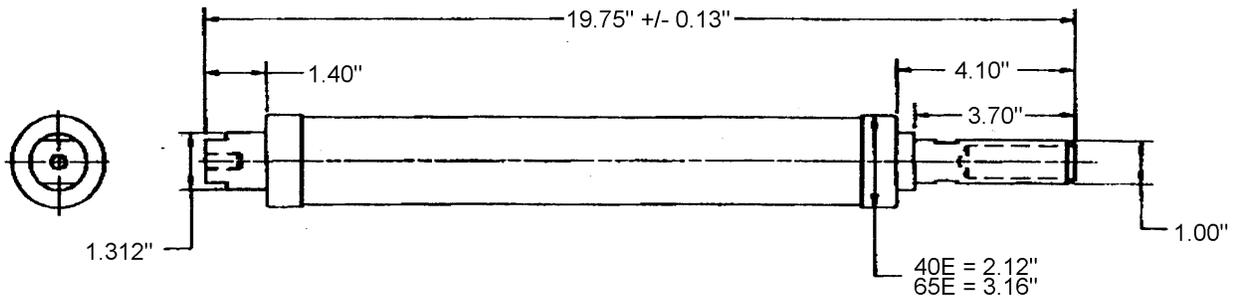

Construction

Weight: 12 pounds maximum

Housing: The tube shall be reinforced fiberglass. The fuse must have no external element solder joints.

Terminals: The top and bottom end terminals shall be of the dimensions shown in Figure 1 below.

FIGURE 1

In November 2015, this standard was renumbered from 6840.1.1 to 6840.11.

**FAULT LIMITER
 BACKUP CURRENT LIMITING FUSE**

Description

This standard applies to high voltage backup current limiting fuses and accessories for use on an AC grounded wye 27/15.5 kV system. These current limiting fuses are to be used both in single-phase and three-phase applications.

The fuse shall be a non-expulsion silver element fuse and shall comply with the latest revision of ANSI C37.47 except as amended by this material specification.

This backup current limiting fuse will be used to protect distribution transformers and equipment against low impedance faults.

Construction

Weight: 12 pounds maximum.

Housing: The fuse shall be sealed for outdoor use. The tube shall be reinforced fiberglass, coated with an ultraviolet resistant two-part epoxy paint, and with EDPM rubber skirted sleeve. The fuse must have no external element solder joints.

Terminals: The top terminal shall be single hole spade type suitable for a bolted connector. Tin-plated aluminum shall not be used. The bottom terminal shall be a stud designed to support the limiter in a vertical or horizontal position. The stud shall be approximately 2 inches long, knurled, and have a diameter of 0.33 ± 0.04 inches. Tin-plated aluminum shall not be used.

Electrical Specifications

Voltage Rating: 15.5 kV phase to neutral and 27 kV three-phase on solidly grounded wye system.

Rated Continuous Current: The backup fuse must be current rated and must coordinate with the respective ANSI K definition fuse links for currents less than 2,000 amperes. The minimum melting time-current characteristic of the limiter shall be greater than the total-clearing TCC of the K-speed fuse link for currents less than the TCC Intersect current

Interrupting Rating: Shall be a minimum of 50,000 amperes RMS symmetrical.

Basic Insulation: The BIL rating of the fuse shall be 125 kV.

Radio Influence: The RIV of the complete device, fuse and connectors shall not be greater than 30 microvolts at 1 megahertz when energized at 17.4 kV.

Maximum Let-Through Ampere Squared Seconds: The maximum I^2T shall be indicated by the manufacturer.

Leakage Distance: The leakage distance of the fuse and assembly shall be equivalent to 17 inches of porcelain and shall be a material of proven dielectric integrity.

Labeling

In addition to the fuse markings as required under Section 6.2 of ANSI C37.47, the manufacturer shall provide the date of manufacture, BIL rating, and coordinating K link fuse size. The fuse markings shall be

ORIGINATOR	STANDARDS COORDINATOR	STANDARDS SUPERVISOR	UNIT DIRECTOR
<i>Jim S. Horn</i>	<i>Charles L. Shaffer</i>	<i>John Chinner</i>	<i>Betty Robin</i>

MATERIAL STANDARD

legible and permanently installed on both the fuse and carton. The carton label shall also include the City Light Stock Number.

Packaging

Each fuse, shall be packaged one to a carton and include an eyebolt connector for #4 to #2 copper conductors, bolted to the spade end.

Test requirement

The fuses must be 100% electrically tested before shipment to withstand 95% minimum melt energy without damage.

Data to be Submitted for Qualification as a Manufacturer

The manufacturer shall indicate any exceptions to this material specification and/or any test requirements as outlined in the latest revision of ANSI C37.47.

- A. Time-Current characteristic graphs on standard size transparencies.
- B. Maximum developed switching surge voltage.
- C. Maximum let-through Ampere-Squared-Seconds.
- D. TCC intersect point in Amperes with respective coordinating K links.
- E. Weight, dimensions, outside body material and leakage distance.
- F. Test data on contaminated insulator performance. The test shall be as suggested in Seattle City Light Standard 6840.3, "A Suggested Method for Contaminated Insulator Performance Test for 27 kV System Voltage," or a pre-approved equivalent test method.
- G. Certified test data on 15.5 kV interrupting tests at critical current (that current which allows maximum energy let-through).
- H. Certified test data on interruption at 15.5 kV where the applied voltage immediately rises to 27 kV and is held for 10 minutes.
- I. Certified test data on interrupting three-phase and phase-to-phase faults.
- J. Part number for fuse.

Warranty

The manufacturer shall warrant the fault limiter to be free of defects of workmanship and materials when used for the applications as stated in this specification (three-phase operation at 27 kV) for a period of five years from the date of shipment.

MATERIAL STANDARD

FUSE HOLDER AND MOUNTING RACK, SUBMERSIBLE SINGLE-PHASE, 15.5 kV, 100 AMPERE

1. General

- 1.1 This specification covers submersible, air insulated single-phase, 15.5 kV, 100 ampere fuse holder and mounting rack for three units.
- 1.2 The fuse holder shall meet or exceed the material and testing requirements of the latest revision of all applicable standards by ANSI, IEEE, NEMA, except as modified herein.
- 1.3 The completed unit shall be capable of withstanding internal failure without explosion of fire.

2. Service

This fuse holder is intended for use on a 26.4 GRD-Y/15.2 kV, three-phase, 60 Hertz distribution system.

3. Ratings

The ratings for the integrated fuseholder assembly shall be as follows:

Normal Voltage - phase to ground.....	15.5 kV
Maximum Design Voltage.....	15.5 kV
Basic Impulse Insulation Level (BIL)	125 kV
Flashover	200 kV
Continuous Current Rating	100 amperes
Short-Circuit Rating – one second.....	20,000 amperes, sym.

4. Materials

- 4.1 The fuse holder tank shall be constructed of 14 gauge 304 stainless steel
- 4.2 The fuse holder rack shall be constructed of mild steel angle stock and shall be hot dip galvanized.
- 4.3 Hot dip galvanizing shall meet the requirements of ASTM A 153.

5. Fuse Holder Tank

- 5.1 The stainless steel tank shall be all welded construction.
- 5.2 The sides of the fuseholder shall be painted black for improved heat transfer. Paint is not required on the top of bottom of the tank.
- 5.3 The fuse holder shall be constructed to withstand all pressure buildup during interruption without permanent distortion or damage to any portion of the structure.
- 5.4 Four mounting tabs shall be provided for securing the fuse holder to the mounting rack.
- 5.5 A Load break parking stand shall be supplied on each fuse holder.
- 5.6 A 1/4" NPT half coupling and pipe plug shall be located on the top of the tank for installation of a pressure relief valve by City Light.

6. Grounding Provisions

Each fuse holder shall have a grounding nut, threaded 1/2" x 13 Welded to the front of the tank within 8 inches of the top.

ORIGINATOR	STANDARDS COORDINATOR	STANDARDS SUPERVISOR	UNIT DIRECTOR
<i>Jim S. Horn</i>	<i>Charles L. Shaffer</i>	<i>John C. Skinner</i>	<i>Harold J. J...</i>

MATERIAL STANDARD

7. Bushings

- 7.1 Primary bushings shall be 200 ampere bushing wells. The bushing wells shall be rated 200 amperes and 125 kV BIL and shall meet the requirements of the 15.2 kV version of Figure 3 of ANSI/IEEE 386-95 for 200 A bushing-well interface, 8.3 kV, 15.2 kV, and 21.1 kV.
- 7.2 Each bushing well shall have a cap to prevent the entrance of moisture or contamination during shipping and storage. The bushings shall be protected against damage during shipping.

8. Operation

- 8.1 The bayonet access for fuse replacement shall be secured with three cam lock releases which are easily operated with a switch stick.
- 8.2 The bayonet fuse access shall be interlocked to prevent opening without first removing the elbow connector.

9. Mounting Rack

Top shall slant fifteen degrees out from the mounting surface.

10. Signs and Nameplates

Each fuseholder shall be provided with a stainless steel nameplate indicating the following:

- (a) Manufacturer's name and drawing or catalog number for the completed assembly.
- (b) Voltage ratings.
- (c) Continuous current rating.
- (d) Short-circuit ratings.
- (e) One line diagram.

11. Guarantee

Any fuse holder failing due to defective design, material, and/or workmanship within 12 months after being energized or 18 months after delivery shall be repaired or replaced at no charge to the City of Seattle Light Department. Any defect in design, material, and/or construction discovered within this period shall be corrected either by repair or replacement on all units furnished on this order by the manufacturer at no charge to the City of Seattle Light Department.

Overhead Fault Indicators

1. Scope

This material standard covers the detailed requirements for single-phase overhead fault indicators.

Because product design engineers are constantly attempting improvements, overhead fault indicators are available in a wide variety of models and features. To be effective, field personnel require a clear understanding of the operating characteristics of each type of fault indicator on the system. For these reasons, to simplify training, operational work practices, and maintenance requirements, only one overhead fault indicator manufactured by one supplier shall be approved for purchase at a time (for this application). A thoughtful review should occur before changing technology.

2. Application

Fault indicators are intended for semi-permanent installation on 26.4 kV, three-phase, bare, overhead, distribution conductors for the purpose of aiding crews with locating faults.

Fault indicators are intended for installation at the following locations:

- Mid-point of the feeder near switches
- Feeder “getaways”
- Underground dips
- Un-fused laterals
- 3/4 point on long feeders

Fault indicators may be installed alone on one conductor or in sets of three on a circuit.

Units may be manually reset with Test/Reset magnet, Stock number 013006.

3. Industry Standard

Fault indicators shall meet the requirements of the following industry standard:

IEEE 495-1986 - Guide for Testing Faulted Circuit Indicators

4. Requirements

4.1 Electrical Parameters

Type:	Non-directional, fixed trip
Fixed trip point:	1200 A (steady state) +/- 10%
Trip speed:	1 cycle (at 4500 A)
	3 cycles (at 3000 A)
	12 cycles (at 1500 A)
Operating temperature range:	-40 to +85 degrees C
Operating voltage (maximum):	46 kV
Current withstand (minimum):	25 kA (10 cycles)

Fault indicators shall trip according to the time current characteristic curve shown in Figure 4.1.

MATERIAL STANDARD

Overhead Fault Indicators

standard number: **6850.00**

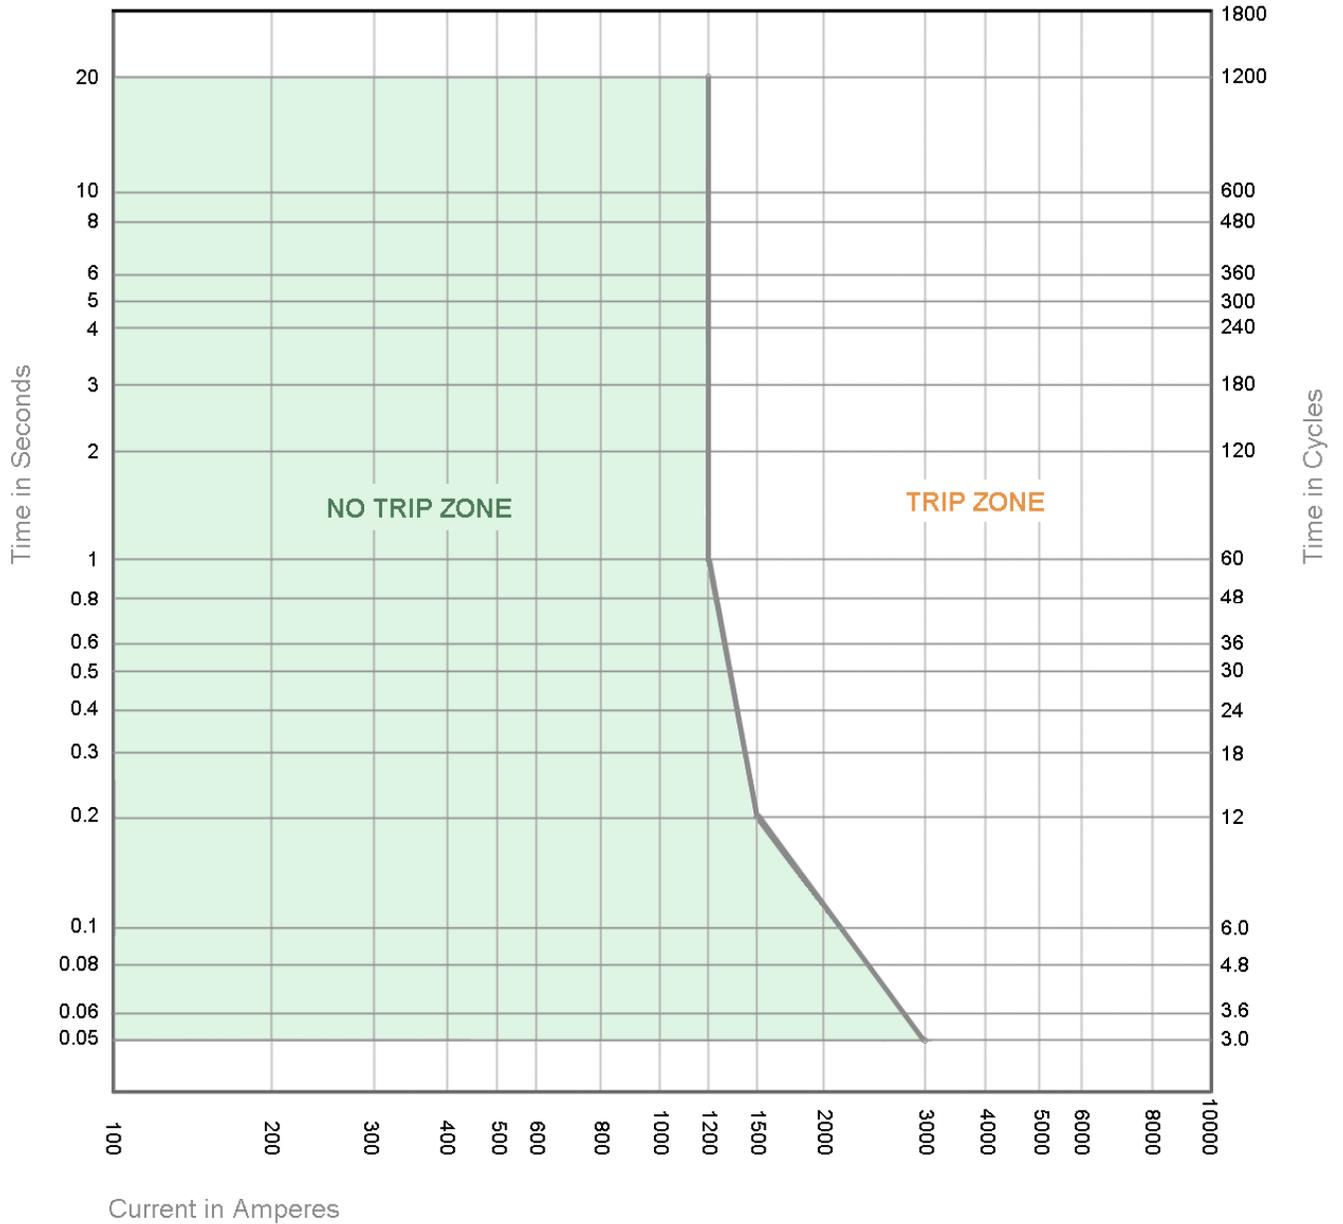

superseding: January 8, 2010

effective date: January 30, 2014

page: 2 of 3

4. Requirements, continued

Figure 4.1

MATERIAL STANDARD

Overhead Fault Indicators

standard number: **6850.00**

superseding: January 8, 2010

effective date: January 30, 2014

page: 3 of 3

4. Requirements, continued**4.2 Indication***

Indication type:	High intensity light emitting diodes (LED)
Indication color:	Red, yellow, or both
Flashing frequency (minimum):	30 per minute
Visibility (day):	1000 feet
Visibility (night):	2000 feet

*Adequacy of indication based on SCL field tests and Standards review

4.3 Reset

Reset type:	Time
Time reset duration:	4 hours, +/- 1 hours
Manual reset capable:	Yes

4.4 Mounting

Wire diameter range low-end (maximum):	0.3 in
Wire diameter range high-end (minimum):	1.2 in
Hot stick installation capable:	Yes

4.5 Power Supply

Power supply type:	Lithium battery
Battery shelf life:	20 years
Battery replaceability:	Replaceable or non-replaceable
Low battery voltage indication:	Yes
Continuous flash life (minimum):	400 hours

5. Marking

Each fault indicator shall be marked with the last two digits of its year of manufacture.

Two digit year code marking shall be reflective (or on reflective background) in 3/4 + 1/4, - 1/16 inch high characters.

6. Packaging

Fault indicators shall be packaged fully assembled, one per cardboard box, complete with installation instructions.

Individual boxes shall be marked with manufacturer's name or symbol, product description, catalog number, year of manufacture, quantity contained, and Seattle City Light's Stock Number.

Shipping containers shall be marked with manufacturer's name or symbol, Seattle City Light's Purchase Order Number, and Seattle City Light's Stock Number.

**FUSE, GENERAL PURPOSE, NON-CURRENT LIMITING,
 250 AND 600 VOLT**

1. Scope

This material standard covers the requirements for 250 and 600 Vac rated, general purpose, non-current limiting, cartridge type fuses.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Voltage Rating, Vac	Current Rating, A
683020	250	1
683021	250	3
683023	250	6
683024	250	10
683025	250	15
683026	250	20
683027	250	25
683028	250	30
683029	250	35
683030	250	40
683031	250	45
683032	250	50
683033	250	60
683034	250	70
683035	250	80
682607	600	3
682609	600	10

2. Application

General purpose fuses are used to protect feeder and branch circuits where the available short-circuit current does not exceed 50,000 amperes for circuits rated up to 60 A (or 10,000 amperes for circuits rated 65 to 600 A).

General purpose fuses are appropriate for lighting, heating, and other non-inductive circuits.

General purpose fuses are intended for dry applications only.

Stock Numbers 682607 and 682609 are used in fire detection control cabinets. Refer to Construction Guidelines NCB-140 and NCB-141.

3. Industry Standards

General purpose fuses shall meet the applicable requirements of the following industry standards and their amendments:

UL Standard 248-6; Underwriters Laboratories Inc., Low Voltage Fuses - Part 6: Class H, Non-Renewable Fuses, January 1, 2000

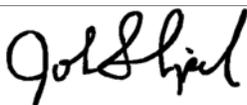

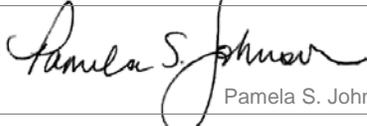

UL Standard 248-6 (Amendment); Underwriters Laboratories Inc., Low Voltage Fuses - Part 6: Class H, Non-Renewable Fuses, April 14, 2004

4. Attributes

General purpose fuses shall have the following attributes:

4.1 Fuses rated 0 to 60A

UL class	K5
Interrupting rating (IR)	50,000 A RMS symmetrical
Terminal style	ferrule
Figure	4.1

standards coordinator	standards manager	unit director

Figure 4.2, End blade, non-rejection style fuse

5. Tests and Test Reports

Data that establishes compliance with the requirements of UL 248-6 and this material standard shall be provided upon request.

6. Marking

Each general purpose fuse shall be permanently marked with:

- Manufacturer's name or symbol
- Manufacturer's catalog number
- Voltage rating
- Ampere rating

7. Packaging

General purpose fuses shall be packaged to prevent damage during shipping, handling, and storage.

DUMMY NEUTRALS, 250 VOLT

1. Scope

This material standard covers the requirements for 250 Vac rated, dummy neutrals.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Fuse Size Equivalent, A
683235	30
683240	60

2. Application

Dummy neutrals are used where a neutral conductor terminates on a UL Class H fuse block and it is not appropriate for a fuse to be in that leg of the circuit.

Dummy neutrals are installed in fuse blocks to effectively form a short-circuit across the terminals of the block.

Dummy neutrals are *not* fuses.

Dummy neutrals are also known as neutral slugs.

3. Attributes

Stock Number 683235 shall:

- Mimic the physical dimensions of a 250 Vac, 30 ampere, UL Class H fuse.
- Form an effective short-circuit across the terminals of a 250 Vac, 1/10 to 30 ampere rated, Class H fuse block.

Stock Number 683240 shall:

- Mimic the physical dimensions of a 250 Vac, 60 ampere, UL Class H fuse.
- Form an effective short-circuit across the terminals of a 250 Vac, 31 to 60 ampere rated, Class H fuse block.

4. Packaging

Dummy neutrals shall be packaged to prevent damage during shipping, handling, and storage.

5. Issuance

FUSE, DUAL-ELEMENT, TIME-DELAY, 250 VOLT

1. Scope

This material standard covers the requirements for 250 Vac rated, dual-element, time-delay, cartridge type fuses with rejection feature terminals.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Current Rating, A
683037	100
683039	125
683040	150
683042	200
683043	225
683045	300
683047	400
683049	500
683050	600

2. Application

Unlike single-element, general purpose fuses (Material Standard 6855.05), dual-element, time-delay fuses can be sized closer to provide both high performance short-circuit protection and reliable overload protection in circuits subject to temporary overloads and surge currents.

Dual-element fuses are appropriate for motor, transformer, and other inductive circuits.

Dual-element fuses are intended for dry applications only.

3. Industry Standards

Dual-element fuses shall meet the applicable requirements of the following industry standard and its amendments:

UL Standard 248-12; Underwriters Laboratories Inc., Low Voltage Fuses - Part 12: Class R Fuses, January 1, 2000

UL Standard 248-12 (Amendment); Underwriters Laboratories Inc., Low Voltage Fuses - Part 12: Class R Fuses, April 14, 2004

4. Attributes

Dual element fuses shall have the following attributes:

UL class	RK5
Voltage Rating	250 Vac
Interrupting rating (IR)	200,000 A RMS symmetrical
Terminal style	end blade, with rejection feature

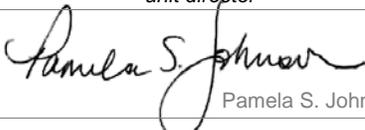

5. Tests and Test Reports

Data that establishes compliance with the requirements of UL 248-12 and this material standard shall be provided upon request.

6. Marking

Each dual-element fuse shall be permanently marked with:

- Manufacturer's name or symbol
- Manufacturer's catalog number
- Voltage rating
- Ampere rating

standards coordinator	standards manager	unit director

**FUSE, DUAL-ELEMENT, TIME-DELAY, PLUG TYPE,
 125 VOLT, S- AND T-SERIES**

1. Scope

This material covers the requirements for 125 Vac rated, dual-element, time-delay, S- and T-series, plug type, fuses, and an adapter.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Series	Base Type	Current Rating, A
683003	T	Edison	6
683354	T	Edison	10
683355	T	Edison	15
683356	T	Edison	20
683357	T	Edison	25
683358	T	Edison	30
683350	S	Rejection	15
683351	S	Rejection	20
683353	S	Rejection	30

683411 Adapter, T series (Edison) to S series (Rejection)

2. Application

Plug fuses are used to protect branch circuits where the available short-circuit current does not exceed 10,000 amperes.

T-series (Edison base) plug fuses are appropriate for general purpose circuits and can provide small motor overload protection when used with box cover units.

S-series plug fuses are designed with an industry standard attribute called *rejection feature*. Fuses

with rejection feature promote safety by preventing the overfusing of branch circuits.

Plug fuses are intended for dry applications, only.

T- to S-series adapters, Stock Number 683411, screw into Edison thread fuse sockets of standard fuse boxes making it easy to retrofit existing fuse installations. Adapters only accept 15 A plug fuses, Stock Number 683350.

3. Industry Standards

Plug fuses shall meet the applicable requirements of the following industry standard and its amendment:

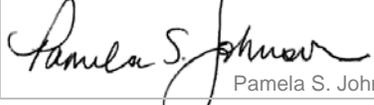

UL Standard 248-11 - Underwriters Laboratories Inc., Low Voltage Fuses - Part 11: Plug Fuses, January 1, 2000

UL Standard 248-11 (Amendment) - Underwriters Laboratories Inc., Low Voltage Fuses - Part 11: Plug Fuses, April 14, 2004

4. Attributes

4.1 T-series plug fuses shall have the following attributes:

UL type	T
Voltage rating	125 Vac
Interrupting rating (IR)	10,000 A RMS symmetrical
Base	Brass with Edison threads
Body	ceramic
Figure	4.1

FUSE, TIME-DELAY, 480 VOLT

1. Scope

This material standard covers the requirements for 480 Vac rated, time-delay, cartridge type fuses.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Current Rating, A
683171	10
683172	15
683165	35
683163	50

2. Application

Time-delay fuses are used to protect branch circuits where the available short-circuit current does not exceed 100,000 amperes.

Time-delay fuses are appropriate for lighting, heating, and other non-inductive circuits.

Time-delay fuses are designed with varied lengths to prevent misapplication.

Time-delay fuses are used in holders specified in Material Standard 6857.05.

Stock Number 683171 is used in physical totaling metering schemes (rare).

3. Industry Standards

Time-delay fuses shall meet the applicable requirements of the following industry standard and its amendment:

UL Standard 248-5 - Underwriters Laboratories Inc., Low Voltage Fuses - Part 5: Class G Fuses, January 1, 2000

UL Standard 248-5 (Amendment) -

Underwriters Laboratories Inc., Low Voltage Fuses - Part 5: Class G Fuses, April 14, 2004

4. Attributes

Time-delay fuses shall have the following attributes:

UL class	G
Voltage rating	480 Vac
Interrupting rating (IR)	100,000 A RMS symmetrical
Terminal style	ferrule

5. Tests and Test Reports

Data that establishes compliance with the requirements of UL 248-5 and this material standard shall be provided upon request.

6. Marking

Each time-delay fuse shall be permanently marked with:

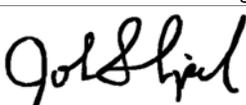

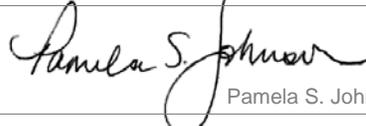

- Manufacturer's name or symbol
- Manufacturer's catalog number
- Voltage rating
- Ampere rating

7. Packaging

Time-delay fuses shall be packaged to prevent damage during shipping, handling, and storage.

FUSE, TIME-DELAY, 125 VOLT

1. Scope

This material standard covers the requirements for 125 Vac rated, time-delay, cartridge type fuses.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Current Rating, A
683193	5
683199	10

2. Application

Time-delay fuses may be used only where proper protection is already being provided by a branch circuit device.

Time-delay fuses are used to provide supplementary protection on branch circuits so that the branch circuit fuse is not disturbed in downstream, overcurrent situations.

Time-delay fuses may be used only where the available short-circuit current does not exceed 10,000 amperes at 125 Vac. Interrupting rating significantly decreases with voltage.

Time-delay fuses are appropriate for general purpose, lighting, and meter circuits.

Fuses measuring 13/32 x 1-1/2 inches are also known as midjet fuses.

3. Industry Standards

Time-delay fuses shall meet the applicable requirements of the following industry standard and its amendment:

UL Standard 248-14 - Underwriters Laboratories Inc., Low Voltage Fuses - Part 14: Supplemental Fuses, January 1, 2000

UL Standard 248-14 (Amendment) - Underwriters Laboratories Inc., Low Voltage Fuses - Part 14: Supplemental Fuses, April 14, 2004

4. Attributes

Time-delay fuses shall have the following attributes:

UL type	Supplemental
Interrupting rating (IR)	10,000 A RMS symmetrical at 125 Vac
Diameter	13/32 in
Length	1-1/2 in
Terminal style	ferrule

5. Tests and Test Reports

Data that establishes compliance with the requirements of UL 248-14 and this material standard shall be provided upon request.

6. Marking

Each time-delay fuse shall be permanently marked with:

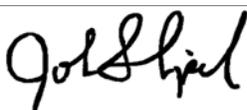

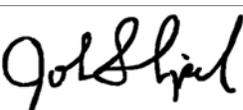

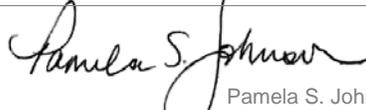

- Manufacturer's name or symbol
- Manufacturer's catalog number
- Voltage rating
- Ampere rating

7. Packaging

Time-delay fuses shall be packaged to prevent damage during shipping, handling, and storage.

MATERIAL STANDARD

FUSE, FAST-ACTING, 125 VOLT, WITH PIN INDICATION

1. Scope

This material standard covers the requirements for 125 Vac rated, fast-acting, cartridge type fuses with pin indication.

This material standard applies to the following Seattle City Light Stock Number:

Stock Number	Current Rating, A
683120	5

2. Application

Fast-acting fuses may be used only where proper protection is already being provided by a branch circuit device.

Fast-acting fuses may be used only where the available short-circuit current does not exceed 10,000 amperes.

Fast-acting fuses have a red pin indicator that provides visual identification of failed circuits, resulting in faster troubleshooting.

Fast-acting fuses are appropriate for control and electronic circuits.

3. Industry Standards

Fast-acting fuses shall meet the applicable requirements of the following industry standard and its amendment:

UL Standard 248-14 - Underwriters Laboratories Inc., Low Voltage Fuses - Part 14: Supplemental Fuses, April 14, 2004

UL Standard 248-14 (Amendment) - Underwriters Laboratories Inc., Low Voltage Fuses - Part 14: Class G Fuses, April 14, 2004

4. Attributes

Fast-acting fuses shall have the following attributes:

UL type	Supplemental
Voltage rating	125 Vac
Interrupting rating (IR)	10,000 A RMS symmetrical
Diameter	1/4 in
Length	1-1/4 in
Terminal style	ferrule

5. Tests and Test Reports

Data that establishes compliance with the requirements of UL 248-14 and this material standard shall be provided upon request.

6. Marking

Fast-acting fuses shall be permanently marked with:

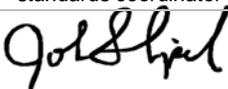

- Manufacturer's name or symbol
- Manufacturer's catalog number
- Voltage rating
- Ampere rating

7. Packaging

Fast-acting fuses shall be packaged to prevent damage during shipping, handling, and storage.

Fuse, Fast-Acting, Current-Limiting, 600 V, 40 A

1. Scope

This material standard covers the requirements for 600 V, 40 A rated, fast-acting, current-limiting, cartridge type fuses.

This standard applies to Seattle City Light (SCL) Stock No. 683162.

2. Application

Fast-acting fuses may be used only where proper protection is already being provided by a branch circuit device.

Fast-acting fuses provide supplementary protection on branch circuits so that the branch circuit fuse is not disturbed in downstream, overcurrent situations.

Fast-acting fuses may be used only where the available ac short-circuit current does not exceed 10,000 A. This value is significantly less for dc circuits.

Fast-acting fuses are appropriate for lighting, control, and meter circuits. Fast-acting fuses are not appropriate for protecting motors or motor circuits

3. Industry Standards

Fast-acting fuses shall meet the applicable requirements of the following industry standard and its amendment:

UL Standard 248-14 - Underwriters Laboratories Inc., Low Voltage Fuses - Part 14: Supplemental Fuses, January 1, 2000

UL Standard 248-14 (Amendment) - Underwriters Laboratories Inc., Low Voltage Fuses - Part 14: Supplemental Fuses, April 14, 2004

Standards Coordinator
Kathy Tilley

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

4. Attributes

Fast-acting fuses shall have the following attributes:

UL type:	Supplemental
Interrupting rating (IR):	
600 Vac	10,000 A
600 Vdc	30 A
Diameter:	13/32 in
Length:	1-1/2 in
Terminal style:	ferrule

5. Tests and Test Reports

Data that establishes compliance with the requirements of UL 248-14 and this material standard shall be provided upon request.

6. Marking

Fast-acting fuses shall be permanently marked with:

- Manufacturer's name or symbol
- Manufacturer's catalog number
- Voltage rating
- Ampere rating

7. Packaging

Fast-acting fuses shall be packaged to prevent damage during shipping, handling, and inside storage.

Each shipping container shall be marked with the Seattle City Light purchase order number.

Fuse, Rejection-Type, Fast-Acting, Current-Limiting, 600 V

1. Scope

This standard covers the requirements for 600 V rated, fast-acting, current-limiting, cartridge, rejection-type fuses.

This standard applies to the following Seattle City Light (SCL) stock numbers:

Stock No.	Current Rating (A)
013509	3
013510	5
013511	10
013512	15
013513	20
013514	30

2. Application

Rejection-type, fast-acting fuses may be used only where proper protection is already being provided by a branch circuit device.

Rejection-type fuses:

- Are used to provide supplementary protection on branch circuits so that the branch circuit fuse is not disturbed in downstream, overcurrent situations.
- May be used only where the available ac short-circuit current does not exceed 200,000 A. This value is less for dc circuits.
- Are appropriate for lighting, control, and meter circuits. Fast-acting fuses are not appropriate for protecting motors or motor circuits.
- Are compatible with both standard and rejection-type holders.

When installed in a rejection-type fuse holder, rejection-type fuses prevent the replacement of fuses rated lower than 600 V.

Standards Coordinator
Kathy Tilley

Standards Supervisor
John Shipek

Unit Director

3. Industry Standards

Fast-acting fuses shall meet the applicable requirements of the following industry standard and its amendment:

UL Standard 248-4 - Underwriters Laboratories Inc., Low Voltage Fuses - Part 4: Class CC Fuses, August 1, 2000

4. Attributes

Fast-acting fuses shall have the following attributes:

UL type:	248-4
Interrupting rating (IR):	
600 Vac	200,000 A
600 Vdc	100,000 A
Diameter:	13/32 in
Length:	1-1/2 in
Terminal style:	ferrule
Rejection feature:	yes

5. Tests and Test Reports

Data that establishes compliance with the requirements of UL 248-4 and this material standard shall be provided upon request.

6. Marking

Rejection-type, fast-acting fuses shall be permanently marked with:

- Manufacturer's name or symbol
- Manufacturer's catalog number
- Voltage rating
- Ampere rating

7. Packaging

Rejection-type, fast-acting fuses shall be packaged to prevent damage during shipping, handling, and inside storage.

Each shipping container shall be marked with the Seattle City Light purchase order number.

8. Issuance

MATERIAL STANDARD

FUSE, ELECTRONIC, SMALL DIMENSION, GLASS

1. Scope

This material standard covers the requirements for electronic, small dimension, glass fuses.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Current Rating , A
683290	1
683360	30
012620	1
012619	2

2. Application

Electronic fuses are appropriate for electronic circuits.

Stock Number 683360 is a time-delay type that avoids needless blows from starting currents or surges. This fuse is used in fuse holder Stock Number 682348 to protect streetlight relays.

3. Industry Standards

Electronic fuses shall meet the applicable requirements of the following industry standard and its amendment:

UL Standard 248-14 - Underwriters Laboratories Inc., Low Voltage Fuses - Part 14: Supplemental Fuses, January 1, 2000

UL Standard 248-14 (Amendment) - Underwriters Laboratories Inc., Low Voltage Fuses - Part 14: Supplemental Fuses, April 14, 2004

FUSE HOLDERS, IN-LINE, WATER-RESISTANT, AND INSULATING BOOTS

1. Scope

This material standard covers the requirements for water-resistant, single-pole, break-away and non-break-away, in-line fuse holders and insulating boots.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Voltage Rating, V	for Fuses measuring, diameter x length, in
682370	600	13/32 x 1-5/16
682346	600	13/32 x 1-1/2
682349		
682350		
682351		
682353		
682366		
682335	480	13/32 x 2-1/4
682352		
012603		
682360	Rubber-insulating boot, single-pole (two required per holder)	

2. Application

In-line fuse holders may be used in dry or wet locations. In wet locations, use rubber insulating boots, Stock Number 682360, to provide added protection against dirt and water. When called for, two boots are required per in-line holder.

Fuse holder assembly, Stock Number 682366, is a breakaway version which includes a set of rubber insulating boots; all other Stock Numbers are non-breakaway and absent boots.

Fuse holders, Stock Numbers 682346, 682349, 682350, 682351, 682353, and 682366 are used with the "midget" fuses cited in Material Standards 6855.35 and 6855.50.

Fuse holder, Stock Number 682370, is used with the 480 V fuses, Stock Numbers 683171 and 683172, cited in Material Standard 6855.25.

Fuse holders, Stock Numbers 682335, 682352, and 012603 are used with the 480 V fuses, Stock Numbers 683165 and 683163, cited in Material Standard 6855.25.

Recommended coupling nut torque is 10 to 20 in-lb.

3. Attributes

Fuse holders shall be Underwriters Laboratories Inc. (UL) or other approved agency recognized.

Fuse holders shall be water-resistant.

Fuse holders shall be in-line, single-pole type.

4. Tests and Test Reports

Data that establishes compliance with the requirements of UL 248-14 and this material standard shall be provided upon request.

**Fuse Holders, Rejection-Type, In-Line, Non-Breakaway,
 Waterproof, Crimp-Terminal**

1. Scope

This material standard covers the requirements for waterproof, single-pole, non-breakaway, crimp-terminal, in-line fuse holder.

This material standard applies to the following Seattle City Light (SCL) stock numbers:

Stock No.	Loadside Terminal (AWG)	Lineside Terminal (AWG)
013518	#12 - #8	#6
013519	#6	#6
013520	#6	#2
013521	#2	#2

2. Application

Rejection-type, in-line, waterproof fuse holder accepts Class CC rejection type fuses. Non-rejection type fuses will not operate if installed.

Rejection-type fuse holders:

- Prevent the installation of fuses rated less than 600 V.
- Are used with class CC, rejection-type fuses cited in Material Standards 6855.55.
- Are UL-Listed for IPX7 conditions for protection against water immersion up to 3 ft.
- Are intended for installation in wet conditions. Two rubber insulating boots, Stock No. 682360, are required per in-line holder.

The recommended coupling nut torque is 10 to 20 in-lb.

Standards Coordinator
 Yaochiem Chao

Standards Supervisor
 John Shipek

Unit Director
 Darnell Cola

3. Industry Standards

Fast-acting fuses shall meet the applicable requirements of the following industry standard and its amendment:

UL Standard 4248-4 - Underwriters Laboratories Inc., Fuseholders - Part 4: Class CC, February 28, 2007

4. Requirements

Rejection-type fuse holders shall have the following attributes:

UL Type:	4248-4
Voltage:	600 V
Amperage:	Up to 30 A
Waterproof Rating:	IPX7
Terminal Style:	Copper crimp
Rejection Feature:	Yes

Rejection-type fuse holders shall be in-line, single-pole, non-breakaway type.

Rejection-type fuse holders shall be designed to accept fuses measuring 13/32 x 1-1/2 (diameter x length, in) with rejection feature.

5. Tests and Test Reports

Data that establishes compliance with the requirements of UL 4248-4 and this material standard shall be provided upon request.

6. Marking

Each fuse holder shall be permanently marked with the following:

- Manufacturer's name or symbol
 - Manufacturer's catalog number
 - Voltage rating
 - Ampere rating
 - UL (or other approved agency) recognition.
-

7. Packaging

Fuse holders shall be packaged to prevent damage during shipping, handling, and inside storage.

8. Issuance

EA

FUSE HOLDERS, PANEL-MOUNT, 250 VOLT

1. Scope

This material standard covers the requirements for 250 V rated, single-pole, panel-mount fuse holders.

This material standard applies to the following Seattle City Light Stock Number:

Stock Number	Voltage Rating, V	for Fuses Measuring diameter x length, in
682348	250	1/4 x 1-1/4

2. Application

Panel-mount fuse holders are used to mount small dimension, electronic, glass fuses in panels.

Panel-mount fuse holders are intended for mounting in panel holes 0.505 +/- .005 inches in diameter.

Panel-mount fuse holders may be used with fuse Stock Number 683360, cited in Material Standard 6855.65.

3. Attributes

Panel-mount fuse holders shall be Underwriters Laboratories Inc. (UL) or other approved agency recognized.

Panel-mount fuse holders shall be suitable for installation in panels up to 5/16-inch thick.

Panel-mount fuse holders shall have a maximum current rating of 30 A.

Panel-mount fuse holders shall feature:

- Thermoplastic body, cap, and nut
- Bayonet-type knob
- Vibration resistance
- Tin-plated brass, quick-connect/solder type terminals

4. Tests and Test Reports

Data that establishes compliance with the requirements of this material standard shall be provided upon request.

5. Marking

Each panel-mount fuse holder shall be permanently marked with:

- Manufacturer's name or symbol
- Manufacturer's catalog number
- Voltage rating
- Ampere rating
- UL (or other approved agency) recognition

6. Packaging

Panel-mount fuse holders shall be packaged to prevent damage during shipping, handling, and storage.

FUSE HOLDERS, BLOCK TYPE, NON-REJECTION, 600 VOLT

1. Scope

This material standard covers the requirements for 600 volt rated, single- and three-pole, block type, non-rejection, fuse holders.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Description
012994	single-pole
012995	three-pole

2. Application

Block type fuse holders accept all fuses measuring 13/32 x 1-1/2 inch. Fuses measuring 13/32 x 1-1/2 inch are also known as midget fuses.

Block type fuse holders may be mounted to a variety of flat surfaces. Refer to specific manufacturer's literature for mounting hole drill patterns.

The block type fuse holders specified in this standard **lack** an optional industry standard attribute called *rejection feature*. Fuse holders **with** *rejection feature* (UL Class CC) promote safety by preventing the insertion of low fault duty rated fuses in high fault duty circuits.

Block type fuse holders will accept the any of the fuses cited in Material Standards 6855.35 and 6855.50.

3. Attributes

Block type fuse holders shall be Underwriters Laboratories Inc. (UL) or other approved agency recognized.

Block type fuse holders shall have the following attributes:

Voltage rating, V	600
Current rating, maximum, A	30
Short-circuit withstand rating, A RMS symmetrical	10,000
For fuses measuring, diameter x length, in	13/32 x 1-1/2
Material	thermoplastic
Terminal type	box lug
Terminal wire range	#6 to #14 AWG, copper only

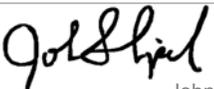

4. Tests and Test Reports

Data that establishes compliance with the requirements of this material standard shall be provided upon request.

5. Marking

Each block type fuse holder shall be permanently marked with:

- Manufacturer's name or symbol
- Manufacturer's catalog number
- Voltage rating
- Ampere rating
- UL (or other approved agency) recognition

UL Standard 248-4 - Underwriters Laboratories Inc., Low Voltage Fuses - Part 4: Class CC Fuses; January 1, 2000

MATERIAL STANDARD

BRACKET, TERMINATOR
 (FOR PAT 1902, 1872, ALUMA FORM CS-820)

Terminator Brackets, shall be of the configuration and dimensions shown.

Material: The brackets shall be made of Merchant Quality, two-inch, steel channel that conforms to ASTM A 29, Grade M1020. The channel shall weigh 2.32 pounds per foot.

Galvanizing: The brackets shall be hot-dipped galvanized after fabrication, in accordance with ASTM A 123 and in accordance with City Light Material Standard 7240.1.

Reference Specifications: ASTM A 29, Grade M1020, and ASTM A 123, latest revisions.

Stock Unit: EA

Stock Number: 686200

**ADAPTER PLATE AND GASKET FOR SINGLE-PHASE G&W 1/C, 27 kV
 TERMINATOR REPLACEMENT**

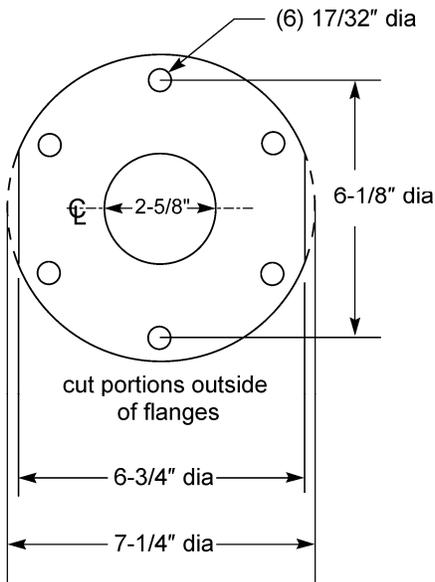

Adapter Plate

Description: Seattle City Light (SCL) Shops made.

Application: Application for both the adapter plate and gasket (686270). For conversion of G&W TR 180245R or W pothead to 600 ampere apparatus bushing on 26 kV network transformers and other apparatus. See Stock Catalog page 70-47 for more information.

Stock No.: 686196

Stock Unit: EA

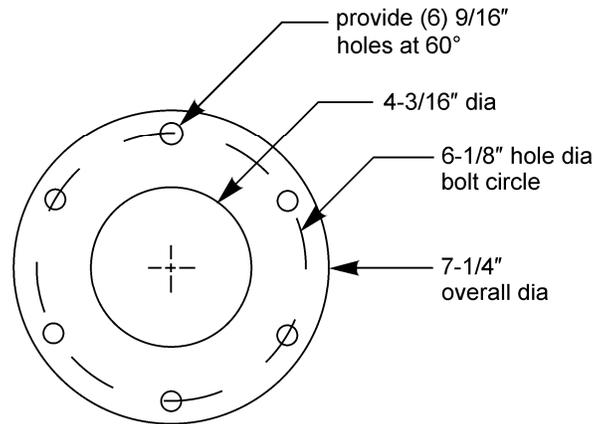

Adapter Plate Gasket

Description: Seattle City Light Shops made from cork and synthetic rubber composition in 1/4-inch sheets (SCL Stock No. 727714). Refer to SCL Material Standard 7276.9.

Application: Application for use with the adapter plate left (686196).

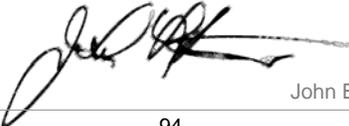

Stock No.: 686270

Stock Unit: EA

Fabrication Notes:

1. "Flower Pot" bushing - Elastimold K1601-T1 (SCL Stock No. 686434)
2. Fabricated from 1/2-inch 304 stainless steel plate.
3. Weld all around stainless steel flange on "flower pot" bushing well. While welding, be sure to provide a heat sink!
4. Test weld with 3 lbs. nitrogen pressure and apply *Leak Tec* to test for leaks.
5. Package in plastic bag.

STRAIGHT APPARATUS BUSHING WITH BOLTABLE ADAPTER PLATE FOR 13 kV NETWORK TRANSFORMER

1. Application:

For conversion of G & W pothead terminations to straight 600 ampere apparatus bushing on 13 kV network transformers and other apparatus. Used with gasket Stock Number: 686386. See Stock Catalog for further information.

Also for use with 26kV Network Transformers when welding in adapter ring (Stock Number 686250, Material Standard 6862.5).

2. Manufacture

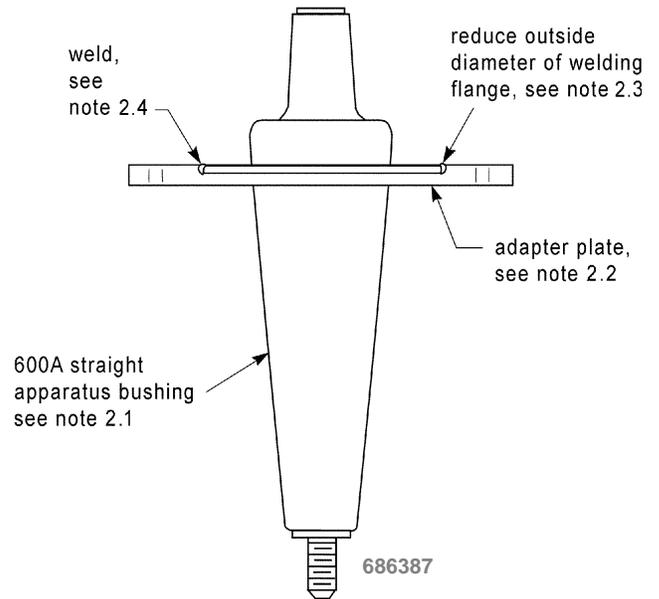

- 2.1 600A straight apparatus bushing - SCL Stock Number 686392 (Material Standard 6863.17), Elastimold K650-T1.
- 2.2 Adapter plate, SCL Stock No. 686213
- 2.3 Reduce OD of welding flange embedded in bushing to 3-3/4" to provide clearance at bolt circle holes of bolttable flange.
- 2.4 Weld all around stainless steel flange on bushing. Be sure to provide a heat sink while welding to prevent heat damage to the epoxy bushing.
- 2.5 Test the weld for leaks in the shop test fixture using *Leak Tec* with nitrogen at 3 lbs. pressure.
- 2.6 Perform dielectric test: One minute at 150 percent of rated voltage.
- 2.7 Package in plastic bags.

3. Bushing with Adapter Plate:

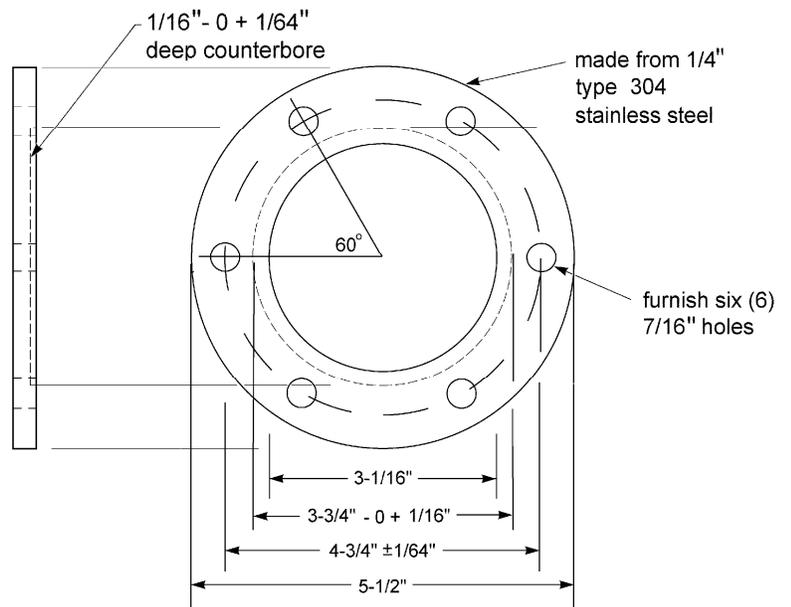

Seattle City Light Shops Made
Stock Unit: EA
Stock Number: 686387

4. Adapter Plate only:

Seattle City Light Shops Made
Stock Unit: EA
Stock Number: 686213

**TERMINATOR ADAPTER PLATE TO REPLACE
 3/C, 27-kV POTHEAD G&W TRA 3855C**

NOTES:

1. Blind drill and tap 3/8" -16NC x 1/2" deep. Install 18, 3/8" -16NC x 1-1/2" bronze studs. Protect studs with Caplug® or equal. Seat stud lightly. On terminator adapter plate (Stock #686205), use 18, 3/8" -16NC x 1-1/2" bronze studs (Stock #012944). No bolt circle holes or studs required for "flower pot" bushing wells.
2. 5/8-inch steel plate
3. Weld all around stainless steel flange on "flower pot" bushing well. While welding, be sure to provide heat sink.
4. Finish Coat:
 - 4.1 **Adapter Plate for PATR Terminators.** Prime outside (stud side) with DuPont LF-1858S and paint with black (Devoe Coatings Devguard 4308). Prime inside with epoxy primer (DuPont Corlar #824S) and paint with epoxy white (Impron #508U).
 - 4.2 **Adapter Plate with "Flower Pot" Bushing Wells.** Prime topside (well side) with DuPont LF-1858S and paint black (Devoe Coatings Devguard 4308) and cover all welds, but do not coat the stainless steel surfaces. Prime bottom side with epoxy primer (DuPont Corlar #824S) and paint with epoxy white (Impron 508U). Protect "flower pot" bushings from contamination.

Composition C.L. Stock Number: 727714.

Material Standard: 7276.9

GASKETS, SILICONE SPONGE RUBBER

Scope: Silicone sponge rubber gaskets of the configurations shown are intended to be used on pole-type transformers where the gasket will be outdoors on a pole exposed to the sun, wind, rain, ozone, corona, and air pollutants.

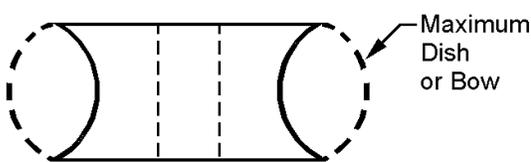

The gaskets will be used to fill gaps between the bird guard and the porcelain high-voltage bushing.

Material: The gaskets shall be cut from stabilized soft-density closed-cell silicone sponge rubber meeting the requirements of ASTM D 1056. The material shall be Groendyk 7910 or equal.

Physical Characteristics:

- Color: Gray
- Finish: Fabric impression, both sides
- Water Absorption: 10% maximum
- Compression/Deflection: 2 to 6 psi
- Compression Set: maximum 35% after 22 hours
- Percent Elongation: 350% minimum on 1/8" samples
- Tensile Strength: 75 psi minimum on 1/8" samples
- Temperature Range: -30° F to 450° F (-17° C to 230° C)
- Flame Resistance: 1-1/2" flame vertical for 12 seconds

Fabrication: The gaskets shall be die cut with the following tolerances:

- 0.05" on 1/2" material
- 0.03" on 1/4" material
- 0.01" on 1/8" material

± 1/16" maximum tolerance on dimensions, out-of-round, and concentricity.

Stock Number	Fig. Number	O.D. In.	I.D. In.	Thickness, In.

COMPRESSION CONNECTORS, ALL-ALUMINUM TYPE

1. Scope

This material standard covers the requirements for all-aluminum type compression connectors.

The requirements for bi-metallic compression connectors, intended for use with 200 A separable connectors, are specified in 6864.00. The requirements for all-copper compression connectors, intended for use with 900 A separable connectors, are specified in 6863.30.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Conductor
686375	#1 AWG compressed, 1/0 AWG solid
686377	2/0 AWG compact
686376	2/0 AWG compressed
686378	3/0 AWG compressed
686369	4/0 AWG compressed
686366	350 kcmil compact
686351	350 kcmil compressed
686362	500 kcmil compact
010135	500 kcmil compressed
686349	750 kcmil compact
686359	750 kcmil compressed
686398	1000 kcmil compact
010136	1000 kcmil compressed

2. Application

All-aluminum compression connectors are used to make up 600 A, 125 kV and 150 kV BIL, deadbreak separable connectors, utilizing the dielectric components specified in Material Standards 6863.15 and 6863.25, respectively.

2. Application, continued

All-aluminum compression connectors can be used with either aluminum or copper conductor cable.

For cable technical data, refer to E6-1.0/NGE-70.

3. Industry Standards

Compression connectors shall meet the applicable requirements of the following industry standard:

ANSI C119.4-2004 – American National Standard for Electric Connectors – Connectors for Use Between Aluminum-to-Aluminum or Aluminum-to-Copper Conductors

4. Detailed Requirements

Compression connectors shall be designed and fabricated for use with the 125 kV and 150 kV BIL, deadbreak separable connector dielectric components specified in Material Standards 6863.15 and 6863.25 respectively.

Compression connectors shall accommodate conductor according to Section 9, below.

Compression connectors shall be all-aluminum, and tin-plated.

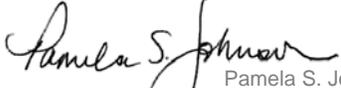

Compression connectors shall be current Class A, as defined in ANSI C119.4.

Compression connectors shall be tensile strength Class 3, minimum tension (or better), as defined in ANSI C119.4.

Compression connector shall be highly conductive aluminum.

Compression connector barrel shall be pre-filled with oxide inhibitor.

Compression connector barrel ends shall be capped or sealed to protect the oxide inhibitor from contamination.

standards coordinator	standards supervisor	unit director
 John Shipek	 John Shipek	 Pamela S. Johnson

MATERIAL STANDARD**4. Detailed Requirements, continued**

Each compression connector shall be provided with tool type, die number, and number of crimps information for:

- Burndy
- Kearney
- Alcoa
- Thomas & Betts (T&B)
- EEI reference

5. Marking

Each compression connector shall be permanently marked with:

- Manufacturer's name
- Manufacturer's catalog number
- Conductor types and sizes (ranges)
- Die number

6. Packaging

Compression connectors shall be packaged to prevent damage during shipping.

Each shipping container shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Quantity contained
- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

Shipping container weight shall not exceed 50 pounds.

7. Issuance

**Separable Connector, Deadbreak,
 Dielectric Components, 125 kV BIL**

1. Scope

This standard covers the requirements for 125 kV BIL, deadbreak, separable connector dielectric components. Separable connector dielectric components consist of T-bodies, and cable adapters.

The requirements for 125 kV BIL, deadbreak, straight line apparatus connector kits are specified in SCL 6863.16.

The requirements for 600 A and 900 A compression connectors are specified in SCL 6863.10 and 6863.30 respectively.

The requirements for 125 kV BIL, 600 A and 900 A junction boxes, plugs, miscellaneous components and tools, and accessories are specified in SCL 6863.17 and 6863.37 respectively.

The requirements for 150 kV BIL, deadbreak, separable connector dielectric components are specified in SCL 6863.25.

This standard applies to the following Seattle City Light stock numbers:

Stock No.	Description	Cable Insulation OD Minimum Range (in)
686350	T-body	–
686310	Cable adapter	0.640-0.820
686315	Cable adapter	0.760-0.950

2. Application

A separable connector (elbow) is a fully insulated and shielded system for terminating and electrically connecting an insulated power cable to electrical apparatus, other power cables, or both, so designed that the electrical connection can be readily established or broken by engaging or separating the connector at the operating interface.

The separable connectors specified in this material standard are intended for use on the following three-phase, 60 Hz systems:

- 13.8 kV, 3-wire, delta, where load consists of network type transformers with delta-connected primary and grounded wye-connected secondary
- 26.4 kV, 4-wire, solidly-grounded, wye-connected.

125 kV BIL T-bodies, and cable adapters **cannot** be used interchangeably with 150 kV BIL dielectric components. New construction should utilize 125 kV BIL material, except in cases where the equipment being connected to has 150 kV BIL bushings.

600 A and 900 A compression connectors can be used to make up either 125 kV BIL or 150 kV BIL separable connectors. Dielectric components alone do not have a current rating.

Because of high fault duty, connectors rated 200 A continuous are not appropriate for network systems. Network systems should be constructed with connectors rated 600 A (or 900 A) continuous.

For cable technical data, refer to SCL 9660.04.

For cable specific information relating to the parts required to make-up a complete separable connector, including jacket sealing and metallic shield adapters, refer to U5-17.05.

3. Industry Standards

Separable connector dielectric components shall meet the applicable requirements of the following industry standard:

IEEE 386-2006 – Standard for Separable Insulated Connector Systems for Power Distribution Systems Above 600 V

4. Detailed Requirements

Separable connector dielectric components shall have the following electrical ratings and attributes:

Voltage class	25 kV
Maximum voltage rating (ph-g)	8.3 kV RMS (delta systems)
	15.2 kV RMS (grounded wye systems)
BIL	125 kV crest
Continuous current rating	600 A RMS (with all-aluminum compression connector)
	900 A RMS (with all-copper compression connector)
Short-time current rating	25 kA RMS, symmetrical
IEEE 386 interface	Figure 11

Each separable connector T-body shall be provided with assembly instructions.

Cable adapters shall be designed and fabricated for use with the 125 kV BIL T-body specified in this standard.

5. Testing

Separable connector dielectric components shall be tested according to the requirements of IEEE 386, Section 7.

Test results shall be provided upon request.

6. Design Changes

Manufacturer shall inform Seattle City Light in writing of all design changes that could affect the product's understood or published capabilities.

7. Marking

Separable connector dielectric components shall be marked according to the requirements of IEEE 386, Section 6.1.

8. Packaging

Separable connector dielectric components shall be packaged to prevent damage and/or contamination during shipping, handling, and storage.

Each shipping container shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Quantity contained
- Seattle City Light's purchase order number
- Seattle City Light's stock number.

Shipping container weight shall not exceed 50 pounds.

9. Issuance

**SEPARABLE CONNECTOR, BOLTED TYPE, DEADBREAK,
 CABLE JOINT PARTS AND KITS, 600 A, 125 KV BIL**

1. Scope

This material standard covers the requirements for 125 kV BIL, 600 A, bolted, deadbreak, cable joint kits, straight cable-to-apparatus connector kits, insulating caps with bails, cable adapter retaining rings and special tools.

Connector systems of this type are known within Seattle City Light as modular systems. Straight cable-to-apparatus connectors are sometimes referred to as SOB connectors, where SOB stands for straight-on-bushing.

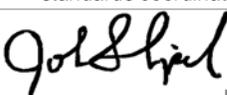

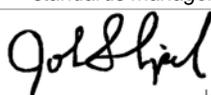

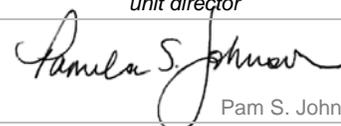

Cable joint parts consist of housings, bolts, flat washers, Belleville washers, insulated bus bars, straight receptacle adapters, and cable adapter retaining rings.

Compression lugs and cable adapters are outside the scope of this standard, but required to make a complete connection. For selection information, refer to Material Standard 6863.10 for 600 A compression connectors and Material Standard 6863.15 for 125 kV BIL cable adapters.

Jacket sealing and metallic shield adapters are also outside the scope of this standard. For more information regarding the installation of straight cable-to-apparatus connection kits, refer to Construction Guidelines NSP-320 and NSP-321.

This Material Standard applies to the following Seattle City Light Stock Numbers:

MATERIAL STANDARD

Separable Connector, Bolted Type, Deadbreak,
Cable Joint Parts and Kits, 600 A, 125 kV BIL

standard number: **6863.16**
superseding: August 19, 2008
effective date: June 2, 2010
page: 2 of 7

2. Application

A bolted cable joint is a fully insulated and shielded system for terminating and electrically connecting an insulated power cable to electrical apparatus or other power cables.

Bolted cable joints are available in cable-to-apparatus (one way), straight (two-way), Y (three way), and H (four way) versions.

De-energized (and grounded) joints can be quickly and easily connected and disconnected using standard hand tools. Bus bars can be changed to add or remove cables from the joint. Note that when modifying an existing joint, jacket sealing and metallic shield adapter connections may need to be reworked.

The cable-to-apparatus connector specified in this standard has an IEEE 386 interface on one end and is designed to be operated in the same manner as 600 A, T-body, separable connector.

The connectors specified in this material standard are intended for use on the following three-phase, 60 Hz systems:

- 13.8 kV, 3-wire, delta, where load consists of network type transformers with delta-connected primary and grounded wye-connected secondary
- 26.4 kV, 4-wire, solidly-grounded, wye-connected

For cable technical data, refer to E6-1.0/NGE-70.

3. Industry Standards

Bolted cable joints shall meet the applicable requirements of **either one** of the following industry standards:

- IEEE 386-2006** – Standard for Separable Insulated Connector Systems for Power Distribution Systems Above 600 V
- IEEE 404-2006** - Standard for Extruded and Laminated Dielectric Shielded Cable Joints Rated 2500 V to 500 000 V

4. Detailed Requirements

Bushing interfaces shall meet the applicable requirements of IEEE 386 and have the following electrical ratings and attributes:

voltage class	25 kV
maximum voltage rating (ph-g)	8.3 kV RMS (delta systems)
	15.2 kV RMS (grounded WYE systems)
BIL	125 kV crest
continuous current rating	600 A RMS
short-time current rating	25 kA RMS, symmetrical
IEEE 386 interface	Figure 11

Bolted cable joints shall have the following electrical ratings and attributes:

voltage class	25 kV
voltage rating (ph-ph)	25 kV RMS (grounded WYE systems)
voltage rating (ph-g)	15.2 kV RMS (grounded WYE systems)
BIL	125 kV crest
continuous current rating	600 A RMS
short-time current rating	25 kA RMS, symmetrical

Bolted cable joint kits (H or Y joint kits) shall include:

- Straight receptacle housings (quantity appropriate for number of ways)
- Insulated bus
- Bolts, flat washers, Belleville washers (quantity appropriate for number of ways)
- Silicone lubricant
- Vent rod
- Instruction sheet

Each **insulated bus bar** shall be provided with a test point with cap.

Straight cable-to-apparatus connector kits shall include:

- Straight receptacle housing (with shipping cap each end)
- Bushing converter
- Contact adapter
- Brass bolt (5/8-11, specialized socket head)
- Loctite 271, thread locker, single application package
- Stainless steel bolt (5/8-11 x 1-1/2), flat washer, Belleville washer
- Silicone lubricant, single application package
- Vent rod
- Instruction sheet

Cable adapter retaining rings shall be marked with the intended conductor size or an application code (manufacturer shall provide Seattle City Light with a legend, if an application code is employed.)

5. Testing

Bushing interfaces shall be tested according to the requirements of IEEE 386, Section 7.

Bolted cable joints shall be tested according to the requirements of IEEE 386, Section 7, or IEEE 404, Section 7.

Test results shall be provided upon request.

MATERIAL STANDARD

Separable Connector, Bolted Type, Deadbreak,
Cable Joint Parts and Kits, 600 A, 125 kV BIL

standard number: **6863.16**

superseding: August 19, 2008

effective date: June 2, 2010

page: 3 of 7

6. Design Changes

Manufacturer shall inform Seattle City Light in writing of all design changes that could affect the product's understood or published capabilities.

7. Marking

Bushing interfaces shall be marked according to the requirements of IEEE 386, Section 6.1.

Bolted cable joints shall be marked according to the requirements of IEEE 386, Section 6.1, or IEEE 404, Section 6.1.

8. Packaging

Bolted cable joint parts and kits shall be individually packaged in heavy duty, clear plastic bags or cardboard boxes, as appropriate for their size and weight, to prevent damage and/or contamination during shipping, handling, and storage.

8. Packaging, continued

Each individual package shall be marked with the following information:

- Manufacturer's identification
- Product description
- Each shipping container shall be legibly marked with the following information:
 - Manufacturer's identification
 - Product description
 - Quantity contained
 - Seattle City Light's Purchase Order Number
 - Seattle City Light's Stock Number

MATERIAL STANDARD

**ACCESSORIES, SEPARABLE CONNECTOR, 600 A,
125 kV BIL, DEADBREAK**

1. Scope

This standard covers the requirements for 600 A, 125 kV BIL, deadbreak, separable connector accessories, such as multi-way junction boxes (J-boxes), parking bushings, extension bushings, apparatus bushings, wells, plugs, caps, threaded studs, and special tools.

The requirements for 125 kV BIL, deadbreak, separable connector dielectric components are specified in SCL 6863.15.

The requirements for 125 kV BIL, deadbreak, straight cable-to-apparatus connector kits are specified in SCL 6863.16.

The requirements for 600 A, 150 kV BIL, deadbreak, separable connector accessories are specified in SCL 6863.27.

The requirements for 900 A, 125 kV BIL, deadbreak, separable connector accessories are specified in SCL 6863.37.

This standard applies to the following Seattle City Light Stock Numbers:

Stock No.	Description	Page
686383	Multi-way junction (J-Box), three-bushing	3
686384	Multi-way junction (J-Box), four-bushing	3

MATERIAL STANDARD

Accessories, Separable Connector, 600 A, 125 kV BIL, Deadbreak

standard number: **6863.17**

superseding: August 22, 2013

effective date: June 11, 2015

page: 2 of 9

2. Application

The cable accessories specified in this standard are intended to be used in conjunction with 125 kV BIL, deadbreak separable connector dielectric components (T-bodies and cable adapters), SCL 6863.15, to construct complete connector systems.

Important Note: Some accessories are provided with a stud. If an accessory is provided with the stud factory-installed, it should be considered permanent and not removable.

3. Industry Standards

Separable connectors (elbows) accessories shall meet the applicable requirements of the following industry standard:

IEEE 386-2006 – Standard for Separable Insulated Connector Systems for Power Distribution Systems Above 600 V

4. General Requirements

600 A interfaces shall have the following electrical ratings and attributes:

voltage class	25 kV
maximum voltage rating (ph-g)	15.2 kV RMS
BIL	125 kV crest
continuous current rating	600 A RMS
short-time current rating	25 kA RMS, symmetrical
IEEE 386 interface	Figure 11

200 A loadbreak interfaces shall have the following electrical ratings and attributes:

voltage class	25 kV
maximum voltage rating (ph-g)	15.2 kV RMS
BIL	125 kV crest
continuous current rating	200 A RMS
short-time current rating	10 kA RMS, symmetrical
IEEE 386 interface	Figure 7

200 A deadbreak interfaces shall have the following electrical ratings and attributes:

voltage class	25 kV
maximum voltage rating (ph-g)	15.2 kV RMS
BIL	125 kV crest
continuous current rating	200 A RMS
short-time current rating	10 kA RMS, symmetrical
IEEE 386 interface	Figure 4

200 A bushing well interfaces shall have the following electrical ratings and attributes:

voltage class	15, 25, and 35 kV
maximum voltage rating (ph-g)	21.1 kV RMS
BIL	150 kV crest
continuous current rating	200 A RMS
short-time current rating	10 kA RMS, symmetrical
IEEE 386 interface	Figure 3

Brackets and mounting hardware shall be stainless steel or other corrosion-proof alloy. Galvanized parts are not acceptable.

Multi-way junction boxes shall be provided with adjustable angle mounting brackets.

Any accessory that requires permanent grounding shall be equipped with a connector for attaching a #2 AWG, bare, stranded copper grounding conductor.

Insulated caps shall be provided with grounding tab for the purpose of attaching a drain wire lead.

For the purposes of this Material Standard, parking stands designed for use with Elastimold type 160 grounding and insulated parking bushings shall be designated type 160PS. Parking stands of this design have a nominal horizontal opening of 2 inches. IEEE 386 does not provide specifications for 160PS parking stands.

Figure 4.1, type 160PS parking stand

**SEPARABLE CONNECTOR, DEADBREAK,
 DIELECTRIC COMPONENTS, 150 KV BIL**

1. Scope

This material standard covers the requirements for 150 kV BIL, deadbreak, separable connector dielectric components. Separable connector dielectric components consist of T-bodies, and cable adapters.

The requirements for 600 A and 900 A compression connectors are specified in Material Standards 6863.10 and 6863.30 respectively.

The requirements for 150 kV BIL, 600 A connecting and insulating plugs are specified in Material Standards 6863.27. 150 kV BIL, multi-way junction boxes (J-boxes) are non-stock items.

The requirements for 125 kV BIL, deadbreak, separable connector dielectric components are specified in Material Standard 6863.15.

This Material Standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Description	Cable Insulation OD Minimum Range, in.
687060	T-body	-
687019	Cable adapter	0.875-0.985
687020	Cable adapter	1.220-1.375
687025	Cable adapter	1.285-1.395
687028	Cable adapter	1.485-1.595

MATERIAL STANDARDSeparable Connector, Deadbreak, Dielectric Components,
150 kV BILStandard Number: **6863.25**
Page: 2 of 3
Superseding: May 27, 2008
Effective Date: September 28, 2015**2. Application**

A separable connector (elbow) is a fully insulated and shielded system for terminating and electrically connecting an insulated power cable to electrical apparatus, other power cables, or both, so designed that the electrical connection can be readily established or broken by engaging or separating the connector at the operating interface.

The separable connectors specified in this material standard are intended for use on the following three-phase, 60 Hz systems:

- 13.8 kV, 3-wire, delta, where load consists of network type transformers with delta-connected primary and grounded wye-connected secondary
- 26.4 kV, 4-wire, solidly-grounded, wye-connected

150 kV BIL T-bodies, and cable adapters **cannot** be used interchangeably with 125 kV BIL dielectric components. New construction should utilize 125 kV BIL material, except in cases where the equipment being connected to has 150 kV BIL bushings.

600 A and 900 A compression connectors can be used to make up either 125 kV BIL or 150 kV BIL separable connectors. Dielectric components alone do not have a current rating.

Because of high fault duty, connectors rated 200 A continuous are not appropriate for network systems. Network systems should be constructed with connectors rated 600 A (or 900 A) continuous.

For cable technical data, refer to 9660.04.

For cable specific information relating to the parts required to make-up a complete separable connector, including jacket sealing and metallic shield adapters, refer to U5-17.10.

3. Industry Standards

Separable connector dielectric components shall meet the applicable requirements of the following industry standard:

IEEE 386-2006 – Standard for Separable Insulated Connector Systems for Power Distribution Systems Above 600 V

4. Detailed Requirements

Separable connector dielectric components shall have the following electrical ratings and attributes:

voltage class	35 kV
maximum voltage rating (ph-g)	21.1 kV RMS ((grounded WYE systems)
BIL	150 kV crest
continuous current rating	600 A RMS (with all-aluminum compression connector) 900 A RMS (with all-copper compression connector)
short-time current rating	25 kA RMS, symmetrical
IEEE 386 interface	Figure 13

Each separable connector T-body shall be provided with assembly instructions.

Cable adapters shall be designed and fabricated for use with the 150 kV BIL T-body specified in this material standard.

Cable adapters shall meet the dimensional requirements specified in **Section 10**.

5. Testing

Separable connector dielectric components shall be tested according to the requirements of IEEE 386, Section 7.

Test results shall be provided upon request.

6. Design Changes

Manufacturer shall inform Seattle City Light in writing of all design changes that could affect the product's understood or published capabilities.

7. Marking

Separable connector dielectric components shall be marked according to the requirements of IEEE 386, Section 6.1.

**ACCESSORIES, SEPARABLE CONNECTOR,
 600 A, 150 kV BIL, DEADBREAK**

1. Scope

This standard covers the requirements for 600 A, 150 kV BIL, deadbreak, separable connector accessories, such as connecting and insulating plugs and caps. 150 kV BIL, multi-way junction boxes (J-boxes) are non-stock items.

The requirements for 150 kV BIL, deadbreak, separable connector dielectric components are specified in SCL 6863.25.

The requirements for 600 A, 125 kV BIL, deadbreak, separable connector accessories are specified in SCL 6863.17.

This standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Description
687260	Connecting plug with one stud
687270	Insulated plug with test point cap
687280	Insulated plug with test point cap and one loose stud
687340	Insulated cap

2. Application

The cable accessories specified in this standard are intended to be used in conjunction with 150 kV BIL, deadbreak separable connector dielectric components (T-bodies and cable adapters), SCL 6863.25, to construct complete connector systems.

3. Industry Standards

150 kV BIL T-bodies and cable adapters **cannot** be used interchangeably with 125 kV BIL dielectric components. New construction should utilize 125 kV BIL material, except in cases where the equipment being connected to has 150 kV BIL bushings.

Separable connectors (elbows) shall meet the applicable requirements of the following industry standard:

IEEE 386-2006 – Standard for Separable Insulated Connector Systems for Power Distribution Systems Above 600 V

4. General Requirements

600 A interfaces shall have the following electrical ratings and attributes:

voltage class	35 kV
maximum voltage rating (ph-g)	21.1 kV RMS
BIL	150 kV crest
continuous current rating	600 A RMS
short-time current rating	25 kA RMS, symmetrical
IEEE 386 interface	Figure 13

Insulated caps shall be provided with grounding tab for the purpose of attaching a drain wire lead.

Seattle City Light
MATERIAL STANDARD

Accessories, Separable Connector, 600 A, 150 kV BIL, Deadbreak

5. Testing

Separable connector (elbow) accessories shall be tested according to the requirements of IEEE 386, Section 7.

6. Design Changes

Manufacturer shall inform Seattle City Light in writing of all design changes that could affect the product's understood or published capabilities.

7. Marking

Separable connector (elbow) accessories shall be marked according to the requirements of IEEE 386, Section 6.1.

8. Packaging

Separable connector (elbow) accessories shall be individually packaged in heavy duty, clear plastic bags or cardboard boxes, as appropriate for their size and weight, to prevent damage and/or contamination during shipping, handling, and storage.

8. Packaging, continued

Each individual package shall be marked with the following information:

- Manufacturer's identification
- Product description

Each shipping container shall be legibly marked with the following information:

- Manufacturer's identification

COMPRESSION CONNECTORS, ALL-COPPER TYPE

1. Scope

This material standard covers the requirements for all copper-type compression connectors.

The requirements for bi-metallic, compression connectors, intended for use with 200 A separable connectors, are specified in 6864.00. The requirements for all-aluminum compression connectors, intended for use with 600 A separable connectors, are specified in 6863.10.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Conductor
686913	#1 AWG compressed
686914	3/0 AWG compressed
686916	350 kcmil compact
686917	500 kcmil compact
686918	500 kcmil compressed
686919	750 kcmil compact
686920	1000 kcmil compact
012128	1000 kcmil compressed

2. Application

All-copper compression connectors are used to make up 900 A, 125 kV and 150 kV BIL, deadbreak separable connectors, utilizing the dielectric components specified in Material Standards 6863.15 and 6863.25, respectively.

2. Application, continued

All-copper compression connectors can only be used with copper conductor cable; all-copper compression connectors shall not be used with aluminum conductor cable.

For cable technical data, refer to 9660.04.

3. Industry Standards

Compression connectors shall meet the applicable requirements of the following industry standard:

ANSI C119.4-2004 – American National Standard for Electric Connectors – Connectors for Use Between Aluminum-to-Aluminum or Aluminum-to-Copper Conductors

4. Detailed Requirements

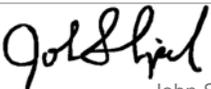

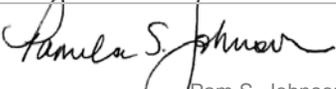

Compression connectors shall be designed and fabricated for use with the 125 kV and 150 kV BIL, deadbreak separable connector dielectric components specified in Material Standards 6863.15 and 6863.25 respectively.

Compression connectors shall accommodate conductor according to Section 8, below.

Compression connectors shall be all-copper and tin-plated.

Compression connectors shall be current Class A, as defined in ANSI C119.4.

Compression connectors shall be tensile strength Class 3, minimum tension (or better), as defined in ANSI C119.4.

**SEPARABLE CONNECTOR, DEADBREAK,
COOPER POWER SYSTEMS T-OP II, KITS, 900 A, 125 KV BIL**

1. Scope

This material standard covers the requirements for Cooper Power Systems, 900 A, 125 kV BIL, T-OP II, deadbreak, separable connector system kits. Kits are cable specific and include a T-body with test point, test point cap, cable adapter, threaded copper stud, copper compression connector, and an insulated cap for the 200 A bushing.

This Material Standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Description
686223	T-OP II kit for 28 kV, 1/0 AWG cable
012486	T-OP II kit for 28 kV, 500 kcmil cable
686226	T-OP II kit for 28 kV, 750 kcmil cable
686227	Combined operating, test, and torque tool
686228	5/16-inch T-wrench

2. Application

A separable connector (elbow) is a fully insulated and shielded system for terminating and electrically connecting an insulated power cable to electrical

apparatus, other power cables, or both, so designed that the electrical connection can be readily established or broken by engaging or separating the connector at the operating interface.

The separable connectors specified in this material standard are intended for use on the following three-phase, 60 Hz system: 26.4 kV, 4-wire, solidly-grounded, wye-connected.

A T-OP II separable connector may be used where a 200 A interface is required for testing, grounding, or overvoltage protection.

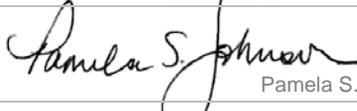

A T-OP II separable connector has an alignment segment and internal rotating nut feature in the loadbreak reducing tap plug which, along with the extended length stud, eliminates cross threading and ensures proper torque.

For cable technical data, refer to E6-1.0/NGE-70.

3. Industry Standards

T-OP II separable connectors shall meet the applicable requirements of the following industry standard:

IEEE 386-2006 – Standard for Separable Insulated Connector Systems for Power Distribution Systems Above 600 V

standards coordinator	standards manager	unit director
 John Shipek	 John Shipek	 Pamela S. Johnson

MATERIAL STANDARD

Separable Connector, Deadbreak, Cooper Power Systems T-OP II, Kits,
900 A, 125 kV BIL

standard number: **6863.34**

superseding: January 25, 2008

effective date: June 11, 2010

page: 2 of 3

4. Detailed Requirements

600 A interfaces shall have the following electrical ratings and attributes:

voltage class	25 kV
maximum voltage rating (ph-g)	15.2 kV RMS
BIL	125 kV crest
continuous current rating	900 A RMS (with included all-copper compression connector)
short-time current rating	25 kA RMS, symmetrical
IEEE 386 interface	Figure 11

200 A loadbreak interfaces shall have the following electrical ratings and attributes:

voltage class	25 kV
maximum voltage rating (ph-g)	15.2 kV RMS
maximum voltage rating (ph-g/ph-ph)	15.2/26.3 kV RMS
BIL	125 kV crest
continuous current rating	200 A RMS
short-time current rating	10 kA RMS, symmetrical
IEEE 386 interface	Figure 7

Each T-OP II separable connector kit shall consist of:

- T-body with test point and cap
- Cable adapter
- Copper compression connector
- Extended length, T-OP II threaded copper stud
- 200 A, loadbreak reducing tap plug (LRTP)
- Insulated cap
- Silicon lubricant
- Assembly instructions

Insulated caps shall be provided with grounding tab for the purpose of attaching a drain wire lead.

5. Testing

T-OP II separable connectors shall be tested according to the requirements of IEEE 386, Section 7.

Test results shall be provided upon request.

6. Design Changes

Manufacturer shall inform Seattle City Light in writing of all design changes that could affect the product's understood or published capabilities.

7. Marking

T-OP II separable connectors shall be marked according to the requirements of IEEE 386, Section 6.1.

8. Packaging

T-OP II separable connectors shall be individually packaged in heavy duty, clear plastic bags or cardboard boxes.

Each individual package shall be marked with the following information:

- Manufacturer's identification
- Product description

Each shipping container shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Quantity contained
- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

MATERIAL STANDARD

**ACCESSORIES, SEPARABLE CONNECTOR,
900 A, 125 kV BIL, DEADBREAK**

1. Scope

This material standard covers the requirements for 900 A, 125 kV BIL, deadbreak, separable connector accessories, such as apparatus bushings, plugs, caps, wells, and threaded studs.

The requirements for 125 kV BIL, deadbreak, separable connector dielectric components are specified in Material Standard 6863.15.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Description	Page
686925	Threaded stud	2
686905	Connecting plug with one loose stud	2
686910	Insulated plug with test point cap	3
686915	Reducing tap well	3
686900	Integral bushing	3

2. Application

The cable accessories specified in this standard are intended to be used in conjunction with 125 kV BIL, deadbreak separable connector dielectric components (T-bodies and cable adapters), Material Standard 6863.15, to construct complete connector systems.

Important Note: Some accessories are provided with a stud. If an accessory is provided with the stud factory-installed, it should be considered permanent and not removable.

3. Industry Standards

Separable connectors (elbows) shall meet the applicable requirements of the following industry standard:

IEEE 386-2006 – Standard for Separable Insulated Connector Systems for Power Distribution Systems Above 600 V

4. General Requirements

900 A interfaces shall have the following electrical ratings and attributes:

voltage class	25 kV
maximum voltage rating (ph-g)	15.2 kV RMS
BIL	125 kV crest
continuous current rating	900 A RMS
short-time current rating	25 kA RMS, symmetrical
IEEE 386 interface	Figure 11

200 A bushing well interfaces shall have the following electrical ratings and attributes:

voltage class	15, 25, and 35 kV
maximum voltage rating (ph-g)	21.1 kV RMS
BIL	150 kV crest
continuous current rating	200 A RMS
short-time current rating	10 kA RMS, symmetrical
IEEE 386 interface	Figure 3

STANDARD NUMBER: **6863.37**

PAGE: 2 of 3

SUPERSEDING: January 25, 2008

EFFECTIVE DATE: February 1, 2008

4. General Requirements, continued

Any accessory that requires permanent grounding shall be equipped with a connector for attaching a #2 AWG, bare, stranded copper grounding conductor.

Insulated caps shall be provided with grounding tab for the purpose of attaching a drain wire lead.

5. Testing

Separable connector (elbow) accessories shall be tested according to the requirements of IEEE 386, Section 7.

Test results shall be provided upon request.

6. Design Changes

Manufacturer shall inform Seattle City Light in writing of all design changes that could affect the product's understood or published capabilities.

7. Marking

Separable connector (elbow) accessories shall be marked according to the requirements of IEEE 386, Section 6.1.

8. Packaging

Separable connector (elbow) accessories shall be individually packaged in heavy duty, clear plastic bags or cardboard boxes, as appropriate for their size and weight, to prevent damage and/or contamination during shipping, handling, and storage.

Each individual package shall be marked with the following information:

- Manufacturer's identification
- Product description

Each shipping container shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Quantity contained
- Seattle City Light's Purchase Order Number

MATERIAL STANDARD

APPARATUS BUSHING, 90 DEGREE, 600 AMPERE

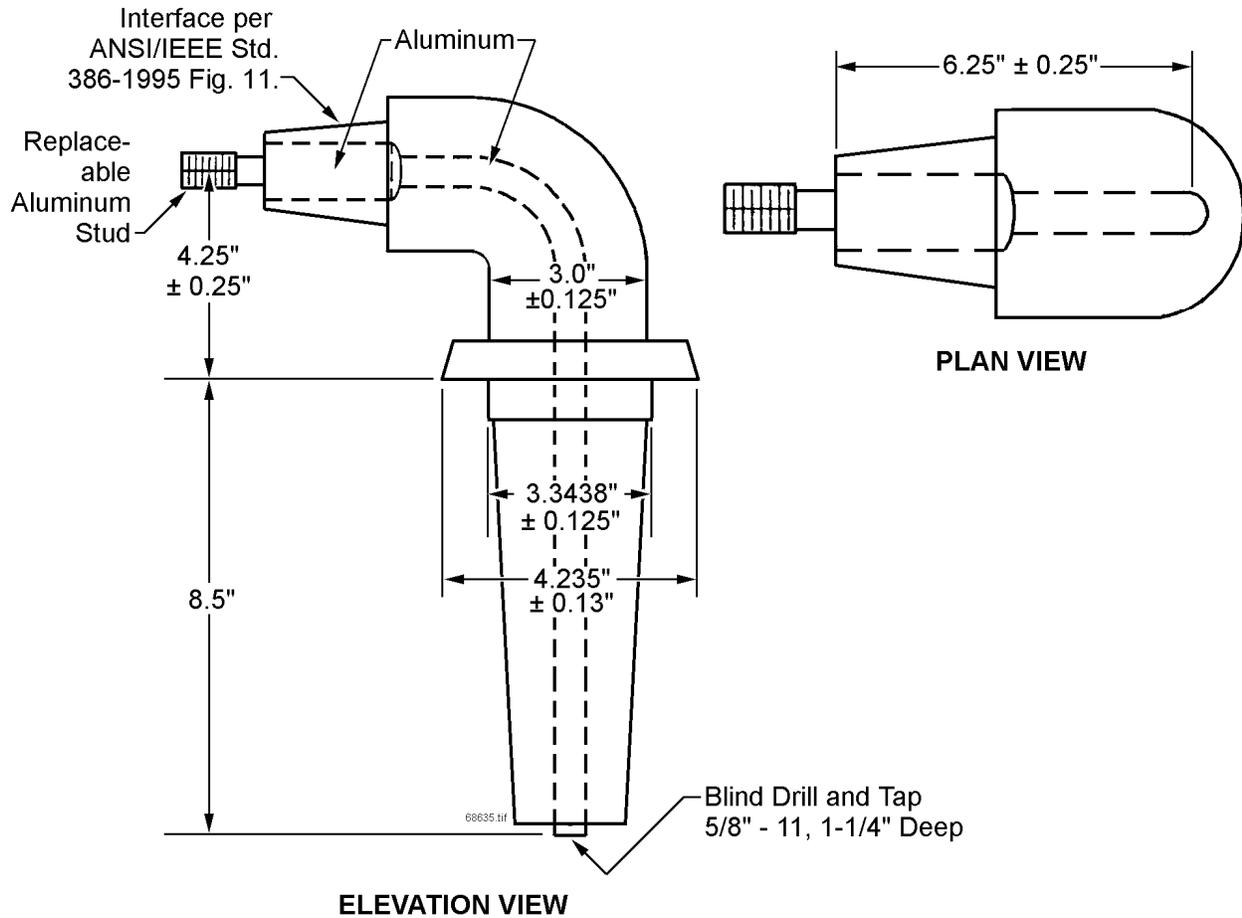

Figure 1

1. General

The bushing will be used to terminate XLPE power cable with separable connectors on the primary side of network transformers. The bushing will be clamped into the terminal chamber with the lower end submersed in oil and the outer end interfaced to terminate with 600 ampere deadbreak elbows and components.

2. Ratings

- A. For use on 25 kV class equipment.
- B. BIL: 125 kV.
- C. Withstand: 42 kV, 60 Hz, 1 minute.
80 kV, D.C., 15 minutes.
- D. Corona: 19 kV extinction.
- E. Current: 600 amperes rms continuous.
- F. Momentary: 40,000 amperes rms, asymmetrical, 12 cycles.
27,000 amperes, symmetrical, 4 seconds.

MATERIAL STANDARD

3. Construction

The bushing shall be constructed as shown in Figure 1. The current-carrying parts shall be aluminum.

The 5/8" x 11 NC stud on the bushing interface shall be made of aluminum and shall be removable.

The bushing interface shall be in accordance with ANSI/IEEE Standard 386-1995, Figure 11.

The bushing construction shall be capable of withstanding clamping forces of 14 ft-lbs applied to six bolts evenly spaced around a clamping ring. See Material Standard 6862.8 for clamping ring.

4. Data to be Submitted with Bid

Each bidder shall submit with his proposal all the data necessary to evaluate the item bid. The bidder shall submit a description of any changes, additions or exceptions to the specifications that the bidder proposes, together with reasons for departure. The drawings and data furnished must be in sufficient detail and clarity to enable making a complete and positive check with the technical provisions of the specifications.

5. Data to be Furnished by Successful Bidder

The successful bidder shall supply with every shipment a certificate of compliance to include test results verifying the ratings in Section 2 of this specification.

6. Receiving of Apparatus Bushings

All apparatus bushings may be X-rayed upon receipt by Seattle City Light. Any units found defective (voids, foreign material, etc.,) will be rejected and the manufacturer shall replace the defective units at his expense.

MATERIAL STANDARD

**COMPRESSION CONNECTORS, BI-METALLIC TYPE,
 FOR 200 A ELBOWS**

1. Scope

This material standard covers the requirements for bi-metallic (copper-top) type compression connectors.

The requirements for all-aluminum compression connectors, intended for use with 600 A separable connectors, are specified in 6863.10. The requirements for all-copper compression connectors, intended for use with 900 A separable connectors, are specified in 6863.30.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Conductor
686417	#1 AWG stranded, 1/0 AWG solid
686421	#2 AWG stranded, #1 AWG solid
686424	#8 AWG stranded (Kerite)

2. Application

Bi-metallic compression connectors are used to make up 200 A loadbreak and 200 A deadbreak separable connectors (elbows), Material Standards 6864.05 and 6864.15 respectively.

In the majority of cases, 200 A elbow kits include a bi-metallic compression connector. Bi-metallic compression connectors are available separately for situations where the connector provided with a particular kit is lost, damaged, or not the correct size.

Bi-metallic compression connectors can be used with either aluminum or copper conductor cable.

Compression connector, Stock Number 686424, is used exclusively with elbows, Stock Numbers

2. Application, continued

686442 or 686440, to terminate 27 kV, #8 AWG copper cable (Kerite), Stock Number 623650. For cable technical data, refer to E6-1.0/NGE-70.

3. Industry Standards

Compression connectors shall meet the applicable requirements of the following industry standard:

ANSI C119.4-2004 – American National Standard for Electric Connectors – Connectors for Use Between Aluminum-to-Aluminum or Aluminum-to-Copper Conductors

4. Detailed Requirements

Compression connectors shall be designed and fabricated to be used with 200 A loadbreak and 200 A deadbreak separable connectors (elbows), Material Standards 6864.05 and 6864.15 respectively.

Compression connectors shall be bi-metallic, with copper top.

Compression connectors shall be current Class A, as defined in ANSI C119.4.

Compression connectors shall be tensile strength Class 3, minimum tension (or better), as defined in ANSI C119.4.

Compression connector barrel shall be highly conductive aluminum.

Compression connector barrel shall be pre-filled with oxide inhibitor.

Compression connector barrel ends shall be capped or sealed to protect the oxide inhibitor from contamination.

Compression connector shall accommodate conductor according to Section 8, below.

SEPARABLE CONNECTOR (ELBOW), 200 A, LOADBREAK

1. Scope

This standard covers the requirements for 200 A, loadbreak, separable connectors (elbows) kits.

The requirements for 200 A deadbreak elbows are specified in Material Standard 6864.15.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Description
686445	Loadbreak elbow kit for 28 kV, 1/0 AWG cable
686442	Loadbreak elbow kit for 27 kV, #8 AWG, Kerite cable
686423	Loadbreak probe

2. Application

A separable connector (elbow) is a fully insulated and shielded system for terminating and electrically connecting an insulated power cable to electrical apparatus, other power cables, or both, so designed that the electrical connection can be readily established or broken by engaging or separating the connector at the operating interface.

The separable connectors specified in this material standard are intended for use on the following three-phase, 60 Hz systems:

- 26.4 kV, 4-wire, solidly-grounded, wye-connected
- 5 kV and below

Because of high fault duty, connectors rated 200 A continuous are not appropriate for network systems. Network systems should be constructed with connectors rated 600 A (or 900 A) continuous.

For cable technical data, refer to 9660.04.

For cable specific information relating to jacket sealing and metallic shield adapters, refer to U5-15.05.

3. Industry Standards

Separable connectors (elbows) shall meet the applicable requirements of the following industry standard:

IEEE 386-2006 – Standard for Separable Insulated Connector Systems for Power Distribution Systems Above 600 V

standards coordinator	standards supervisor	unit director
 John Shipek	 John Shipek	 Darnell Cola

MATERIAL STANDARD

Separable Connector (Elbow), 200 A, Loadbreak

standard number: **6864.05**

superseding: August 10, 2012

effective date: February 15, 2013

page: 2 of 3

4. Detailed Requirements

Separable connectors (elbows) shall have the following electrical ratings and attributes:

voltage class	25 kV
maximum voltage rating (ph-g)	15.2 kV RMS
maximum voltage rating (ph-g/ph-ph)	15.2/26.3 kV RMS
BIL	125 kV crest
continuous current rating	200 A RMS
short-time current rating	10 kA RMS, symmetrical
IEEE 386, interface	Figure 7

Separable connectors (elbows) shall have the following features:

- Test point with cap
- Removable white band with centered black strip as specified in IEEE 386, Section 6.1 e) 2) to indicate both phase-to-ground and phase-to-phase voltage ratings

Each separable connector (elbow) kits shall include:

- Body
- Compression connector (Stock Number 686445 only)
- Loadbreak probe
- Probe installation tool
- Silicone lubricant
- Instruction sheet

Compression connectors shall be bi-metallic, with copper top and meet the requirements of Material Standard 6864.00.

Separable connector (elbow) shall be designed for a cable insulation shield cutback length of 6-7/8 in. measured from the end of the installed compression connector.

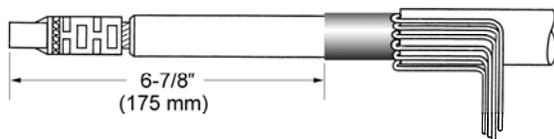

Figure 4, Cutback Length

5. Testing

Separable connectors (elbows) shall be tested according to the requirements of IEEE 386, Section 7.

Test results shall be provided upon request.

6. Design Changes

Manufacturer shall inform Seattle City Light in writing of all design changes that could affect the product's understood or published capabilities.

7. Marking

Separable connectors (elbows) shall be marked according to the requirements of IEEE 386, Section 6.1.

Optional color-coding as described in IEEE 386, Section 6.1 f) is not required or desired.

8. Packaging

Separable connectors (elbows) shall be individually packaged in heavy duty, clear plastic bags or cardboard boxes.

Each individual package shall constitute a kit that includes all of the parts cited in Section 4 of this material standard.

Each individual package shall be marked with the following information:

- Manufacturer's identification
- Product description

Each shipping container shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Quantity contained
- Seattle City Light's Purchase Order Number

MATERIAL STANDARD

**ACCESSORIES, SEPARABLE CONNECTOR (ELBOW),
200 A, 125 kV BIL, LOADBREAK**

1. Scope

This material standard covers the requirements for 200 A, 125 kV BIL, loadbreak, separable connector (elbow) accessories, such as multi-way junction boxes (J-boxes), parking bushings, wells, inserts, plugs, caps, threaded studs, and test probes.

The requirements for 200 A, 125 kV BIL, loadbreak, separable connector (elbow) kits are specified in Material Standard 6864.05.

The requirements for 200 A, 125 kV BIL, deadbreak, separable connector (elbow) accessories are specified in Material Standard 6864.17.

This material standard applies to the Seattle City Light Stock Numbers in the table, right.

2. Application

The cable accessories specified in this standard are intended to be used in conjunction with 200 A, 125 kV BIL, loadbreak separable connector (elbow) kits, Material Standard 6864.05 to construct complete connector systems.

Because of high fault duty, connectors rated 200 A continuous are not appropriate for network systems. Network systems should be constructed with connectors rated 600 A (or 900 A) continuous.

SUPERSEDING: May 27, 2008

EFFECTIVE DATE: April 1, 2015

4. General Requirements

Separable connector (elbow) accessories (except bushing well interfaces) shall have the following electrical ratings and attributes:

voltage class	25 kV
maximum voltage rating (ph-g)	15.2 kV RMS
maximum voltage rating (ph-g/ph-ph)	15.2/26.3 kV RMS
BIL	125 kV crest
continuous current rating	200 A RMS
short-time current rating	10 kA RMS, symmetrical
IEEE 386 interface	Figure 7

Bushing well interfaces shall have the following electrical ratings and attributes:

voltage class	15, 25, and 35 kV
maximum voltage rating (ph-g)	21.1 kV RMS
BIL	150 kV crest
continuous current rating	200 A RMS
short-time current rating	10 kA RMS, symmetrical
IEEE 386 interface	Figure 3

Brackets and mounting hardware shall be stainless steel or other corrosion-proof alloy. Galvanized parts are not acceptable.

Multi-way junction boxes shall be provided with adjustable angle mounting brackets.

Each cable accessory well shall be provided with a threaded stud.

Grounding parking bushing bases shall be marked red, orange, or yellow.

Grounding parking bushings shall be provided with 5-foot, flexible, 2/0 AWG copper ground leads.

Any accessory that requires permanent grounding shall be equipped with a connector for attaching a #2 AWG, bare, stranded copper grounding conductor.

Insulated caps shall be provided with grounding tab for the purpose of attaching a drain wire lead.

For the purposes of this Material Standard, parking stands designed for use with Elastimold type 151 grounding and insulated parking bushings shall be designated type **151PS**. Parking stands of this design have a nominal horizontal opening of 3/8 inch. Parking stands designed for use with Elastimold type 160 grounding and insulated parking bushings shall be designated type **160PS**. Parking stands of this design have a nominal horizontal opening of 2 inches. IEEE 386 does not differentiate between type 151PS and 160PS parking stands.

SEPARABLE CONNECTOR (ELBOW), 200 A, DEADBREAK

1. Scope

This material standard covers the requirements for 200 A, deadbreak, separable connectors (elbows) kits.

The requirements for 200 A, loadbreak separable connectors (elbows) are specified in Material Standard 6864.05.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Description
686412	Deadbreak elbow kit for 5 kV, #2 AWG cable
686413	Deadbreak elbow kit for 5 kV, 1/0 AWG cable
686414	Deadbreak elbow kit for 15 kV, 1/0 AWG cable
686416	Deadbreak elbow kit for 28 kV, 1/0 AWG cable
686440	Deadbreak elbow kit for 27 kV, #8 AWG, Kerite cable
686426	Probe contact
012435	Hold down bail assembly, spring loaded, for Cooper Power Systems elbows
012587	Hold down bail assembly, spring loaded, for Elastimold elbows

2. Application

A separable connector (elbow) is a fully insulated and shielded system for terminating and electrically connecting an insulated power cable to electrical apparatus, other power cables, or both, so designed that the electrical connection can be readily established or broken by engaging or separating the connector at the operating interface.

The separable connectors specified in this material standard are intended for use on the following three-phase, 60 Hz systems:

- 26.4 kV, 4-wire, solidly-grounded, wye-connected
- 5 kV and below

Elbow kits, Stock Numbers 686412, 686413, and 686414, are special cases. Little technical information is known about the cables they are to be used with. Elbows and related cables were installed in the Seattle neighborhoods of Laurelhurst, Hillcrest, and/or Edge-O-Town. Kits are spares for emergency replacement.

Because of high fault duty, connectors rated 200 A continuous are not appropriate for network systems. Network systems should be constructed with connectors rated 600 A (or 900 A) continuous.

For cable technical data, refer to E6-1.0/NGE-70.

For cable specific information relating to jacket sealing and metallic shield adapters, refer to U5-16.05.

<i>standards coordinator</i>	<i>standards supervisor</i>	<i>unit director</i>
 John Shipek	 John Barnett	 Richard Kent

effective date: June 12, 2008

page: 2 of 4

3. Industry Standards

Separable connectors (elbows) shall meet the applicable requirements of the following industry standard:

IEEE 386-2006 – Standard for Separable Insulated Connector Systems for Power Distribution Systems Above 600 V

4. Detailed Requirements

Separable connectors (elbows) shall have the following electrical ratings and attributes:

voltage class	25 kV
maximum voltage rating (ph-g)	15.2 kV RMS
maximum voltage rating (ph-g/ph-ph)	15.2/26.3 kV RMS
BIL	125 kV crest
continuous current rating	200 A RMS
short-time current rating	10 kA RMS, symmetrical
IEEE 386 interface	Figure 4

Separable connectors (elbows) shall be equipped with a test point with cap.

Each separable connector (elbow) kit shall include:

- Body
- Compression connector (not included with Stock Number 686440)
- Probe contact
- Probe installation tool
- Silicone lubricant
- Spring loaded hold down bail assembly
- Instruction sheet

Separable connector (elbow) kit Stock Number 686412 shall be designed to accommodate cable with XLP insulation with an outside diameter of 0.540 inch.

Separable connector (elbow) kit Stock Number 686413 shall be designed to accommodate cable with XLP insulation with an outside diameter of 0.585 inch.

Separable connector (elbow) kit Stock Number 686414 shall be designed to accommodate cable with XLP insulation with an outside diameter of 0.765 inch.

Compression connectors shall be bi-metallic, with copper top, and meet the requirements of 6864.00.

Separable connector (elbow) shall be designed for a cable insulation shield cutback length of 6-7/8 in. measured from the end of the installed compression connector.

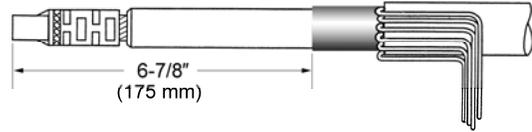

Figure 4, Cutback Length

Spring loaded hold down bail assemblies shall be stainless steel.

5. Testing

Separable connectors (elbows) shall be tested according to the requirements of IEEE 386, Section 7.

Test results shall be provided upon request.

6. Design Changes

Manufacturer shall inform Seattle City Light in writing of all design changes that could affect the product's understood or published capabilities.

7. Marking

Separable connectors (elbows) shall be marked according to the requirements of IEEE 386, Section 6.1.

8. Packaging

Separable connectors (elbows) shall be individually packaged in heavy duty, clear plastic bags or cardboard boxes.

Each individual package shall constitute a kit that includes all of the parts cited in Section 4 of this material standard.

Each individual package shall be marked with the manufacturer's identification and product description.

Each shipping container shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Quantity contained
- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

9. Issuance

MATERIAL STANDARD

**ACCESSORIES, SEPARABLE CONNECTOR (ELBOW),
 200 A, 125 kV BIL, DEADBREAK**

1. Scope

This standard covers the requirements for 200 A, 125 kV BIL, deadbreak, separable connector (elbow) accessories, such as multi-way junction boxes (J-boxes), parking bushings, wells, inserts, plugs, caps, and special purpose hold down bails.

The requirements for 200 A, 125 kV BIL, deadbreak, separable connector (elbow) kits, which include spring-loaded hold down bails, are specified in SCL 6864.15.

The requirements for 200 A, 125 kV BIL, loadbreak, separable connector (elbow) accessories are specified in SCL 6864.07.

This standard applies to the Seattle City Light Stock Numbers, right:

Stock Number	Description	Page
686411	Insulated cap	3
686469	Shipping cap	3
686732	Multi-way junction box, three-way	4
686730	Multi-way junction box, four-way	4
686420	T-splice	4
686432	Grounding parking bushing, 151PS	4
686463	Grounding parking bushing, 160PS	5
686458	Insulated parking bushing, 151PS	5
686456	Insulated plug	5
686433	Bushing well, 4-hole ring	6
686434	Bushing well, 9-1/2 inch	6
686435	Bushing well, 10-1/2 inch	6
686437	Bushing well, 15 inch	6
686430	Bushing insert	6
686726	Feed-thru bushing insert	7
686551	Bail, dual elbow	7
686560	Bail, "T" connector	7
686561	Bail, deadend plug	7
686562	Bail, elbow	8
686563	Bail, insulating cap	8

2. Application

The cable accessories specified in this standard are intended to be used in conjunction with 200 A, 125 kV BIL, deadbreak separable connector (elbow) kits, SCL 6864.15 to construct complete connector systems.

Because of high fault duty, connectors rated 200 A continuous are not appropriate for network systems. Network systems should be constructed with connectors rated 600 A (or 900 A) continuous.

SUPERSEDING: May 27, 2008

EFFECTIVE DATE: June 11, 2015

3. Industry Standards

Separable connectors (elbows) shall meet the applicable requirements of the following industry standard:

IEEE 386-2006 – Standard for Separable Insulated Connector Systems for Power Distribution Systems Above 600 V

4. General Requirements

Separable connector (elbow) accessories (except bushing well interfaces) shall have the following electrical ratings and attributes:

voltage class	25 kV
maximum voltage rating (ph-g)	15.2 kV RMS
BIL	125 kV crest
continuous current rating	200 A RMS
short-time current rating	10 kA RMS, symmetrical
IEEE 386 interface	Figure 4

Bushing well interfaces shall have the following electrical ratings and attributes:

voltage class	15, 25, and 35 kV
maximum voltage rating (ph-g)	21.1 kV RMS
BIL	150 kV crest
continuous current rating	200 A RMS
short-time current rating	10 kA RMS, symmetrical
IEEE 386 interface	Figure 3

Hold down bails for separable connector (elbow) accessories shall be provided separately, unless stated otherwise.

Brackets and mounting hardware shall be stainless steel or other corrosion-proof alloy. Galvanized parts are not acceptable.

Multi-way junction boxes shall be provided with adjustable angle mounting brackets.

Grounding parking bushing bases shall be marked red, orange, or yellow.

Grounding parking bushings and grounding elbows shall be provided with 5-foot, flexible, covered, 2/0 AWG copper ground leads.

Any accessory that requires permanent grounding shall be equipped with a connector for attaching a #2 AWG, bare, stranded copper grounding conductor.

Insulated caps shall be provided with grounding tab for the purpose of attaching a drain wire lead.

For the purposes of this standard, parking stands designed for use with Elastimold type 151 grounding and insulated parking bushings shall be designated type **151PS**. Parking stands of this design have a nominal horizontal opening of 3/8 inch. Parking stands designed for use with Elastimold type 160 grounding and insulated parking bushings shall be designated type **160PS**. Parking stands of this design have a nominal horizontal opening of 2 inches. IEEE 386 does not differentiate between type 151PS and 160PS parking stands.

125 kV BIL, Deadbreak

5. Testing

Separable connector (elbow) accessories shall be tested according to the requirements of IEEE 386, Section 7.

Test results shall be provided upon request.

6. Design Changes

Manufacturer shall inform Seattle City Light in writing of all design changes that could affect the product's understood or published capabilities.

7. Marking

Separable connectors (elbows) shall be marked according to the requirements of IEEE 386, Section 6.1.

8. Packaging

Separable connector (elbow) accessories shall be individually packaged in heavy duty, clear plastic bags or cardboard boxes, as appropriate for their size and weight, to prevent damage and/or contamination during shipping, handling, and storage.

Each individual package shall be marked with the following information:

- Manufacturer's identification
- Product description

Each shipping container shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Quantity contained
- Seattle City Light's Purchase Order Number

MATERIAL STANDARD

TERMINATORS – HIGH VOLTAGE CABLES

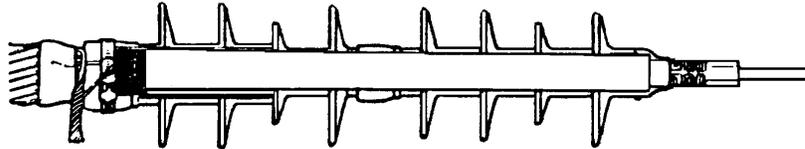

Figure 1. Cold Shrink

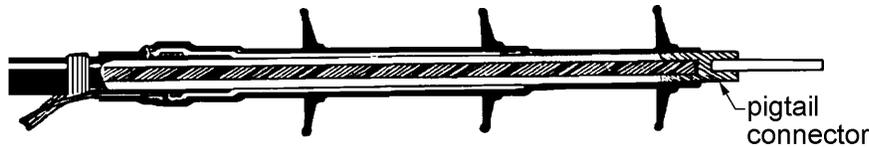

Figure 2. Heat Shrink

1. Scope

This specification is for outdoor isolated phase cable terminations to be used on single or multi-phase circuits of a 26.4 kV or 34.5 kV solid grounded neutral system.

2. Construction

- 2.1 The terminators shall be made of irradiated ethylene-propylene diene monomer (EPDM) formulated to resist severe atmospheric contamination without tracking and to withstand thermal, ultraviolet, and oxidation decomposition under electrical stress. The insulation shall comply with the ASTM D2303 (latest revision) test for liquid contaminant, inclined plane tracking, and erosion of insulating materials. Silicone rubber will be accepted for the weather shedding materials. Creepage distance shall be 24" minimum.
- 2.2 Cold Shrink Terminators (Figure 1) shall be a one-piece, EPDM relief tube inside a silicone skirted insulator that is a non-force fit.
- 2.3 Heat Shrink Terminators (Figure 2) shall have a coating of meltable adhesive or meltable tape on the inner wall, which on the application of heat, shall adhere to the cable jacket forming a watertight seal. The weather shedding skirts shall be heat-shrink non-force fit.

3. Specifications

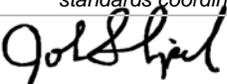

All terminators shall meet the requirements of the latest revision of IEEE 48 for Class I terminations. Voltage rating and BIL shall be as shown on page 2 of this material standard.

4. Packaging

The terminator shall be packaged complete in self-contained kits including all material required for a single cable termination including skirts (modules), caps, and ground clamps.

5. Instructions

Each terminator package shall contain complete, current instructions for installation of all materials required for a single cable termination and any accessories. If the package contains three terminations, three sets of instructions shall be included.

* The unit of issue and the standard package is the "kit". Each "kit" includes three terminations. All other items on this page are issued in quantities of one each (EA).

♥ Pigtail connector not included. See Seattle City Light Material Standard 6772.00 for pigtail connectors.

§ Two bolt paddle not included. Shown on Seattle City Light Material Standard 6770.70.

Bracket, For Pole Riser Conduit

See page 2 for 26-inch bracket drawings.

Figure 1. Conduit bracket (not to scale)

1. Scope

Conduit Bracket shall be of the configuration and dimensions shown, free of rough or uneven surfaces and edges.

This standard applies to the following Seattle City Light Stock Numbers:

Without Brace		With Brace	
Stock No.	Length, in	Stock No.	Length, in
686784	10-1/2	686792	10-1/2

		012330	26

2. Industry Standards

ASTM A109, Steel, Strip, Carbon (0.25 Maximum Percent), Cold-Rolled, latest revisions

ASTM A123, Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products, latest revisions

3. Galvanizing

The bracket shall be galvanized, after fabrication, in accordance with ASTM A123.

4. Material

The bracket shall be made of cold-rolled steel strip in accordance with ASTM A109. The channel shall be Power Strut PS-501, Unistrut P-4101, Super Strut B1402, Speed Strut 800-2, or equal.

5. Packaging

Brackets shall be packaged in boxes that will fit on a standard wood pallet. Boxes shall be suitable for inside storage. Individual boxes shall not exceed 500 pounds in weight.

MATERIAL STANDARD

SPLICES 15-kV Through 69-kV, HEAT SHRINKABLE

This specification covers four items: (1) Splices to be used to join 28 kV or 35 kV solid dielectric power cables. (2) Splices to be used to join 15 kV or 28 kV solid dielectric to PILC power cables in a transition joint. (3) Three and four way "wye" splices. (4) Live end seals for 15 kV solid dielectric power cables. All items shall meet or exceed the requirements of the latest revision of ANSI/IEEE Standard 404, except as modified herein.

For 15 kV, straight, heat shrink splices for solid dielectric cable, refer to Construction Standard 0535.11.

Transition splices shall withstand 15 psi or more of continuous internal operating oil pressure under load.

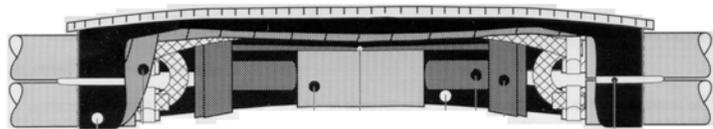

All splices shall have a 25-year minimum shelf life under normal storage conditions.

Manufacturers shall submit electrical data and test data and supply two samples for utility testing, evaluation, and approval before being listed as an approved manufacturer.

Grounding kits and/or connectors listed on Page 2 shall be supplied with splicing kits.

MATERIAL STANDARD

SPLICES 15 kV THROUGH 25 kV, COLD SHRINK

This specification covers cold shrink splices to be used to join 15 kV or 28 kV solid dielectric power cables.

All splices shall meet or exceed the requirements of the latest revision of ANSI/IEEE Standard 404, except as modified herein.

All splices shall have a 3-year minimum shelf life under normal storage conditions.

Splices shall be provided without connector.

Heat Shrink Splices, Straight, 110 kV BIL, Tyco

1. Scope

This standard covers the requirements for Tyco, 110 kV BIL, straight, heat shrink cable splices. Cable splices are also known as cable joints.

This Material Standard applies to the Seattle City Light Stock Numbers shown below:

Stock Number	City Light Application, AWG/kcmil
013055	#1 - 2/0
013056	350 - 500
013057	750 - 1000

2. Application

Heat shrink splices are used to permanently join two like-sized conductors, TRXLPE or EPR insulated, tape or flat strap shielded, medium voltage cable ends.

The current and temperature rating of a properly installed heat shrink splice is equal to or greater than that of the cable for which it is designed.

The heat shrink splices specified in this material standard are intended for use on Seattle City Light's 13.8 kV, 3-wire, delta network system, where load consists of network type transformers with delta connected primary and grounded wye connected secondary.

Heat shrink type joints consist of one or more expanded polymeric extruded tubes or molded parts that undergo thermally activated recovery when heated to an appropriate temperature.

Heat shrink kits contain everything that is needed to make up a splice, except the connector.

For cable-specific application information, refer to Construction Standard 0535.11 - Heat Shrink Splice, Straight, 110 kV BIL

The industry-popular Raychem Corporation was purchased by Tyco Electronics in 1999; in some circles, heat shrink splices are still referred to as Raychems.

3. Industry Standards

Heat shrink splices shall meet the requirements of the following industry standard:

IEEE 404-2006 - Standard for Extruded and Laminated Dielectric Shielded Cable Joints Rated 2500 V to 500 000 V

4. Detailed Requirements

Heat shrink splices described in this Standard shall have the following electrical ratings and attributes:

Voltage class	15 kV
Maximum voltage rating (ph-g), grounded systems	8.7 kV rms
Maximum voltage rating (ph-ph)	15 kV rms
Basic impulse insulation level, BIL	110 kV crest
Withstand voltage, 15 minute	75 kV DC
Withstand fault current, 100 cycles	10 kA rms

Specific heat shrink splices shall be designed for use with the cables described in Table 4.

Table 4, Splice to Cable Cross Reference

Stock Number	Conductor Size, AWG/kcmil	Insulation overall dia, range, in	Jacket overall dia, max, in
013055	#2 - 2/0	0.65 - 0.95	1.20
013056	3/0 - 400	0.85 - 1.30	1.65
013057	500 - 750	1.10 - 1.55	1.90

Each heat shrink splice kit shall include (quantities of some components may vary with kit size):

- 4 - Strips adhesive-backed copper tape
- 1 - Red/black triple layer tube
- 1 - SRM-stress relief mastic
- 4 - Red sealant strips
- 2 - Ground braid with solder block
- 4 - Spring clamps
- 2 - Rolls shielding mesh
- 1 - Black/green wraparound sleeve
- 2 - Stainless steel channels
- 1 - Stainless steel retention clip
- 1 - Set installation instructions

Figure 4, Heat Shrink Splice Kit Contents:

5. Testing

Heat shrink splices shall be tested according to the requirements of IEEE 404, Section 7.

Test results shall be provided upon request.

6. Design Changes

Manufacturer shall inform Seattle City Light in writing of all design changes that could affect the product's understood or published capabilities.

7. Marking

Heat shrink splices shall be marked according to the requirements of IEEE 404, Section 6.1. This shall include but not be limited to:

- Company name or logo
- Part identification
- Date of manufacture (month and year)

8. Packaging

Heat shrink splices shall be individually packaged to prevent damage during shipping, handling, and storage.

Each individual package shall constitute a kit that includes all of the parts cited in Section 4 of this material standard.

Individual packages shall be legibly marked with:

- Manufacturer's name
- Manufacturer's catalog number
- Product description
- Seattle City Light's Stock Number

Shipping containers shall be legibly marked with:

- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

9. Issuance

AUTOTRANSFORMER, 100 VA, 277/125V

1. GENERAL

This specification covers single-phase, 60 Hertz, dry-type autotransformers that will be used to supply power to network monitoring transmitters and will be installed within a network protector case.

2. RATINGS

- 2.1 Primary Voltage (Terminals 1-3): 277 volts
- 2.2 Secondary Voltage (Terminals 2-3): 125 volts
- 2.3 Frequency: 60 Hertz
- 2.4 Secondary Load Current: 0.83 amperes
- 2.5 Regulation: 5% maximum at 125° C. ambient, no load to full load.

3. ENVIRONMENTAL REQUIREMENTS

- 3.1 Temperature: -20° C. to 150° C. Internal temperature rise at nominal load shall not exceed 150° C.
- 3.2 Humidity: 0% to 95% relative humidity.

4. DIELECTRIC WITHSTAND

- 4.1 Primary winding shall withstand 3.5 kV RMS, 60 Hz, applied between it and the core for 5 seconds.

5. PHYSICAL REQUIREMENTS

- 5.1 Mounting: 0.125 inch rolled steel brackets suitable for chassis mounting.
- 5.2 Terminals: Insulated stranded wire, No. 20 AWG, 200° C. Teflon insulation, color coded, minimum 18 inches long.
- 5.3 Corrosion Protection: Metallic surfaces shall be cadmium plated or equivalent. Windings shall be impregnated against moisture.
- 5.4 Grounding: The core shall be grounded to the mounting brackets.
- 5.5 Marking: Markings shall include manufacturer's name, voltage, current, and frequency ratings, and terminal identification.
- 5.6 Maximum size: 3.0 inches wide, 4.0 inches long, 3.5 inches high.

INSULATOR, MEDIUM-VOLTAGE, PORCELAIN, PIN-TYPE

1. Scope

This standard covers the requirements for porcelain medium-voltage pin-type insulators.

This standard applies to Seattle City Light Stock Number 690005.

2. Application

Porcelain medium-voltage pin-type insulators are installed on wood cross arms to support lines rated up to 2.6 kV, phase-to-ground.

3. Industry Standards

Porcelain pin-type insulators shall meet the requirements of the following national standard:

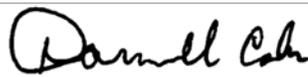

ANSI C29.5-1984 - American National Standard for Wet-Process Porcelain Insulators Low- and Medium-Voltage Types

4. Requirements

Porcelain pin-type insulators shall meet the following requirements:

ANSI C29.5 Class	55-2 (Radio Freed)
60 Hz dry flashover, kV rms, nominal	45

60 Hz wet flashover, kV rms, nominal	25
Positive critical impulse flashover, kV crest, nominal	70
Leakage distance, in, nominal	5
Strike/dry arc distance, in, nominal	3-3/8
Pin height, in, minimum	4
Pin diameter, in, nominal	1
Cantilever strength, ultimate, lbs	2500
Porcelain color	gray, according to ANSI C29.5, Section 5.2
Semi-conductive glaze	required
Top and side wire grooves	according to ANSI C29.5, Figure 2
Neck type	"C"

<i>standards coordinator</i>	<i>standards supervisor</i>	<i>unit director</i>

Material Standard

Insulator, Medium-Voltage, Porcelain, Pin-Type

standard number: **6900.10**

superseding: October 27, 2006

effective date: June 30, 2011

page: 2 of 2

5. Testing

Test data that establishes compliance with the requirements of ANSI C29.5, Section 8 shall be provided upon request.

6. Marking

Porcelain, pin-type insulators shall be clearly and indelibly marked in accordance with ANSI C29.5-Section 7.

Marking shall include but not be limited to:

- Manufacturer's name or symbol
- Year of manufacture
- Product Identification Number

7. Packaging

Porcelain pin-type insulators shall be packaged in a way that prevents damage during shipping, handling, and long-term outside storage.

Crates shall be secured to pallets for handling by forklifts. Pallets shall not exceed 4 feet in height or 1,000 pounds in weight.

Individual packages shall be legibly marked with:

- Manufacturer's name
- Manufacturer's catalog number
- Seattle City Light's Stock Number

Shipping containers shall be legibly marked with:

690094	108
690096	24

Some manufacturers do not consider this product an 'insulator' because they are not intended to be connected directly to energized lines. They are also referred to as a 'guy strain' or 'isolator'. Seattle City Light will continue to refer to this product as an 'insulator'.

2. Application

Guy strain insulators are installed in-line with down guys on utility poles. They are installed to provide electrical insulation to the guy wire and anchor if a conductor makes contact to the guy. The insulator is installed to keep grounded guy wires out of hot working areas.

Standards Coordinator
Kathy Tilley

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

3. Industry Standards

Guy strain insulators shall meet the applicable requirements of the following industry standards:

ASTM A153 / A153M - 09 Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware

ANSI C29.1-1988 (R2002) Test Methods for Electrical Power Insulators

4. Requirements

4.1 General

Guy strain insulators shall utilize glass-fiber filaments designed to meet cited strength requirements.

The guy strain insulator rod surface shall have a high-gloss finish to resist the adherence of contaminating materials and to minimize tracking and ultraviolet damage.

The guy strain insulator shall have excellent weathering characteristics, and remain stable and uniform in varying temperatures.

Guy strain insulators shall meet the requirements listed in Tables 4.1 and 4.2.

Table 4.1. General Requirements

End Fitting Material	Ductile iron
End fitting type (top/structure)	Clevis with roller
End fitting type (bottom/guy)	Clevis with roller

The end fittings shall be hot-dip galvanized per ASTM A153.

The junction between the fiberglass rod and end fittings shall be sealed to prevent moisture ingress.

Rollers shall rotate freely between the clevis ears.

4.2 Detailed

Table 4.2. Detailed Requirements

	Stock No.			
	690090	690092	690094	690096
Section Length, nom (in)	36	12	108	24
Ultimate Strength Rating, min (lb)	21,000	15,000	21,000	36,000
Roller Groove Radius (in)	5/16	5/16	5/16	3/8 +- 1/32
Flashover, Dry, min (kV)	330	120	820	230
Flashover, Wet, min (kV)	195	70	506	130

5. Testing

Test data that establishes compliance with the requirements of ANSI C29.1 and this standard shall be provided upon request.

6. Product Marking

Each guy strain insulator shall be clearly and indelibly marked with:

- Manufacturer's name or symbol
- Year of manufacture

7. Packaging

Guy strain insulators shall be packaged in a manner that prevents damage during shipping, handling, and long-term outside storage.

Shipping containers shall be legibly marked with:

- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

INSULATOR, PORCELAIN, GUY STRAIN

1. Scope

This standard covers the requirements for porcelain guy strain insulators.

The Seattle City Light Stock Numbers for this insulator type are 690104 and 690106.

2. Application

Porcelain guy strain insulators are installed in down guys and span guys to create an electric break. Their use is governed by NESC, Section 21, Rule 215.

Porcelain guy strain insulators provide a safer working space in the area of high voltage conductors and minimize corrosion of anchors and anchor rods.

3. Industry Standards

Porcelain guy strain insulators shall meet the requirements of the following national standard:

ANSI C29.4-1989 - American National Standard for Wet-Process Porcelain Insulators Strain Type

4. Requirements

Porcelain guy strain insulators shall meet the following requirements:

Stock No	690104	690106
ANSI C29.4 Class	54-2	54-3
60 Hz dry flashover, kV rms, nominal	30	35
60 Hz wet flashover, kV rms, nominal	15	18
Leakage distance, in, nominal	1-7/8	2-1/4
Length, in, nominal	4-1/4	5-1/2
Rated tensile strength, lbs, nominal	12,000	20,000
Porcelain color	gray, according to ANSI C29.4, Section 5	gray, according to ANSI C29.4, Section 5

Insulator, Porcelain, Guy Strain

standard number: **6901.10**

superseding: December 22, 2005

effective date: July 13, 2011

page: 2 of 2

5. Testing

Test data that establishes compliance with the requirements of ANSI C29.4, Section 8 shall be provided upon request.

6. Marking

Porcelain guy strain insulators shall be clearly and indelibly marked in accordance with ANSI C29.4, Section 7.

Marking shall include but not be limited to:

- Manufacturer's name or symbol
- Year of manufacture
- Product Identification Number

7. Packaging

Porcelain guy strain insulators shall be packaged in a way that prevents damage during shipping, handling, and long-term outside storage.

Crates shall be secured to pallets for handling by forklifts. Pallets shall not exceed 4 feet in height or 1,000 pounds in weight.

Individual packages shall be legibly marked with:

- Manufacturer's name
- Manufacturer's catalog number
- Seattle City Light's Stock Number

**INSULATOR, VERTICAL LINE-POST, PORCELAIN, TIE-TOP,
 FOR DISTRIBUTION SYSTEMS**

1. Scope

This standard covers requirements for porcelain, tie-top vertical line post insulators.

This standard applies to Seattle City Light Stock Numbers 690157 and 690161.

2. Application

Porcelain, tie top, vertical line post insulators are used on wood poles to support distribution conductors. The following table gives the application for each of the Stock Numbers.

Stock No	Application
690157	26 kV lines, nominal
690161	26 kV lines, nominal in contaminated and non-contaminated areas

3. Industry Standards

Porcelain, vertical line post insulators shall meet the requirements of the following national standard:

ANSI C29.7-1996 – American National Standard for Wet-Process Porcelain Insulators – High- Voltage Line-Post Type

4. Requirements

Porcelain, vertical line post insulators shall meet the following requirements:

	Stock No.	
	690157	690161
ANSI C29.7 Class	57-2	57-3
60 Hz dry flashover, kV rms, minimum	100	125
60 Hz wet flashover, kV rms, minimum	70	95
Positive critical impulse flashover, kV crest, minimum	160	200
Leakage distance, in, nominal	22	29
Strike/dry arc distance, in, nominal	9.5	12.25
Reference length, in, nominal	12	15
Ultimate cantilever strength, lb	2800	2800
Center hole thread, in, nominal	3/4 – 10, UNC	3/4 – 10, UNC
Neck type	“F”	“F”

Material Standard

Insulator, Vertical Line-Post, Porcelain, Tie-Top, for Distribution Systems

5. Quality Assurance

The distance between the bottom of the base and the bottom skirt around the circumference of the insulator shall be uniform with a maximum difference of 1/8 inch.

6. Testing

Test data that establishes compliance with the requirements of ANSI C29.7, Section 8 shall be provided upon request.

7. Marking

Porcelain, vertical line-post insulators shall be clearly and indelibly marked in accordance with ANSI C29.7, Section 7.

Marking shall include but not be limited to:

- Manufacturer's name or symbol
- Year of manufacture
- Product Identification Number

8. Packaging

Porcelain, vertical line-post insulators shall be packaged in a way that prevents damage during shipping, handling, and long-term outside storage.

Crates shall be secured to pallets for handling by forklifts. Pallets shall not exceed 4 feet in height or 2,000 pounds in weight.

Individual packages shall be legibly marked with:

- Manufacturer's name
- Manufacturer's catalog number
- Seattle City Light's Stock Number

Shipping containers shall be legibly marked with:

- Seattle City Light's Purchase Order Number

STUD BOLTS FOR LINE POST INSULATORS

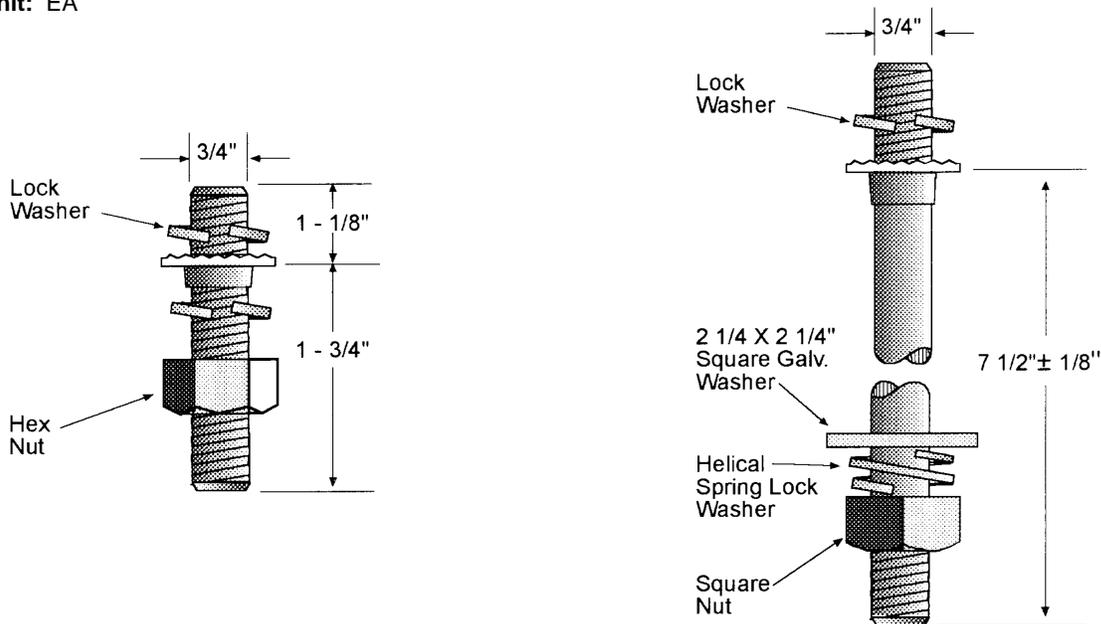

Long and short bolts shall be interchangeable in the insulators. All parts shall be hot-dip galvanized per ASTM A-153 (2 mils min.).

Long stud bolts shall be furnished with a 2-1/4" x 2-1/4" square washer, a lock washer, a square nut, and a helical spring washer. The helical spring washer shall have a section width of 0.234" and a section thickness of 0.188" meeting ANSI B18.21.1. See City Light Material Standard 5842.5, Stock No. 584267.

Short stud bolts shall be furnished with two lock washers and a hex nut.

It shall be the Bidder's responsibility to update and/or maintain the referenced manufacturer's catalog numbers shown. A written explanation must accompany each bid if different from the numbers shown.

**INSULATOR, VERTICAL LINE POST, PORCELAIN, CLAMP TOP,
 FOR DISTRIBUTION SYSTEMS**

1. Scope

This Material Standard applies to porcelain, vertical line post insulators. This Material Standard applies to Seattle City Light Stock Numbers 690159, 690163, and 690166.

2. Application

Vertical line post insulators are used on wood poles to support distribution conductors. The following table gives the application for each of the Stock Numbers.

Stock No	Application
690159	26 kV lines, nominal
690163	46 and 26 kV lines in contaminated areas
690166	69 and 35 kV lines in contaminated areas

3. Industry Standards

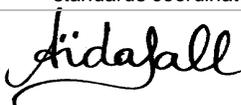

Vertical line post insulators shall meet the requirements of the following industry standard:

ANSI C29.7-1996 – American National Standard for Wet Process Porcelain Insulators – High Voltage Line Post Type

4. Requirements

Vertical line post insulators shall meet the following requirements:

Insulator, Horizontal Line Post, Polymer, For 115 kV Nominal Systems

1. Scope

This standard applies to polymer, horizontal line post insulators used to construct 115 kV transmission lines. Insulators have a trunnion end fitting.

This standard applies to the Seattle City Light (SCL) stock numbers listed in Table 2.

2. Application

Horizontal line post insulators are used on wood or steel poles to support transmission conductors. Table 2 gives the application for each of the stock numbers.

Table 2. Horizontal Line Post Insulator Applications

Stock No.	Application
012830	115 kV, nominal, steel poles, no base
013307	115 kV, nominal, steel poles, flat base
690189	115 kV, nominal, wood poles, curved base

In 2008, stock number 012830 was used with SCL-fabricated bases to re-insulate the 115 kV north to Bothell line. If an insulator on the 115 kV north to Bothell line becomes damaged, re-use the existing base with the new insulator. If a base is required, SCL's shop will need to be contacted to fabricate a base.

Standards Coordinator
John Shipek

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

3. Industry Standards

Insulators shall meet the applicable requirements of the following national standards:

ANSI C29.1-1988 (R2002) Test Methods for Electrical Power Insulators

ANSI C29.7-1996 (R2002) Wet Process Porcelain Insulators – High Voltage Line Post Type

ANSI C29.11-1989 (R1996) Tests for Composite Suspension Insulators for Overhead Transmission Lines

ASTM A153-1982 Zinc Coating (Hot Dip) on Iron and Steel Hardware

4. Requirements

4.1 Common Requirements

Ultimate mechanical strength ratings shall be based on fully assembled insulators; insulators with base and end fittings attached.

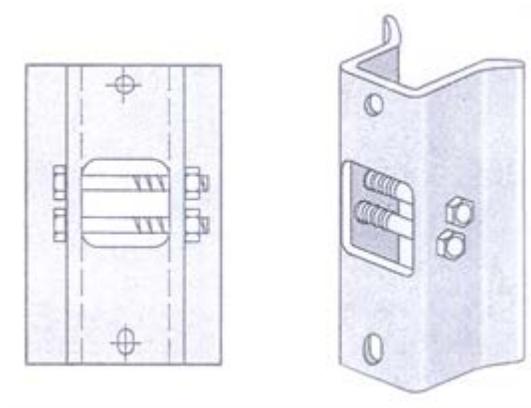

Table 4.1. Common Requirements

60 Hz dry flashover	325 kV rms, minimum
60 Hz wet flashover	295 kV rms, minimum
Positive critical impulse flashover	505 kV crest, minimum
Horizontal coupling length	46 in (plus 3, minus 2)
Mounting angle	12 degrees
Leakage	82 in, minimum
Strike/dry arc distance	33 in, minimum
Ultimate mechanical strength in cantilever	3,790 lb, minimum As defined by ANSI C29.1-1988 (R2002) and ANSI C29.7-1996 (R2002), section 8
Maximum design cantilever (MDC)	1,515 lb, minimum Where MDC is defined as 40% of the ultimate mechanical strength in cantilever
Ultimate mechanical strength in tension	5,000 lb, minimum At 0%, MDC shall be as defined by ANSI C29.1-1988 (R2002), section 5
End fitting type (line end)	Horizontal trunnion (clamp top) Similar to ANSI C29.7-1996 (R2002), figure 11, with one supplemental hole capable of accepting a 3/4-inch diameter Y-clevis and carrying the full design load of the insulator. Trunnion bolt shall be at least 2 inches long and include a hot dip galvanized jam nut.
Weathershed/sheath material	Silicon rubber; to qualify as silicon type, weathershed/sheath material must be composed of at least 33% silicon by weight; "EP/silicon alloys" do not qualify.
Weathershed/sheath material color	Gray

4.2 Stock No. 690189 Requirements, Bendable Curved Base

Base type (structure end)	Steel or aluminum gain channel (a.k.a. bendable)
Base mounting bolt holes	Two holes spaced 12 inches vertically from one hole or slot, designed to accommodate 3/4-inch nominal diameter fasteners.

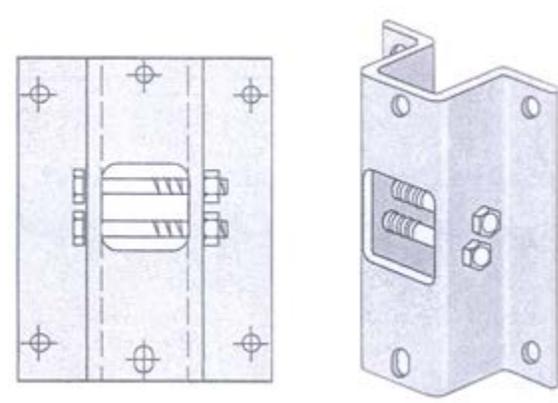

Figure 4.2. Bendable Curved Base

4.3 Stock No. 013307 Requirements, Bendable Flat Base

Base type (structure end)	Steel or aluminum formed channel (a.k.a. bendable)
Base mounting bolt holes	Two holes spaced 12 in vertically from one hole or slot. Four holes or slots in rectangular pattern spaced 10 in vertically and 8 in horizontally. Holes shall be designed to accommodate 3/4-in nominal diameter fasteners.

Figure 4.3. Bendable Flat Base

4.4 Stock No. 012830 Requirements

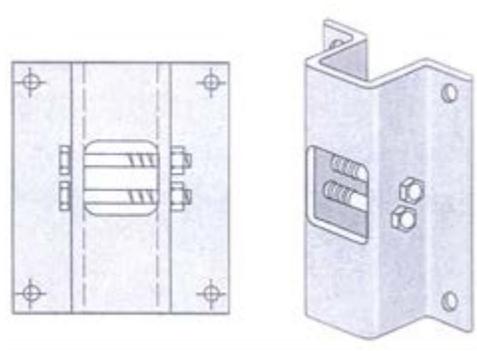

Insulator shall be furnished without a base.
 Insulator shall be furnished with sets of mounting fasteners.

4.5 Flat Base Requirements – No Stock Number

Base shall be fabricated by SCL shop according to L2-SN251-28 W/ELT.

Base type (structure end)	Steel or aluminum formed channel (A.K.A. bendable)
Base mounting bolt holes	Four holes or slots in rectangular pattern spaced 13 in vertically and 8 in horizontally, designed to accommodate 3/4-in nominal diameter fasteners.

Figure 4.5. Bendable Flat Base

5. Notice of Changes

Manufacturer shall provide Seattle City Light reasonable notice of anticipated insulator design changes. This includes, but is not limited to, changes in polymer formulation, dimensions, electrical characteristics, mechanical characteristics, or accessories.

6. Marking

Insulators shall be clearly and indelibly marked with the manufacturer's name or symbol, the year of manufacture, and the maximum design cantilever (MDC). Load ratings shall be stated in units of pounds. Labeling shall be in English.

7. Packaging

Insulators shall be packaged in wood crates to protect against physical damage that could occur during shipping, handling, or long-term outside storage. If slatted crates are used, each insulator shall be sealed in plastic. If sealed crates are used, plastic is not required.

Insulator weathersheds shall not bear any load due to its own weight or that of insulators or crates above or below it.

Crates shall be secured to pallets for handling by forklift. Pallets shall not exceed 4 ft in height or 1,000 lb in weight. Crates shall be marked with the manufacturer's name or symbol, catalog number, SCL stock number, and purchase order number.

Number of insulators per crate: 16 maximum.

**INSULATOR, HORIZONTAL LINE POST, POLYMER,
 FOR 230 kV NOMINAL SYSTEMS**

Note: Size and number of actual weathersheds will vary.

1. Scope

This Material Standard applies to polymer, horizontal line post insulators used to construct 230 kV transmission lines. Insulators have a drop eye end fitting and are designed for mounting on single wood poles.

This standard applies to the Seattle City Light Stock Numbers: 012382, and 013308.

2. Application

Horizontal line post insulators are used on wood or steel poles to support transmission conductors. The following table gives the application for each of the Stock Numbers.

Stock No	Application
012382	230 kV, nominal, wood poles, curved base
013308	230 kV, nominal, steel poles, flat base

3. Industry Standards

Insulators shall meet the applicable requirements of the following national standards:

ANSI C29.1-1988 (R2002) Test Methods for Electrical Power Insulators

ANSI C29.2-1992 (R1999) Wet Process Porcelain and Toughened Glass - Suspension Type

ANSI C29.11-1989 (R1996) Tests for Composite Suspension Insulators for Overhead Transmission Lines

ASTM A153-1982 Zinc Coating (Hot Dip) on Iron and Steel Hardware

4. Requirements

4.1 Common Requirements

Ultimate mechanical strength ratings shall be based on fully assembled insulators; insulators with base and end fittings attached.

60 Hz dry flashover, kV rms, minimum	618
60 Hz wet flashover, kV rms, minimum	555
Positive critical impulse flashover, kV crest, minimum	990
Horizontal coupling length, in	74 (plus 1, minus 1)
Mounting angle, degrees	12
Leakage, in, minimum	177
Strike/dry arc distance, in, minimum	63

**INSULATOR, HORIZONTAL LINE POST, PORCELAIN, CLAMP TOP,
 FOR DISTRIBUTION SYSTEMS**

1. Scope

This Material Standard applies to porcelain, horizontal line post insulators. This Material Standard applies to Seattle City Light Stock Number 690173.

2. Application

Horizontal line post insulators are used to construct 26.4 and 34.5 kV overhead distribution lines.

3. Industry Standards

Horizontal line post insulators shall meet the requirements of the following industry standard:

ANSI C29.7-1996 – American National Standard for Wet Process Porcelain Insulators – High Voltage Line Post Type

4. Requirements

Horizontal line post insulators shall meet the following requirements:

ANSI C29.7 Class	57-22
60 Hz dry flashover, kV rms	110, minimum
60 Hz wet flashover, kV rms	100, minimum
Positive critical impulse flashover, kV crest	180, minimum
Leakage distance, in	22, nominal
Strike/dry arc distance, in	9.5, nominal
Reference length, in	14, nominal

Cantilever strength

ultimate, lbs	2800, nominal
proof test, lbs	1400, minimum
Center hole thread, in	3/4 – 10, UFS-2B
Porcelain color	gray, according to ANSI C29.7, Section 5.2
Insulator base and clamp bracket	according to ANSI C29.7, Section 5.3
Trunnion bolt, City Light special	2 inches long with hot-dipped galvanized jam nut

5. Testing

Test data that establishes compliance with the requirements of ANSI C29.7, Section 8 shall be provided upon request.

6. Marking

Horizontal line-post insulators shall be clearly and indelibly marked in accordance with ANSI C29.7-1996, Section 7. Marking shall include but not limited to:

- Manufacturer's name or symbol
- Year of manufacture
- Product Identification Number

<i>standards coordinator</i>	<i>standards supervisor</i>	<i>unit director</i>

INSULATOR, STATION POST-TYPE, PORCELAIN

1. Scope

This standard covers the requirements for porcelain station post-type insulators.

This standard applies to Seattle City Light Stock Numbers 690253, 690280, 690186 and 690187.

2. Application

Porcelain station post-type insulators are used in substations to support buses or apparatus.

The following table gives the maximum voltage ratings for each of the Stock Numbers and their ANSI Technical Reference (TR) numbers.

Stock Number	ANSI TR Number	Voltage Rating, maximum
690253	202	7.5 kV
690280	222	7.5 kV
690186	205	15 kV
690187	208	23 kV

3. Industry Standards

Porcelain station post-type insulators shall meet the requirements of the following national standard:

ANSI C29.9-1983 – American National Standard for Wet-Process Porcelain Insulators Apparatus, Post –Type

4. Requirements

Porcelain station post-type insulators shall meet the following requirements:

	Stock Number			
	690253	690280	690186	690187
ANSI C29.9 TR Number	202	222	205	208
BIL (Basic Impulse Insulation Level) rating, kV, nominal	95	95	110	150
60 Hz, wet flashover, kV, rms, nominal	30	30	45	60
Positive critical impulse flashover, kV crest, nominal	105	105	125	170
Leakage distance, in, nominal	10-1/2	10-1/2	15-1/2	24
Four tapped holes, size, in	1/2-13, UFS	5/8-11, UFS	1/2-13, UFS	1/2-13, UFS
Bolt circle diameter, in	3	5	3	3
Height, in, overall	7-1/2	10	10	14
Height, in, tolerance	±1/32	±1/32	±1/32	±1/32
Cantilever strength, lb, ultimate, upright	2000	4000	2000	2000

Porcelain color for station post-type insulators shall be gray, according to ANSI C29.9, Section 4.2.

Cap material and coating for station post-type insulators shall be hot-dipped galvanized iron or steel, according to ANSI C29.9, Section 4.3.

**INSULATOR, STATION POST, POLYMER
 FOR 115 kV NOMINAL SYSTEMS**

Note: Size and number of actual weathersheds will vary.

1. Scope

This Material Standard applies to polymer, station post insulators used to support 115 kV bus in substations. The end of each insulator has a 5-inch diameter bolt circle end fitting.

This insulator, in combination with a steel trunnion adapter, Stock No. 012381, can also be used as a 115 kV vertical line post insulator.

2. Industry Standards

Insulators shall meet the applicable requirements of the following national standards:

ANSI C29.1-1988 (R2002) Test Methods for Electrical Power Insulators

ANSI C29.9-1983 (R1996) Wet Process Porcelain Insulators – Apparatus, Post-Type

ASTM A153-1982 Zinc Coating (Hot Dip) on Iron and Steel Hardware

Insulator is intended to be as similar as practical to Technical Reference Number 286 unit as identified in Table 2 of ANSI C29.9-1983 (R1996) for porcelain post type insulators. No industry standard exists for polymer station post insulators.

3. Requirements

Overall height:	45" (plus/minus 1/16")
Impulse withstand:	550 kV crest minimum
Leakage:	99" minimum
Positive critical impulse flashover:	610 kV crest minimum
60 Hz wet withstand:	230 kV rms minimum
Ultimate mechanical strength in cantilever:	2,600 lbs. minimum
Ultimate mechanical strength in tension:	17,500 lbs. minimum
Ultimate mechanical strength in compression:	12,000 lbs. minimum
Ultimate mechanical strength in torsion:	30,000 in.-lbs. minimum

Ultimate mechanical strength ratings shall be based on fully assembled insulators; insulators with base and end fittings attached.

STANDARDS COORDINATOR	STANDARDS SUPERVISOR	UNIT DIRECTOR
<i>Gold Shiel</i>	<i>John Schinner</i>	<i>Hardee Juy</i>

SEATTLE CITY LIGHT
MATERIAL STANDARD

STANDARD NUMBER: **6901.95**

PAGE: 2 of 2

SUPERCEDING: NEW

EFFECTIVE DATE: October 11, 2004

3. Requirements, Continued

- Base type (structure end): 5" bolt circle as defined by ANSI C29.9-1983 (R1996), Table 2, for technical reference number 286 type insulators.
- End fitting type (line end): 5" bolt circle as defined by ANSI C29.9-1983 (R1996), Table 2, for technical reference number 286 type insulators.
- Weathershed/sheath material: Silicon rubber – to qualify as silicon type, weathershed/sheath material must be composed of at least 33% silicon by weight; "EP/silicon alloys" do not qualify.
- Weathershed/sheath material color: Gray

4. Notice of Changes

Manufacturer shall provide Seattle City Light reasonable notice of anticipated insulator design changes. This includes, but is not limited to, changes in polymer formulation, dimensions, electrical characteristics, mechanical characteristics, or accessories.

5. Marking

Insulators shall be clearly and indelibly marked with the manufacturer's name or symbol, the year of manufacture, and load ratings. Load ratings shall be stated in units of pounds. Labeling shall be in English.

6. Packaging

Insulators shall be packaged in wood crates to protect against physical damage that could occur during shipping, handling, or long-term outside storage. If slatted crates are used, each insulator shall be sealed in plastic. If sealed crates are used, plastic is not required.

Insulator weathersheds shall not bear any load due to it's own weight or that of insulators or crates above or below it.

Crates shall be secured to pallets for handling by forklift. Pallets shall not exceed 4 feet in height or 1,000 pounds in weight. Crates shall be marked with the manufacturer's name or symbol, catalog number, Seattle City Light's Stock Number, and Purchase Order number.

Number of insulators per crate: 12 maximum.

MATERIAL STANDARD

INSULATOR, STATION POST, POLYMER FOR 230 kV NOMINAL SYSTEMS

size and number of actual
weathersheds will vary

1. Scope

This material standard applies to polymer, station post insulators.

This material standard applies to the following Seattle City Light Stock Number:

Stock No.: 012781

2. Application

Insulator is intended for use in substations to support 230 kV bus.

This insulator, in combination with a steel trunnion adapter, Stock No. 012381, can also be used as a 230 kV vertical line post insulator.

3. Industry Standards

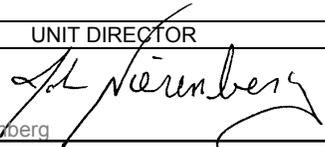

Insulator shall meet the applicable requirements of the following industry standards:

ANSI C29.1-1988 (R2001) Test Methods for Electrical Power Insulators

ANSI C29.9-1983 (R2002) Wet-Process Porcelain Insulators —Apparatus, Post Type

ASTM A153-2005 Standard Specification for Zinc Coating (Hot Dip) on Iron and Steel Hardware

Insulator is intended to be as similar as practical to Technical Reference Number 304 unit as identified in Table 2 of ANSI C29.9 for porcelain post type insulators. No industry standard exists for polymer station post insulators.

STANDARDS COORDINATOR	STANDARDS SUPERVISOR	UNIT DIRECTOR
Sean Parker 	John Bennett 	John Nierenberg 

MATERIAL STANDARD

Insulator, Station Post, Polymer for 230 kV Nominal Systems

4. Construction

4.1 General

Unless indicated otherwise, all values cited below should be consistent with industry standards – they are repeated here for the convenience of the reader. Values or requirements different from industry standards are identified with the symbol ▲.

Insulator shall meet the following requirements (with the grading ring installed):

	Requirements	Reference
Stock Number	012781	-
BIL Rating, kV	900	ANSI C29.9, Table 2
Overall Height, in.	80 +/- 1/8	ANSI C29.9, Table 2
Impulse Withstand Minimum, kV rms	900	ANSI C29.9, Table 2
Leakage Distance, minimum, in.	165	ANSI C29.9, Table 2
Positive Critical Impulse Flashover, minimum, kV peak-to-peak	1,010	ANSI C29.9, Table 2
Low Frequency Wet Withstand Minimum, kV rms	385	ANSI C29.9, Table 2
Ultimate Mechanical Strength Cantilever, lb	1,600 ▲	SCL preference
Ultimate Mechanical Strength In Tension, lb	17,500 ▲	SCL preference
Ultimate Mechanical Strength In Compression, lb	3,400 ▲	SCL preference
Ultimate Mechanical Strength In Torsion, in-lb	30,000 ▲	SCL preference

4.2 Weathershed/Sheath Material

Weathershed/sheath material shall be made out of silicon rubber – to qualify as silicon type, weathershed/sheath material must be composed of at least 33% silicon by weight; “EP silicon alloys” do not qualify.

Parting lines along the weathershed/sheath must be kept to a minimum so as to reduce the likelihood of tracking when contaminated.

Weathershed/sheath material shall be gray.

4.3. End Fittings

	Requirements	Reference
Material	ductile iron or forged steel	SCL preference
End Fitting Type (top/structure)	flange	ANSI C29.9, Table 2
End Fitting Type (bottom/line)	flange	ANSI C29.9, Table 2

End fittings shall have a 5” inch diameter bolt circle as defined in ANSI C29.9, Table 2 for technical reference number 304 type insulators.

4.4 Grading Ring

One 9” diameter (plus/minus 3”) grading ring shall be provided for the line end of each insulator. Grading rings shall be designed to allow easy installation and removal with the conductor in place. No information bands or tags shall be placed in the area where the grading ring brackets are mounted to the end fitting. Grading ring installation instructions shall be packed with each insulator in a waterproof, ultraviolet-light resistant plastic envelope or other waterproof, Seattle City Light approved means.

MATERIAL STANDARD

Insulator, Station Post, Polymer for 230 kV Nominal Systems

5. Notice of Changes

Manufacturer shall provide Seattle City Light reasonable notice of anticipated design changes. This includes, but is not limited to, changes in polymer formulation, dimensions, electrical characteristics, mechanical characteristics, or accessories.

6. Testing

Insulator test data that establishes compliance with the requirements of ANSI C29.9, Section 7 shall be provided upon request.

7. Marking

Insulator shall be clearly and indelibly marked in accordance with ANSI C29.9, Section 6. Load ratings shall be stated in units of pounds.

Labeling shall be in English.

8. Packaging

Insulators shall be packaged in wood crates to protect against physical damage that could occur during shipping, handling, or long-term outside storage. If slatted crates are used, each insulator shall be sealed in plastic. If sealed crates are used, plastic is not required.

Insulator weathersheds shall not bear any load due to its own weight or that of insulators or crates above or below it.

Crates shall be secured to pallets for handling by forklift. Pallets shall not exceed 4 feet in height or 1,000 pounds in weight. Crates shall be marked with the manufacturer's name or symbol, catalog number, Seattle City Light's Stock Number, and Purchase Order number.

Number of insulators per crate: 18 maximum.

9. Issuance

NGK-Locke	S2-SN471-22-W

INSULATOR, SUSPENSION, POYLMER, FOR 26.4 KV SYSTEMS

1. Scope

This standard applies to overhead distribution polymer, suspension insulators.

This standard applies to the following Seattle City Light Stock Numbers:

Stock No	Nominal Section Length, in
690233	20
690235	25

2. Application

Suspension insulators are intended for use in overhead distribution systems nominally rated up to 26.4 kV phase-to-phase, 60Hz.

Insulators with a nominal section length of 20 inches are used to deadend overhead distribution conductors.

Insulators with a nominal section length of 25 inches are used in situations where additional

section length is required, such as preserving climbing space.

3. Industry Standards

Insulator shall meet the applicable requirements of the following industry standards:

ANSI C29.1-1988 (R2000) Test Methods for Electrical Power Insulators

ANSI C29.13-2000 For Insulators- Composite-Distribution Deadend Type

ASTM A153-2005 Standard Specification for Zinc Coating (Hot Dip) on Iron and Steel Hardware

4. Specifications

4.1 General

INSULATOR, SUSPENSION, POLYMER FOR 230 KV NOMINAL SYSTEMS

1. Scope

This standard applies to 230 kV polymer, suspension insulators.
 This material standard applies to the following Seattle City Light Stock Number: 012782.

2. Application

Insulator is intended for use in overhead transmission systems nominally rated up to 230 kV phase-to-phase, 60Hz.

3. Industry Standards

Insulator shall meet the applicable requirements of the following industry standards:

ANSI C29.1-1988 (R2002) Test Methods for Electrical Power Insulators

ANSI C29.2-1992 (R1999) Insulators – Wet-Process Porcelain and Toughened Glass – Suspension Types

ANSI C29.11-1989 (R1996) Tests for Composite Suspension Insulators for Overhead Transmission Lines

ANSI C29.12-1997 (R2002) Insulators—Composite Suspension Type

ASTM A153-2005 Standard Specification for Zinc Coating (Hot Dip) on Iron and Steel Hardware

4. Construction

4.1 General

Insulator shall meet the following requirements (with the grading ring installed):

section length, in.	89 (± 2)
strike/dry arc distance, minimum, in	75
leakage distance, minimum, in	150
60 Hz dry flashover minimum, kV RMS	725
60 Hz wet flashover minimum, kV RMS	625
positive critical impulse flashover, minimum, kV peak-to-peak	1105
specified mechanical load, minimum, lb	30,000
routine test load, minimum, lb	15,000

4.2 Weathershed/Sheath Material

Weathershed/sheath material shall be made out of silicon rubber – to qualify as silicon type, weathershed/sheath material must be composed of at least 33% silicon by weight; “EP silicon alloys” do not qualify.

Parting lines along the weathershed/sheath must be kept to a minimum so as to reduce the likelihood of tracking when contaminated.

Weathershed/sheath material shall be gray.

 John Shipek	 John Shipek	 Darnell Cola

Material Standard

Insulator, Suspension, Polymer for 230 kV Nominal Systems

standard number: **6902.37**superseding: August 29, 2007
effective date: February 15, 2013
page: 2 of 2**4. Construction**, continued**4.3 End Fittings**

Insulator shall meet the following requirements:

	Requirements	Reference
material	ductile iron or forged steel	SCL preference
end fitting type (top/structure end)	socket, ANSI 52-5 class	ANSI C29.2 Table 3
end fitting type (bottom/line end)	ball, ANSI 52-5 class	ANSI C29.2 Table 3

Cotter key shall be stainless steel and humped, self-retaining and self-locking after each installation.

4.4 Grading Ring

One 9" diameter (plus/minus 3") grading ring shall be provided for the line end of each insulator.

Grading rings shall be designed to allow easy installation and removal with the conductor in place.

No information bands or tags shall be placed in the area where the grading ring brackets are mounted to the end fitting.

Grading ring installation instructions shall be packed with each insulator in a waterproof, ultraviolet-light resistant plastic envelope or other waterproof, Seattle City Light approved means.

5. Notice of Changes

Manufacturer shall provide Seattle City Light reasonable notice of anticipated design changes.

This includes, but is not limited to, changes in polymer formulation, dimensions, electrical characteristics, mechanical characteristics, or accessories.

6. Testing

Insulator test data that establishes compliance with the requirements of ANSI C29.11, Section 7 shall be provided upon request.

7. Marking

Insulator shall be clearly and indelibly marked in accordance with ANSI C29.12, Section 6.

Load ratings shall be stated in units of pounds.

Labeling shall be in English.

8. Packaging

Insulators shall be packaged in wood crates to protect against physical damage that could occur during shipping, handling, or long-term outside storage. If slatted crates are used, each insulator shall be sealed in plastic. If sealed crates are used, plastic is not required.

Insulator weathersheds shall not bear any load due to its own weight or that of insulators or crates above or below it.

Crates shall be secured to pallets for handling by forklift. Pallets shall not exceed 4 feet in height or 1,000 pounds in weight. Crates shall be marked with the manufacturer's name or symbol, catalog number, Seattle City Light's Stock Number, and Purchase Order number.

Number of insulators per crate: 18 maximum

**INSULATORS, SUSPENSION
 PORCELAIN BALL AND SOCKET TYPE**

1. Scope

This specification covers 10-inch diameter standard and fog type porcelain ball and socket type suspension insulators.

2. Industry Standards

Insulators shall meet all applicable requirements of the following National Standards:

ANSI Standard C29.2-1992 (R1999), Wet-Process Porcelain and Toughened Glass - Suspension Type Insulators.

3. Requirements

Stock Number	690210	690214	690215	690220
ANSI Class	52-3	52-5	52-5	52-3*
Leakage Distance, in.	11.5	11	11	17
M&E Strength, lbs.	15,000	25,000	25,000	15,000
Flashover, kV, Dry	80	80	80	80
Flashover, kV, Wet	50	50	50	50
Color	brown	gray	brown	gray

* Increased leakage version of 690210.

4. Cotter Pins

Shall be made of stainless steel and shall be self-retaining and self-locking after installation.

5. Marking

Each insulator shall bear symbols identifying the manufacturer and giving the year of manufacture and the tension proof load in pounds, identified by the word "TEST". The markings shall be legible and durable.

INSULATOR, PORCELAIN, SPOOL AND CLEVISES

1. Scope

This standard covers the requirements for porcelain spool insulators and their assembly parts.

This standard applies to the following Seattle City Light Stock Numbers:

Stock No	Spool ANSI C29.3 Class	Description
690658	53-1	spool only
690656	53-2	spool only
690455	53-1	with clevis
690452	53-2	with clevis
690458	53-5	with clevis

2. Application

Stock Numbers 690452, 690455, 690456, and 690658 are used to deadend a variety of secondary conductors.

Stock Number 690458 is used to deadend common neutral conductors.

3. Industry Standards

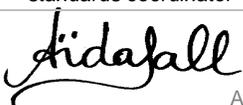

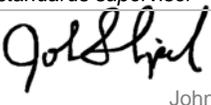

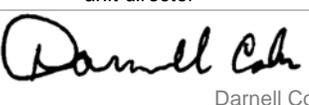

Porcelain spool insulators and their assembly parts shall meet the requirements of the following national standards:

ANSI C29.3-1986 – American National Standard for Wet Process Porcelain Insulators-Spool Type

ASTM A153 / A153M - 09 Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware

ASTM A 568/A 568M – 95, Standard Specification for Steel, Sheet, Carbon, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements for

EI TD-1, 1949 – Specifications for Steel Bolts and Nuts, approved by the Transmission and Distribution Committee Edison Electric Institute

The color of the spool insulator porcelain shall be gray, according to C29.3, Section 5.2.

All steel parts shall be hot-dipped galvanized according to ASTM A153.

Material Standard

Insulator, Porcelain, Spool, Spool And Clevises

5. Testing

Test data that establishes compliance with the requirements of ANSI C29.3, Section 8 shall be provided upon request.

Individual packages shall be legibly marked with:

- Manufacturer's name
- Manufacturer's catalog number
- Seattle City Light's Stock Number

6. Marking

Porcelain spool insulators shall be clearly and indelibly marked in accordance with ANSI C29.3, Section 7.

Shipping containers shall be legibly marked with:

- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

Marking shall include but not be limited to:

- Manufacturer's name or symbol
- Year of manufacture
- Product Identification Number

8. Issuance

Stock Unit: EA

7. Packaging

Stock Numbers 690452, 690455, and 690458 shall be assembled in accordance with EE1 packaging standards.

9. References

MATERIAL STANDARD

BRACKET - WITH SECONDARY SPOOL INSULATOR, ASSEMBLED

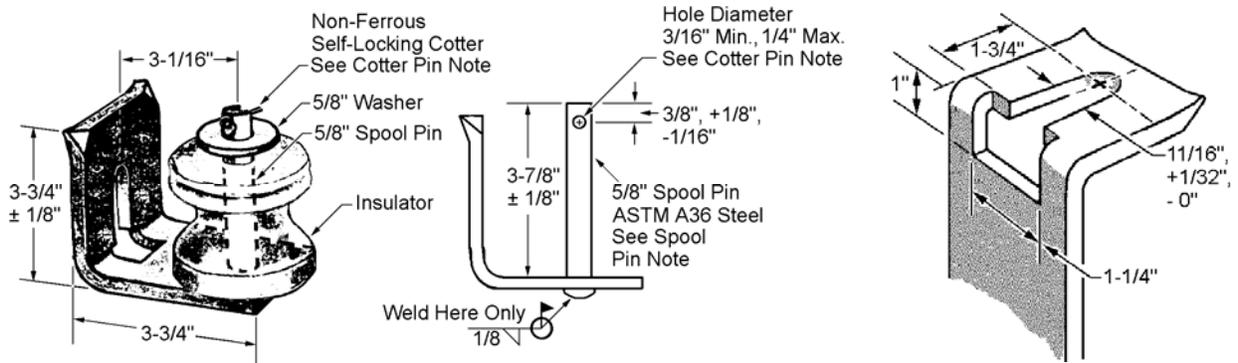

Figure 1, Angle Bracket, Small

Stock Number 690402

All linear dimensions to be ± 1/8" unless specific tolerance is shown.

1. Angle Brackets shall be of the configurations and dimensions shown, and shall be made of hot-rolled carbon steel. The steel shall meet the requirements of ASTM Specification A 569. See page 2 for Angle Bracket, Large (Stock Number 690404).

2 Industry Standards

Angle brackets shall meet the applicable requirements of the following industry standards:

A 569; "Steel Carbon, Hot-Rolled Sheet & Strip, Commercial"; ASTM

A153; "Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware"; ASTM

A36; "Standard Specification for Carbon Structural Steel"; ASTM

C29.3; "Wet-Process Porcelain Insulators-(Spool Type)"; ANSI

6906.1; "Insulators, Porcelain Spool"; SCL Construction Guidelines

3. Galvanizing: The brackets shall be galvanized, after assembly, in accordance with ASTM Specification A 153 (3 mils minimum). Hole diameters are minimums following plating. Maximum diameter following plating shall not exceed + 1/32 inch.

4. Spool Pins shall be firmly affixed to the brackets by welding. The welding shall only be on the side opposite the spool location. The hole to receive the 5/8 inch spool pin shall be the minimum

diameter to allow clearance of the pin. The steel shall meet the requirements of ASTM Specification A 36.

5. Cotter Pins shall be made of hard-drawn bronze or stainless steel, and shall be self-locking. The cotter pin must be of an appropriate size to allow insertion with reasonable force and withdrawal with 4 lb. minimum force.

6. Insulator. The insulator, of the configuration shown, below, **shall be assembled on the bracket.** The insulator shall be made of commercial-grade, wet-process porcelain in accordance with ANSI C29.3. The color of the glaze shall be Sky Gray, ANSI No. 70. (Brown may be accepted, **upon approval**, only if Sky Gray is unavailable.) Note, insulators listed on SCL Material Standard 6906.1 may be substituted.

Wildlife Protection Products, Assorted

1. Scope

This standard covers the requirements for an assortment of small wildlife protection products.

This standard applies to the following Stock Numbers:

Stock No.	Description
013038	Raptor protection cover, single arm/pin construction
013039	Raptor protection cover, double arm/pin construction
013040	Line and insulator protector, single pin/arm
013041	Pin insulator cover
013042	Cutout cover, Kaddas Enterprises, Inc.
013043	Wildlife connector cap
580776	Wildlife guard
013359	Conductor marker/diverter, flapper
013360	Conductor marker/diverter, round
013582	Bushing cover, 15 – 35 kV

2. Application

The products specified in this standard are intended to cover a variety of exposed high-voltage parts commonly found on the 26.4 kV, overhead distribution system for the purpose of protecting small birds, such as crows and pigeons, and other wildlife from electrical shock.

Stock number 013360 may also be effective in diverting large birds such as swans, eagles, ducks, and geese.

Products are suitable for indoor or outdoor applications and are non-tracking.

Operations personnel shall determine if products may be installed on energized systems or if equipment must be de-energized and grounded first. It should not be necessary to disassemble system components to install protection products.

Protective products may be cut to improve fit.

Operations personnel are encouraged to try different products and report their experiences and findings to Standards.

For additional information, refer to Construction Standard 0072.01 - Avian and Wildlife Protection, Small Birds and Animals.

3. Product Requirements

3.1 Stock Number 013038

Description	Raptor protection cover , single arm/pin construction
Manufacturer	Tyco Electronics/Raychem
Catalog Number	BCIC-G-PIN-556-01
Color	Gray
Material	Track resistant, UV resistant, polymer
Overall length	42 inches

Specific application Product is installed over vertical, tie-top, "F" neck, Class 57-2 porcelain insulators or over vertical, clamp top, Class 57-12 porcelain insulators. Tie-top, "F" neck insulators are typically used with 397.5 kcmil (Chickadee) or smaller conductor. Clamp top insulators are typically used with 954 kcmil (Rail) conductor. Flexible cover allows conductors to exit up to 30 degree angles from any axis.

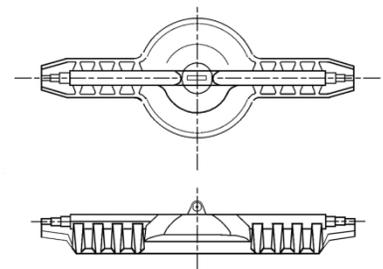

3.2 Stock Number 013039

Description	Raptor protection cover , double arm/pin construction
Manufacturer	Tyco Electronics/Raychem
Catalog Number	BCIC-G-DPIN-556-01
Color	Gray
Material	Track resistant, UV resistant, polymer
Overall length	42 inches

Specific application Product is installed over vertical, tie-top, "F" neck, Class 57-2 porcelain insulators or over vertical, clamp top, Class 57-12 porcelain insulators. Tie-top, "F" neck insulators are typically used with 397.5 kcmil (Chickadee) or smaller conductor. Clamp top insulators are typically used with 954 kcmil (Rail) conductor. Flexible cover allow conductors to exit up to 30 degree angles from any axis.

3.3 Stock Number 013040

Description	Line and insulator protector , single pin/arm construction
Manufacturer	Kaddas Enterprises
Catalog Number	KE1039-F-GR, Reference 27017
Color	Gray
Material	Fire retardant, flame resistant ABS/PVC blend with UV inhibitors
Overall length	32 inches

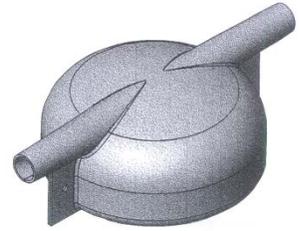

Specific application Product is installed over vertical, tie-top, "F" neck, Class 57-2 porcelain insulators or over vertical, clamp top, Class 57-12 porcelain insulators. Tie-top, "F" neck insulators are typically used with 397.5 kcmil (Chickadee) or smaller conductor. Clamp top insulators are typically used with 954 kcmil (Rail) conductor.

3. Product Requirements, continued

3.4 Stock Number 013041

Description	Pin insulator cover
Manufacturer	Midsun Group
Catalog Number	126-00-01
Color	Gray
Material	Silicone rubber
Overall length	15 inches

Specific application Product is installed over vertical, tie-top, "F" neck, Class 57-2 porcelain insulators. Tie-top, "F" neck insulators are typically used with 397.5 kcmil (Chickadee) or smaller conductor.

3.5 Stock Number 013042

Description	Cutout cover with fastener pin
Manufacturer	Kaddas Enterprises, Inc.
Catalog Number	KE1183-BR or KE1138-GR
Color	Brown or Gray
Material	Fire retardant, flame resistant base material with UV inhibitors

Specific application Product is installed over 100 ampere, open type, porcelain cutouts, Seattle City Light Stock Number 682099, and locked with a pin.

3.6 Stock Number 013043

Description	Wildlife connector cap
Manufacturer	Central Moloney
Catalog Number	70380326
Color	Gray
Material	Molded glass-filled polyester

Specific application Product is used to add wildlife protection to overhead distribution transformer primary bushings. Unscrew the original connector and install new connector in its place. Connector will accept copper or aluminum conductor up to 2/0 AWG. Note: All new overhead transformers are already provided with this type of protective connector.

3.7 Stock Number 580776

Description	Wildlife guard
Manufacturer	Colt Industries/Central Moloney
Catalog Number	703803-85
Color	Gray
Material	UV stabilized polypropylene

Specific application Hinged cover snaps and locks around overhead distribution transformer primary bushings. This cover is approximately 5 inches in diameter and may be used with other types of equipment.

3. Product Requirements, continued

3.8 Stock Number 013359

Description	Conductor marker/diverter, flapper
Manufacturer	P&R Technologies, Inc.
Catalog Number	FF-HW
Color	Combination of fluorescent, highly reflective, and glow-in-the-dark surfaces
Material	Weather resistant ABS Makrolon plastic and stainless steel spring

Specific application Product is attached along spans of primary conductor to protect birds in flight from colliding with overhead power lines, guy wires, communications towers, and other thin profile obstructions. The device can also be used to haze birds from buildings and structures. Fits conductor 0.375" – 2.75" in diameter. Device can be installed on live power lines with a hot stick and a (non-stock) proprietary P&R Technologies "SnapFast" installation tool. Recommended spacing is every 30 feet.

3.9 Stock Number 013360

Description	Conductor marker/diverter, round
Manufacturer	P&R Technologies, Inc.
Catalog Number	BM-AG
Color	See Application Section below.
Material	Weather resistant ABS plastic and stainless steel spring

Specific application Product is attached along a span of primary conductor. Device stand out like a beacon against background features, letting birds see where the power lines are. When swaying in the wind, the device also make a noise that birds can hear. Highly reflective orange and yellow tape is positioned in the center of each device to further assist in warning birds. Device glows up to 10 hours after the sun has set, providing extended protection for at risk birds. Fits – conductor 0.375" – 2.50" in diameter. Device can be installed on live power lines with a hot stick and a (non-stock) proprietary P&R Technologies "SnapFast" installation tool. Recommended spacing is every 30 feet.

3.10 Stock Number 013582

Description	Animal Protection Bushing Cover
Manufacturer	TE Connectivity
Catalog Number	BCAC-5D/8
Color	Gray
Material	Cross-linked polymer

Specific application Hot-stickable insulating cover designed to prevent animal-related outages on pole-top transformer bushings. Fits bushing sizes ranging from 15 to 35 kV.

4. Packaging

Products shall be packaged to prevent damage during shipping, handling, and storage.

5. Issuance

Stock Unit: EA (for all products)

6. Approved Manufacturers

Approved manufacturers and catalog numbers are cited in Section 3 of this standard.

SPLIT, SILICONE RUBBER, INSULATING HOSE

1. Scope

This material standard covers the requirements for split, silicone rubber, insulating hose.

This standard applies to the Seattle City Light Stock Numbers shown in Table 1.

Table 1

Stock Number	Conductor Diameter Use Range, in	Application
013044	up to 0.45	#4 AWG - 2/0 AWG
013045	0.50 - 0.75	3/0 AWG - 336.4 kcmil
013046	0.75 - 1.00	397.5 kcmil - 636 kcmil
013047	1.00 - 1.20	666.6 kcmil - 954 kcmil

2. Application

Insulating hose is used to cover bare, high-voltage leads and jumpers for the purpose of protecting small birds and other wildlife from electrical shock.

Insulating hose is suitable for indoor or outdoor applications, non-tracking, and easy to install over existing conductor. Refer to Table 1 for more-specific application information.

Insulating hose may only be installed on de-energized and grounded systems.

Insulating hose is not appropriate for covering spans of bare conductor; it would be too time-consuming to install.

For additional information, refer to Construction Standard 0072.01 - Avian and Wildlife Protection, Small Birds and Animals.

3. Attributes

Insulating hose shall have the following attributes:

Base material	silicone rubber
Color	gray
Continuous operating temperature, maximum	90 degrees C
Install temperature, minimum	0 degrees C
Withstand voltage, one minute dry, AC, minimum	20 kV

Insulating hose shall have the nominal dimensions cited in Table 1.

4. Packaging

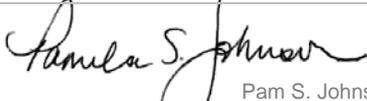

Insulating hose shall be packaged to prevent damage during shipping, handling, and storage.

Individual packages or spools shall be legibly marked with:

- Manufacturer's name
- Manufacturer's catalog number
- Product description
- Seattle City Light's Stock Number

Shipping containers shall be legibly marked with:

- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

SELF AMALGAMATING, SILICONE RUBBER, INSULATING TAPE

1. Scope

This material standard covers the requirements for self amalgamating, silicone rubber, insulating tape.

This standard applies to the following Seattle City Light Stock Number:

Stock Number	Description
013048	2-inch wide x 36 foot long roll

2. Application

Self amalgamating, insulating tape is used to cover exposed, high-voltage conductor, bus, and fittings for the purpose of protecting small birds and other wildlife from electrical shock.

Self amalgamating, insulating tape is suitable for indoor or outdoor applications, non-tracking, and easy to install.

Self amalgamating, insulating tape may only be installed on de-energized and grounded systems.

Upon application, the tape amalgamates the overlapped layers together, producing a complete seal. A single layer of tape, two-thirds overlapped, will provide an AC voltage withstand rating of 15 kV. A second layer will increase the AC voltage withstand rating to 35 kV.

Surface should be free of sharp edges or burrs and thoroughly cleaned and degreased before applying. Use sufficient tension to provide snug fit, but do not stretch more than 10%.

Although insulating tape will stick to itself and other insulating materials, it will not adhere to metal or porcelain allowing easy removal.

For additional information, refer to Construction Standard 0072.01 - Avian and Wildlife Protection, Small Birds and Animals.

3. Attributes

Self amalgamating, insulating tape shall have the following attributes:

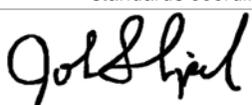

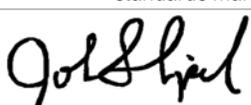

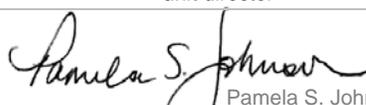

Base material	silicone rubber
Color	gray
Continuous operating temperature, maximum	90 degrees C
Install temperature, minimum	0 degrees C
Withstand voltage, one minute dry, AC, minimum	
One insulation layer	15 kV
Two insulation layers	35 kV

4. Packaging

Insulating tape shall be packaged to prevent damage during shipping, handling, and storage.

Individual packages shall be legibly marked with:

- Manufacturer's name
- Manufacturer's catalog number
- Product description
- Seattle City Light's Stock Number

PLASTIC BIRD SPIKES

1. Scope

This material standard covers the requirements for plastic bird spikes.

This standard applies to the following Seattle City Light Stock Number:

Stock Number	Description
013049	7-inch coverage x 2-foot section

2. Application

Plastic bird spikes can be installed on ledges, conduit, large flat surfaces, and nesting areas to deter pigeons, crows and seagulls from landing and roosting near high voltage lines or equipment. Product is non-conductive and may be installed on overhead distribution cross arms.

Plastic bird spikes require no maintenance, are virtually unbreakable, and are UV protected.

Plastic bird spikes may be glued, nailed, screwed, or tied down. One standard tube of outdoor rated adhesive (not silicone based) will secure approximately 24 feet of spike sections to steel, brick, stone, or concrete. Use rust-proof, #8 wood screws for mounting to wood, ten screws per two-foot section. Use UV protected tie-wraps for mounting to curved surfaces.

For additional information, refer to Construction Standard 0072.01 - Avian and Wildlife Protection, Small Birds and Animals.

3. Attributes

Plastic bird spikes shall have the following attributes:

Base material	UV stabilized polycarbonate
Color	light gray
Temperature resistance, range	+310 to -200 degrees F
Dimensions	
width	7 inches
height	4-1/2 inches
length	2 feet
Electrical properties	Non-conductive

4. Packaging

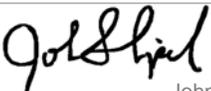

Plastic bird spikes shall be packaged to prevent damage during shipping, handling, and storage.

Individual packages shall be legibly marked with:

- Manufacturer's name
- Manufacturer's catalog number
- Product description
- Seattle City Light's Stock Number

Shipping containers shall be legibly marked with:

- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

MATERIAL STANDARD

CLAMPS, DEADEND, QUADRANT STRAIN, FORGED STEEL AND MALLEABLE IRON

69331b.tif

Strain Clamps of the type shown, their keepers and connectors, shall be made of malleable iron or drop-forged steel. Malleable iron shall conform to ASTM A47, and forged steel shall conform to ASTM A273. The clamps shall meet the strength requirements listed in the table below. The clamp bodies and keepers shall be smooth surfaced, and all edges rounded to prevent damage to the conductor or the formation of corona. A stringing, or pulling eye shall be an integral part of the clamp body.

Socket Eyes. The clamp shall be equipped with socket eye connectors meeting the requirements of ANSI C29.2 as it applies to ball and socket gauges for Class 52-3 insulators.

Cotter Pins. Cotter pins for the socket eye and button-head pins shall be hard-drawn bronze or stainless steel. They shall be the humpback type, and shall be self-locking and self-retaining.

Galvanizing. The clamps shall be galvanized in accordance with ASTM A153.

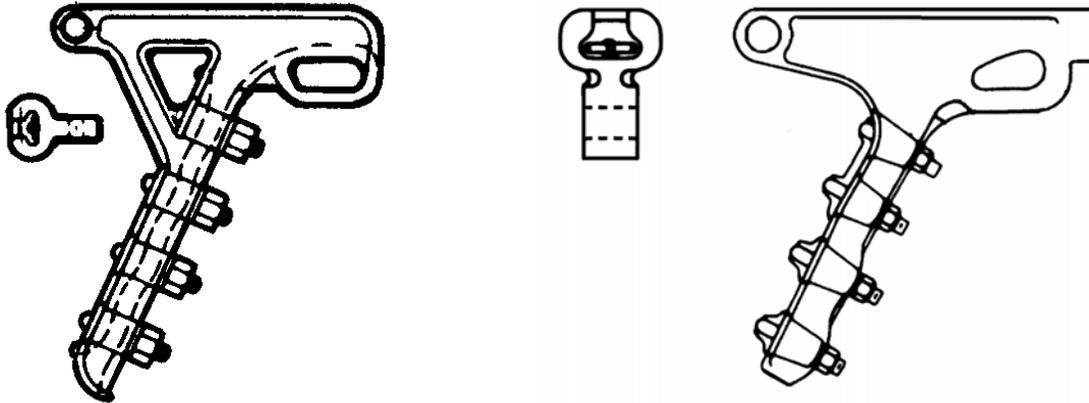

Reference Specifications: ANSI C29.2, ASTM A47, A153, A273, latest revisions.

CLAMPS, ALUMINUM DEADEND, QUADRANT STRAIN

1. **Aluminum Strain Clamps** of the type shown, and their keepers, shall be made of 356-T6 cast aluminum alloy or high-strength, heat-treated wrought aluminum alloy, and shall be designed to meet the ultimate strengths listed below. The body and keeper pieces of the clamps shall be smooth surfaced and all edges rounded to prevent formation of corona or damage to the conductor. A string, or pulling, eye shall be an integral part of the clamp body.
2. **Socket Eyes.** Socket eye connectors for the clamps shall be made of malleable iron conforming to ASTM A 47, or drop-forged steel conforming to ASTM A 273. The dimensions of the socket eye shall meet the requirements of ASA C29.2 as it applies to ball-and-socket gauges for Class 52-3 and Class 52-5 insulators.
3. **Cotter Pins.** Cotter pins for the socket eye and button-head pins shall be stainless steel, humpback type, and shall be self-locking and self-retaining.
4. **Galvanizing.** All ferrous parts shall be galvanized in accordance with ASTM A 153.
5. **Reference Specifications:** ASTM A 47, A 153, A 273, ASA C29.2, latest revisions.

**Clamps - Deadend, Straight Line
Malleable or Ductile Iron**

1. Scope

This standard covers the requirements for malleable or ductile iron, straight line dead-end clamps and associated clevis pin.

This standard applies to the following Seattle City Light (SCL) Stock Numbers:

Stock No.	Description
693901	Straight Line Deadend Clamp
013167	5/8-inch Clevis Pin

2. Application

Straight line deadend clamps are for constructing pole switch terminations.

Straight line deadend clamps are use to attach aluminum, ACSR, or copper conductors ranging in size from 2/0 to 500KCM to suspension insulators.

3. Industry Standards

Straight Line Deadend clamps shall be manufactured according to the following industry standards:

ANSI/ASME B18.8.1-1994(R2005) - Clevis Pins and Cotter Pins

ASME B18.12-2001 - Glossary of Terms for Mechanical Fasteners

ASTM A47/A47M-99(2009) - Standard Specification for Ferritic Malleable Iron Castings

ASTM A153-2005 - Standard Specification for Zinc Coating (Hot Dip) on Iron and Steel Hardware

ASTM A439 – 83 (2009) - Standard Specification for Austenitic Ductile Iron Castings

Standards Coordinator
Quan Wang

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

ASTM A571/A571M-01(2011) - Standard Specification for Austenitic Ductile Iron Castings for Pressure-Containing Parts Suitable for Low-Temperature Service

4. Clamp Requirements

Straight line deadend clamps shall be made of malleable iron conforming to ASTM A47, Grade 35018, or ductile iron conforming to ASTM A439 and A571.

The body and keeper piece of the clamps shall be smooth surfaced and all edges rounded to prevent damage to the conductor.

A stringing or pulling eye shall be an integral part of the clamp body, and the keeper shall have a lifting eye (3/4-inch diameter) for hot-line work.

Straight line deadend clamps and clevis pins shall be hot-dipped galvanized according to ASTM A153.

Straight line deadend clamps shall be provided with round and cotter pins installed.

Split lock washers shall be included under each nut on the U-bolt.

Figure 4. Clamp Dimensions

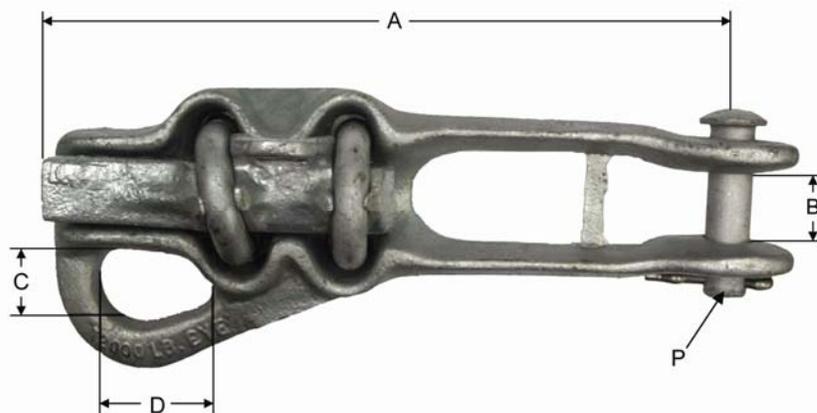

Table 4. Clamp Dimensions

5. Clamp Accessories Requirements

Cotter pins shall meet the applicable requirements of SCL 5825.90.

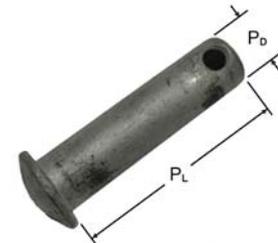

Clevis or Round pin shall meet the applicable requirements of ANSI/ASME B18.8.1 with the following clarification below.

Table 5.1. Clevis Pin Common Requirements

	Requirement	Reference
Product Name	Clevis Pin	ASME B18.12, Section 9.2
Material	C1010-1018 Steel	ANSI/ASME B18.8.1 Section 2.5
Dimension	Per reference	ANSI/ASME B18.8.1, Table 1
Corrosion Protection	Hot Dipped Galvanized	ANSI C153

Table 5.2. Clevis Pin Dimensions:

Stock No.	Diameter nominal (in) P_D	Length nominal (in) P_L
013167	5/8	2-1/2

6. Marking

Each straight line deadend clamp body shall be permanently and legibly marked in raised or stamped letters. Marking shall include but not be limited to the following information:

- Manufacturer's name or symbol or part number
- Eye Ultimate Strength
- Clamp Ultimate Strength
- U-Bolt Torque value

7. Packaging

Product shall be packaged to prevent damage during shipping, handling and storage.

Standard package quantity shall not exceed 100 per box.

Standard package weight shall not exceed 50 pounds.

Individual packages shall be legibly marked with:

- Manufacturer's name
- Manufacturer's catalog number
- Product description
- SCL Stock Number

Shipping containers shall be legibly marked with:

- SCL Purchase Order Number
- SCL Stock Number

**CLAMPS, ALUMINUM DEADEND STRAIN
 STRAIGHT-LINE, HOT LINE OPERABLE**

Aluminum Spring Loaded, Side Opening Straight Line Strain Clamps shall be of the configuration shown and shall be capable of being installed on an energized conductor before it is cut, without removing keeper piece, bolts or nuts.

The body and keeper shall be fabricated from 356-T6 aluminum alloy. All surfaces shall be smooth and all edges rounded to prevent damage to conductor or the formation of corona.

All bolts, nuts, washers and buttonhead pins shall be steel and shall be hot-dipped galvanized in accordance with ASTM A 123.

Cotterpins and compression springs shall be made of stainless steel.

Reference Specifications: ASTM A 123, A 313, latest revisions.

ANCHOR SHACKLES, ROUND PIN

1. Scope

This material standard covers the requirements for Class 1 anchor shackles with round pins.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Body Diameter, Nominal, in	Ultimate Strength, Minimum, lbs
696603	1/2	20,000
696604	5/8	32,500
696605	3/4 (wide bow)	47,500
696618	3/4	47,500

Class 2 anchor shackles with screw pins and Class 3 safety anchor shackles are outside the scope of this standard.

Anchor shackles used for rigging are specified in Material Standard 6966.17.

2. Application

Anchor shackles with round pins are for constructing permanent assemblies, such as attaching a high-voltage insulator to a steel tower.

Anchor shackles with round pins can be used in tie down, towing, suspension or lifting applications where the load is strictly applied in-line. Round pin shackles should never be used in rigging applications to gather multiple sling legs, or where side loading conditions may occur.

Working load limit (WWL) values are calculated by dividing a shackle's ultimate strength (also known as breaking load rating) by a safety factor. Working load limit is also known as safe working load (SWL).

Seattle City Light transmission line engineers commonly employ a safety factor of four. Federal Specification RR-C-271D calculates working load limits based on a safety factor of five.

If a shackle is marked with a working load limit (WWL) or safe working load (SWL) value, the ultimate strength or breaking load is (probably) five times higher. If a shackle is marked with an ultimate strength, the working load limit is calculated as either four or five times less, depending on the user's choice of safety factor.

An anchor shackle should never be applied above its working load limit.

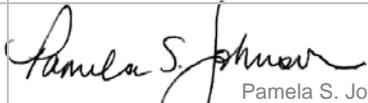

3. Industry Standard

Anchor shackles shall be manufactured according to the following industry standards:

Federal Specification RR-C-271D; "Chains and Attachments, Welded and Weldless"; September 25, 1990

Federal Specification RR-C-271D, "Chains and Attachments, Welded and Weldless," Amendment 1, November 29, 1995

ASTM A153-2005 "Standard Specification for Zinc Coating (Hot Dip) on Iron and Steel Hardware," 2005

MATERIAL STANDARD

Anchor Shackles, Round Pin

standard number: **6966.15**

superseding: new
 effective date: October 1, 2010
 page: 2 of 2

4. Requirements and Attributes

Anchor shackles shall meet the requirements of Federal Specification RR-C-271D as clarified below:

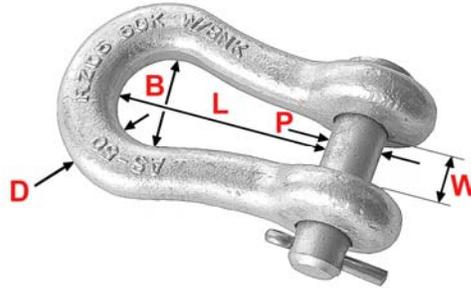

Anchor shackles shall be Type IVA, Grade A, regular and shall be Class 1.

Anchor shackles and pins shall be hot-dipped galvanized according to ASTM A153.

Cotter pins shall be bronze or stainless steel.

Cotter pins shall be of humped design.

Anchor shackles shall be provided with round and cotter pins installed.

Stock number	Body diameter, nominal, in	Pin diameter, nominal, in	Width between eyes, nominal, in	Length inside, nominal, in	Bow width, min., in	Weight per 100 shackles, approx., lb	Ultimate strength min., lb
	D	P	W	L	B

696605	3/4	7/8	1-1/2	2-27/32	1-3/4	216	47,500
696618	3/4	3/4	1-3/4	3-1/8	1-1/2	216	47,500

5. Testing

Test data that establishes compliance with the requirements of Federal Specification RR-C-271D shall be provided upon request.

6. Marking

Each anchor shackle body shall be permanently and legibly marked in raised or stamped letters on the side of the shackle bow according to the requirements of Federal Specification RR-C-271D, Section 3.5.3.1.6. Marking shall include but not be limited to the following information:

- Manufacturer's name or symbol
- Size (body diameter)
- Working load limit (WLL), safe working load (SWL), or ultimate strength

7. Packaging

Anchor shackles shall be packaged to prevent damage during shipping, handling and storage.

Individual packages shall be legibly marked with:

- Manufacturer's name
- Manufacturer's catalog number
- Product description
- Seattle City Light's Stock Number

Shipping containers shall be legibly marked with:

- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

8. Issuance

Stock Unit: EA

ANCHOR SHACKLES, SCREW PIN

1. Scope

This material standard covers the requirements for Class 2 anchor shackles with screw pins.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Body Diameter, Nominal, in	Ultimate Strength, Minimum, lbs
696620	1/4	5,000
696621	3/8	10,000
696622	7/16	15,000
696623	1/2	20,000
696624	5/8	32,500
696625	3/4	47,500
696626	7/8	65,000
696627	1	85,000

Class 1 anchor shackles with round pins and Class 3 safety anchor shackles are outside the scope of this standard.

Anchor shackles used for construction are specified in Material Standard 6966.15.

2. Application

Anchor shackles with screw pins are for pick and place applications.

Anchor shackles with screw pins can be used in side-loading situations; however users should be aware that this reduces effective working load limits.

There are many dos and don'ts to rigging. Inexperienced users should not attempt rigging without consulting someone who is.

Working load limit (WWL) values are calculated by dividing a shackles' ultimate strength (also known as breaking load rating) by a safety factor. Working load limit is also known as safe working load (SWL).

Federal Specification RR-C-271D calculates working load limits based on a safety factor of five.

An anchor shackle should never be applied above its working load limit.

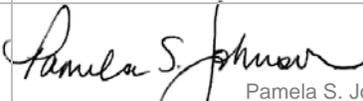

3. Industry Standard

Anchor shackles shall be manufactured according to the following industry standards:

Federal Specification RR-C-271D; "Chains and Attachments, Welded and Weldless"; September 25, 1990

Federal Specification RR-C-271D; "Chains and Attachments, Welded and Weldless"; Amendment 1; November 29, 1995

Yoke Plate Assembly, Deadend Strain

1. Scope

This standard covers the material requirements for a galvanized steel heavy-duty deadend yoke plate assembly.

This standard applies to Seattle City Light (SCL) stock number 693085.

2. Application

Yoke plate assemblies are commonly used to attach double strings of transmission class suspension insulators to supporting structures. The yoke plate assembly provides an insulator spacing of 18 inches.

3. Industry Standards

Yoke plate assembly shall meet the applicable requirements of the following industry standards:

ASTM A153; "Standardized Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware"

ASTM A47; "Standard Specification for Ferritic Malleable Iron Castings"

ASTM A668/A668M; "Standard Specification for Steel Forgings, Carbon and Alloy, for General Industrial Use"

Federal Specification RR-C-271D; "Chains and Attachments Carbon and Alloy Steel"

Standards Coordinator
Kathy Tilley

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

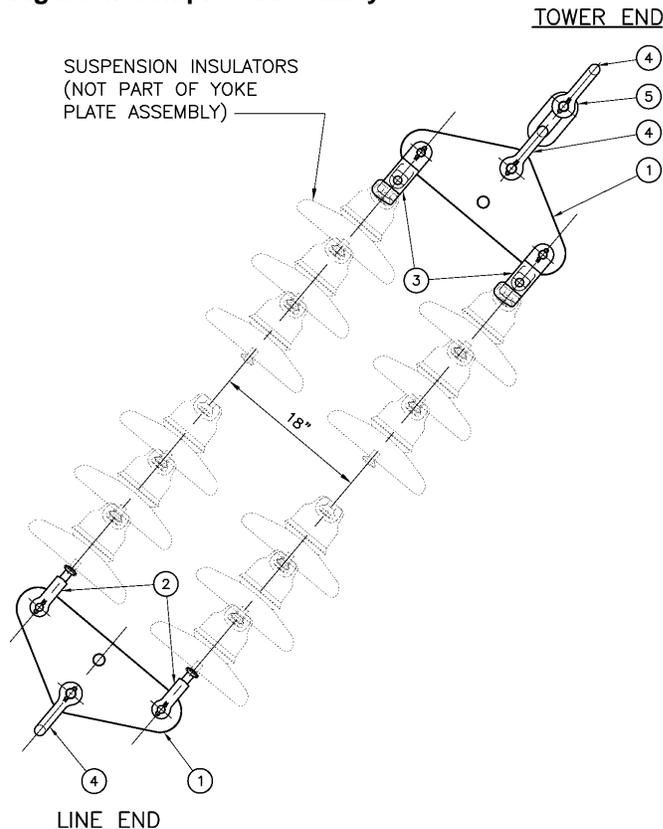

4. Requirements

Each assembly shall be composed of the material listed in Table 4 and shown in Figure 4.

Table 4. Yoke Plate Assembly Material List

Item No.	Qty	Description	Stock No.	Ultimate Strength Rating (lb)
1	2	Galvanized steel yoke plate	013660	90,000
2	2	Forged steel ball clevis	695515	30,000
3	2	Iron socket clevis	695550	30,000

Schedule 40 PVC Conduit and Fittings

1. Scope

This standard covers the requirements for Schedule 40 extruded rigid polyvinyl chloride (PVC) conduit and fittings consisting of elbows, couplings, adapters.

2. Application

Schedule 40 PVC conduit and fittings are used to construct smooth raceways for the pulling in of cable installed in a variety of looped radial and network system applications:

- Service
- Secondary
- Primary
- Communication
- Control

Refer to SCL 0222.02.

Five-inch (IPS) size conduit is specified with both ends straight cut to minimize the gap at the conduit joints. Minimized gaps are less likely to catch debris during construction and lead to damaged cable.

Elbows are also known as bends. Large radius elbows are also known as sweeps.

The straight cut end of a section of conduit or elbow is also known as the spigot end.

A handwritten signature in black ink, appearing to read 'Quan Wang'.

A handwritten signature in black ink, appearing to read 'John Shipek'.

A handwritten signature in black ink, appearing to read 'Darnell Cola'.

3. Industry Standards

Schedule 40 PVC conduit and fittings shall meet the requirements of the following industry standard:

UL 651 - Standard for Schedule 40 and 80 Rigid PVC Conduit and Fittings, 7th Edition, dated October 4, 2005

The following clarifications apply:

- Five inch (IPS) size shall meet the requirements for specific applications, Section 4.5 (straight cut, without couplings or adapters).
- All other (IPS) sizes shall meet the requirements for *general use*, Section 4.6 (one bell end).

4. Detailed Requirements

4.1 General

Conduit and fittings shall be suitable for above ground use indoors or outdoors exposed to sunlight and weather, and for underground use by direct burial or encasement in concrete.

Conduit and fitting dimensions shall conform to UL 651 and the Iron Pipe Standard (IPS), where dimensions are based on outside diameters of iron pipe sizes.

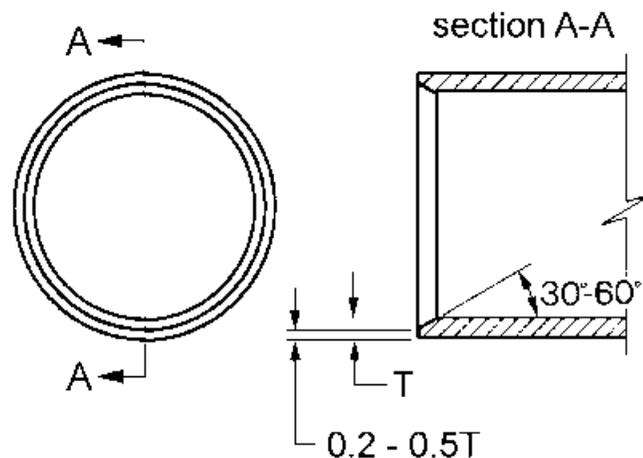

Conduit and fitting color shall be medium to dark gray.

Conduit and fittings shall not have any features that can abrade or otherwise damage cable.

All straight-cut ends from conduit, reducers and elbows with a diameter of 2 in (IPS) and larger shall be chamfered according to Figure 4.1.

Conduit, elbows, and fittings shall be designed and manufactured to be a system intended to guarantee complete interchangeability and compatibility between components.

Figure 4.1. Chamfer Detail

4.2 Conduit

Conduit shall be certified by Underwriters Laboratories (UL) or one of the following NRTLs (Nationally Recognized Testing Laboratories) as meeting the minimum requirements of Standard UL 651:

- CSA (Canadian Standards Association)
- ETL
- NSF International

Manufacturer shall inform SCL in writing of all design changes that could affect the product's understood or published capabilities or attributes.

Dimensional information cited in Sections 4.2, 4.3, and 4.4 should be consistent with UL requirements and is provided for the convenience of SCL design engineers, construction crews, inspectors, and quality assurance personnel who do not have ready access to UL 651.

Conduit shall meet the performance requirements as described in Table 4.2a

Table 4.2a. Conduit performance requirements

Description	UL 651 Section

5. Marking

Each conduit section shall be marked according to the requirements of UL 651, Section 25.

The outer surface of each conduit section shall be marked with the following minimum information:

- Trade size
- Schedule number or equivalent information
- Manufacturer's name or symbol
- Date (or period) of manufacture
- UL or NRTL mark

Each fitting shall be marked according to the requirements of UL 651, Section 46.

The outer surface of each fitting shall be marked with the following minimum information:

- Manufacturer's name or symbol
- Catalog number

6. Testing

Conduit and fitting test data that establishes compliance with the requirements of UL 651 and this material standard shall be provided upon request.

7. Packaging

Straight conduit shall be furnished in 10-ft sections, unless specified otherwise on the purchase order.

Master bundles shall be secured with at least two bands of steel or UV-resistant plastic strapping.

Each master bundle of straight conduit shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Seattle City Light purchase order number
- Seattle City Light stock number
- Gross, net, and tare weight

8. Shipping

Conduit may be delivered on enclosed, covered, or flatbed trucks. If conduit is delivered on a flatbed truck, conduit shall be side-loaded.

Because Washington State law requires a 10-in minimum side board when driving a forklift or pallet jack onto the bed of a truck or trailer, most flatbed trucks or trailers must be side-loaded to ease off-loading.

9. Issuance

Conduit: FT

Elbows: EA

All Other Fittings: EA

10. Approved Manufacturers

Conduit Spacers for PVC and FG Conduit

Base Spacer
Figure 1

Intermediate Spacer
Figure 2

Plastic Spacers for Nonmetallic Conduit shall be of the general configuration shown, and shall be molded from a general-purpose polystyrene meeting the requirements of ASTM Standard D4549 for Type 1 molding material.

Each unit shall have two lugs for interlocking on one side and bottom, and two mating holes on the other side and top. The lugs shall fit corresponding holes snugly, permitting rapid, secure field assembly of multiple units. Separation between conduits shall be 2 inches for all sizes of spacers.

Reference Specification: ASTM D4549, latest revision.

* GS Industries of Bassett, Inc. GS Industries spacers marked "Underground Products" are acceptable.

These items are approved for contractor use but NOT for City Light stock.

Approved Manufacturers:

- Underground Device Inc. Wunpeece Duc Spacer SERIES
- Cantex 53360xx and 53359xx SERIES
- PWPipe 6268 and 6266 SERIES

In October 2015, this standard was renumbered from 7346.8 to 7015.80.

Directional Drilling Conduit Systems

1. Scope

This standard covers the requirements for conduit systems specifically intended for directional drilling construction projects.

2. Application

Directional drilling is an underground excavation method using a steerable system for installing pipe, conduit and cable using a surface launched drill rig. A fluid-filled pilot bore is drilled using a fluid-driven motor, and the bore is then enlarged by pre-reaming when necessary, and back reaming to the size required for product pipe installation. The drill head steers the pilot boring.

The conduit systems cited in this standard have been reviewed and approved by Seattle City Light (SCL) for use on our system.

3. Industry Standards

Conduit shall meet the applicable requirements of the following industry standard:

UL 651 - Standard for Schedule 40 and 80 Rigid PVC Conduit and Fittings, 7th Edition, dated October 4, 2005

4. Requirements

Conduit shall meet the requirements of the latest revision of SCL 7015.05 with the following clarification: the requirements of SCL 7015.05 are waived where they conflict with the specific nature of the approved, directional drilling-designed joints.

Conduit shall be listed by Underwriters Laboratories (UL 651).

5. Marking

Each conduit section shall be marked according to the requirements of UL 651, Section 25.

The outer surface of each conduit section shall be marked with the following minimum information:

- Trade size
- Schedule number or equivalent information
- Manufacturer's name or symbol
- Date (or period) of manufacture.

6. Testing

Conduit test data that establishes compliance with the requirements of UL 651 and this standard shall be provided upon request.

7. Packaging

Conduit shall be furnished in 20 ft sections, unless specified otherwise.

Locking and sealing accessories shall be packaged with each conduit stick.

8. Approved Manufacturers

Can-Loc by Cantex

Certa-Com by NASP (North American Specialty Products LLC)

Bore-Gard by Prime Conduit

Schedule 80 PVC Conduit and Elbows

1. Scope

This material standard covers the requirements for Schedule 80 extruded rigid polyvinyl chloride (PVC) conduit.

The requirements for Schedule 40 PVC conduit and fittings are located in SCL 7015.05.

2. Application

Schedule 80 PVC conduit is used to construct smooth raceways for the pulling in of cable installed in a variety of applications.

Five-inch Iron Pipe Standard (IPS) size conduit is specified with both ends straight cut to minimize the gap at the conduit joints. Minimized gaps are less likely to catch debris during construction and lead to damaged cable.

Elbows are also known as bends. Large radius elbows are also known as sweeps.

The straight cut end of a section of conduit is also known as the spigot end.

Design engineers should be aware that different types of conduit have widely different physical properties that affect their application.

3. Industry Standards

Schedule 80 PVC conduit and fittings shall meet the requirements of the following industry standard:

UL 651; Standard for Schedule 40 and 80 Rigid PVC Conduit and Fittings, 7th Edition, October 4, 2005

Standards Coordinator
Quan Wang

Standards Supervisor
John Shipek

274

Unit Director
Darnell Cola

4. Detailed Requirements

4.1 General

Conduit shall be suitable for aboveground use indoors or outdoors exposed to sunlight and weather, and for underground use by direct burial or encasement in concrete.

Conduit dimensions shall conform to UL 651 and the IPS, where dimensions are based on outside diameters of iron pipe sizes.

Conduit color shall be medium to dark gray.

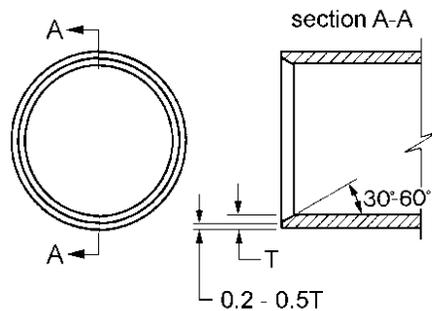

Conduit shall not have any features that can abrade or otherwise damage cable.

All conduit that is 2 inch (IPS) and larger shall be chamfered according to Figure 4.1.

Manufacturer shall inform Seattle City Light in writing of all design changes that could affect the product's understood or published capabilities or attributes.

Dimensional information cited in Section 4.2 should be consistent with UL requirements and is provided for the convenience of Seattle City Light design engineers, construction crews, inspectors, and quality assurance personnel who do not have ready access to UL 651.

Figure 4.1. Chamfer Detail

4.2 Conduit

Conduit shall be certified by Underwriters Laboratories or one of the following Nationally Recognized Testing Laboratories (NRTLs) as meeting the minimum requirements of Standard UL 651:

- Canadian Standards Association (CSA)
- ETL
- NSF International

Conduit shall meet the requirements of Table 4.2a.

Five inch IPS size shall meet the requirements in Table 4.2b (straight cut, without couplings or adapters).

All other IPS sizes shall meet the requirements in Table 4.2b (one bell end).

Table 4.2a. Conduit Performance Requirements

013652	3	90	"	"	24

5. Marking

Each conduit section shall be marked according to the requirements of UL 651, Section 25.

The outer surface of each conduit section shall be marked with the following minimum information:

- Trade size
- Schedule Number or equivalent information
- Manufacturer name or symbol
- Date (or period) of manufacture
- UL or NRTL mark

6. Testing

Conduit test data that establishes compliance with the requirements of UL 651 and this material standard shall be provided upon request.

7. Packaging

Straight conduit shall be furnished in 10-ft sections, unless specified otherwise on the purchase order.

Master bundles shall be secured with at least two bands of steel or UV-resistant plastic strapping.

Each master bundle of straight conduit shall be legibly marked with the following information:

- Manufacturer identification
- Product description
- Seattle City Light purchase order number
- Seattle City Light stock number
- Gross, net, and tare weight

8. Shipping

Conduit may be delivered on enclosed, covered, or flatbed trucks. If conduit is delivered on a flatbed truck, conduit shall be side-loaded.

Because Washington State law requires a 10-in minimum side board when driving a forklift or pallet jack onto the bed of a truck or trailer, most flatbed trucks or trailers must be side-loaded to ease off-loading.

Fiberglass Fittings, Heavy-Wall, Four-Inch IPS

1. Scope

This standard covers the requirements for 4-inch IPS (iron pipe standard), heavy-wall, fiberglass fittings.

In addition to identifying products that are approved for purchase and installed by Seattle City Light (SCL) personnel, this standard identifies products that may be purchased and installed by contractors working under Seattle City Light's direction.

This material standard applies to the following SCL stock numbers:

Stock No.	Description
013587	Elbow, 5° x 144 in
013588	Elbow, 11-1/4° x 144 in
013589	Elbow, 15° x 144 in
013590	Elbow, 22-1/2° x 144 in
013591	Elbow, 45° x 144 in
013592	Elbow, 90° x 144 in

2. Application

Four-inch fiberglass elbows are appropriate for riser pole, other above ground, and below ground (encased in concrete) applications.

The intended application for large radius 4-in fiberglass elbows is to allow ease of cable pull around bends. The fiberglass elbows will have a deep socket PVC coupling attached at each ends. The PVC couplings enable a smooth transition between the fiberglass elbow and the PVC straight conduit in the duct system.

Standards Coordinator
Quan Wang

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

When Champion Fiberglass was first obtaining its UL Listed certification, it had offered different wall choices: standard wall (SW), medium wall (MW) and heavy wall (HW). However, the wall names were not associated with a numerical thickness, 0.070 inches, 0.096 inches, or 0.110 inches respectively.

The Champion 4-in HW conduit, elbow and fittings have the same numerical wall thickness (0.096 in) as the Champion 5-in MW conduit or elbows that SCL also uses. Champion does not offer a medium wall option for the 4-in fiberglass conduit, elbow and fittings.

3. Detailed Requirements

3.1 General

Fittings shall be listed by UL 2515 (Underwriters Laboratories standard).

Fittings shall be heavy wall, type AG (above ground) as defined by UL 2515.

Fitting dimensions shall conform to the Iron Pipe Standard (IPS), where dimensions are based on outside diameters of iron pipe sizes.

Resin system shall be epoxy with no fillers. Glass shall be E-type.

Conduit and fittings shall be manufactured from the same resin/hardener/glass systems and by the same filament wound system.

Conduit and fittings shall be halogen-free as defined by UL 2515.

Conduit, fittings, and accessories shall be designed and manufactured as a system that guarantees complete interchangeability and compatibility between components.

Manufacturer shall inform Seattle City Light in writing of all design changes that could affect the product's understood or published capabilities or attributes.

3.2 Fittings

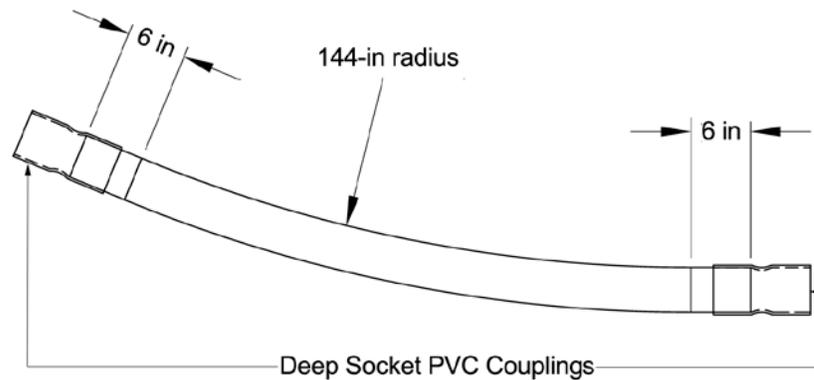

Fittings shall be appropriate and compatible for use with Schedule 40 PVC conduit.

Elbow angles shall be accurate to $\pm 2\%$ of specified.

Elbow shall have a 6-in tangent on each end as shown in Figure 3.2.

A deep socket PVC coupling shall be permanently attached to each end of the elbow.

Figure 3.2. 4-in Fiberglass Elbow with Deep Socket PVC Couplings

Trade size	4 in (IPS)
Outside diameter	
Minimum	4.490 in
Average	4.512 in
Maximum	4.540 in
Inside diameter, minimum	4.320 in
Wall thickness, nominal	0.096 in
UV stability	Meeting the requirements of UL 2515
Fire resistance	Meeting the requirements of UL 2515

4. Marking

Each fitting shall be marked according to the requirements of UL 2515, Section 6.

5. Testing

Test data that establishes compliance with the requirements of UL 2515 and this standard shall be provided upon request.

6. Packaging

Each crate shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Seattle City Light's purchase order number
- Seattle City Light's stock number.

7. Shipping

45 degrees or larger elbows shall be delivered on enclosed, covered, or flatbed trucks with side-load capability.

Because Washington State law requires a 10-in minimum side board when driving a forklift or pallet jack onto the bed of a truck or trailer, most flatbed trucks or trailers must be side-loaded to ease off-loading.

8. Issuance

EA

Fiberglass Conduit and Fittings, Standard-Wall, Five-Inch IPS

1. Scope

This standard covers the requirements for 5-inch IPS (iron pipe standard), standard-wall, fiberglass conduit, fittings, and accessories. This collection of components may be considered a system.

The formal, industry name for fiberglass conduit is Aboveground Reinforced Thermosetting Resin Conduit (RTRC).

In 2013, the title of this standard was changed from "Fiberglass Conduit and Fittings, **Medium-Wall**, Five-Inch IPS" to "Fiberglass Conduit and Fittings, **Standard-Wall**, Five-Inch IPS". Wall thickness requirements remained unchanged.

In addition to identifying products that are approved for purchase and installed by Seattle City Light (SCL) personnel, this standard identifies products that may be purchased and installed by contractors working under Seattle City Light's direction.

This material standard applies to the following SCL stock numbers:

Stock No.	Description
012808	Conduit, 20 foot straight section
012809	Elbow, 90 degree x 60 in
012847	Elbow, 90 degree x 144 in
012848	Elbow, 11-1/4 degree x 144 in
013586	Elbow, 15 degree x 144 in
012849	Elbow, 22-1/2 degree x 144 in
012850	Elbow, 45 degree x 144 in
012814	Stop coupling
013358	Repair coupling
012815	End bell, socket type
013568	Elbow, 5 degree x 144 in
012817	Female terminal adapter
012818	Fiberglass end cap with gasket
012819	Adhesive gun
012820	Epoxy cartridge, 20 fl oz
012821	Adhesive kit
013314	Mixing tip, spare
013567	5-in IPS fiberglass to 5-in PVC adapter

The purpose of this standard is three-fold:

- Promote the standardization of material across URD and Network boundaries.
- Make available a family of fiberglass conduit and fittings that reduces engineering construction costs by guaranteeing high component quality, fit, and compatibility. Unlike PVC and steel, fiberglass conduit and fittings are not universally interchangeable between suppliers; to ensure component compatibility, the subject family must be considered a system and sole-sourced.
- Facilitate ordering by providing a cross-reference between SCL stock numbers, common applications, and the manufacturer's catalog numbers.

2. Application

Fiberglass conduit is an alternative to PVC conduit systems where the following (superior) attributes are required:

- Wide operating temperature range, -60 to +250 degrees F (-51 to +121 degrees C)
- Resistant to cable pull burn through
- Low relative coefficient of friction
- Shatter-proof
- Shape retention after impact.

Fiberglass conduit is an alternative to galvanized steel where the following (superior) attributes are required:

- Corrosion resistance
- Low relative unit cost
- Low relative unit weight
- Low relative coefficient of friction
- Non-conductive
- Shape retention after impact.

Five-inch fiberglass conduit systems are appropriate for riser pole, other above ground, and below ground (encased in concrete) applications.

For 5-in fiberglass conduit, one 20 fl oz adhesive cartridge, Stock No. 012820, will make about 20 joints.

Adhesive is required at:

- Joints where a field cut has been made and the interference joint is not available
- Joints between large sweep elbows and vertical risers
- All end bells.

Adhesive gun, Stock Number 012819, may be considered expendable and issued with each job.

Adhesive curing time is approximately one hour at an ambient temperature of 75 degrees F (29 degrees C). Cold weather adhesive is available from the manufacturer by special order.

Female terminal adapter, Stock Number 012817, is used for joining fiberglass conduit to galvanized rigid steel (GRS) conduit. Adapter has same threads as GRS.

Joining may be made easier by applying a lubricant, such as American Polywater or 3M Compound, on the Elastomeric gasket prior to inserting the spigot end into the belled end.

Joining a field cut with a belled end should be discouraged because of the sharp edge created; use a coupling instead.

For many years, Champion created catalog numbers and physically labeled their 5-in IPS, 0.096-inch thick wall conduit as Medium Wall (MW). In 2012, Underwriters Laboratories (UL) revised their standards and now Champion's 0.096-inch thick wall conduit is considered by UL and industry as Standard Wall (SD). In response, Champion elected to retain their existing catalog numbers and physically mark their products SW/MW.

Refer to SCL 9220.05, "Electric Power Cable and Conduit Selection" for the preferred electric power cable and conduit to be used in a given application.

3. Industry Standards

Five-inch fiberglass conduit and fittings shall meet the above ground (type AG) requirements of the following industry standards:

ASTM F512 – 93; Standard Specification for Smooth-Wall Poly (Vinyl Chloride (PVC) Conduit and Fittings for Underground Installation.

NEMA TC 14-2002; Standard for Reinforced Thermosetting Resin Conduit (RTRC) and Fittings

UL 2515; Standard for Aboveground Reinforced Thermosetting Resin Conduit (RTRC) and Fittings, November 16, 2011

4. Detailed Requirements

4.1 General

Conduit and fittings shall be listed by UL 2515 (Underwriter's Laboratories standard).

Conduit and fittings shall be standard wall, type AG (above ground) as defined by UL 2515.

Conduit and fitting dimensions shall conform to the Iron Pipe Standard (IPS), where dimensions are based on outside diameters of iron pipe sizes.

Resin system shall be epoxy with no fillers. Glass shall be E-type.

Conduit and fittings shall be manufactured from the same resin/hardener/glass systems manufactured by the same filament wound system.

Conduit and fittings shall be halogen-free as defined by UL 2515.

Conduit, fittings, and accessories shall be designed and manufactured to be a system intended to guarantee complete interchangeability and compatibility between components.

Manufacturer shall inform Seattle City Light in writing of all design changes that could affect the product's understood or published capabilities or attributes.

4.2 Conduit

Trade size	5 in (IPS)
Outside diameter	
Minimum	5.544 in
Average	5.572 in
Maximum	5.606 in
Inside diameter, minimum	5.380 in
Wall thickness, nominal	0.096 in
Length	20 ft
Weight per foot, nominal	1.20 lb
Joining system	Gasket joint (triple seal) consisting of an integral bell and spigot. Bell end shall have a triple seal gasket in addition to the interference joint.
Pull-out strength	
Triple-seal gasket with interference joint	2,000 lb
Triple-seal gasket without interference joint (after field cut)	500 lb
UV stability	Meeting the requirements of UL 2515
Fire resistance	Meeting the requirements of UL 2515

Conduit shall be manufactured having non-tapered sections (except for belled ends) to allow for field cutting and joining.

4.3 Fittings

Fittings, consisting of couplers and elbows, shall be appropriate and compatible for use with the conduit specified in this standard.

Elbow angles shall be accurate to $\pm 2\%$ of specified.

Female terminal adapter shall have straight threads.

4.4 Accessories

Accessory components, consisting of two-part adhesives, adhesive guns, stir sticks, and abrading supplies, shall be appropriate and compatible for use with the conduit and fittings specified in this standard.

Adhesive curing time shall be approximately one hour at an ambient temperature of 75 degrees F (29 degrees C).

Adhesive shall be suitable for bonding fiberglass and PVC together.

5. Marking

Each conduit section and fitting shall be marked according to the requirements of UL 2515, Section 6.

6. Testing

Conduit test data that establishes compliance with the requirements of UL 2515 and this standard shall be provided upon request.

7. Packaging

Standard crate dimensions shall be approximately 4 ft by 4 ft by 20 ft.

Each crate shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Seattle City Light's purchase order number
- Seattle City Light's stock number.

8. Shipping

Conduits and 45-degree or larger elbows shall be delivered on enclosed, covered, or flatbed trucks with side-load capability.

Because Washington State law requires a 10-in minimum side board when driving a forklift or pallet jack onto the bed of a truck or trailer, most flatbed trucks or trailers must be side-loaded to ease off-loading.

STEEL ELECTRICAL METALLIC TUBING (EMT)

1. Scope

This material standard covers the requirements for steel electrical metallic tubing, also known as EMT or thinwall conduit. EMT bends and fittings are outside the scope of this standard.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Trade Size, in
734880	1/2
734881	3/4
734882	1

2. Application

EMT conduit is used to construct smooth, exposed or concealed raceways for the pulling in of low voltage wire or cable.

EMT conduit is not appropriate for use in concrete below grade or in contact with soil without supplementary corrosion protection.

3. Industry Standards

EMT conduit shall meet the requirements of the following industry standard:

ANSI C80.3-2005 - American National Standard for Steel Electrical Metallic Tubing (EMT)

4. Requirements

EMT conduit shall meet the requirements of ANSI C80.3.

EMT conduit shall not have any features that can abrade or otherwise damage wire or cable.

5. Marking

Each EMT conduit section shall be marked according to the requirements of ANSI C80.3.

The outer surface of each EMT conduit section shall be marked with the manufacturer's name or symbol.

6. Testing

Test data that establishes compliance with the requirements of ANSI C80.3 and this material standard shall be provided upon request.

7. Packaging

EMT conduit shall be furnished in 10 ft sections, unless specified otherwise on the purchase order.

Bundles shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number
- Gross, net, and tare weight

8. Shipping

EMT conduit may be delivered on enclosed, covered, or flatbed trucks. If conduit is delivered on a flatbed truck, conduit shall be side-loaded.

Because Washington State law requires a 10 inch minimum side board when driving a forklift or pallet jack onto the bed of a truck or trailer, most flatbed trucks or trailers must be side-loaded to ease off-loading.

9. Issuance

Stock Unit: FT

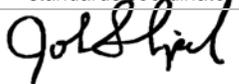

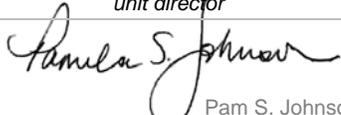

10. Approved Manufacturers

Seattle City Light Material Control personnel may identify and approve distributors, and hence manufacturers, of EMT conduit.

11. References

MATERIAL STANDARD

CONDUIT AND FITTINGS, RIGID ALUMINUM

1. **Scope:** This specification covers rigid aluminum conduit and associated fittings – couplings, elbows, bends, and nipples. Conduit and fittings shall comply with the requirements of ANSI Standard Specification C80.5 for Rigid Aluminum Conduit and Underwriters' Laboratories, Inc. Standard UL6 for Rigid Metallic Conduit.
2. **Identification:** Each length of conduit, elbow, or nipple shall be identified with the manufacturer's name or trademark, UL label, and the words "Rigid Aluminum Conduit" or "Rigid Metal Conduit" -- except that close-threaded nipples need not be so identified.
3. **Couplings:** Each 10-foot length of conduit shall be furnished with a coupling attached to one end, and the other threaded end shall be protected by a suitable cover.
4. **Packaging:** Conduit and fittings shall be packaged in accordance with the manufacturer's commercial practice to ensure safe delivery without damage.
5. **Inspection and Test:** Conduit and fittings may be subject to test and inspection under the provisions of ANSI C80 or UL6. The supplier shall, at his own expense, replace any rejected conduit.

6. **Rigid Aluminum Couplings**

ZINC-COATED STEEL CONDUIT AND FITTINGS

1. Scope

This standard covers the requirements for zinc-coated steel conduit and fittings consisting of elbows, couplings, and nipple stock.

2. Application

Zinc-coated steel conduit and fittings are used to construct smooth raceways for the pulling in of cable.

Design engineers should be aware that different types of conduit have widely different physical properties that affect their application. Less expensive Schedule 40 PVC, Schedule 80 PVC, and/or fiberglass conduit systems should be considered first.

Refer to Design Standard 9220.05 for more information matching conduit with cable and application.

For new construction, design engineers are directed to utilize the following standard conduit trade sizes:

- 1/2
- 1-1/2
- 2
- 3
- 4
- 5

Design engineers should move away from utilizing these trade sizes (IPS):

- 3/4
- 1
- 2-1/2
- 3-1/2

Steel conduit is also known as electrical rigid metal conduit - steel, abbreviated ERMCS. Conduit that is finished means it has a threaded coupling attached to one end.

Elbows are also known as bends. Large radius elbows are also known as sweeps or large sweeps. Five-inch

trade size, 60-inch radius sweeps, Stock Number 734826, are used at the base of a riser pole.

Underground duct systems typically utilize elbows that are bent in the field from straight sections. Field bending elbows allows for custom angles and better nesting of multiple runs.

UL 6 defines a nipple to be a straight section of conduit 24 inches in length or less, with male pipe threads at each end. Technically, Seattle City Light purchases nipple stock, also known as running thread.

3. Industry Standards

Zinc-coated steel conduit and fittings shall meet the requirements of the following industry standard:

UL 6 - Standard for Electrical Rigid Metal Conduit - Steel, 14th Edition, dated November 30, 2007

4. Detailed Requirements

4.1 General

Conduit and fittings shall be suitable for above ground use indoors or outdoors exposed to sunlight and weather, and for underground use by direct burial or encasement in concrete.

Conduit and fittings shall not have any features that can abrade or otherwise damage cable.

Conduit and fittings shall be provided with a primary coating of zinc.

Dimensional information cited in Sections 4.2 through 4.5 should be consistent with UL requirements and is provided for the convenience of Seattle City Light design engineers, construction crews, inspectors, and quality assurance personnel who do not have ready access to UL 6.

Figure 4.5. Nipple Stock**5. Marking**

Each straight length of finished conduit, elbow, and threaded coupling shall be marked according to the requirements of UL 6, Section 7. This marking shall include, but not be limited to:

- Manufacturer's name or symbol
- "electrical rigid metal conduit" or "ERMC-S" (conduit and elbows only)
- "EC" (couplings only)

6. Testing

Conduit and fitting test data that establishes compliance with the requirements of UL 6 and this material standard shall be provided upon request.

7. Packaging

Straight conduit shall be furnished in 10 ft sections unless specified otherwise on the purchase order.

Each bundle shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number
- Gross, net, and tare weight

8. Shipping

Conduit may be delivered on enclosed, covered, or flatbed trucks. If conduit is delivered on a flatbed truck, conduit shall be side-loaded.

Because Washington State law requires a 10-inch minimum side board when driving a forklift or pallet jack onto the bed of a truck or trailer, most flatbed trucks or trailers must be side-loaded to ease off-loading.

Conduit Fitting, Cable Protector

Cable Protectors for installation in duct and conduit ends shall be of the configuration shown, and shall be made from stress-relieved virgin nylon meeting the requirements of ASTM D789 or high-density polyethylene meeting the requirements of ASTM D1248. The material shall have the following additional requirements.

- Exceptional resistance to abrasion
- Low coefficient of friction
- Burning rate of 1.04"/minute or slower per ASTM D635
- Temperature range: -20 to +90°C., and retain uniform characteristics
- Resistant to weak acids and alkalis
- Color shall be white, light gray or other light colors which can be written on with a black marker. Black is unacceptable.

STEEL COUPLINGS, FIVE-INCH, SET-SCREW TYPE

1. Scope

This standard covers the requirements for five-inch, set-screw type, zinc-coated, steel couplings.

This standard applies to Seattle City Light stock number 013421.

2. Application

Set-screw type steel couplings are used to join threaded sections of five-inch steel conduit to straight-cut, unthreaded sections.

This coupling is used where it is not practical or possible to use a standard, five-inch threaded coupling, stock number 731102. This coupling also satisfies federal "Buy American" policies.

3. Requirements

Set-screw type steel couplings shall be fabricated by Seattle City Light's machine shop from excess couplings meeting the requirements of Material Standard 7050.05 – Zinc-Coated Steel Conduit and Fittings.

Note: It is an industry standard that straight sections of steel conduit are provided with a coupling on one end. After a project it is common for numerous couplings to be left over. It is from these leftovers that the machine shop fabricates a new product. Leftover couplings should be turned in to the warehouse as stock number 731102.

Set-screw type steel couplings shall be fabricated according to the requirements of Figure 3.1.

4. Packaging

Packaging shall accommodate the needs of Seattle City Light warehouse personnel.

Each package shall be legibly marked with Seattle City Light's stock number.

5. Issuance

EA

6. Approved Manufacturers

Seattle City Light machine shop

Pipe Fittings, Malleable Iron, Threaded

1. Scope

This standard covers the requirements for threaded, malleable iron pipe fittings.
This standard applies to the Seattle City Light stock numbers cited in Section 4.

2. Application

Pipe fittings are suitable for constructing potable water and drainage systems.
In this standard, nominal pipe size (NPS) and iron pipe size (IPS) are considered interchangeable terms.

3. Industry Standards

Pipe fittings shall meet the applicable requirements of the following industry standard:
ASME B16.3-2011 - Malleable Iron Threaded Fittings: Classes 150 and 300

4. Requirements

4.1 General Requirements

Pipe fittings shall meet the applicable requirements of ASME B16.3 and this material standard.

Pipe fittings shall be Class 150.

Pipe fittings material shall be steel or malleable iron.

MATERIAL STANDARD

2. Shipping

Duct shall be shipped in 5,000-foot lengths per reel. Duct shall be supplied on non-returnable reels.

3. Reels

The cable reels shall be constructed as follows (see diagram). Reels, including arbor hole, must meet City Light vehicle restraints.

City Light Stock No.	Duct Length on Reel, feet	Not to Exceed, inches			Drive Holes ("Dog Holes") 2 in Each Reel End	
		Max. Flange Diameter	Max. Outside Width of Reel	Arbor Hole, Diameter, inches	Diameter, inches	Center to Center, inches
010312	5,000	84	53	3.25	1.5 min. 2.0 max.	11 min. 28 max.

Reel, End View

4. Stock Unit: FT

5. Approved Manufacturer and Product Number:

AD Technologies, Part No. 5-152305-5000

In November 2015, this standard was renumbered from 8020.0 to 7140.10.

Fluidized Thermal Backfill

1. Scope

This standard covers the requirements for the formulation of thermally conductive concrete and low strength material used in the construction of encased electrical conduits (duct banks) including high strength Fluidized Thermal Backfill (FTB) and low strength Fluidized Thermal Backfill. Because FTB is a mixed-to-order product, it is not stocked in Seattle City Light (SCL) inventory.

This standard applies to the following SCL stock numbers:

Stock No.	Description	Unit
013711	High strength FTB	CYU
013712	Low strength FTB	CYU

2. Application

Fluidized Thermal Backfill (FTB) is used to encase and cover underground power conduits that will contain transmission or distribution cables which may operate at or above normal ampere capacity (ampacity). FTB transfers heat away from power cables, allowing them to conduct more power.

Low-Strength FTB is used like controlled density fill (CDF) to backfill trenches over the high-strength FTB duct banks, and also for encasement where high-strength is not desired. It provides superior thermal properties to other backfills, and is self-compacting.

High-Strength FTB is used like concrete for duct bank encasement. It provides maximum protection against dig-ins and undermining during future excavations. As a rule, high-strength FTB is more thermally conductive than low-strength FTB, but it is much more difficult to remove in future excavations.

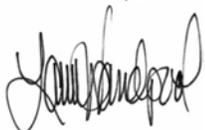

FTB is normally not required for vault, manhole, or handhole backfill.

Admixtures must be pre-approved by SCL.

Standards Coordinator
Laura Vanderpool

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

3. Industry Standards

Backfill shall meet the requirements of the latest revisions of the following industry standards:

ASTM C31/C31M; Standard Practice for Making and Curing Concrete Test Specimens in the Field

ASTM C39/C39M; Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens

ASTM C136; Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates

ASTM C143; Standard Test Method for Slump of Hydraulic Cement Concrete

ASTM C150; Standard Specification for Portland Cement

ASTM C618; Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use in Concrete

ASTM C989; Standard Specification for Ground Granulated Blast-Furnace Slag for Use in Concrete and Mortars.

4. Mix Design & Requirements

4.1 General Requirements

The contractor shall provide a FTB mix design which meets the performance requirements outlined in Table 4.

FTB mix designs must specify the source of all FTB component materials, including the source pit for aggregate materials. The maximum aggregate is 3/8 in.

FTB mix designs must be engineered by a Seattle City Light-approved consultant.

FTB component materials may include:

- 3/8-in minus (medium) aggregate – ASTM C136 Sieve Analysis required for approval
- Building sand (fine aggregate) – ASTM C136 Sieve Analysis required for approval
- Portland Cement – type I per ASTM C150
- Fly Ash – Class F as per ASTM C618-05
- Ground Granulated Blast Furnace Slag – ASTM C989-05
- Water – clean potable water required, or as approved by SCL
- Red concrete dye, where specified by Seattle City Light engineering. Red dye should be added at the equivalent of 4 pounds of red oxide per cubic yard.

Table 4. Performance Requirements

Criteria	Unit	Low Strength FTB		High Strength FTB		Testing Method
		Mix Design	Field Test	Mix Design	Field Test	
Thermal Resistivity						
Maximum at 0% Moisture Content	(°C-cm)/W	100	100	75	75	Consultant
Maximum at Critical Moisture Content	(°C-cm)/W	70	80	60	65	Consultant
Minimum 28-Day Compressive Strength	lb/sq-in	100	100	3000	3000	ASTM C873
Maximum 28-Day Compressive Strength	lb/sq-in	130	150	none	none	ASTM C873
Minimum Slump	in	6	6	6	6	ASTM C143
Maximum Slump	in	9	9	9	9	ASTM C143

4.2 Mix Design Criteria

FTB mix designs shall meet or exceed the performance requirements cited in Table 4.

4.3 Air Content

The total air content of any FTB mix shall not exceed 2% by volume. No air entraining admixtures will be permitted.

4.4 Substitutions

No substitutions allowed for any component material without permission of Seattle City Light.

4.5 Withdrawal of Mix Design Approval

SCL reserves the right to temporarily suspend or permanently withdrawal approval of any mix design.

4.6 Admixtures

Admixtures must be approved for use in FTB by Seattle City Light. When allowed, the admixture shall be added per manufacturer recommendation.

4.7 Accelerating Admixture

The following accelerating admixture is approved for use in Seattle City Light FTB: Pozzolith NC 534, manufactured by BASF Admixtures, Inc.

4.8 Fluidizers

Seattle City Light-approved fluidizers may be used interchangeably where produced under the same ASTM specification. Unapproved fluidizers are not interchangeable with approved fluidizers.

For example, approved fly ash (ASTM C618) may be used in any mix design that specifies fly ash but it may not be substituted for blast furnace slag (ASTM 989) in another mix design. Also, an unapproved fly ash may not be substituted for an approved fly ash.

Fluidizer approval requires formulation of a mix design through an approved consultant, and two compliance certification reports that demonstrate consistent physical properties over a six-month period. Seattle City Light may withdraw approval at any time.

High-strength FTB mix designs may be formulated without fluidizer. Low-strength FTB mix designs must be formulated with fluidizer.

5. Producers Identification Codes

FTB mix designs must be designated as follows on all mix designs, submittals and delivery tickets:

- High Strength FTB – SCLHSFTB
- Low Strength FTB – SCLLSFTB

The addition of red dye must also be indicated.

Product codes and mix ID codes of individual suppliers will not be accepted.

6. Approval of FTB Mix Design

6.1 Submittals

The Contractor shall submit a mix design to SCL for all classes of concrete specified.

The Contractor’s submittal of a mix design shall contain a unique identification, as per section 5, for each mix design, and shall include the mix proportions per cubic yard, the proposed sources, admixtures, the average 28-day compressive strength (as per ASTM C873), thermal resistivity testing including thermal dry graphs and the water cement ratio.

Test results for compressive strength and thermal resistivity included in the mix design submittal shall not be more than 60 days old.

The Contractor shall notify SCL in writing of any mix design modifications.

6.2 Expiration

Mix designs are approved for a period of one year from the date of SCL approval.

Expired mix designs will not be permitted for use on Seattle City Light projects.

A mix design may be renewed by resubmitting the mix design, including up to date strength and thermal resistivity test results.

7. Approved Suppliers and Mix Designs

Supplier	Stock No. 013711		Stock No. 013712

MATERIAL STANDARD

ACCEPTANCE CRITERIA FOR THE INSTALLATION OF NEW PRECAST CONCRETE DISTRIBUTION FACILITIES

Figure 1. Precast Ring Vault

1. Purpose

This Material Standard sets criteria for acceptability and repair of new precast concrete panel vaults, ring vaults, manholes, handholes and equipment pads from manufacture through the warranty period. Design parameters such as surface loading are not included.

2. General

- 2.1 Vaults and manholes installed with duct windows, risers, and/or panel seams placed contrary to the original design may be rejected at the discretion of SCL Engineering.
- 2.2 All repairs referred to in this criteria will be performed by the manufacturer in his yard and the installing contractor in the field.
- 2.3 Repairs will be performed in accordance with SCL Guideline U2-6.
- 2.4 These procedures assume an adequate structural unit design is used per established good engineering practices, with sound material and good workmanship conforming to the design. This criteria will not limit SCL's recourses if the above assumptions are not met.
- 2.5 Manufacturer will provide a one (1) year warranty on all repairs and patches.

2. General, continued

2.6 The Manufacturer will not be held responsible for damage that can be determined to be caused by unusual conditions outside of his control.

3. Action While in Manufacturer's Yard

3.1 Roof-top surface

- a. The manufacturer shall replace the roof if cracks 0.012 inch or wider, that run from one edge to another edge or to the manhole opening, or appears to go through the concrete or through a ladder insert.
- b. The manufacturer shall replace the roof if a crack 0.062 inch wide or greater develops.
- c. Any spalled concrete 0.375 inch or deeper shall be repaired.
- d. Exposed rebar shall be repaired.

Precast Reinforced Concrete Handholes - General

1. Scope

This material standard covers the general requirements for precast reinforced concrete handholes used at Seattle City Light (SCL).

Specific requirements shall be according to the detailed material standards and purchase orders issued.

2. Application

These precast handholes are intended for use in the construction of underground electric system. The precast concrete handhole may be used to house equipment, cables, service connections, fuses and splices for the secondary distribution system and streetlight system. The precast handholes are not intended to be placed in locations subjected to continuous traffic loading.

Standards Coordinator
Quan Wang

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

3. Definitions

3.1 Handhole

National Electrical Safety Code (NESC): An access opening, provided in equipment or in a below-the-surface enclosure in connection with underground lines, into which personnel reach but do not enter, for the purpose of installing, operating, or maintaining equipment or cable or both.

Seattle City Light (SCL): An enclosure that is used for secondary service and/or streetlight system. Enclosures 233 or smaller.

4. Industry Standards

Handholes shall meet the applicable requirements of the following industry standards:

ACI 318-11 – Building Code Requirements for Structural Concrete and Commentary,

ANSI/AWS D1.4/D1.4M-11 – “Structural Welding Code – Reinforced Steel”

ASTM A123/A123M-08 – “Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products”

ASTM A185/A185M-07 – “Standard Specification for Steel Welded Wire Reinforcement, Plain, for Concrete”

ASTM A497/A497M-07 – “Standard Specification for Steel Welded Wire Reinforcement, Deformed, for Concrete”

ASTM A615/A615M-09b – “Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement”

ASTM A706/A706M-09b – “Standard Specification for Low-Alloy Deformed and Plain Bars for Concrete Reinforcement”

ASTM C39/C39M-10 – “Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens”

ASTM C150/C150M-12 – “Standard Specification for Portland Cement”

ASTM C478-09 – “Standard Specification for Precast Reinforced Concrete Manhole Sections”

ASTM C857-11 – “Standard Practice for Minimum Structural Design Loading for Underground Precast Concrete Utility Structures”

ASTM C858-10e1 – “Standard Specification for Underground Precast Concrete Utility Structures”

NEC - 2012 – National Electric Safety Code, Rule 094B6, Concrete-Encased Electrodes

5. Conflict

Where conflict exists, the following order of precedence shall apply:

1. Seattle City Light purchase order (PO)
2. Seattle City Light General Terms and Conditions
3. Detailed material standards
4. This standard
5. ASTM standards
6. Other industry standards.

6. Dimensions

Manufacturers, the Washington State Department of Transportation (WSDOT) and the City of Seattle Standard Plan No 550A may refer to the different sizes of handhole by name and type. Table 6 summarizes the agreed-upon dimensions.

Table 6. Handhole Names, Types and Dimensions

Name	Type	Overall Dimensions Nominal (in)			Inside Dimensions Nominal (in)		
		Width	Length	Height	Width	Length	Height
1419	1	17	22	12	14	19	12
1728	2	21	32	12	17	28	12
3030	None	30	30	25.5	23.5	23.5	24
231	3	32	44	18.75	24	36	12
233	5	32	44	42	24	36	31.5

7. Structural and Construction

7.1 General

Handholes shall be precast concrete, reinforced, and of the type and size indicated on Seattle City Standard Plan no. 550, SCL detailed material standards and this standard.

Design changes shall require the prior written approval of an SCL Standards Engineer or Civil Engineer.

7.2 Reinforced Concrete

Minimum compressive strength of concrete shall not be less than 4,500 pounds per square inch in 28 days as determined by the ASTM Method C39.

Cement shall conform to ASTM C150.

No additives containing calcium chloride or any other material that will produce corrosive ions shall be used in the concrete.

Welded wire fabric shall conform to ASTM A185 or A497.

Steel Reinforcing Bars shall conform to ASTM A615, Grade 60 or ASTM A706, Grade 60.

Welding of reinforcing steel shall conform to the Structural Welding Code, Reinforcing Steel (AWS D1.4) of the American Welding Society.

The concrete cover (measured from the surface of the concrete to the outside surface of the reinforcement) for reinforcement shall be 1-1/2 in minimum for main reinforcing bars and 3/4 in for stirrups and ties.

The concrete finish shall be free of rock pockets and honeycombed areas.

The interior walls, ceiling and exterior surfaces exposed shall be smooth.

Rock pockets over 3/8-in deep and other imperfections on all surfaces shall be patched and troweled to match the surrounding surface.

7.3 Structural Design

Structural design of the precast handhole shall conform to ACI 318 – “Building Code Requirements for Structural Concrete,” and ASTM C857, “Minimum Structural Design Loading for Underground Precast Concrete Utility Structures,” with the following clarifications:

- Live Load: AASHTO HS-20 truck, P=16 kips. Traffic can approach the structure from any direction.
- 30% Live load impact load factor for soil cover less than or equal to 2 ft.
- No live load surcharge for soil cover greater than 8 ft.
- Soil density = 120 pcf
- 40 pcf Equivalent Fluid Pressure Lateral Soil Pressure Above Water Table
- 80 pcf Equivalent Fluid Pressure Lateral Soil Pressure Below Water Table
- 80 psf Live Load Surcharge

8. Grounding

All handhole bodies shall be supplied with a grounding connector; 1/4-in ground insert/bolt.

Grounding connector shall be electrically bonded to the frame of the handhole.

Type 1 and Type 2 handhole bodies shall have a 5/16-in ground insert or a grounding pad.

All Type 1 and Type 2 handhole lids shall be supplied with at least a 4-ft length copper braid (ground strap).

9. Knockouts

All knockout edges shall be beveled.

Each enclosure with a floor shall have a ground-rod knockout at two corners of the base of the enclosure.

Size, shape, quantity and location of knockouts shall be specified in detailed material standards.

10. Metal Doors and Access Cover Plates

All lids, hatches and frames shall be provided with a grounding site per manufacturer's standards and detailed material standards.

10.1 Frames and Covers

All hatch covers shall be designed for 16 kips wheel load (H2O + 30% impact) applied in any directions and it shall have a non-skid surface.

10.2 Non Slip Surface

The metal covers, doors, lids and frames shall have a non-slip surface with the following properties:

- Slip resistant surface shall be coated with SlipNOT® Grade 3-coarse, by W.S. Molnar Company or have minimum coefficient of friction of 0.8
- Bond strength to the plate of 4000 psi or greater
- Surface hardness of 55 minimum on the Rockwell "C" scale.

The cover shall be identified on the underside with the Type of surface ("S3" for SlipNOT® 3) and the year of manufacture. Example: "S3 2005." The identification shall be bead-welded or clearly stamped into a metal surface on the underside of each lid, or labeled with an adhesive metallic foil-backed label.

10.3 3030, 231 (Type 3) and 233 (Type 5) Doors

Hinged door shall include one 5/8 inch diameter bonding hole located in an underside bearing bar, approximately centered in the door and 2-1/2 to 3-1/2 inches from the hinged edge.

Doors and access cover plates shall be hot dipped galvanized in accordance with ASTM A153, unless otherwise approved in accordance with Section 8.1.

Door shall be hinged and shall fully open 180 degrees.

Doors shall not exceed 55 pounds equivalent lift.

All doors shall have a locking mechanism, such as a Penta head bolt, to prevent unsolicited access.

10.4 1419 (Type 1) and 1728 (Type 2) Door

Lids shall be at least 5/16 inch thick steel and shall be hot-dip galvanized in accordance with ASTM A 153.

The handhole body shall be provided with a non-slip frame on the top of the handhole body.

The surface of the handhole frame shall be coated with SlipNOT® Grade 3-coarse as manufactured by W. S. Molnar Company.

11. Identification "SL/TC, Electric, SL"

Lids shall be identified clearly on the top of the lid/hatch with 3-inch high letters.

Table 11. Lid Identification Standard

Label	Handhole Occupant/Usage
ELECTRIC	Secondary Distribution
SL	Streetlight Only
SL/TC	Streetlight and Traffic Control – Joint Use

The lid marking shall be accomplished by welding or shall be cast onto the cover.

The lids shall be identified with permanent marking on the underside with the type of surface ("S3" for SlipNOT® 3), and the year of manufacture.

This permanent marking shall be clearly legible.

12. Documentation

12.1 General

Documentation shall be in English and use customary inch-pound units.

Documentation shall utilize common industry terminology and well-understood abbreviations.

12.2 Bidder's Data

Bidder shall return the following technical information with their bids:

- Manufacturer's name
- Manufacturing plant location (all possible)
- Bid information shall be presented in a clear and consolidated manner for ease of review.

13. Approved Manufacturer

Approved manufacturers are identified in the detailed material standards.

3030 Handhole, Precast, Secondary

1. Scope

This standard covers the requirements for 3030 precast secondary handhole bases, frames and covers. Components can be ordered separately or they can be ordered as an assembled handhole unit with cover.

This standard applies to the following Seattle City Light (SCL) stock numbers.

Stock No.	Description
013186	3030 handhole base with frame and cover (labeled "Electric")
013187	3030 handhole, base only
013188	3030 handhole frame and cover assembly (labeled "Electric")

2. Application

Handholes are used to house secondary service connections.

Handholes are for use in pedestrian sidewalks where an occasional car or light truck may inadvertently traverse.

3. General Requirements

This detailed standard is to be used in conjunction with the latest version of SCL Material Standard 7203.01, "Precast Reinforced Concrete Handholes – General."

Standards Coordinator
Quan Wang

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

4. Construction - Component Requirements

4.1 Grounding and Bonding Requirements

The handhole base shall be provided with a grounding insert.

The metal frame shall be provided with a grounding lug.

4.2 Handhole Base

The SCL 3030 handhole base (Stock No. 013187) shall have dimensions and features as shown in Tables 4.2a and 4.2b, and Figure 4.2.

Table 4.2a. Handhole Dimensions (Nominal)

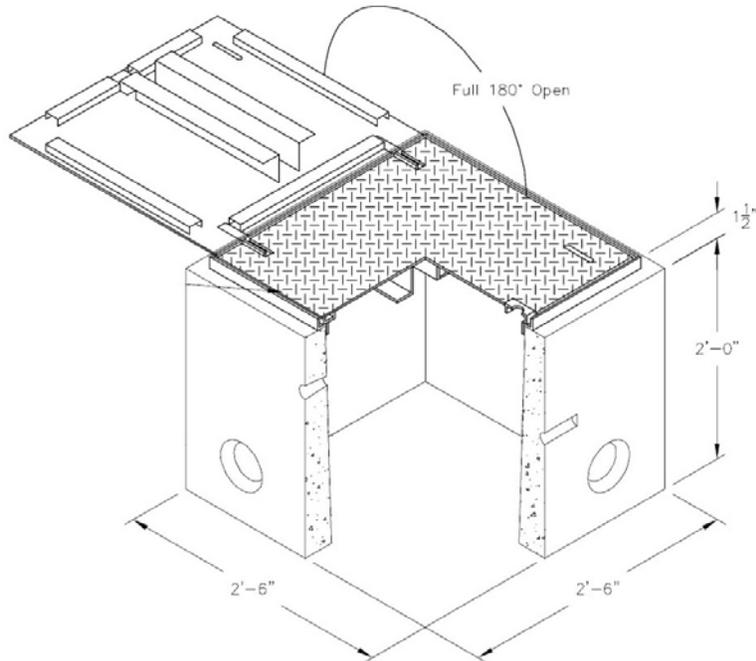

Stock No.	Item	Outside (in)			Inside (in)		
		Length	Width	Height	Length	Width	Cover Label
013186	Handhole base, frame and cover	30	30	25.5	24	24	ELECTRIC
013187	Handhole base only	30	30	24	24	24	-
013188	Frame and cover only	28	28	1.5	25	25	ELECTRIC

Table 4.2b. Handhole Features

Feature	Size, Nominal (in)	Location	Per Location	Total No.
Knockouts, round	5 dia	All 4 walls, on bottom	2 ea side	8
Lift Holes	1-1/2 dia	Upper center on 2 walls, opposite	1 ea side	2
Ground Inserts, bronze	1/4 dia	One wall, internal	1 ea side	1

Note: Approximate weight is 700 pounds.

Figure 4.2. 3030 Handhole

4.3 Frame and Cover

The 3030 frame and cover assembly (Stock No. 013188) shall have dimensions and features as shown in Table 4.3 and Figure 4.3.

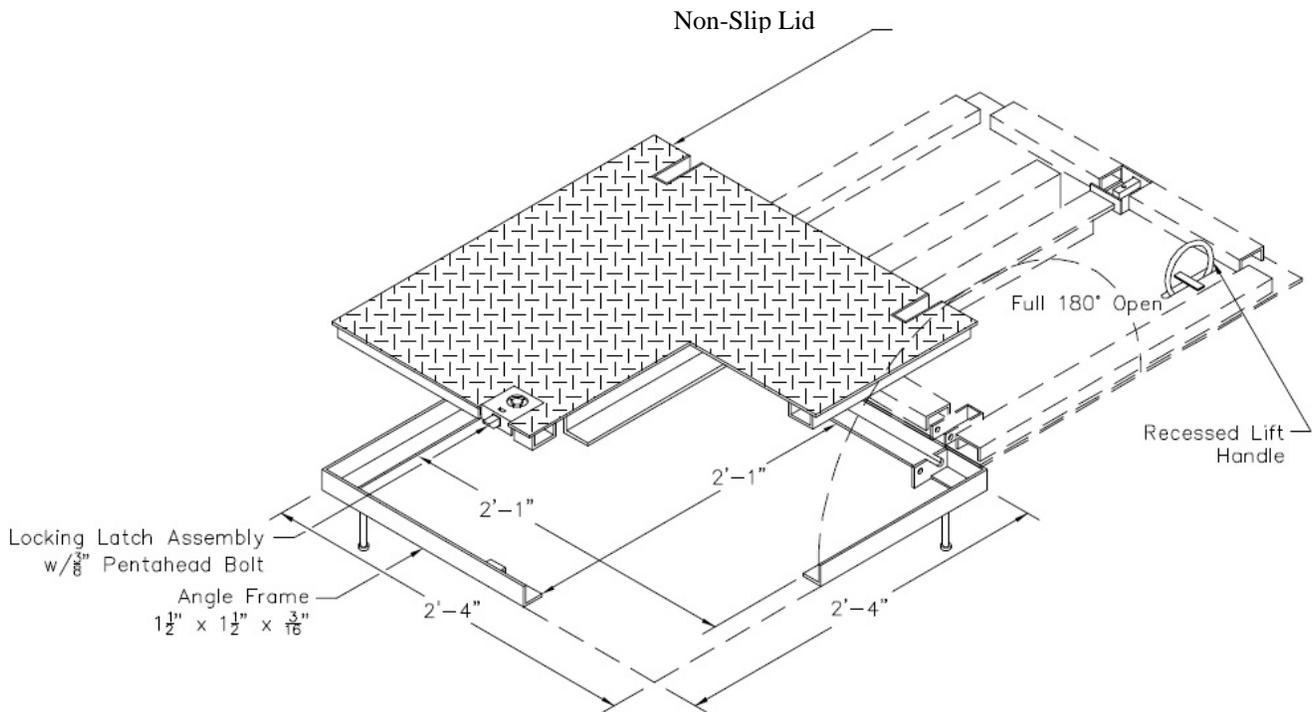

The cover and frame shall be made of slip resistant steel plate

The angle frame shall be securely anchored in the concrete.

Table 4.3. Frame and Cover Features

Non-Slip Surface, (COF)	0.8
Galvanizing	Hot-Dipped Galvanized
Load Rating	H-20
Grounding	Inserts or Lugs
Locking Device	Penta-Bolt Lock
Lift Handle	Recessed Lift Handle

231 and 233 Handholes, Precast, Secondary and Streetlight, Detailed

1. Scope

This standard covers the detailed requirements for the precast 231 and 233 handhole bases, covers, and hatches; and the assembled 213 and 233 handhole units. Components can be ordered separately or ordered as an assembled unit.

Manufacturers, Washington State Department of Transportation (WSDOT) and City of Seattle Standard Plan No 550A refer to the 231 handhole as a Type 3 handhole and the 233 handhole as a Type 5 handhole.

This standard applies to the following Seattle City Light (SCL) stock numbers:

Stock No.	231 and 233 Handhole Components and Assemblies
013182	Base, 231 handhole
013183	Base, 233 handhole
013184	Cover with hatch, "Electric"
013185	Cover with hatch, "SL"
013484	Cover with hatch, "SL/TC"
013180	Assembly, 231 handhole base with cover, "Electric"
013181	Assembly, 231 handhole base with cover, "SL"
720388	Assembly, 233 handhole base with cover, "Electric"
013179	Assembly, 233 handhole base with cover, "SL"
013485	Assembly, 233 handhole base with cover, "SL/TC"

Standards Coordinator
Quan Wang

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

2. Application

Handholes are used to house secondary service and streetlight service connections.

Handholes are for use in pedestrian sidewalks where an occasional car or light truck may inadvertently traverse.

3. General Requirements

This standard is to be used in conjunction with the latest version of SCL 7203.01, "Precast Reinforced Concrete Handholes - General".

4. Handhole Base

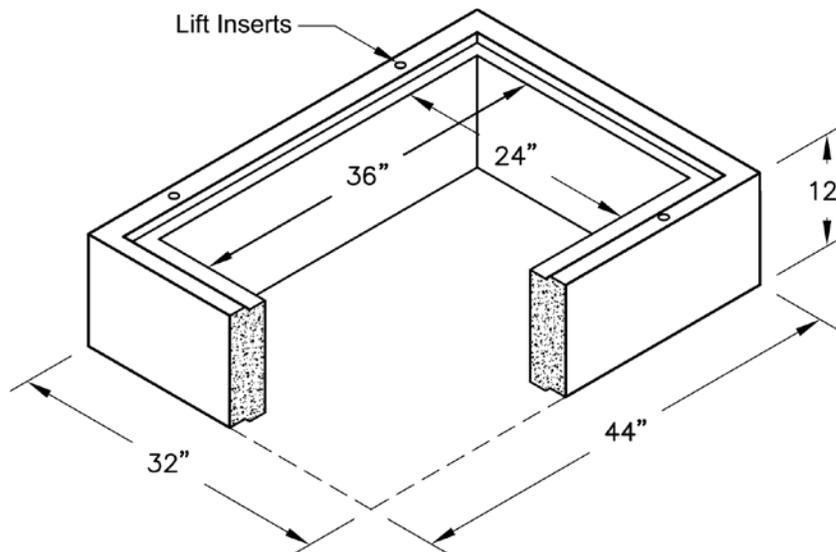

4.1 231 Handhole Base (Stock No. 013182)

Handhole base shall have four 3/4 in diameter lift inserts (2 each along the length of handhole), as shown in Figure 4.1.

Dimensions shall as shown in Figure 4.1.

Top of handhole base shall have a key way to allow proper fit with the cover.

Figure 4.1. 231 Handhole Base

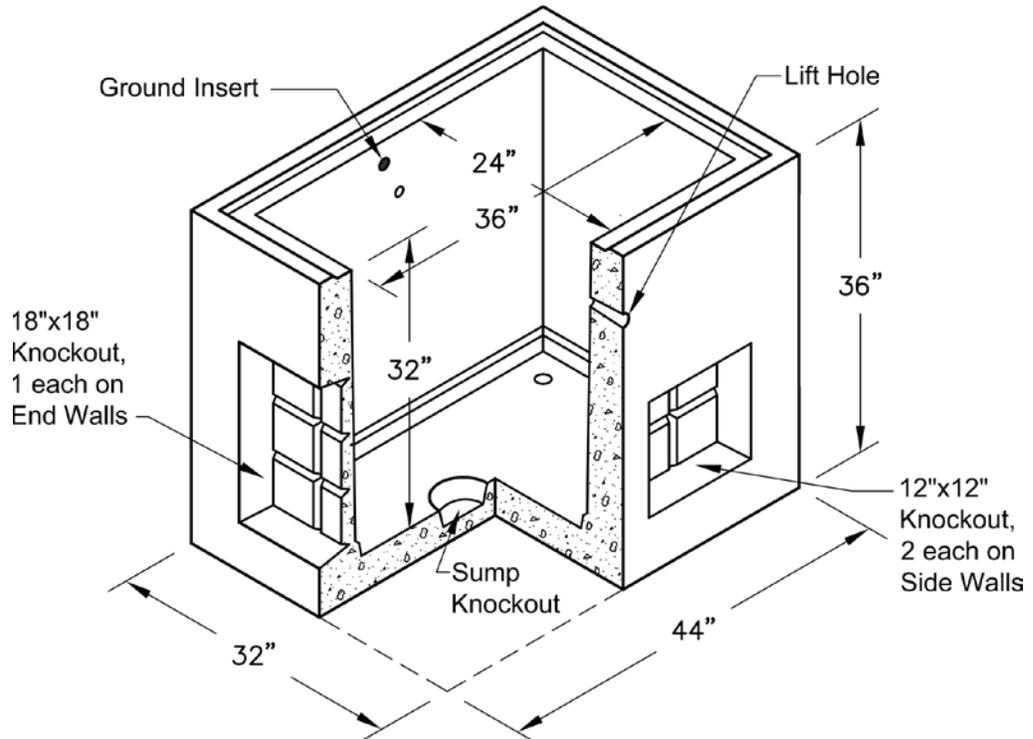

4.2 233 Handhole Base (Stock No. 013183)

233 handhole bases shall have the following attributes:

- Knockouts
 - Waffle (4–6 in squares), 12 in x 12 in on both side walls
 - Waffle (9–6 in squares), 18 in x 18 in on both end walls
 - Ground rod, 1 in diameter at 2 opposite corners of floor
- Galvanized "C" channel, embedded in walls, 18-in length, as requested per project
- Sump, round, 6 in diameter, 3 inches deep, off center on floor
- Pulling Irons, 1/2 in diameter, as requested per project
- Lift Holes, 1-1/2 in diameter on center of wall
- Ground Inserts, bronze, 1/4 in diameter, on the side wall, centered, above lift hole

Dimensions shall be as shown in Figure 4.2.

Figure 4.2. 233 Handhole Base

5. Covers

Cover shall consist of a concrete collar with a 24 in by 36 in slip-resistant steel hatch with steel frame.

Cover shall be of configuration as shown in Figure 5.

- Cover dimensions shall be 32-in wide by 44-in long by 6-in deep.
- Covers shall have a 3/4-in lift insert at each corner on the top.
- Caps shall be provided to cover the lift inserts.
- Cover shall have a keyway to ensure a tight fit.
- A 1/4 in diameter ground insert shall be embedded in the cover on the hinged hatch side for bonding the frame.

The hatch shall have the following:

- Steel frame securely anchored in the concrete
- H20 rating
- Recessed lift handles
- One handle located on each of the short ends of the hatch
- 5/8-in bonding point hole on support bar for grounding hatch
- Hatch-locking mechanism with Penta-head bolt
- Label (Electric, SL, or SL/TC), according to Table 5.

Figure 5. Cover with Slip-Resistant Steel Hatch

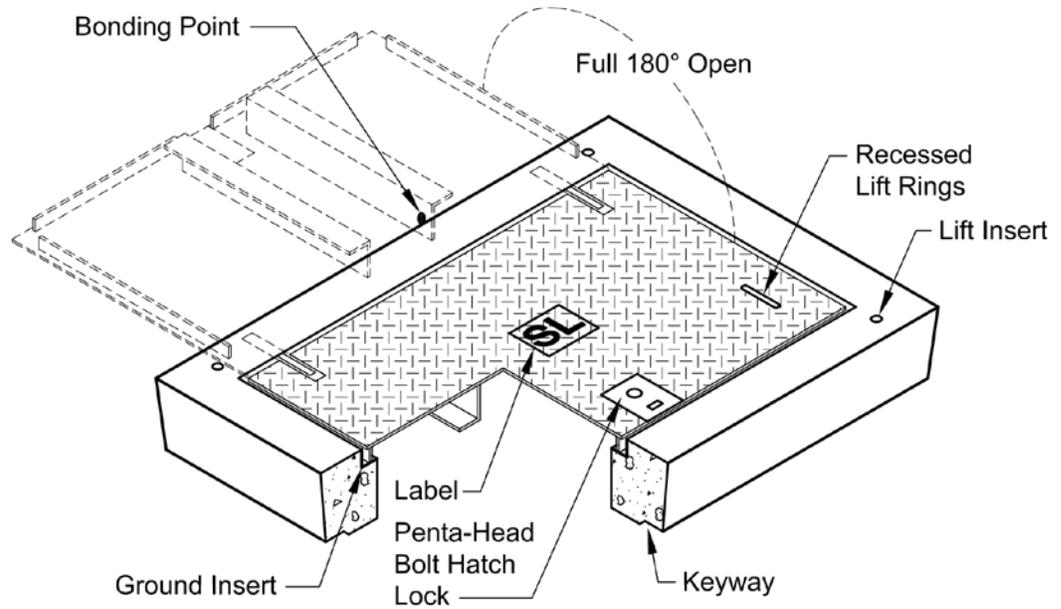

Table 5. Hatch Label

Stock No.	Label
013184	Electric
013185	SL
013484	SL/TC

6. Assemblies

Handhole assemblies consist of a handhole base and a cover with metal hatch. All handhole assemblies use the same size cover.

Table 6. Materials for 231 and 233 Handhole Assemblies

Fig #	Stock No.	Assembly Description	Quantity				
4.1	013180	231 handhole base with cover, "Electric"

Type 1 and Type 2 Open Bottom Handhole, Precast, Secondary and Streetlight

1. Scope

This standard covers the requirements for precast secondary handholes, streetlight handholes, handhole stacking risers, and handhole covers.

Stock No.	Description
012945	Type 1 handhole, with frame and cover labeled "S/L"
720391	Type 2 handhole, with frame and cover, "ELECTRIC"
013178	Type 2 handhole, with frame and cover, "S/L"
012978	Type 2 handhole, with frame and no cover
720402	Type 2 handhole stacking riser, without frame or cover
012660	Type 2 handhole cover, labeled "ELECTRIC"
012979	Type 2 handhole cover, labeled "S/L"

2. Application

Handhole assemblies are used to construct the means to allow connections to be made for secondary service and streetlight located on pedestrian sidewalks.

H-20 rated frames and covers are for use in pedestrian sidewalks where an occasional car or light truck may inadvertently traverse, or side streets that see only light truck traffic.

Standards Coordinator
Quan Wang

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

3. Industry Standards

All handholes shall meet the applicable requirements of the following industry standards:

City of Seattle Standard Plan 550a; "Handholes"; Public Utilities

WSDOT Standard Plan J-40.10-00; "Locking Lid Standard. Junction Box Types 1 & 2;"
Washington State Department of Transportation

Concrete Specimens;" ASTM

ASTM C478 - 11; "Standard Specification for Precast Reinforced Concrete Manhole
Sections;" ASTM

ASTM C857 - 12a; "Standard Practice for Minimum Structural Design Loading for
Underground Precast Concrete Utility Structures;" ASTM"

ASTM C858 - 10e1; "Standard Specification for Underground Precast Concrete Utility
Structures;" ASTM

4. Conflict

Where conflict exists, the following order of precedence shall apply:

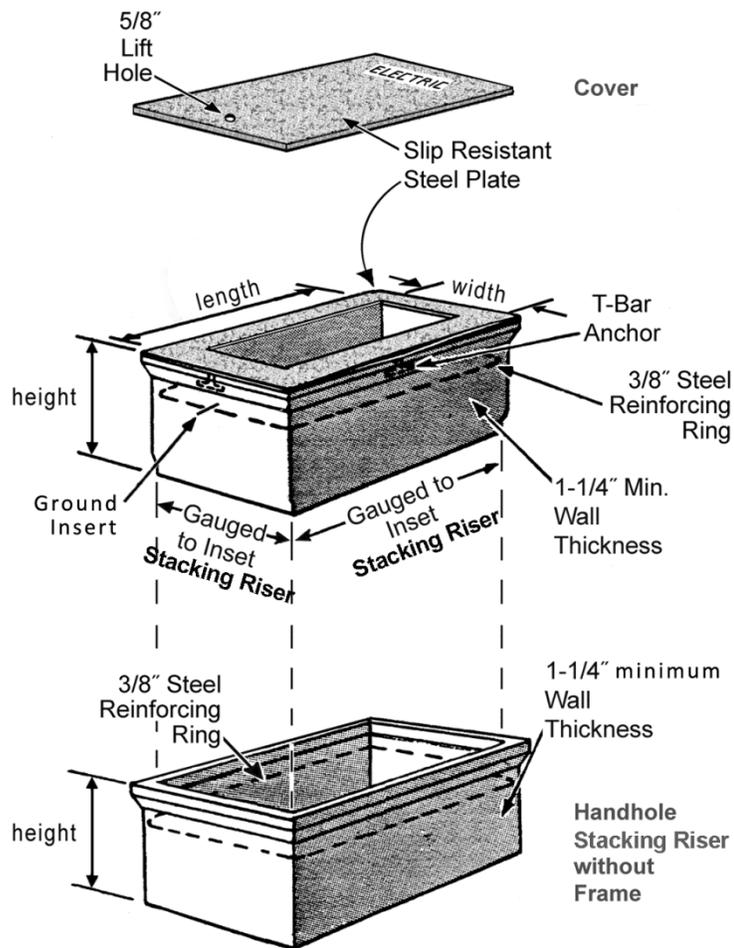

- Seattle City Light Purchase Order (PO)
- Seattle City Light General Terms and Conditions
- This material standard
- Other industry standards

5. Construction

The handhole shall meet Washington State Department of Transportation Standard Plan J-40.10 with the following clarifications.

Stock No.	Item	Type	Dimensions, nominal (in)				Cover Label	
			Inside Length	Inside Width	Outside Length	Outside Width		
012945	Handhole with frame	1	19	14	—	—	12	—

012660	Cover only	2	—	—	26-5/8	16-1/2	5/16	"ELECTRIC"
012979	Cover only	2	—	—	26-5/8	16-1/2	5/16	"SL"

Figure 5. Handhole

5.1 Precast Handhole

Precast secondary and streetlight handholes shall be of the general configuration shown, in accordance with City of Seattle Standard Plan 550a.

Handhole shall be designed to nest, with an easy, snug fit to increase the depth of the handhole when necessary.

Handhole shall be sound and free of cracks.

5.2 Concrete

The handhole shall be cast of concrete meeting a minimum strength of 4000 psi after 28 days.

5.3 Cover Plate

The cover plate shall adhere to the following requirements:

- The cover shall comply with City of Seattle Standard Plan No. 550a.
- The cover shall be 5/16-in (nominal) in thickness or other design pre-approved by Seattle City Light.
- The cover shall be at least H-20 rated.
- The cover shall have 1/16-in to 1/8-in clearance on each edge within the frame after galvanizing.

5.4 Frame

The frame shall adhere to the following requirements:

- The frame shall comply with City of Seattle Standard Plan No. 550a.
- The steel frame shall be securely anchored in the concrete.
- The frame shall have a ground point, which the copper braid from the cover may be attached.

5.5 Non Slip Surface

The cover and frame shall have a non-slip surface with the following properties:

- Slip resistant surface shall be coated with SlipNOT® Grade 3-coarse by W.S. Molnar Company or have minimum coefficient of friction of 0.8.
- Bond strength shall be to the plate of 4000 psi or greater.
- Surface hardness shall be 55 minimum on the Rockwell "C" scale.
- The cover shall be identified on the underside with the type of surface ("S3" for SlipNOT® 3) and the year of manufacture. Example: "S3 2005." The identification shall be bead-welded or clearly stamped into a metal surface on the underside of each lid, or labeled with an adhesive metallic foil-backed label.

5.6 Grounding

A 4-ft length of copper braid, equivalent to a #8 AWG THNW or THHW copper wire, shall be secured from the handhole cover.

All handholes shall have a 5/16-in ground insert or a ground pad on the interior wall.

5.7 Labeling

The word "ELECTRIC" or "SL" for streetlight shall be cast or otherwise permanently affixed to the cover and shall be easily readable. Lettering shall be affixed in such a manner as to avoid being a tripping hazard.

5.8 Lock

The cover shall have a Penta-head bolt locking device to prevent easy removal by unauthorized persons.

5.9 Galvanizing

The frame and cover shall be hot-dip galvanized after fabrication in accordance with ASTM A123M.

6. Documentation

6.1 General

Documentation shall be in English and use customary inch-pound units.

Documentation shall use common industry terminology and well-understood abbreviations.

6.2 Technical Information

Upon request, the supplier shall provide the following technical information:

- Manufacturer's name
- Manufacturing plant locations
- Product shop drawing

Technical information shall be presented in a clear and consolidated manner for ease of review.

7. Issuance

MATERIAL STANDARD

**HANDHOLE, SECONDARY
COMPOSITE FIBERGLASS, REINFORCED PLASTIC TYPE**

1. Composite Fiberglass, Reinforced Plastic, or Fiberglass Reinforced Mortar Secondary Handholes shall be of the configuration shown and shall meet the applicable requirements of Western Underground Committee Guide 3.6, except as modified herein. The handholes are for use in light vehicular traffic areas.

The handholes shall have good abrasion resistance, high dielectric strength, a low moisture-absorption rate and be impervious to rot and fungus growth. They shall also be inert to corrosive chemicals, including acids, alkalies, and organic solvents.

2. Covers. Handhole covers shall be made of the same material and have an embossed slip resistant surface to enhance pedestrian safety. The covers shall be provided with a locking device to prevent easy removal by unauthorized persons.

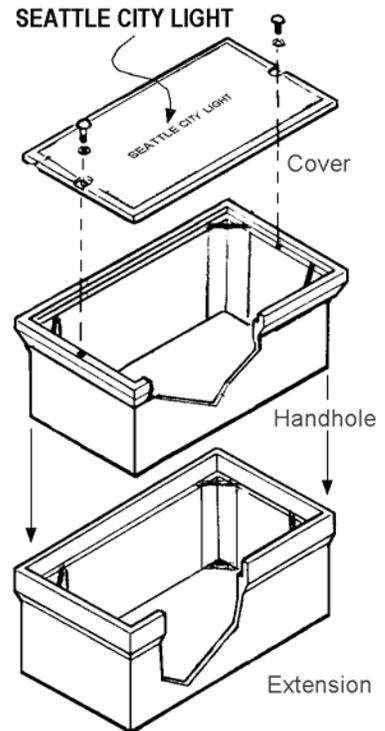

3. Extensions. Extensions, used to extend hole depth, shall be designed to nest with the handholes for a snug fit. Handholes may be 1 or 2 piece to equal a 24" to 26" depth.

4. Color. The color of the handholes and extensions shall be light to medium grey.

5. Marking. The words "Seattle City Light" shall be molded in the handhole cover.

6. Reference Specification. Western Underground Committee, Guide 3.6, latest revision.

7. Stock Unit: EA

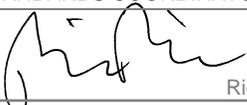

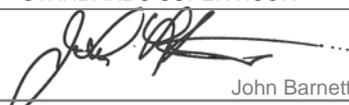

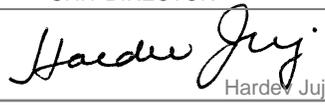

Quazite requires 2 stackable units (handhole plus extension) to achieve the 24-inch depth.

Stock No.	Item	Description	Approved Manufacturers		
			Carson Ind.	Electrimold	Quazite
720393*	Handhole	17" x30" x12" or 24-26"	H1730-24	ECBA-173024 DO-EH	PC1730BA
720397	Cover	17" x 30" x 3/4" or 2"	H1730-P1	ECCA-173002 DO-EH	PC1730CA
720394	Handhole	24" x 36" x 18"	H2436-24	ECBA-243618 DO-EH	PG2436BA
720399	Cover	24" x 36" x 2" or 3"	H2436-P1	ECCA-243603 DO-EH	PG2436CA

* Quazite requires two PC1730BA sections for the 24-inch depth and for the City Light stock number.

formerly Material Standard 7203.10.1

STANDARDS COORDINATOR  Rick Rice	STANDARDS SUPERVISOR  John Barnett	UNIT DIRECTOR  Hardev Juj
---	--	--

POLYMER CONCRETE HANDHOLE, SECONDARY AND STREETLIGHT

1. Scope

This standard covers requirements for precast polymer handholes. There are three main components that make up a handhole assembly: box, extension, and cover.

This standard applies to the following Seattle City Light Stock Numbers: 013321, 013322, 013323, and 013324.

2. Application

Precast polymer handholes are non-conductive, non-flammable, corrosion resistant, and lightweight underground enclosures used to house connections for secondary service and streetlight (SL) located on pedestrian sidewalks. Two types of handholes are approved for secondary and SL connections. Type 1 and 2 with nominal interior dimensions of 13 inches by 24 inches and 17 inches by 30 inches, respectively.

The following table gives the application for each of the Stock Numbers.

Stock number 013322 can be used as a box or an extension.

Stock Number	Type	Description	Application
013321	1	box with cover	streetlight
013322	2	box/extension, without cover	secondary or streetlight
013323	2	cover	secondary
013324	2	cover	streetlight

Polymer concrete handholes are not intended for use in constant traffic areas.

3. Industry Standards

Polymer precast concrete handholes shall meet the following national standard:

ANSI/SCTE 77 2010: Specification for Underground Enclosure Integrity

<i>standards coordinator</i>	<i>standards supervisor</i>	<i>unit director</i>
 Aida Diop	 John Shipek	 Darnell Cola

page: 3 of 4

4. Requirements, continued**4.2 Box, Cover and Extension**

Handhole box, cover and extension shall be:

- a. Polymer concrete
- b. Gray in color
- c. Non-conductive
- d. Non-flammable
- e. Corrosion resistant
- f. ANSI Tier 22 load rated, designed for areas subjected to occasional non-deliberate heavy vehicular traffic.
- g. To avoid accidental placement of both the box body and the cover in areas for which they are not rated, each product shall display securely affixed labels stating "Sidewalk Use Only".
- h. The chemical resistance (sunlight exposure, water absorption, and flammability) of polymer handholes and covers shall be according to ANSI/SCTE 77 2010, Section 6.

4.3 Box and Extension

Handhole box and extension shall be:

- a. Bottomless without any knockouts or mouseholes.
- b. Straight wall and stackable.

4.4 Cover

Cover shall:

- a. Require the use of tools to open to avoid easy removal by unauthorized persons.
- b. Be skid resistant with a minimum coefficient of friction of 0.5 percent.
- c. Have recessed bolt holes such that the bolt head will not protrude above the cover surface.
- d. Be attached to the handhole box by two, stainless steel, captive, penta head bolts (1/2 inches – 13 UNC, 2-1/2 or 3 inches long).
- e. Have 1/16-inch to 1/8-inch clearance on each edge of the box.
- f. Be marked with the ANSI load rating (Tier 22)

5. Testing

The structural testing shall be in accordance with ANSI/SCTE 77 2010, Section 7. The maximum deflection shall be one-half-inch for vertical tests and one-quarter-inch per foot of length for lateral tests.

Test data that establishes compliance with the requirements of STCE 77 shall be provided upon request.

Tests of complete boxes and covers shall be performed by an independent testing agency.

6. Marking

Handhole covers shall have embedded on the top surface an identifying mark or label that defines the function of the enclosure: "ELECTRIC" or "STREETLIGHT".

Polymer handholes shall be clearly and indelibly marked in accordance with NEC2008. Marking shall include but not be limited to:

- Manufacturer's name
- Year of manufacture
- Product identification number
- ANSI load rating

7. Packaging

Handholes, covers, and extensions shall be packaged in a way that allows the product to withstand normal shipping and installation practices without chipping, cracking, or structural damage.

Individual packages shall be legibly marked with:

- Manufacturer's name
- Manufacturer's catalog number
- Product description
- Seattle City Light's Stock Number

Shipping containers shall be legibly marked with:

- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

8. Issuance

Stock Unit: EA

2. Scope

This standard covers the general requirements for precast reinforced concrete structures used at Seattle City Light (SCL).

This standard applies to the following SCL reinforced concrete products:

- Vaults
- Vault cover slabs
- Pads or slabs.

Specific requirements shall be according to the detailed material standards and purchase orders issued subsequent to competitive solicitations.

This standard does not apply to panel vaults.

3. Application

Precast concrete structures are used to construct the underground electric system. Precast concrete structures may be used to house equipment, cables, service connections and splices for the distribution system.

The H20-rated 444 vault assemblies are not intended to be used in high density traffic locations.

Some vault floors may exceed 12 feet 6 inches below finished grade; in which case, a fixed ladder is required.

4. Definitions

Vault (as defined by NESC) - A structurally solid enclosure, (including all sides, top, and bottom), above or below ground, where entry is limited to personnel qualified to install, maintain, operate, or inspect the equipment or cable enclosed. The enclosure may have openings for ventilation, personnel access, cable entrance, and other openings required for operation of equipment in the vault.

Vault (as defined by SCL) - An enclosure that is used for primary service. Enclosures 444 or larger.

Ring Vault (as defined by SCL) - A vault that is composed of multi-sections, i.e. base, mid-section, and a top section. These vaults may also have various risers to achieve the proper height and access openings. Enclosures 818 and 814.

Concrete Encased Electrode (as defined by NESC) - A metallic wire, rod, or structural shape, meeting Rule 93E5 and encased in concrete, that is not insulated from direct contact with earth, shall constitute an acceptable ground electrode. The concrete depth below grade shall be not less than 1 foot, and a depth of 2.5 feet is recommended. Wire shall be no smaller than AWG No. 4 if copper, or 3/8-inch diameter or AWG No. 1/0 if steel. It shall be not less than 20 feet long, and shall remain entirely within the concrete except for the external connection. The conductor should be run as straight as practical.

5. Industry Standards

Concrete structures shall meet the applicable requirements of the following industry standards:

ACI 318-11, "Building Code Requirements for Structural Concrete and Commentary"

ANSI/AWS D1.4/D1.4M-11, "Structural Welding Code – Reinforced Steel"

ASTM A123/A123M-08, "Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products;" ASTM

- ASTM A185/A185M-07**, “Standard Specification for Steel Welded Wire Reinforcement, Plain, for Concrete”
- ASTM A497/A497M-07**, “Standard Specification for Steel Welded Wire Reinforcement, Deformed, for Concrete”
- ASTM A615/A615M-09b**, “Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement”
- ASTM A706/A706M-09b**, “Standard Specification for Low-Alloy Deformed and Plain Bars for Concrete Reinforcement”
- ASTM C39/C39M-10**, “Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens”
- ASTM C150/C150M-12**, “Standard Specification for Portland Cement”
- ASTM C478-09**, “Standard Specification for Precast Reinforced Concrete Manhole Sections”
- ASTM C857-11**, “Standard Practice for Minimum Structural Design Loading for Underground Precast Concrete Utility Structures”
- ASTM C858-10e1**, “Standard Specification for Underground Precast Concrete Utility Structures”
- National Electrical Safety Code (NEC) C2-2012, Rule 094B6**;
“Concrete-Encased Electrodes”
-

6. Conflict

Where conflict exists, the following order of precedence shall apply:

1. SCL purchase order (PO)
 2. SCL General Terms and Conditions
 3. This material standard
 4. SCL detailed material standards
 5. ASTM standards
 6. Other industry standards.
-

7. Order Information

Seattle City Light orders will provide the following minimum information:

- Vault size and description
- SCL general material standard number citing revision date
- SCL detailed material standard number citing revision date
- SCL Stock number
- Total order quantity
- Delivery date
- Delivery location
- Ladder requirement.

8. Structural Requirements

8.1 General

All concrete vaults and accessories, including special order (non-stock) materials shall be manufactured in accordance with the requirements herein.

Design changes shall require the prior written approval of an SCL Org 321 Standards Engineer.

8.2 Reinforced Concrete

Minimum compressive strength of concrete shall not be less than 4,500 pounds per square inch in 28 days as determined by the ASTM Method C39.

Cement shall conform to ASTM C150.

No additives containing calcium chloride or any other material that will produce corrosive ions shall be used in the concrete.

Welded wire fabric shall conform to ASTM A185 or A497.

Steel Reinforcing Bars shall conform to ASTM A615, Grade 60 or ASTM A706, Grade 60.

Welding of reinforcing steel shall conform to the Structural Welding Code, Reinforcing Steel (AWS D1.4) of the American Welding Society.

The concrete cover (measured from the surface of the concrete to the outside surface of the reinforcement) for reinforcement shall be 1-1/2 inches minimum for main reinforcing bars and 3/4 inch for stirrups and ties.

The concrete finish shall be free of rock pockets and honeycombed areas.

The interior walls, ceiling and exterior surfaces exposed shall be smooth.

Rock pockets over 3/8 inch deep and other imperfections on all surfaces shall be patched and troweled to match the surrounding surface.

8.3 Structural Design

Structural design of the precast vault shall conform to ACI 318 and ASTM C857 with the following clarifications:

- Top of vault shall be assumed to be at a minimum of 2 feet and maximum (unless noted on drawings) 5 feet below grade.
- Live Load: AASHTO HS-20 truck, P=16 kips. Traffic can approach the structure from any direction.
- 30% live load impact load factor for soil cover less than or equal to 3 feet.
- No live load surcharge for soil cover greater than 8 feet.
- Soil density shall be 120 pounds force per cubic foot.
- 40 pounds force per cubic foot Equivalent Fluid Pressure Lateral Soil Pressure Above Water Table.
- 80 pounds force per cubic foot Equivalent Fluid Pressure Lateral Soil Pressure Below Water Table.
- 80 pounds per square foot Live Load Surcharge.
- Buoyancy - The weight of vault (without equipment) plus weight of soil cover shall be greater than 1.1 times the hydrostatic uplift force on the base of the vault. It cannot rely on skin frictional resistance between backfill and vault wall surfaces. If the gravity load is insufficient, then the vault shall be designed with restraints to withstand the buoyant force. The restraint design shall be submitted for review and approval.
- The groundwater table shall be assumed to be 5 feet below grade.

8.4 Cable Support and “C” Channel

Vault shall be provided with cast-in-place channel, 1-5/8 in x 1-5/8 in.

“C” channels shall be included on each of the four interior walls unless stated otherwise in the detailed material standard.

9. Grounding

9.1 Electrodes

Concrete-encased electrodes shall comply with NESC 094B6.

The electrode shall meet, but not be limited to, the following specifications:

- Electrode shall be no smaller than AWG No. 4 if copper or 3/8 inch diameter (AWG No. 1/0) if steel
- Electrode shall be no less than 20 feet long and shall remain entirely within the concrete except for the external connections.
- Electrode shall be installed as straight as possible.
- Electrode shall be encased with a minimum of 1-1/2 inches of concrete.
- Electrode shall be positioned a minimum of 2-1/2 feet below the top of the vault.

9.2 Ground Insert Connector

The ground insert connector shall be installed flush (neither recessed nor protruding) with the vault wall.

Each bronze insert shall be 1 inch in diameter or have a minimum surface area of 0.58 square inches for the grounding lug-insert connection.

Each bronze insert shall be tapped for 1/2-13 UNC bolts, and located on two opposite walls.

The nominal thread depth of the bronze insert shall be 1-1/8 inches.

The lead rod, a 3/8-inch steel or bronze rod, shall be connected to the ground electrode with arc or Cadweld (exothermic connection) at a minimum of three points as shown in Figure 9.

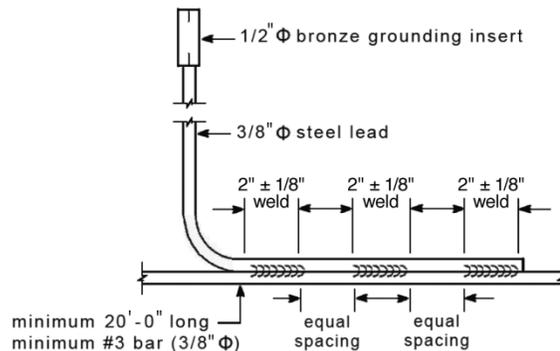

Inserts shall be plugged to prevent contamination from entering.

The inserts shall be exposed and marked prior to pick-up or delivery.

On multi sectioned vaults (3 or more sections):

- The inserts shall be aligned vertically.
- Only the middle section will have the inserts that face inside and outside of the vault.
- All other inserts in the vault shall be placed in accordance with the drawing of the specific vaults on manufacturer’s specifications and approved by SCL.

Figure 9. Lead Rod and Ground Electrode Weld Details

10. Knockouts and Vault Openings

10.1 Vault Openings

Vaults 7 ft x 12 ft (inside dimensions) and larger shall have two 42-in diameter access entries, unless specified otherwise in the detailed material standards.

All vaults shall have cable knockouts located in each lower corner of the enclosure according to the manufacturer's standard and SCL's requirements.

Knockout and duct openings shall be beveled on the exterior surface.

Each enclosure with a floor shall have a ground-rod knockout at two corners of the base of the enclosure. Size, shape, quantity and location of knockouts shall be as specified in the detailed material standards.

10.2 Duct Bank Knockout Threaded Inserts

For 712 and larger vaults, and all panel vaults, provide four minimum 1/2-in diameter ferrule-threaded insert at perimeter of each duct bank knockout. These threaded inserts are to allow the duct bank rebar to dowel into the vault wall.

Threaded inserts shall be spaced 12 in (nominal) apart along the height of each knockout panel.

11. Lifting Methods

Lifting provisions shall be provided per manufacturer's and SCL requirements.

11.1 Covers

All vault covers, pads or slabs, or risers weighing less than 9,000 pounds shall have 3/4-in lifting inserts on each corner of the top surface, or as described in the detailed material standards.

11.2 Burke Fittings

All vault covers or structures over 9,000 pounds shall have either a 2-ton or a 4-ton Burke fitting placed in each corner of the top surface or on the four walls, as described in the detailed material standards.

11.3 Lifting Inserts

Lifting inserts shall be provided as shown in the detailed material standards.

All metal lifting devices cast into the internal or external surfaces of vaults for handling purpose shall be hot-dipped galvanized or made from stainless steel.

12. Accessories

Items in the following sections to be included with all vaults.

12.1 Cable Pulling Irons

Vaults larger than 577 shall have 7/8-in diameter cable pulling irons mounted on each corner of the vault and be suitable as anchors for cable pulling operations.

7/8-in diameter cable pulling iron mounts shall withstand 10 kips maximum working tension and 20 kips ultimate strength.

577 and smaller vaults shall have 1/2-in diameter cable pulling irons mounted on each corner of the vault and be suitable as anchors for cable pulling operations.

1/2-in diameter cable pulling iron mounts shall withstand 5 kips maximum working tension and 10 kips ultimate strength.

The pulling irons shall be stainless steel or hot dipped galvanized steel.

The pulling iron's maximum working tension shall be stenciled on the wall surface near two of the roof pulling irons.

Burke lifting devices are not suitable for cable pulling purposes.

12.2 Drainage and Sump

All vaults shall have a drain sump.

Vaults that are 7 ft x 12 ft (inside dimensions) and larger shall have a rectangular sump at one end wall. Sump shall be equipped with galvanized grating.

Vaults smaller than 7 ft x 12 ft shall have a circular sump with cover located near the center of the vault.

The floor shall be sloped to drain to the sump in 577 or larger vaults.

12.3 Ladders

Where a ladder is required, the ladder shall conform to the following:

- Ladders shall be corrosion resistant.
- Ladder shall be made according to SCL Drawing D-28304, "Retractable Ladder, Vault and Manhole Access."

12.4 Joint Sealant

Vault sections shall be provided with butyl rubber joint sealant material or gasket mastic to be used between vault keyways and sections, including hatch riser rings.

13. Metal Doors and Access Cover Plates

All lids, hatches and frames shall be provided with a grounding site.

13.1 Frames and Covers

All frames and hatch covers for shall be designed for at least 20.8 kips wheel load (HS20 + 30% impact) applied in any direction.

All frames and lids shall have a non-slip surface.

The 42-inch round cover and frames shall also comply with requirements in SCL Material Standard 7204.70, Frames and Covers, 42 inch Round, Iron.

13.2 Doors

All doors shall include one 5/8-in diameter bonding hole located in an underside bearing bar, approximately centered in the door and 2-1/2 to 3-1/2 in from the hinged edge.

All doors shall be designed for at least 20.8 kips wheel loading (H20 + 30% impact).

Aluminum doors for 34-in x 37-in and 34-in x 74-in opening access shall be designed for at least 26 kips wheel loading (H25 + 30% impact or equivalent H30 + 8% impact).

All steel doors and access cover plates shall be hot dipped galvanized in accordance with ASTM A123, unless otherwise approved in accordance with Section 8.1.

All doors shall be hinged and shall fully open 180 degrees.

All doors shall not exceed 65 pounds equivalent lift.

All doors shall have a non-slip surface.

All doors shall have a locking mechanism, such as a Penta head bolt, to prevent unsolicited access. Locking mechanism shall not protrude above the door surface.

Square or rectangular doors shall open along the lengthwise of the access opening.

14. Non-Slip Surfaces

All non-slip surfaces shall have the following properties:

- Minimum coefficient of friction of 0.8
- Bond strength to the plate of 4000 psi or greater
- Surface hardness of 55 minimum on the Rockwell "C" scale.

Type of non-slip surface ("S3" for SlipNOT® 3) and the year of manufacture shall be identified on the underside of the door. Example: "S3 2005." The identification shall be bead welded or clearly stamped into a metal surface on the underside of each lid, or labeled with an adhesive metallic foil-backed label.

15. Identification

All lids and doors shall be permanently marked with 3-inch high letters "Electric" clearly visible on the top where distribution cables occupy the enclosure.

16. Quality Control

Precast concrete vaults shall be manufactured in accordance with ASTM C858.

The vault(s) may be rejected if it fails to conform to ASTM C858's construction and dimensional tolerances except for concrete cover over reinforcing shall not be less than listed above.

Vaults may also be rejected if it does not meet SCL 7201.00, "Acceptance Criteria for the Installation of New Precast Concrete Distribution Facilities."

Minor defects that can be repaired in accordance to criteria in SCL Material Standard shall be done in accordance with SCL U2-6/NVH-20, "Inspection and Repair Procedures for Precast Vaults and Manholes."

The vaults shall be warranted for one year against design and manufacturing defects including those resulting from poor workmanship and materials.

17. Documentation

17.1 General

Documentation shall be in English and use customary inch-pound units.

Documentation shall utilize common industry terminology and well-understood abbreviations.

17.2 Bidder's Data

Bidder shall return the following technical information with their bids:

- Manufacturer's name
- Manufacturing plant location (all possible)
- Manufacturer's experience and qualification.

Bid information shall be presented in a clear and consolidated manner for ease of review.

18. Product Approval

Manufacturers interested in having their precast concrete vaults and accessories approved for purchase by SCL must participate in the stepped process summarized below.

- Provide evidence of National Precast Concrete Association (NPCA) certification.
- Adhere to Quality Control Program in accordance with the NPCA plant certification.
- Provide product specifications and cut sheet review.
- Provide sample concrete enclosure field trial.
- Review and evaluate field trial.
- Conduct a prototype pulling iron test to demonstrate that the pulling iron could withstand 40 kips ultimate load without failure.
- Submit the certified report for the pulling iron test.
- Manufacturer shall have a local representative or agent who will provide technical support and authorized to allow returns and repairs to be conducted by SCL or contractors.

Manufacturers are encouraged to plan accordingly. The approval process can take up to six months to complete.

19. Issuance

EA

20. Approved Manufacturers

Approved manufacturers are identified in the detailed material standards.

 9. Approved Manufacturers 6

2. Scope

This standard covers the detailed requirements for the 444 electrical vault components (vault base and cover slabs with cover hatch) and the assembled 444 electric vaults assembled from those components. The basic components can be ordered separately or they can be ordered as assembled vaults with cover slabs.

This standard applies to the following Seattle City Light Stock Numbers:

Stock Number	444 Vault Components
013093	vault base , standard 444
013094	cover slab , 4- by 4-foot slab with one 3-by 3-foot, non-slip, H-20, solid cover hatch
013095	cover slab , 4- by 4-foot slab with one 42--inch round, solid cover and frame, H-20
013157	cover slab , 4-foot, 4-inch by 4-foot, 7-inch slab with one 3- by 3-foot, non-slip, solid cover hatch, H-30

Stock Number	Assembled 444 Vaults with Cover Slabs
013120	assembled 444 vault with 4- by 4-foot cover slab with one 3-foot by 3-foot, non-slip, H-20, solid cover hatch
013121	assembled 444 vault with 4- by 4-foot cover slab with one 42-inch round, solid cover and frame, H-20
013158	assembled 444 vault with 4-foot, 4-inch by 4-foot, 7-inch slab with one 3- by 3-foot, non-slip, solid cover hatch, H-30

standards coordinator	standards supervisor	unit director
 Quan Wang	 John Shipek	 Darnell Cola

3. Application

The 444 vaults are intended for use in the construction of underground electric systems. The precast concrete structure may be used to house load break junction boxes, and in making service connections and splices for the distribution system.

The H20-rated 444 vault assemblies are not intended to be used in high density traffic locations.

The standard 444 vault assembly typically consists of the 444 base (Stock Number 013093) and the 4-foot by 4-foot cover slab with one 3- by 3-foot non-slip, H-20 solid cover (Stock Number 013094).

Due to different applications, the vault may need to be customized with a different entry opening.

Depending on the application for the enclosure selected, it can be defined as a handhole or a vault.

When Seattle City Light uses the 444 enclosure for primary service, the 444 enclosure will be designated as a vault. For non-primary service the 444 enclosure can typically be referred to as a handhole (not covered in this Standard).

Steps for selecting the proper vault assembly for your application:

1. Select the appropriate vault base (one option for the 444 size)
2. Select slab cover (three options for the 444)

4. General Requirements

This detailed standard is to be used in conjunction with the latest revision of:

- City Light Material Standard 7203.21, "Precast Reinforced Concrete Structures – General"
- City Light Material Standard 7204.70, "Frames and Covers, 42-Inch Round, Iron"

5. Component Requirements**5.1 Grounding**

Vault grounding shall comply with Material Standard 7203.21, Section 9, Grounding.

5.2 Vault Base

The SCL 444 vault base (Stock No. 013093) shall have an overall nominal dimension of 4-feet by 4-feet by 3-feet 6-inches high as shown in Table 5.2a and Figure 5.2.

Approximate base weight is 2,200 pounds.

Table 5.2a, Standard 444 Vault Base Dimensions

Stock Number	Nominal Dimensions, ft-in					
	Wall, Outside		Wall, Inside		Height	
	Length	Width	Length	Width	Outside	Inside
013093	4-0	4-0	3-6	3-6	3-6	3-3

5. Component Requirements, continued

5.2 Vault Base, continued

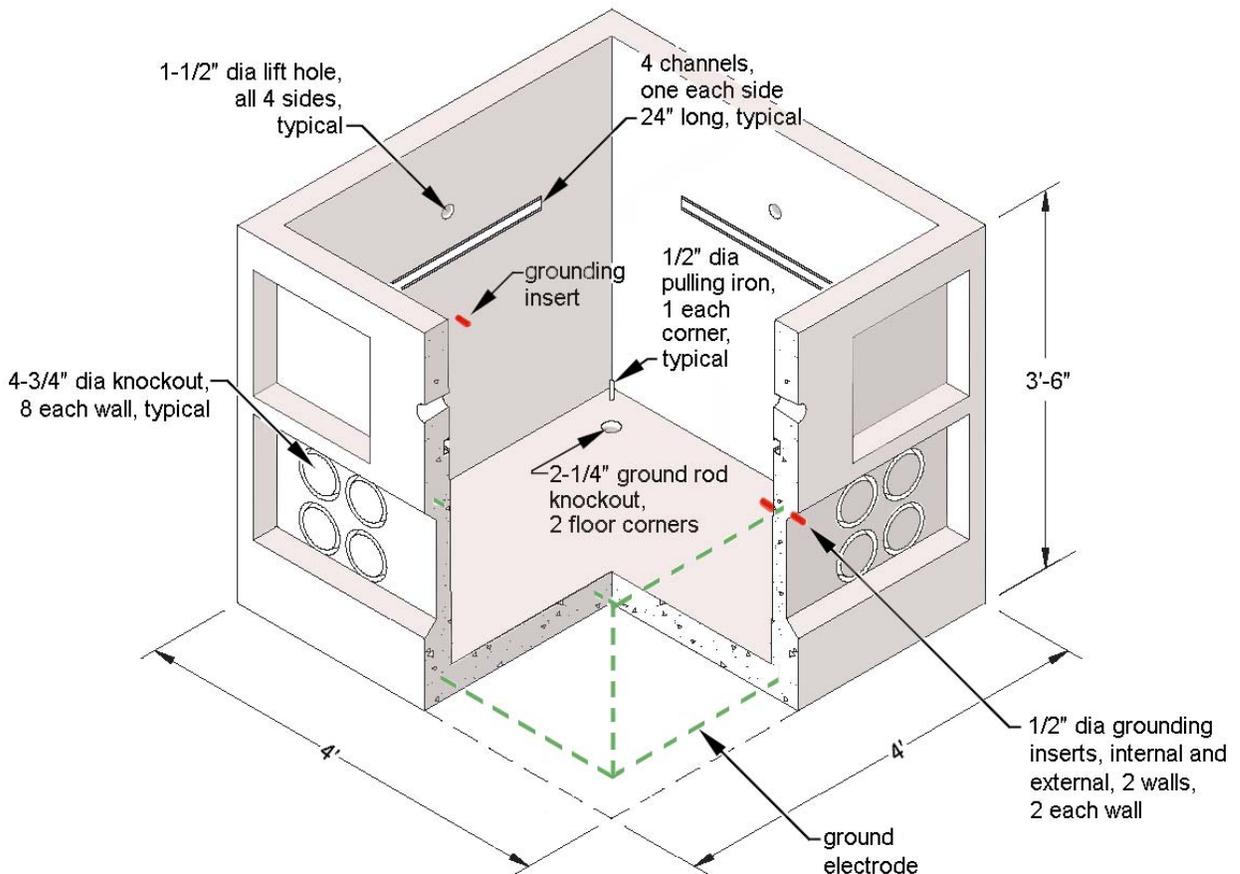

Table 5.2b, Vault Base Attributes

All Standard 444 Vault Bases Shall Have the Following Features:

	Size, Nominal, in	Location	Per Location	Total Number

5. Component Requirements, continued

5.3 Cover Slab

Cover slabs shall have a nominal overall dimension of 4 feet by 4 feet. Thickness shall be 6 inches. Approximate slab weight is 650 pounds.

All cover slabs shall have overall dimension as shown in Table 5.3. Cover slabs shall have shall have a keyed form to match the base for proper assembly.

All cover slabs shall have 3/4-inch diameter (nominal) lift insert at each corner on the top, as shown in Figure 5.3a.

Caps shall be provided to cover the lift inserts.

Cover slab with the 42-inch round cover shall include a 4-inch deep, round frame, as shown in Figure 5.3b. Note, the iron frame in the slab for round opening extends over the sides of the slab.

Figure 5.3a, 4-Foot Square Cover Slab with 3-Foot Square Cover

(Stock Number 013094) dimensions shown are nominal values

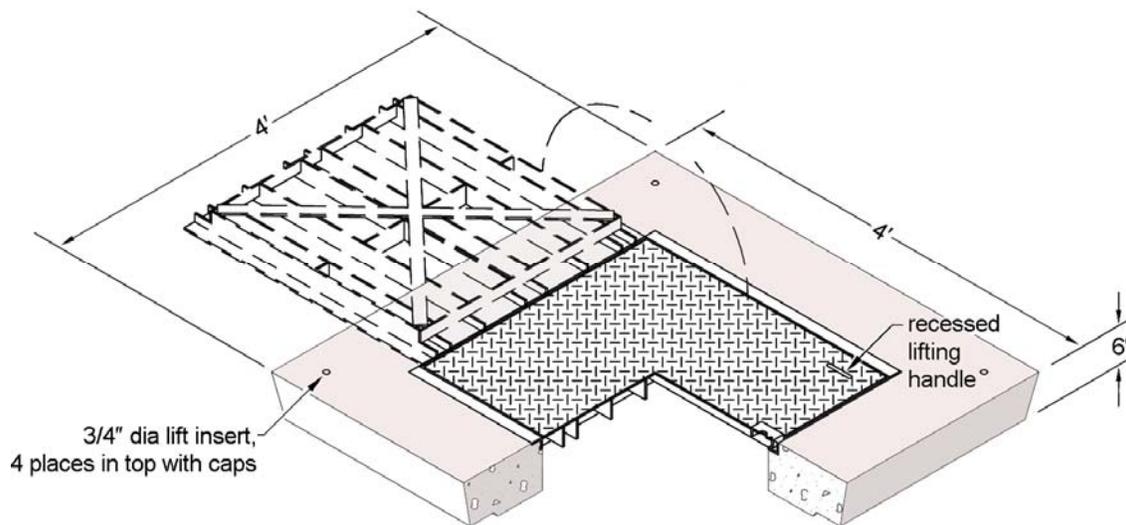

Table 5.3, Cover Slab

Stock Number	Cover Slab Dimensions, Nominal, ft-in			Opening, in	Cover/Hatch
	Length	Width	Thickness		
013094	4-0	4-0	0-6	36 by 36, square	one 3- by 3-foot, non-slip, solid cover hatch, H-20

6. 444 Vault Assemblies

Table 6, Assembled 444 Vault Components

Assembled Vault Stock Number	Vault Base Stock Number	Cover Slab Stock Number	Cover
013120	013093	013094	H-20 solid square hatch, 3- by 3-foot
013121	013093	013095	H-20 solid round, 42-inch
013158	013093	013157	H-30 solid square hatch, 3- by 3-foot

Refer to Tables 5.2a, 5.2b, and 5.3 for the various components included in each vault assembly.

6.1 Assembly Options

All vault assemblies use the same vault base. Depending on the type of cover hatch desired, the vault base may be paired with a different cover slab size with appropriate cover hatch, as shown in Table 6.

6.2 Assembly Requirements

All solid cover hatches have non-slip surfaces. Each section of the vault components shall have keyways for proper assembly.

8. References	5
9. Sources	5

2. Scope

This standard covers the detailed requirements for 504 electrical vault components (base and cover with hatch) and assembled 504 electric vaults. Components can be ordered separately or as complete assemblies, which include covers.

Standards Coordinator
 Quan Wang

Standards Supervisor
 John Shipek

Unit Director
 Darnell Cola

This standard applies to the following Seattle City Light (SCL) stock numbers:

Stock No.	Description
013096	Base , standard 507
013097	Cover with hatch, H-20
013098	Cover with 42-in round solid hatch and frame, H-20
013159	Cover with solid hatch, H-30
013122	Assembly , base and cover with solid hatch, H-20
013123	Assembly , base and cover with 42-in round solid hatch and frame, H-20
013160	Assembly , base and cover with solid hatch, H-30

3. Application

504 vaults are used to construct underground electric systems. The precast concrete structure may be used to house load break junction boxes, and in making service connections and splices for the distribution system.

H20-rated 504 vault assemblies are not to be used in high density locations.

Depending on the selected application, a 504 vault can be defined as a handhole or a vault. When SCL uses a 504 for primary service, it is designated a vault. For non-primary service it is typically designated a handhole (not covered in this standard).

Also depending on the application selected, the vault may need to be customized with a different entry opening.

4. General Requirements

This detailed standard is to be used in conjunction with the latest revisions of:

SCL 7203.21; "Precast Reinforced Concrete Structures – General"

SCL 7204.70; "Frames and Covers, 42-Inch Round, Iron"

5. Component Requirements

5.1 Grounding and Bonding

Vault grounding shall comply with SCL 7203.21, Section 9, Grounding.

5.2 Base

Table 5.2a. Base Components

	Size, Nominal (in)	Location	Per Location	Total Number

Length	Width	Height
4-8	4-8	3-6

Figure 5.2. Base

5.3 Covers

Covers shall consist of a concrete collar with a slip-resistant hatch.

Covers shall have dimensions as shown in Table 5.3. Note: cover for square opening is tapered from top to bottom and is notched on the bottom to fit inside the sides of the vault.

Covers shall have 3/4-inch diameter (nominal) lift insert at each corner on the top, as shown in Figure 5.3a.

Caps shall be provided to cover the lift inserts.

The 42-inch round cover shall include a 4-in deep, round frame, as shown in Figure 5.3b.

Equipment hatches shall have:

- 3 ft x 3 ft dimension
- H20 rating
- Recessed lift handles
- Non-slip surfaces
- One handle located on each of the short ends of the hatch
- 5/8-in bonding point hole on support bar for grounding hatch
- Hatch-locking mechanism with Penta head bolt

507 Electric Vault, Primary Service

1. Scope

This standard covers the requirements for 507 (also known as 557) electrical vault components (vault base and cover with hatch) and assembled 507 units.

Components can be ordered separately or ordered as an assembly.

This standard applies to the following Seattle City Light (SCL) stock numbers:

Stock No.	Description
013101	Base , standard 507
013102	Cover with hatch
013124	Assembly (base and cover with hatch)
013688	Cover with 42-in blockout
013169	Assembly (base and cover with 42-in blockout)

2. Application

507 vaults are used to construct the underground electric system. This precast concrete vault may be used to house medium-size transformers, loadbreak junction boxes, and service connections and splices for the distribution system.

H20-rated 507 vault assemblies should not be used in high-density locations.

Depending on the selected application, the 507 vault can be defined as a handhole or a vault. When SCL uses the 507 vault for primary service, it is designated a vault. For non-primary service, it is typically designated a handhole (not covered in this standard).

A 42-in round iron frame and cover must be ordered separately. For detailed material specifications for the iron frame and cover, see SCL 7204.70, "Frame and Covers, 42-Inch Round, Iron."

Standards Coordinator
Quan Wang

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

3. General Requirements

This standard is to be used in conjunction with the latest revision of SCL 7203.21, "Precast Reinforced Concrete Structures, General."

4. Component Requirements

4.1 Grounding and Bonding

Vault grounding shall conform to SCL 7203.21.

4.2 Base

Table 4.2a. Vault Base Components

	Size, Nominal (in)	Location	Per Location	Total Number
Knockouts				
Round	4-3/4 dia	All 4 walls, on bottom	8 ea side	32
Round	4-3/4 dia	4 panels of 4 on middle of all walls	16 ea side	64
Ground rod	2 dia	2 corners of floor	1 ea	2
Channels				
Galvanized "C" channel, horizontal, embedded in walls	36 long	All walls, above all knockouts	1 ea side	4
Sump	12 dia	Floor, center	1, to one side	1
Pulling irons	1/2 dia	1 ea corner of floor (typical)	1 ea corner	4
Lift holes	1-1/2 dia	2 opposite walls, center wall horizontally	1 ea side	2
Ground Inserts, bronze	1/2 dia	2 walls, opposite, internal and external	2 ea side	4
Ladder	–	Not required	–	–

The base shall have dimensions as shown in Tables 4.2b and 4.2c, and Figure 4.2.

Length	Width	Height
4-2	4-2	6-0

Table 4.2c. Base Dimensions, Outside, Nominal (ft-in)

Length	Width	Height
4-8	4-8	6-6

Figure 4.2. Base

4.3 Cover

Covers shall consist of a concrete collar with a slip-resistant steel-grated vent hatch or a concrete collar with a 42-in round blockout.

Covers shall have dimensions as shown in Table 4.3. Note: The cover for a square opening is tapered from top to bottom and is notched on the bottom to fit inside the sides of the vault.

Covers shall have a 3/4-in diameter (nominal) lift insert at each corner on the top as shown in Figure 4.3a.

Caps shall be provided to cover the lift inserts.

Covers shall have a keyway to ensure a tight fit.

Covers with a 42-in round blockout are used in conjunction with a 42-in round hatch and frame as shown in Figure 4.3b.

The steel-grated vent hatch shall have:

- 3 ft x 3 ft dimension
- H20 rating
- Recessed lift handles
- Non-slip surfaces
- One handle located on each of the short ends of the hatch
- 5/8-in bonding point hole on support bar for grounding hatch
- Hatch-locking mechanism with Penta head bolt

 Quan Wang	 John Shipek	 Darnell Cola

MATERIAL STANDARD

577 Electric Vault, Primary Service

3. Application

577 vaults are intended for use in the construction of underground electric systems. This precast concrete structure may be used to house medium-size transformers, load break junction boxes, and in making service connections and splices for the distribution system.

The H20-rated 577 vault assemblies are not intended to be used in high density location.

The standard 577 vault assembly typically consists of the 577 base (Stock Number 013089) and the 7-foot by 4-foot-8-inch cover slab with two 3- by 3-foot non-slip, H-20 solid covers (Stock Number 013091).

Due to different applications, the vault may need to be customized with a divider wall and/or different entry openings and covers.

Depending on the application for the enclosure selected, it can be defined as a handhole or a vault. When Seattle City Light uses the 577 enclosure for primary service, the 577 enclosure will be designated as a vault. For non-primary service the 577 enclosure can typically be referred to as a handhole (not covered in this Standard).

Steps for selecting the proper vault assembly for your application:

1. Select vault base
2. Determine if divider wall is needed
3. Select removable divider wall (optional)
4. Select slab cover

4. General Requirements

This detailed standard is to be used in conjunction with the latest revision of Seattle City Light Material Standard 7203.21, "Precast Reinforced Concrete Structures – General".

5. Component Requirements**5.1 Grounding Requirements**

Vault grounding shall comply with Material Standard 7203.21, Section 9, Grounding.

5.2 Vault Base

The SCL 577 vault base (Stock No. 013089) shall have overall nominal dimensions of 7 feet by 4 feet 8 inches by 6 feet high as shown in Figure 6.2.

Approximate weight is 6,000 pounds.

Table 5.2, Vault Base Attributes

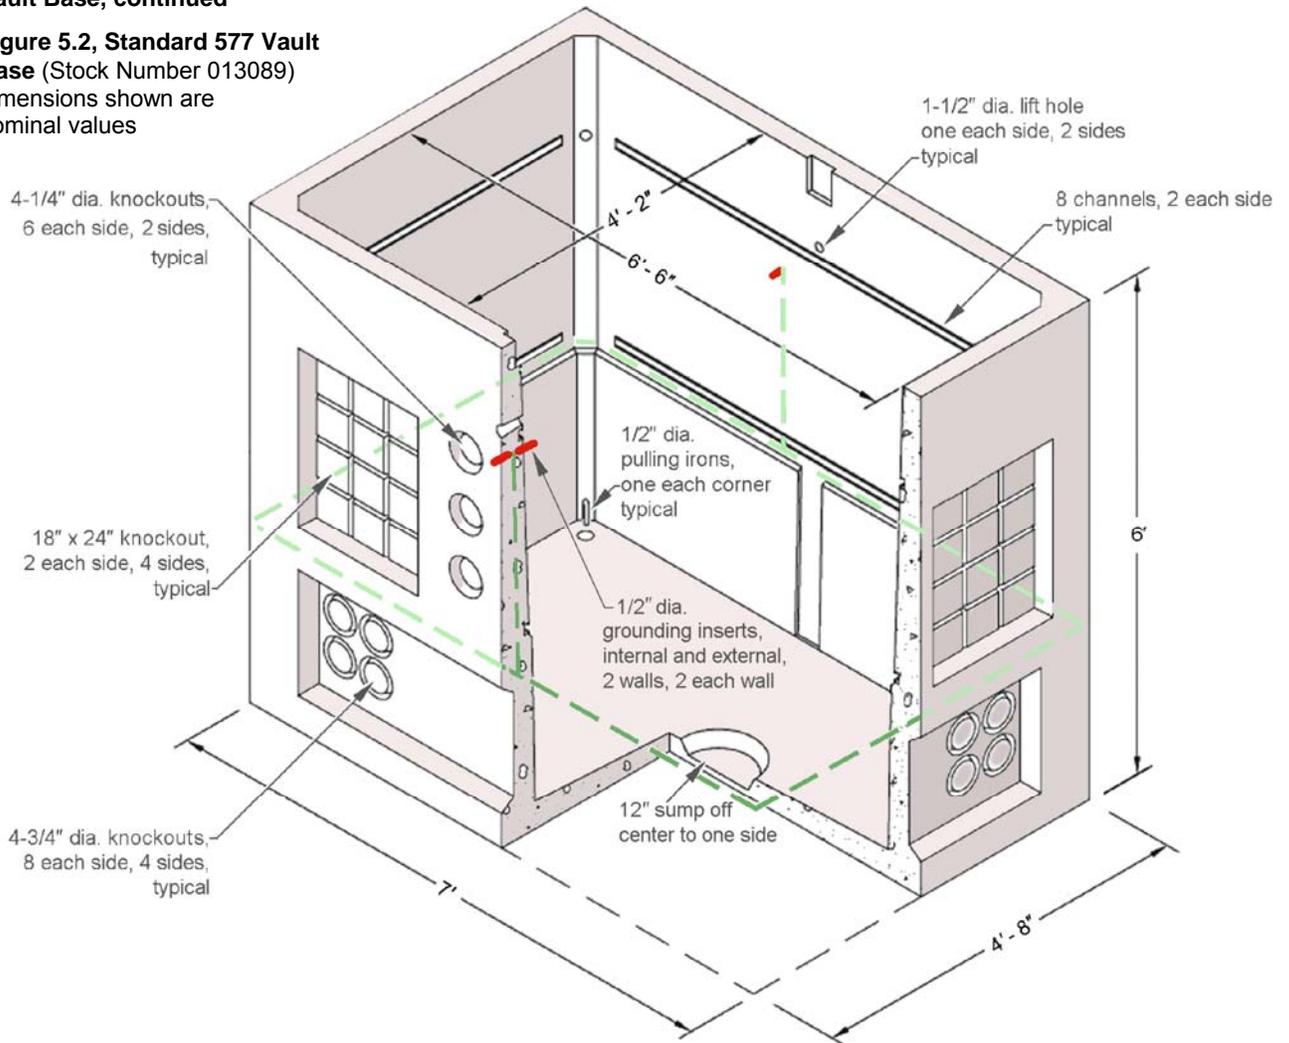

All standard 577 vault bases shall have the following features:

	Size, Nominal, in	Location	Per Location	Total Number
Knockouts				
round	4-3/4 dia	all 4 walls, on bottom	8 ea side	32
round	4-3/4 dia	3 rows of 2 in center of 2 long walls	6 ea side	12
waffle (12 - 6" squares)	18 x 24	all 4 walls	2 ea side	8 waffles
ground rod	2 dia	2 corners of floor	1 ea	2
Channels				
galvanized "C" channel, horizontal, embedded in walls	42 long	short walls, above waffle	1 ea side	2
	42 long	short walls, below waffle	1 ea side	2
	72 long	long walls, above waffle	1 ea side	2
	72 long	long walls, below waffle	1 ea side	2
Sump, round	12 dia	floor, off center (long axis)	1, to one side	1
Pulling Irons	1/2 dia	1 ea corner of floor (typical)	1 ea corner	4
Lift Holes	1-1/2 dia	2 center of wall, just below channel, long walls, opposite	1 ea side	2
Ground Inserts, bronze	1/2 dia	on opposite long walls, on the internal and external of walls	2 ea side	4
Ladder		not required		

5. Component Requirements, continued

5.2 Vault Base, continued

Figure 5.2, Standard 577 Vault Base
 (Stock Number 013089)
 dimensions shown are nominal values

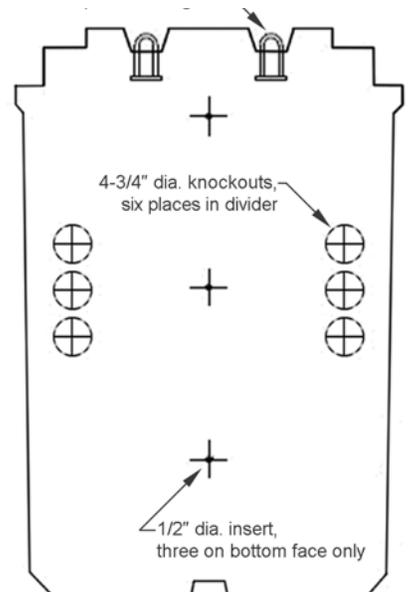

5.3 Removable 577 Divider Wall
 (Stock Number 013090)

Divider wall shall be reinforced with #4 rebar.
 Divider wall shall be 3 inches thick (nominal).
 Approximate weight is 1,000 pounds.

The removable 577-divider wall shall include: (see Figure 5.3)

- 1/2-inch diameter lift ring, placed in the top edge
- 4-3/4-inch diameter knockouts, 6 locations in divider, 3 to a side laterally
- 1/2-inch diameter inserts, 3 on bottom face of wall only
- 3/4-inch diameter inserts, 4 on the top face of wall only

Figure 5.3, Removable Divider Wall

5. Component Requirements, continued

5.4 Cover Slabs

Cover slabs shall have a nominal overall dimension of 7 feet by 4 feet 8 inches. Thickness shall be 12 inches. Approximate weight is 2,200 pounds.

All cover slabs shall have 3/4-inch lift insert at each corner on the top, as shown in Figure 5.4.

Caps shall be provided to cover the lift inserts.

Hinges for the lids shall be along the length of the cover slab.

Cover slabs shall have shall have a keyway to match the base for proper assembly.

013126	013089	013090	013091	H-20 solid	H-20 solid
013127	013089	013090	013092	H-20 solid	H-20 grate
013152	013089	none	013151	H-30 solid	H-30 solid

Refer to Table 6 for the various components included in each vault assembly.

6.1 Assembly Options

All vault assemblies use the same vault base. The assemblies differ on whether they are provided with a divided wall or not and on the type of cover hatch. Depending on the type of cover hatches desired, the vault base may be paired with a different cover slab size with appropriate hatches, as shown in Table 6.

6.2 Assembly Requirements

All solid cover hatches are and have non-slip surfaces.

Each section of the vault components shall have keyways for proper assembly.

7. Issuance

Unit: EA

8. Approved Manufacturer

Stock Number	Description	Catalog Number
		Oldcastle/Utility Vault
013089	vault base , standard 577	577-LA w/ GRD In & Out
013090	removable divider wall , standard 577	577-Divider Wall
013091	cover slab , 7-foot by 4-foot-8-inch slab with two 3- by 3-foot, non-slip, H-20, solid cover hatches	57-2-332-NS-SA-80
013092	cover slab , 7-foot by 4-foot-8-inch slab with two 3- by 3-foot, H-20 cover hatches (one non-slip, solid hatch and one grated vent hatch)	57-2-332-NS-GV-SA-80
013151	cover slab , 7-foot-6-inch by 5-foot-2-inch slab with two non-slip, H-30 cover hatches	57 Top w/ LW Hatch 34" x 74"
013125	assembled 577 vault with two 3- by 3-foot, non-slip, H-20 solid cover hatches	577-LA w/ GRD In & Out w/ 2-33 cover - SCL
013126	assembled 577 vault with divider wall and with two 3- by 3-foot, H-20 cover hatches (one non-slip, solid hatch and one grated vent hatch)	577-LA w/ Iron, GRD In & Out w/ grate and 33 cover - SCL
013127	assembled 577 vault with divider wall and with two 3- by 3-foot, non-slip, H-20 solid cover hatches	577-LA w/ Iron, GRD In & Out w/ 2-33 cover - SCL
013152	assembled 577 vault with two non-slip, H-30 cover hatches	577-LA w/ Iron, GRD In & Out w/ LW Hatches

4. General Requirements	4
5. Vault Base Requirements	4
6. Top Section Requirements	5
7. Cover Slabs, Risers and Hatches or Cover	7
8. Vault Assembly and Packaging	8
9. Issuance	13
10. Approved Manufacturers	13
11. References	13

2. Scope

This standard covers the requirements for the 712 electrical vault components (vault base and top sections) and the assembled 712 electric vaults.

The 712 vault is considered a ring vault by Seattle City Light (SCL) crews.

Most of the basic components can be ordered separately or they can be ordered as assembled vaults with cover slabs.

This standard applies to the SCL stock numbers listed in Section 10.

3. Application

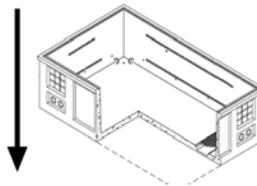

712 vaults are intended for use in the construction of underground electric systems. The precast concrete structure may be used to house medium-size transformers up to 501 kVA, three-phase load break junction boxes, and in making service connections and splices for the distribution system.

The standard 712-vault assembly consists of the 712 base [A], a 712 top with two 78-inch by 50-inch block-outs [B1], various risers to bring access opening to grade, a cover slab with two 3- by 3-foot non-slip, solid cover and a 42-inch entry access.

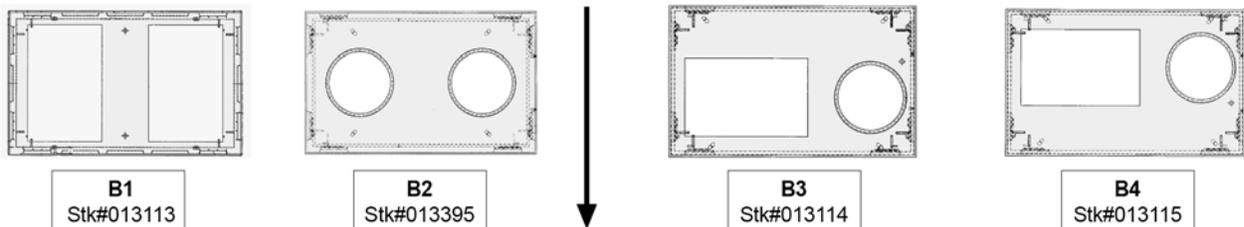

Due to different applications, the vault may need to be customized with different block-out configurations; various risers and access openings (see Figure 3).

Figure 3. Steps for selecting the proper vault assembly for your application:

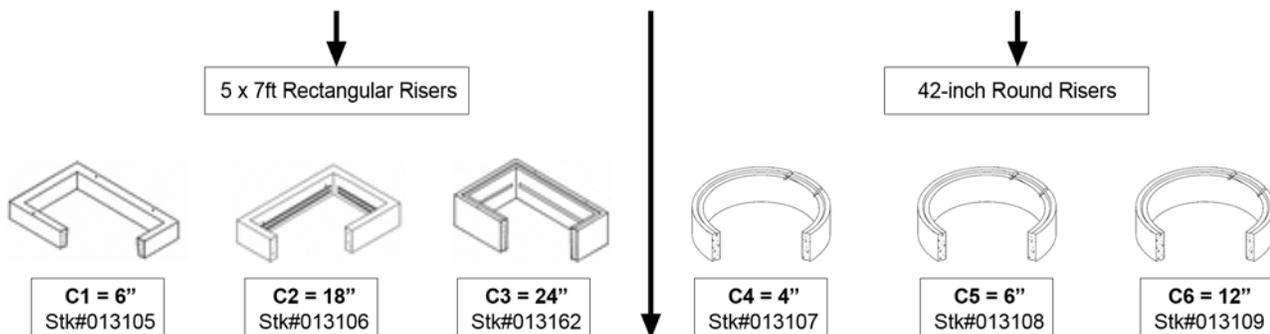

Step 1. Select standard 712-vault base, [A] (Stock Number 013112, see section 5).

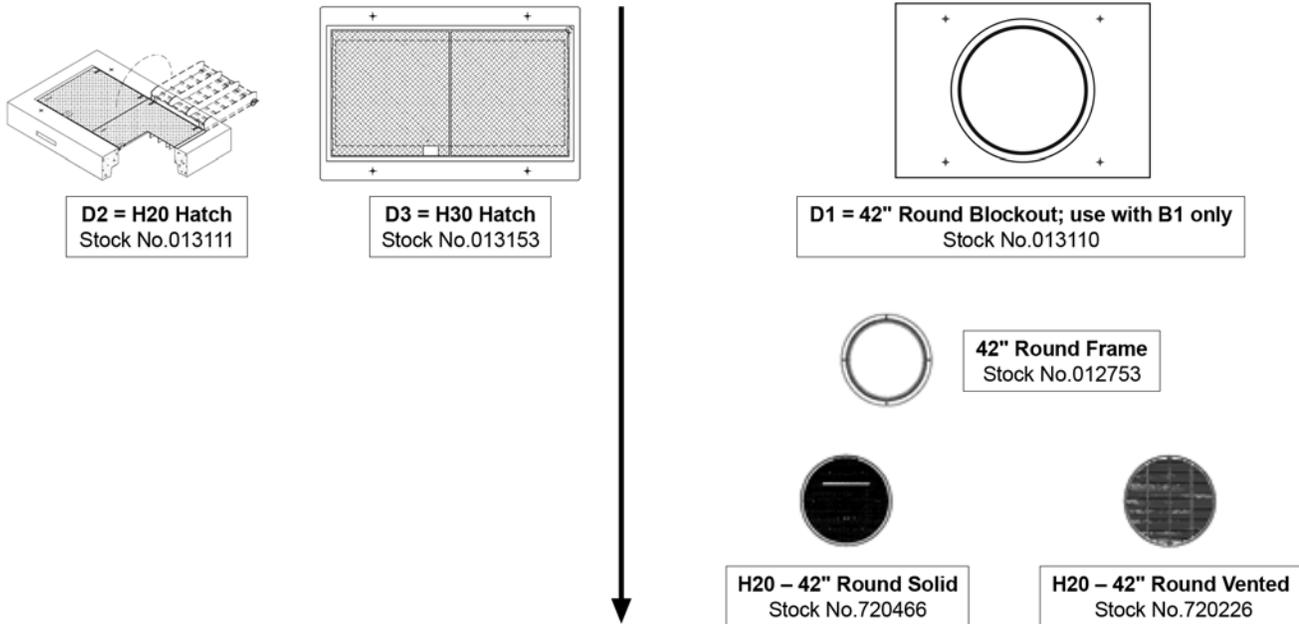

Step 2. Determine and select the type of blockout configuration needed for the vault top section [B#]. There are 4 possible options for the 712 top sections; each allowing a different set of access openings. (Stock Numbers 013113, 013114, 013395, or 013115, see section 6).

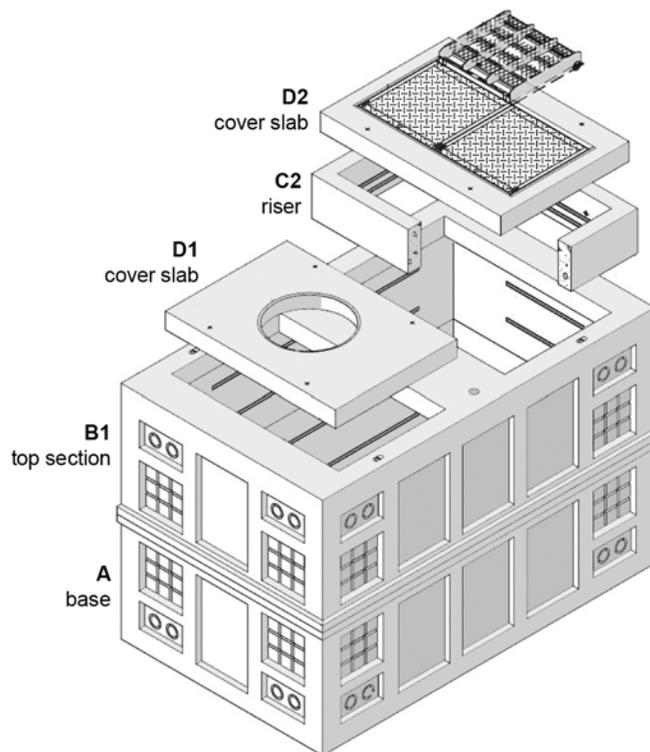

Step 3. Select appropriate risers [C#] to bring access opening up to grade. Each riser section for the 712 covers half of the top section. (Stock numbers 013105, 013106, 013162, 013107, 013108, and 013109)

Step 4. Determine the appropriate type of cover slabs and lids or hatches [D#]

Step 5. Check the assembled vault configurations in section 8 for vaults that can be ordered configured with base, top section, and cover slabs. Assembled option will still require choices for risers and hatches or lids.

4. General Requirements

This detailed standard is to be used in conjunction with SCL Material Standard 7203.21, "Precast Reinforced Concrete Structures – General".

Vault grounding shall conform to SCL Material Standard 7203.21, Section 9, Grounding.

5. Vault Base Requirements [A]

All 712 vault bases shall conform to the dimensions cited in Table 5a and Figure 5.

Table 5a. Nominal Base Dimensions

Stock No.	Outside (ft-in)		Inside (ft-in)		Height (ft-in)		Figure No.
	Length	Width	Length	Width	Outside	Inside	
013112	12-11	7-10	12-3	7-2	4-2.5	3-9	5

Figure 5. Standard 712 vault base [A]

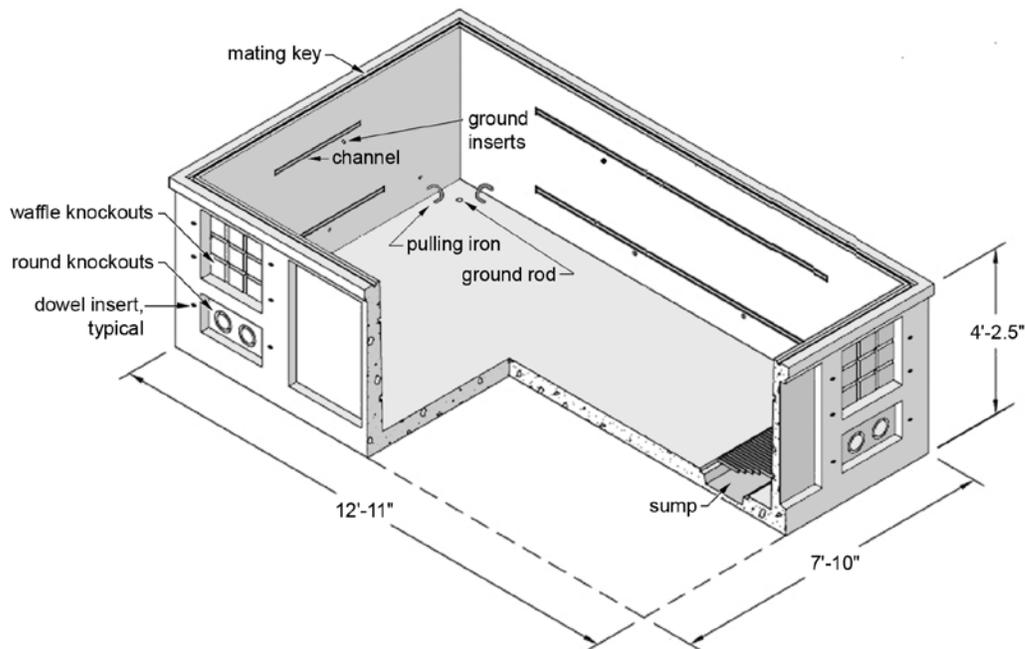

Table 5b. Vault Base Attributes

All standard 712 vault bases shall have the following features:

	Size, Nominal (in)	Location	Per Location	Total Number
Knockouts				
Round	4-3/4 dia	All 4 walls, on bottom corners of wall	4 ea side	16
Waffle, 9 - 6 in squares	18 x 18	All 4 walls, above round knockouts	2 ea side	8
Ground rod	2 dia	4 corners of floor	1 ea	4
Channels				
Galvanized "C" channel, horizontal, embedded in walls	36 length	End walls, 9 inches above floor, between knockouts, 22.5 inches on center between channels.	2 ea side	4
	96 length	Side walls, 9 inches above floor between knockouts, 22.5 inches on center between channel	2 ea side	4
Sump with galvanized grate	12 x 60	Floor, about 1 foot from and parallel to short wall	1	1
Pulling irons	7/8 dia	2 each corner of floor (typical)	2 ea corner	8
Ground inserts, bronze	1/2 dia	Side walls, 4 inches below top channel, internal and external	2 ea side	4
Dowel Inserts	1/2 dia	12 inches on center; around the perimeter of duct knockout		
Ladder		Not required		

6. Top Section Requirements [B1, B2, B3, B4]

All 712 top sections shall conform to the dimensions cited in Table 6.1 and Figure 6.

Table 6a. Nominal Top Section Dimensions

Stock No.	Outside (ft-in)		Inside (ft-in)		Height (ft-in)		Blockout Configurations	Figure
	Length	Width	Length	Width	Outside	Inside		
013113	12-11	7-10	12-3	7-2	4-4.5	3-9	two 78-in by 50-in blockouts	6b, [B1]
013395	12-11	7-10	12-3	7-2	4-4.5	3-9	two 42-in round blockouts	6b, [B2]
013114	12-11	7-10	12-3	7-2	4-4.5	3-9	one 78-in by 50-in blockout and one 42-in round blockout, offset to left (Type 1) [B3]	6b, [B3]
013115	12-11	7-10	12-3	7-2	4-4.5	3-9	one 78-in by 50-in blockout and one 42-in round blockout, offset to right (Type 2) [B4]	6b, [B4]

Notes:

Type 1 refers to a left-offset rectangular blockout from point-of-view of round blockout end.

Type 2 refers to a right-offset rectangular blockout from point-of-view of round blockout end.

Ground inserts, bronze	1/2 dia	side walls, 4 inches below top channel, internal and external	2 ea side	4
Dowel Inserts	1/2 dia	12-Inch on center; around the perimeter of duct knockout		

7. Cover Slabs, Risers and Hatches or Covers

For detailed material standard of cover slabs and risers used with the 712 vault, refer to the latest version of SCL Material Standard 7204.15, "Risers and covers slab for Self-Grounding Electric Vault."

For detailed material standard of 42-inch round cover and frames, refer to the latest version of SCL Material Standard 7204.70, "Frame and Covers, 42-Inch Round, Iron."

Table 7. Cover slabs, risers and hatches or covers

013111	5- by 7-foot adjustable cover slab with two 3- by 3-foot non-slip solid covers	7204.15	D2
012753 and 720466	42-inch frame with 42-inch solid cover	7204.70	
012753 and 720226	42-inch frame with 42-inch grated vent cover	7204.70	

8. Vault Assembly and Packaging

The vault base and the vault top section shall have keyways for proper assembly.

Vault assemblies shall be delivered fully assembled, unless otherwise requested in purchase order.

Vaults shall be delivered to the job site, unless otherwise requested in purchase order.

Refer to Tables 8a, 8b, 8c and 8d for the various components included in each vault assemblies.

Table 8a. 712 Vault Assembly 013116: With 1 Equip. (72 in x 36 in) and 1 Personnel (42-in Round Hatch) [A-B1]

2. Scope

This standard covers the requirements for 814 electrical ring vault components (vault base, center sections (risers) and top sections) and assembled 814 electric vaults.

Most of the basic components can be ordered separately or they can be ordered as assembled vaults with cover slabs.

This standard applies to the Seattle City Light (SCL) stock numbers listed in Section 12.

Due to their size, 814 vaults, components, and accessories will not be stocked in SCL inventory. Engineers and the Civil Crew Chief are required to order and specify delivery of these items.

Standards Coordinator
Quan Wang

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

3. Application

814 vaults are used to construct the underground electric system. This precast concrete vault may be used to house medium size transformers up to 501 kVA, three-phase load break junction boxes, and service connections and splices for the distribution system.

The standard 8-ft high 814-vault assembly consists of the 814 vault base, two 48-in center sections (risers), a 814 top section with two 78-in by 50-in blockouts, various additional risers to bring access opening to grade, a cover slab with two 3-ft by 3-ft non-slip, solid covers and a 42-inch entry access.

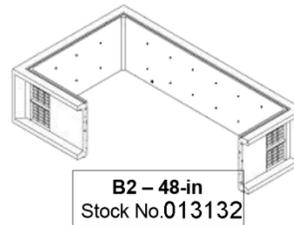

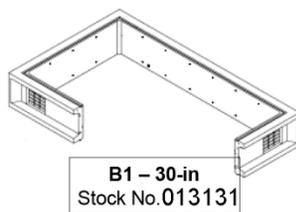

Due to different applications, the vault may need to be customized with tops with different block-out configurations, different combinations of center sections, various risers and access openings (see Figure 3).

Figure 3. Steps for selecting the proper vault assembly for your application:

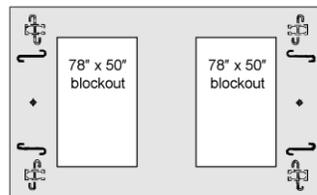

Step 1. Select standard 814 vault **base, [A]** (Stock No. 013130, Section 5).

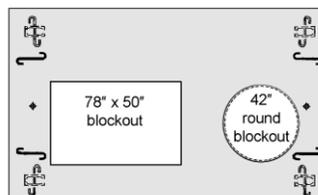

Step 2. Determine the height of vault needed, select any combination of 30-in **[B1]** or 48-in **[B2]** center sections (Stock Nos. 013131 and 013132, Section 6)

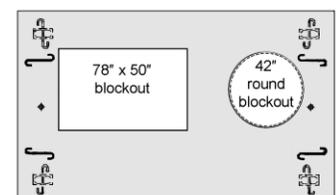

Step 3. Determine and select the type of blockout configuration needed for the vault **top section, [C1, C2 and C3]**. For the 814 top sections there are 4 possible options each allowing a different set of access openings. Note, the top section allowing for two 42-in round access openings is not an option to be ordered separately but can be ordered as part of an assembly. Three top sections can be ordered separately. (Stock Nos. 013133, 013134 or 013135, Section 7).

C1
 Stk#013133

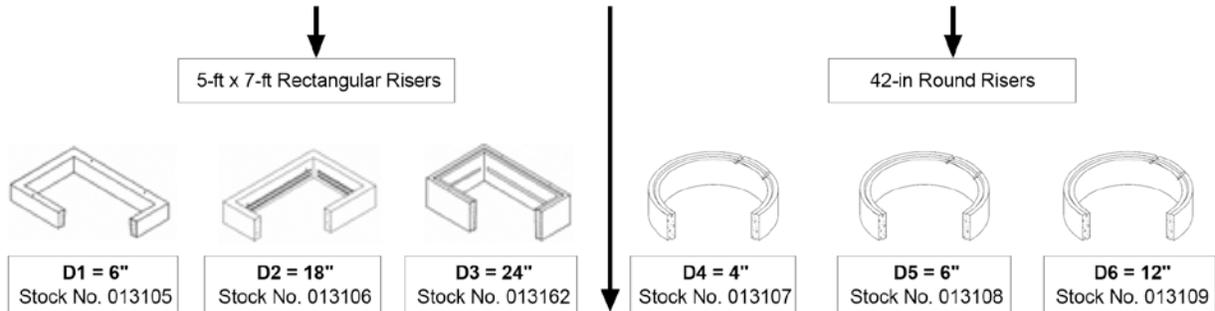

C2
 Stk#013134

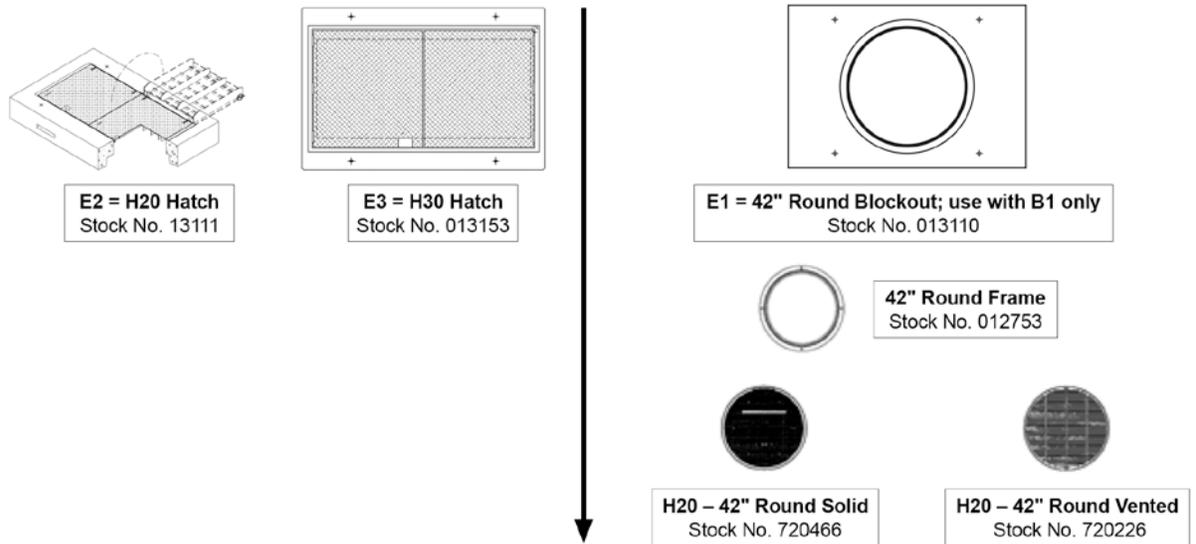

C3
 Stk#013135

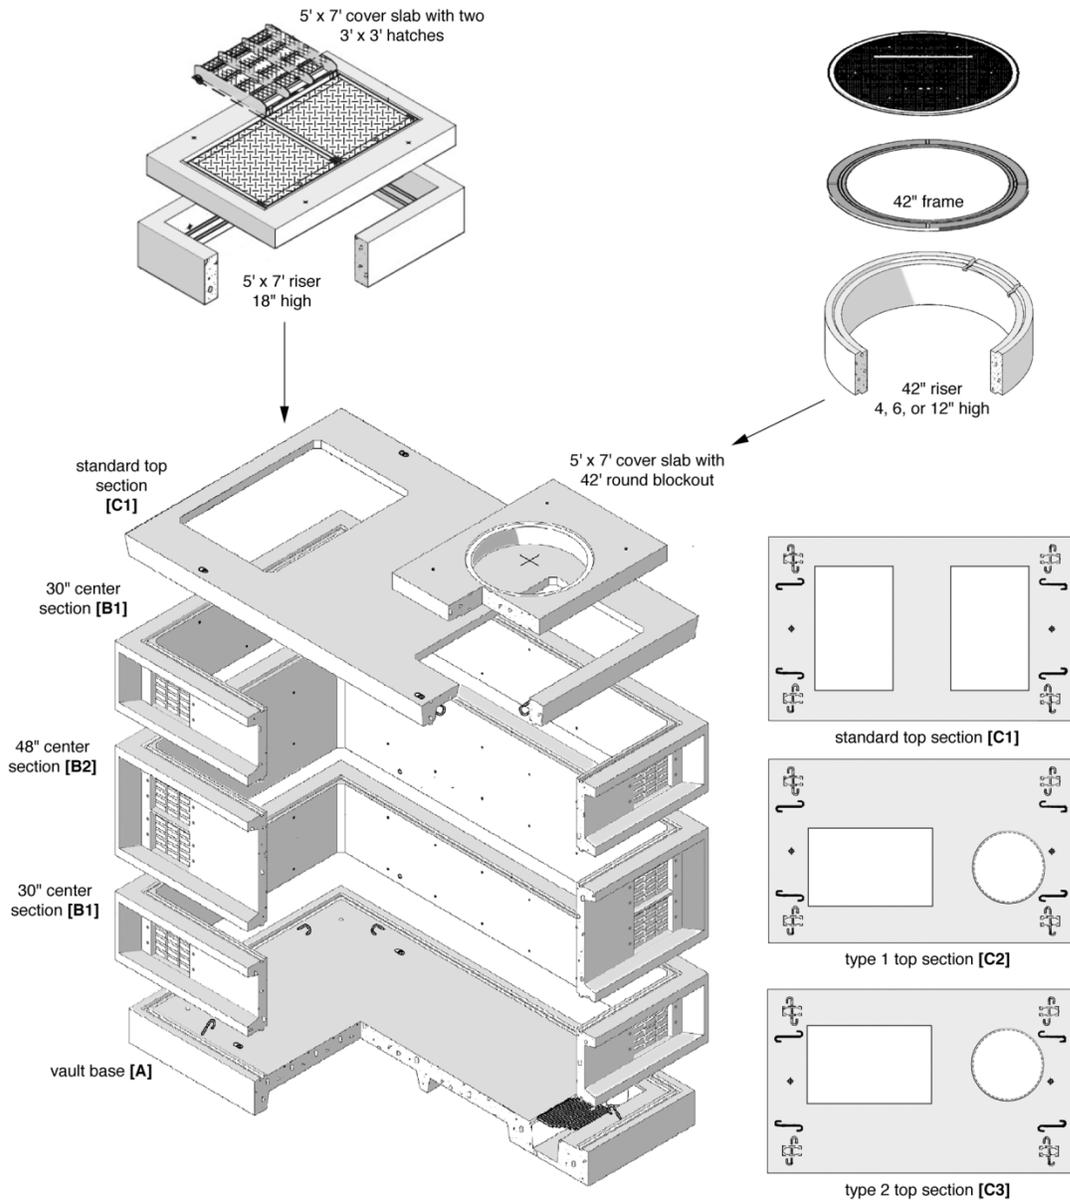

Step 4. Select appropriate risers [D#] to bring access opening up to grade. Each riser section for the 814 covers half of the top section. (Stock Nos. 013105, 013106, 013162, 013107, 013108, and 013109).

Step 5. Determine the appropriate type of cover slabs and lids or hatches [E#]

Step 6. Check the assembled vault configurations in Section 9 for vaults that can be ordered configured with base, top section, and cover slabs. Assembled option will still require choices for risers and hatches or lids.

4. General Requirements

This standard is to be used in conjunction with SCL 7203.21, "Precast Reinforced Concrete Structures – General".

Vault grounding shall conform to SCL 7203.21, Section 9, Grounding.

Typical load rating for ring vaults is H-20; however, if heavy traffic is anticipated, engineer should request an H-25 load rating.

5. Base [A] Requirements

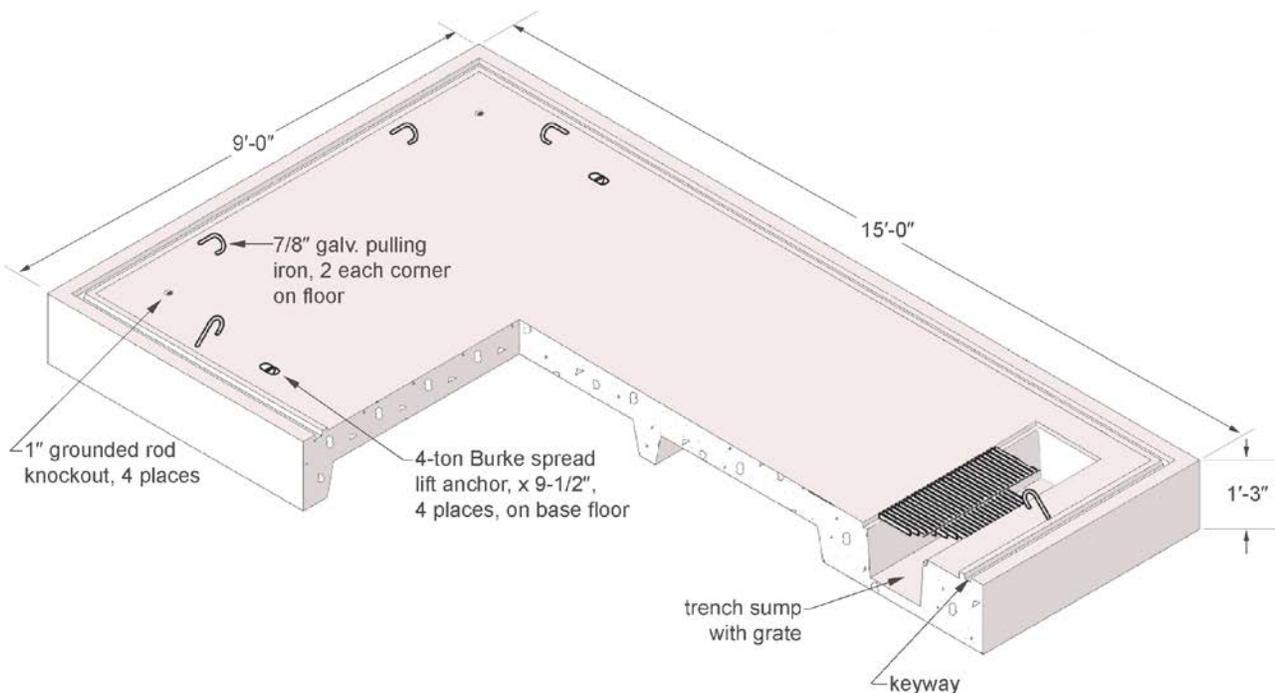

All 814 ring vault bases shall be constructed according to the dimensions shown in Table 5 and Figure 5.

The ring vault floor shall be sloped to drain toward the sump.

Table 5. Nominal Base Dimensions

Stock No.	Outside (ft-in)		Inside (ft-in)		Height (ft-in)		Figure
	Length	Width	Length	Width	Outside	Inside	
013130	15-0	9-0	14-0	8-0	1-3	-	5

Figure 5. Standard Vault Base [A]

All 814 ring vault base shall have the following attributes:

- Ground rod knockout (1 inch diameter) at each corner of floor
- Trench sump with removable galvanized grating (12 in x 60 in); 1 ft from, and parallel to, short wall
- Pulling iron (7/8 in diameter); two (2) shall be located at each corner of floor, recessed in floor
- 4-ton lift anchors, one on each corner of floor
- Ground inserts (1/2 in) on opposite end walls on the floor
- Ladder; as required if vault floor is 12 ft-6 in or more below finish grade; fixed ladders shall be per SCL drawing D-28304; ladder substitution shall be submitted for approval

6. Center Section (Riser) Requirements [B1, B2]

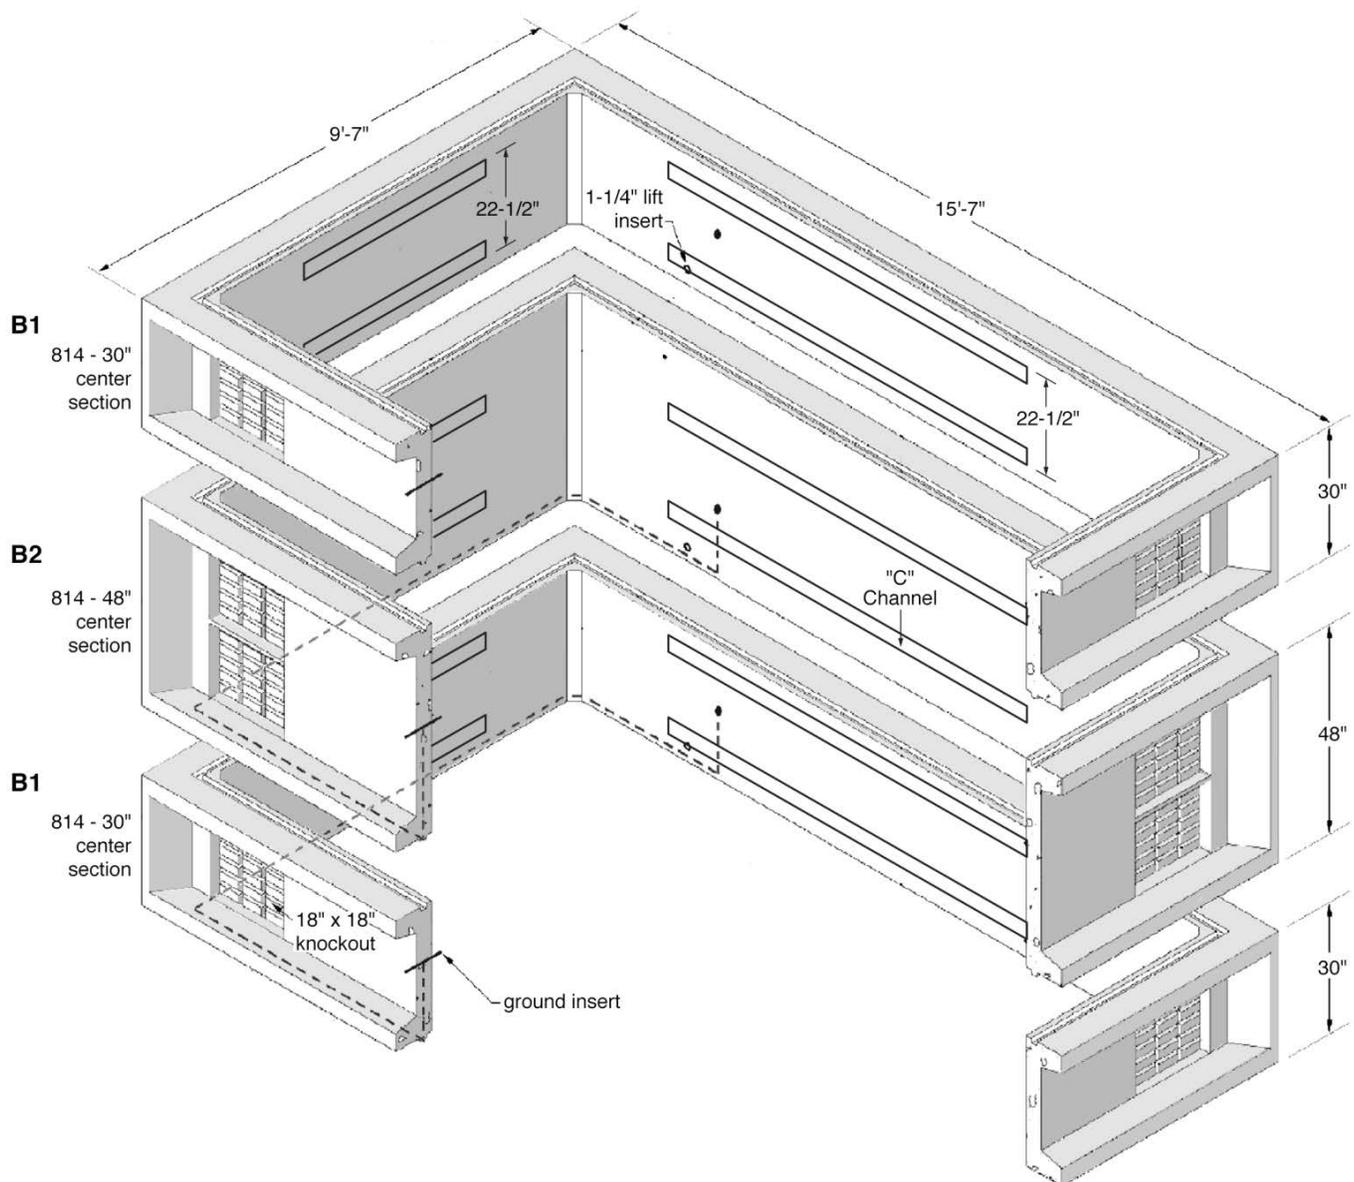

All 814 ring vault center sections shall be constructed according to the dimensions shown in Table 6.

Table 6. Vault Nominal Center Sections Dimensions

Stock No.	Outside (ft-in)		Inside (ft-in)		Height (ft-in)		Figure
	Length	Width	Length	Width	Outside	Inside	
013131	15-7	9-7	14-0	8-0	2-6	-	6 [B1]
013132	15-7	9-7	14-0	8-0	4-0	-	6 [B2]

Note: Center sections are considered to be risers by manufacturers but in this Standard we use the term 'center section' to make a distinction from risers used above the top section for the purpose of adjusting the heights of cover slabs to meet surface elevations (grade).

Figure 6. Vault Center Sections [B1 and B2]

6.1 Knockouts, Waffle

Knockouts shall be of the waffle type.

For a 30-in high vault section **[B1]** (Stock No. 013131, knockout shall measure 18 in by 18 in. Knockouts shall be located on all 4 walls on the outer edge of the wall, two (2) on each side, for a total of eight (8) knockouts.

For a 48-in high vault section **[B2]** (Stock No. 013132), knockout shall measure 15 in by 18 in. Knockouts shall be located on all 4 walls on the outer edge of the wall, four (4) on each side, for a total of 16 knockouts.

6.2 Dowel Inserts

Dowel inserts (duct bank knockout inserts) shall be embedded 12 inches on center, around the perimeter of the knockout. Dowel inserts shall accommodate a 1/2-in diameter threaded rebar or steel dowel.

6.3 Channels

Galvanized "C" channels shall be embedded in vault walls between knockouts, centered, with 22.5-in spacing between rows.

Channels shall measure 1-5/8 in by 7/8 in by 48 in on the end walls and 1-5/8 in by 7/8 in by 120 in on the side walls.

6.4 Lift Inserts

Lift inserts shall measure 1 inch in diameter. These shall be located on wall ends, along the bottom of the side walls, between knockouts.

6.5 Ground Inserts

Material shall be bronze. Ground inserts shall measure 1/2 inch in diameter. Four (4) total inserts shall be used, two (2) each located at the center of both internal and external side walls.

7. Top Section Requirements, [C1], [C2] and [C3]

All 814 top sections shall be constructed according to the dimensions shown in Table 7 and Figures 7a and 7b.

Table 7. Nominal Top Sections Dimensions and Weight

Stock No.	Top Sections (ft-in)			Blockout Configurations	Figure
	Length	Width	Thickness (in)		
013133	15-2	9-2	9.5	Two 78-in x 50-in blockouts [C1]	7a & 7b [C1]
013134	15-2	9-2	9.5	One 78-in x 50-in blockouts and one 42-in round blockouts, offset to left (Type 1) [C2]	7a & 7b [C2]
013135	15-2	9-2	9.5	One 78-in x 50-in blockouts and one 42-in round blockouts, offset to right (Type 2) [C3]	7a & 7b [C3]

Notes

- Type 1** refers to a left-offset rectangular blockout from point-of-view of round blockout end.
- Type 2** refers to a right-offset rectangular blockout from point-of-view of round blockout end.

Figure 7a. Vault Top Section [C1]

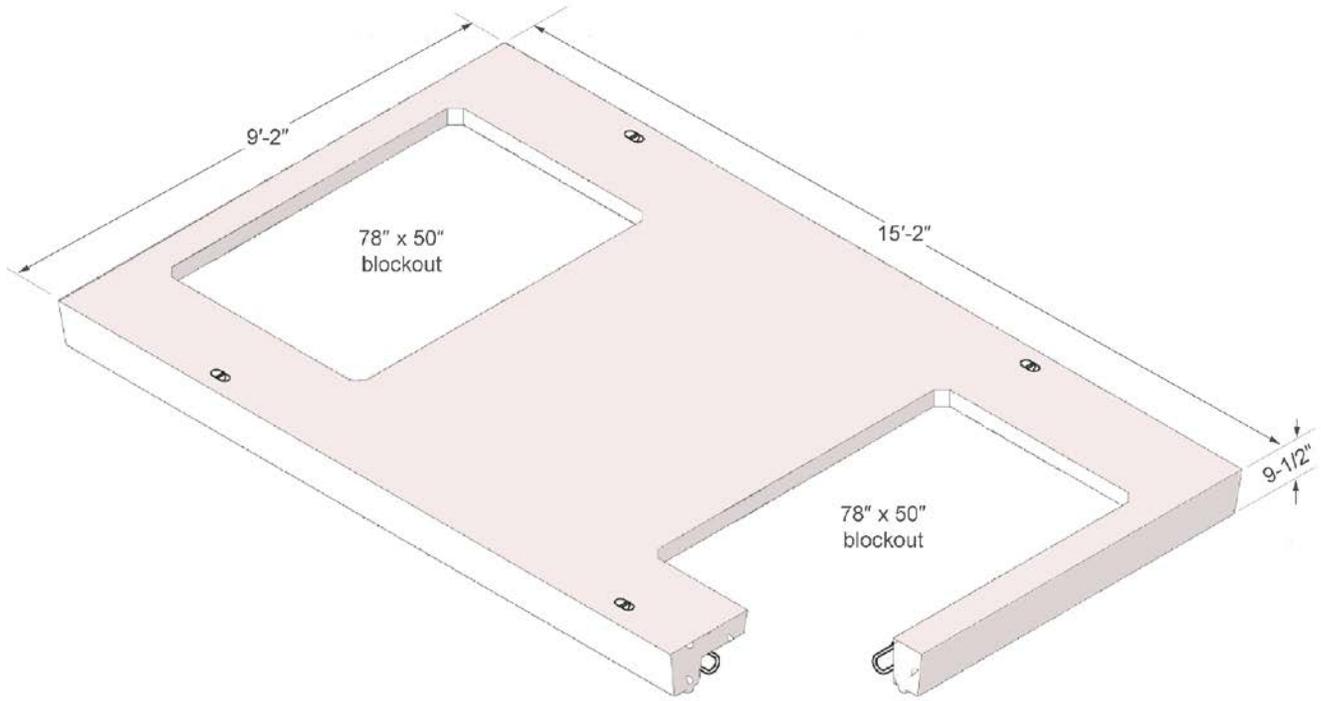

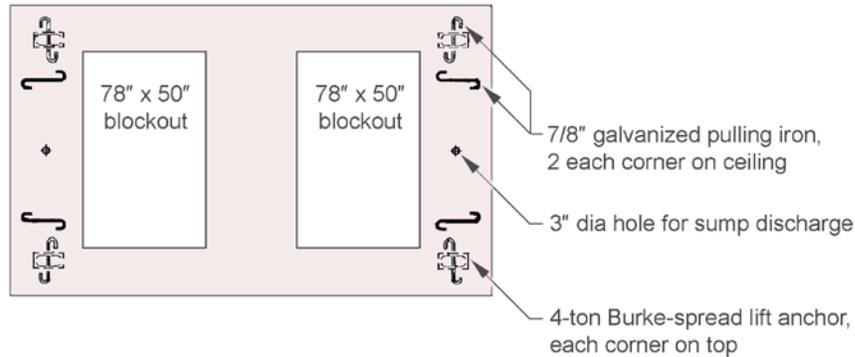

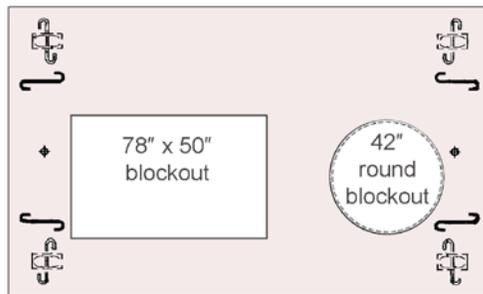

Figure 7b. Vault Top Section Blockout Options

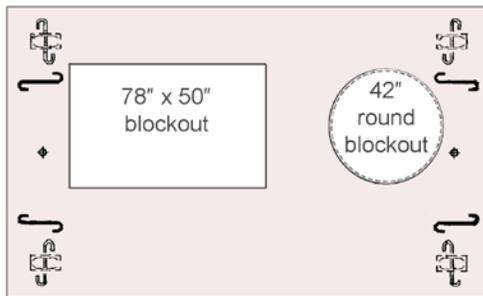

814 Standard Top, Stock No. 013133 [C1]

814 Type 1 Top, Stock No. 013134 [C2], blockout offset to left

814 Type 2 Top, Stock No. 013135 [C3], blockout offset to right

All 814 ring vault top covers shall have the following features:

- Pulling iron (7/8 in diameter); two (2) shall be located at each corner of ceiling
- 4-ton lift anchors, one on each corner of floor
- One access port (3 in diameter) shall be located at the center of each ends of top cover

8. Cover Slab, Risers, and Hatches or Covers

Risers described in this section are designed to be set on the vault top section or on the cover slab for the purpose of adjusting the height of the vault access entrance to meet surface elevations (grade).

For a detailed material standard for cover slabs and risers used with the 814 vault, refer to SCL 7204.15, "Cover Slabs and Risers for Electric Vaults."

For a detailed material standard for 42-inch round cover and frames, refer to SCL 7204.70, "Frame and Covers, 42-Inch Round, Iron."

Table 8. Cover Slabs, Risers, and Hatches or Covers

Stock No.	Description	Matl. Std.	References to Figure 3
013105	5-ft x 7-ft x 6-in riser without galvanized "C" channel	7204.15	D1
013106	5-ft x 7-ft x 18-in riser with galvanized "C" channels	7204.15	D2
013362	5-ft x 7-ft x 24-in riser with galvanized "C" channels	7204.15	D3
013107	42-in diameter by 4-in high round riser	7204.15	D4
013108	42-in diameter by 6-in high round riser	7204.15	D5
013109	42-in diameter by 12-in high round riser	7204.15	D6
013110	5-ft x 7-ft cover slab with one 42-in round access opening	7204.15	E1
013111	5-ft x 7-ft adjustable cover slab with two 3-ft x 3-ft non-slip solid covers	7204.15	E2
013153	5-ft x 7-ft cover slab with two H-30 solid cover	7204.15	E3
012753 and 720466	42-in frame with 42-in solid cover	7204.70	
012753 and 720226	42-in frame with 42-in grated vent cover	7204.70	

Rectangular blackout: For all top sections with rectangular openings cover slabs are necessary, one for each top section rectangular blackout. Cover slabs may either be set directly on the top section or may be set on risers. Cover slabs shall be produced with a key shape on the bottom to fit into the 8-ft x 4 ft-6 in opening in the top section or in the riser openings. Risers are used to obtain the required elevation and then topped by the cover slabs. In that case the risers are set with the blackout hole in the top section matching the opening of the risers (the openings have the same dimension). No key system is required to mate the rectangular riser to the top section.

Round blackout: Cover slabs with 42-in round access holes may be set in grout directly on the top section surface. Keyed round risers may also be set directly into top sections that have 42-in round blockouts. Round risers shall have keys that are matched in the top slabs with round blockouts; the same type of matching keys is required in cover slabs with round blockouts.

9. Vault Assemblies

Seattle City Light has specified fourteen 814 vault assemblies that can be ordered by stock number. The predefined assemblies have three interior vault heights of 8, 9, or 10 feet with several options for overall height and type of access openings (see Table 9q).

The vault base and the vault top section shall have keyways for proper assembly.

Vaults shall be delivered to the job site, unless otherwise requested in purchase order.

Refer to Tables 9a – 9p for the various components included in each vault assemblies.

For all vault assemblies, if vault contains more than 75 kVA of transformer capacity, a vented (grate) cover (Stock No. 720226) is required in place of the solid cover (Stock No. 720466) per Table 9a.

2. Scope

This standard covers the requirements for 818 electrical ring vault components (vault base, center sections (risers) and top sections) and assembled 818 electric vaults.

Most of the basic components can be ordered separately or they can be ordered as assembled vaults with cover slabs

This standard applies to the Seattle City Light (SCL) stock numbers listed in Section 12.

Due to their size, 818 vaults, components, and accessories will not be stocked in SCL inventory. Engineers and the Civil Crew Chief are required to order and specify delivery of these items.

Standards Coordinator
 Quan Wang

Standards Supervisor
 John Shipek

Unit Director
 Darnell Cola

3. Application

818-vaults are used to construct the underground electric system. This precast concrete vault may be used to house medium size transformers up to 2500 kVA, three-phase load break junction boxes, and service connections and splices for the distribution system.

The standard 8-ft high 818-vault assembly consists of the 818 vault base, two 48-in center sections (risers), a 818 top section with two 78-in x 50-in blockouts, various additional risers to bring access opening to grade, a cover slab with two 3-ft x 3-ft non-slip, solid covers and a 42-inch entry access.

Due to different applications, the vault may need to be customized with tops with different block-out configurations, different combinations of center sections, various risers and access openings (see Figure 3).

Figure 3. Steps for selecting the proper vault assembly for your application:

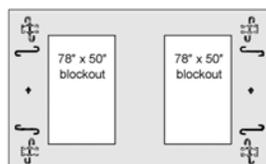

Step 1. Select standard 818-vault base, [A] (Stock No. 013443, Section 5).

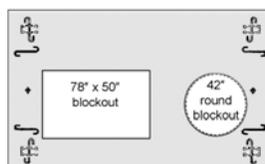

Step 2. Determine the height of vault needed, select any combination of 30-in [B1] or 48-in [B2] center sections (Stock Nos. 013444 and 013445, Section 6)

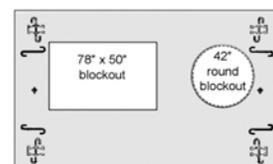

Step 3. Determine and select the type of blockout configuration needed for the vault top section, [C1, C2 and C3]. For the 818 top sections there are 4 possible options each allowing a different set of access openings. Note: the top section allowing for two 42-inch round access openings is not an option to be ordered separately but can be ordered as part of an assembly. Three top sections can be ordered separately, Stock Nos. 013446, 013447 or 013448, Section 7).

C1
 Stock No. 013446

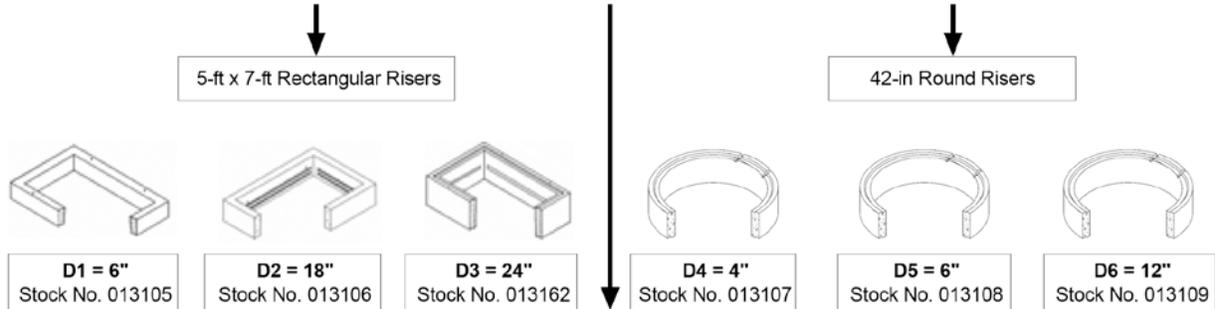

C2
 Stock No. 013447

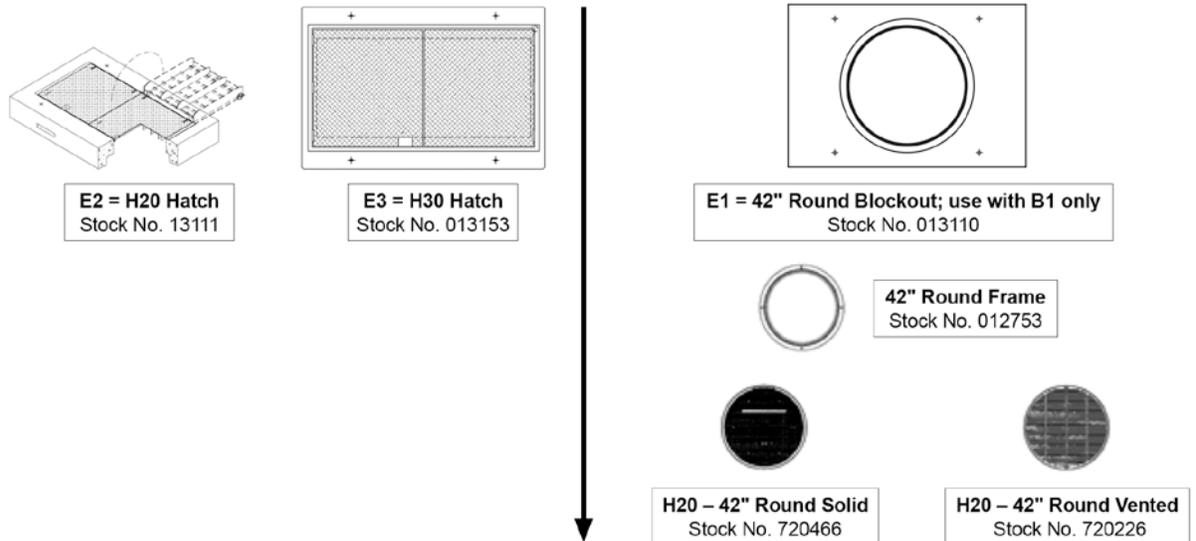

C3
 Stock No. 013448

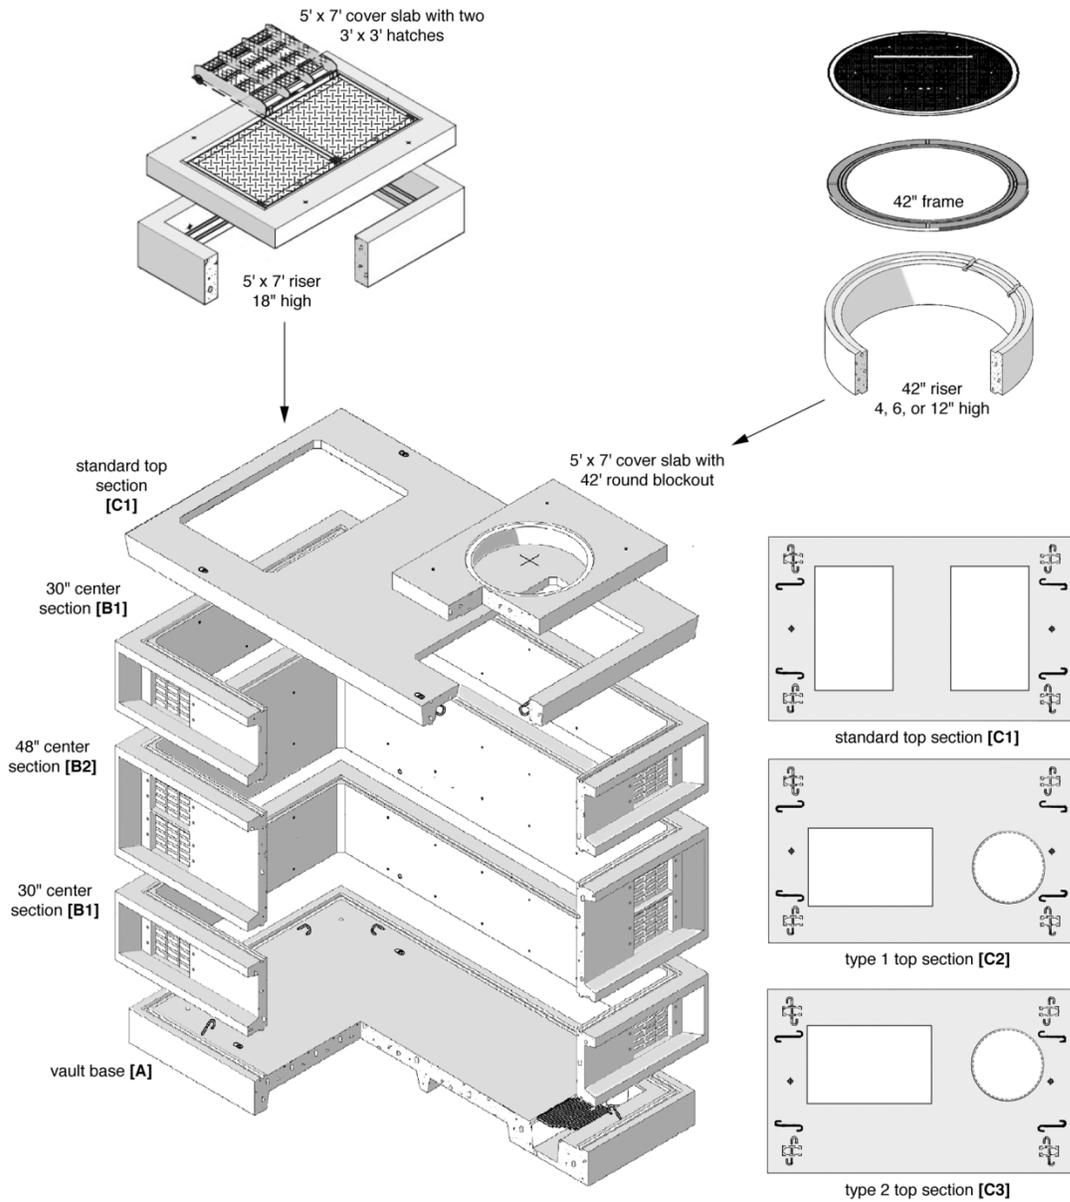

Step 4. Select appropriate risers [D#] to bring access opening up to grade. Each riser section for the 818 covers half of the top section. (Stock numbers 013105, 013106, 013162, 013107, 013108, and 013109)

Step 5. Determine the appropriate type of cover slabs and lids or hatches [E#]

Step 6. Check the assembled vault configurations in Section 9 for vaults that can be ordered configured with base, top section, and cover slabs. Assembled option will still require choices for risers and hatches or lids.

4. General Requirements

This detailed Material Standard is to be used in conjunction with SCL 7203.21, "Precast Reinforced Concrete Structures – General".

Vault grounding shall conform to SCL Material Standard 7203.21, Section 9, Grounding.

Typical load rating for ring vaults is H-20; however, if heavy traffic is anticipated, engineer should request an H-25 load rating.

5. Base Requirements [A]

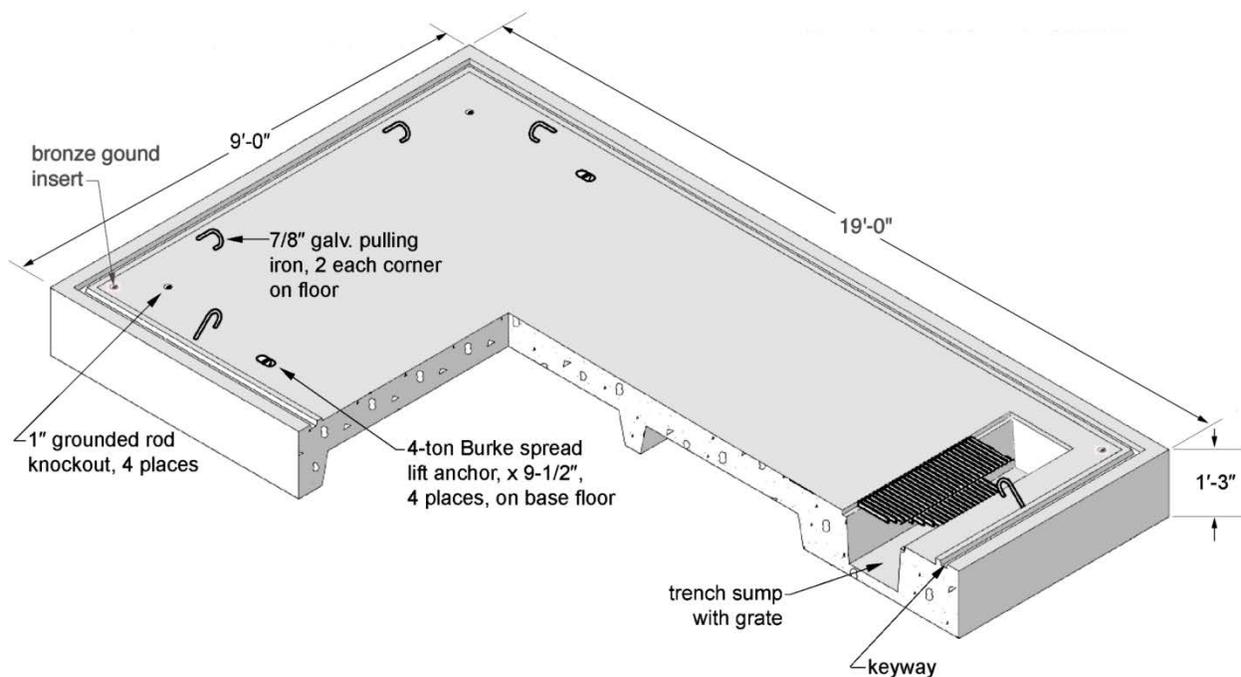

All 818 ring vault bases shall be constructed according to the dimensions shown in Table 5 and Figure 5.

The ring vault floor shall be sloped to drain toward the sump.

Table 5. Nominal Base Dimensions

Stock No.	Outside (ft-in)		Inside (ft-in)		Height (ft-in)		Figure No.
	Length	Width	Length	Width	Outside	Inside	
013443	19-0	9-0	18-0	8-0	1-3	-	5

Figure 5. Standard Vault Base [A]

All 818 ring vault base shall have the following attributes:

- Ground rod knockout (1 inch diameter) at each corner of floor
- Trench sump with removable galvanized grating (12 in x 60 in); 1 ft from and parallel to short wall
- Pulling iron (7/8 in diameter); two (2) shall be located at each corner of floor, recessed in floor
- 4-ton lift anchors, one on each corner of floor
- Ground inserts (1/2 inch) on opposite end walls on the floor
- Ladder; as required if vault floor is 12 ft-6 in or more below finish grade; fixed ladders shall be per SCL drawing D-28304; ladder substitution shall be submitted for approval

6. Center Section (Riser) Requirements [B1, B2]

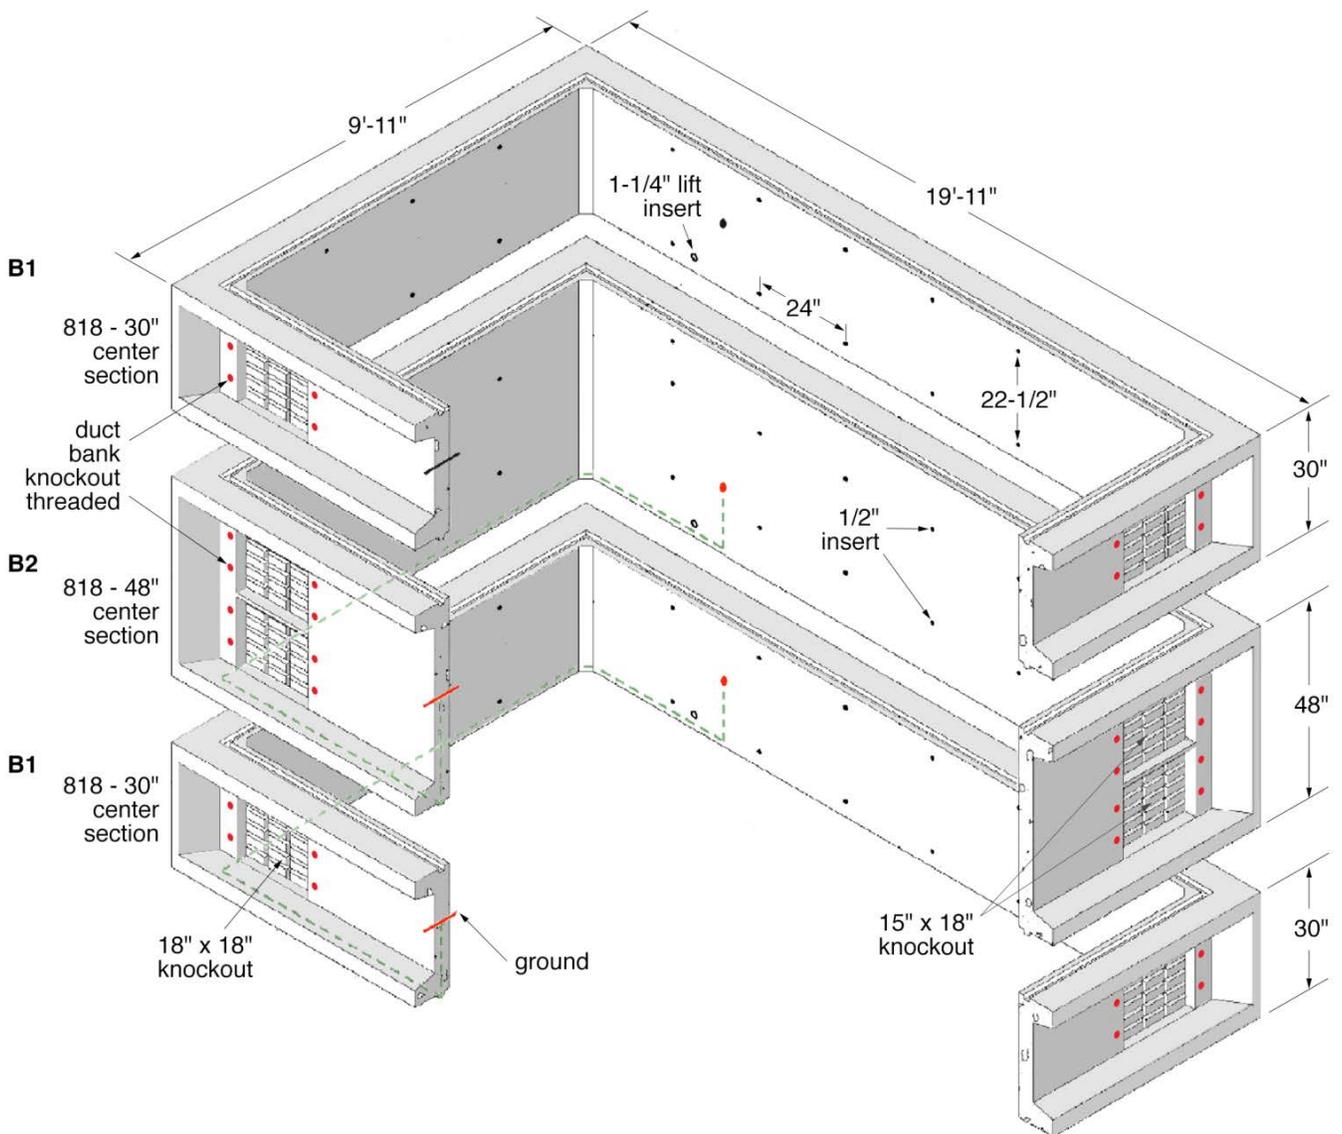

All 818 ring vault center sections shall be constructed according to the dimensions shown in Table 6 and Figure 6.

Table 6. Vault Nominal Center Sections Dimensions

Stock No.	Outside (ft-in)		Inside (ft-in)		Height (ft-in)		Figure No.
	Length	Width	Length	Width	Outside	Inside	
013444	19-11	9-11	18-0	8-0	2-6	-	6 [B1]
013445	19-11	9-11	18-0	8-0	4-0	-	6 [B2]

Note: Center sections are considered to be risers by manufacturers but in this Standard we use the term 'center section' to make a distinction from risers used above the top section for the purpose of adjusting the heights of cover slabs to meet surface elevations (grade).

Figure 6. Vault Center Sections [B1 and B2]

6.1 Knockouts, Waffle

Knockouts shall be of the waffle type.

For a 30-in high vault section **[B1]** (Stock No. 013444), knockout shall measure 18 in by 18 in. Knockouts shall be located on all 4 walls on the outer edge of the wall, two (2) on each side, for a total of eight (8) knockouts.

For a 48-in high vault section **[B2]** (Stock No. 013445), knockout shall measure 15 in by 18 in. Knockouts shall be located on all 4 walls on the outer edge of the wall, four (4) on each side, for a total of 16 knockouts.

6.2 Dowel Inserts

Dowel inserts (duct bank knockout inserts) shall be embedded 12 inches on center, around the perimeter of the knockout. Dowel inserts shall accommodate a 1/2-in diameter threaded rebar or steel dowel.

6.3 Channels

Galvanized "C" channels shall be embedded in vault walls between knockouts, centered, with 22.5-in spacing between rows.

Channels shall measure 1-5/8 in by 7/8 in by 48 in on the end walls and 1-5/8 in by 7/8 in by 168 in on the side walls.

6.4 Lift Inserts

Lift inserts shall measure 1 inch in diameter. These shall be located on wall ends, along the bottom of the side walls, between knockouts.

6.5 Ground Inserts

Material shall be bronze. Ground inserts shall measure 1/2 inch in diameter. Four (4) total inserts shall be used, two (2) each located at the center of both internal and external side walls.

7. Top Section Requirements, [C1], [C2] and [C3]

All 818 top sections shall be constructed according to the dimensions shown in Table 7 and Figures 7a and 7b.

Table 7. Nominal Top Section Dimensions

Stock No.	Top Section (ft-in)		Thickness (in)	Blockout Configurations	Figure Nos.
	Length	Width			
013446	19-4	9-4	12	Two 78-in x 50-in blockouts [C1]	7a & 7b [C1]
013447	19-4	9-4	12	One 78-in x 50-in blockout and one 42-in round blockout, offset to left (Type 1) [C2]	7a & 7b [C2]
013448	19-4	9-4	12	One 78-in x 50-in blockout and one 42-in round blockout, offset to right (Type 2) [C3]	7a & 7b [C3]

Notes

- Type 1** refers to a left-offset rectangular blockout from point-of-view of round blockout end.
- Type 2** refers to a right-offset rectangular blockout from point-of-view of round blockout end.

Figure 7a. Vault Top Section [C1]

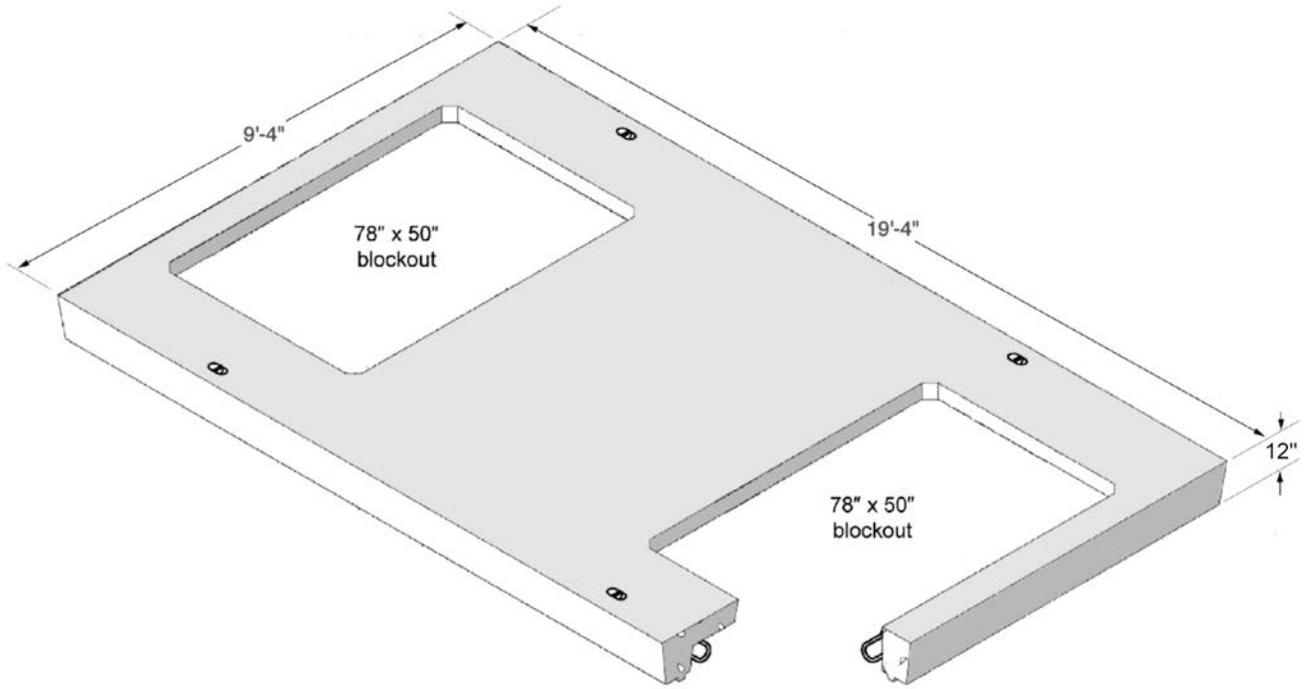

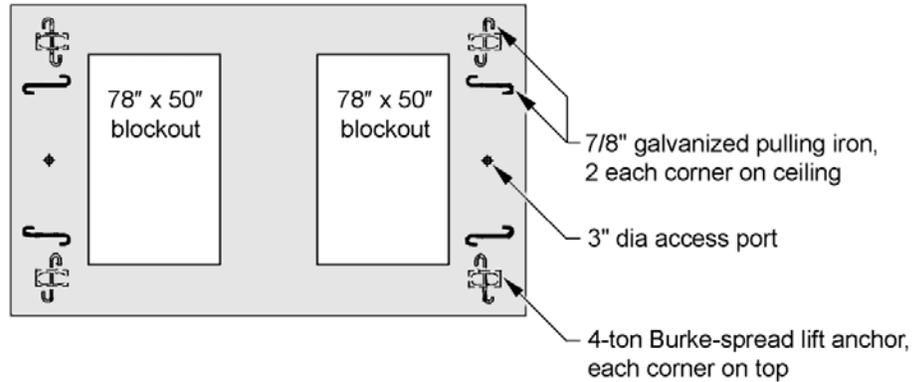

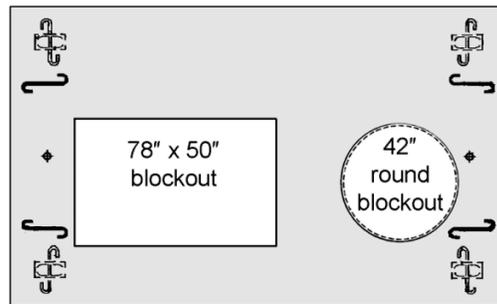

Figure 7b. Vault Top Section Blockout Options

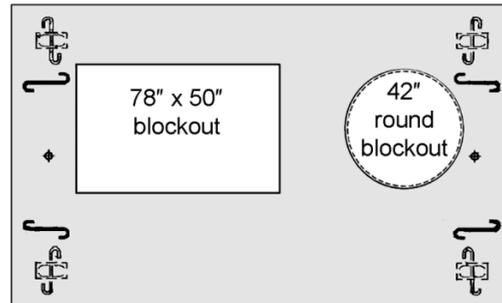

818 Standard Top, Stock No 013446 [C1]

818 Type 1 Top, Stock No. 013447 [C2]; blockout offset to left

818 Type 2 Top, Stock No. 013448 [C3]; blockout offset to right

All 818 ring vault top cover shall have the following features:

- Pulling iron (7/8 in diameter); two (2) shall be located at each corner of ceiling
- 4-ton Lift anchors, one on each corner of floor
- One 3-in diameter access port located at the center of each ends of the top cover

8. Cover Slab, Risers, and Hatches or Covers

Risers described in this section are designed to be set on the vault top section or on the cover slab for the purpose of adjusting the height of the vault access entrance to meet surface elevations (grade).

For a detailed material standard for cover slabs and risers used with the 818 vault, refer to SCL 7204.15, "Cover Slabs and Risers for Electric Vaults."

For a detailed material standard for a 42-inch round frame and covers, refer to SCL 7204.70, "Frame and Covers, 42-Inch Round, Iron."

Table 8. Cover Slabs, Risers and Hatches or Covers

Stock No.	Description	Mtl. Std.	References to Figure 3
013105	5-ft x 7-ft x 6-in riser without galvanized "C" channel	7204.15	D1
013106	5-ft x 7-ft x 18-in riser with galvanized "C" channels	7204.15	D2
013362	5-ft x 7-ft x 24-in riser with galvanized "C" channels	7204.15	D3
013107	42-in diameter by 4-in high round riser	7204.15	D4
013108	42-in diameter by 6-in high round riser	7204.15	D5
013109	42-in diameter by 12-in high round riser	7204.15	D6
013110	5-ft x 7-ft cover slab with one 42-in round access opening	7204.15	E1
013111	5-ft x 7-ft adjustable cover slab with two 3-ft x 3-ft non-slip solid covers	7204.15	E2
013153	5-ft x 7-ft cover slab with two H-30 solid cover	7204.15	E3
012753 and 720466	42-in frame with 42-in solid cover	7204.70	
012753 and 720226	42-in frame with 42-in grated vent cover	7204.70	

Rectangular blackout: For all top sections with rectangular openings cover slabs are necessary, one for each top section rectangular blackout. Cover slabs may either be set directly on the top section or may be set on risers. Cover slabs shall be produced with a key shape on the bottom to fit into the 8-ft x 4 ft-6 in opening in the top section or in the riser openings. Risers are used to obtain the required elevation and then topped by the cover slabs. In that case the risers are set with the blackout hole in the top section matching the opening of the risers (the openings have the same dimension). No key system is required to mate the rectangular riser to the top section.

Round blackout: Cover slabs with 42-in round access holes may be set in grout directly on the top section surface. Keyed round risers may also be set directly into top sections that have 42-in round blockouts. Round risers shall have keys that are matched in the top slabs with round blockouts; the same type of matching keys is required in cover slabs with round blockouts.

9. Vault Assemblies

Seattle City Light has specified twelve 818 vault assemblies that can be ordered by stock number. The predefined assemblies have three interior vault heights of 8, 9, or 10 ft with several options for overall height and type of access openings (see Table 9n).

The vault base and the vault top section shall have keyways for proper assembly.

Vaults shall be delivered to the job site, unless otherwise requested in purchase order.

Refer to Tables 9a – 9m for the various components included in each vault assemblies.

For all vault assemblies, if vault contains more than 75 kVA of transformer capacity, a vented (grate) cover (Stock No. 720226) is required in place of the solid cover (Stock No. 720466) per Table 9a.

644 Electric Vault, Primary Service

1. Scope

This standard covers the detailed requirements for 644 electrical vault components (vault base and cover with hatch) and 644 vault assemblies. Components may be ordered separately or ordered as an assembly.

This standard applies to the following Seattle City Light (SCL) stock numbers:

Stock No	Description
013731	Base , standard 644
013732	Cover , with hatch
013733	Assembly ; base and cover with hatch

2. Application

644 vaults are used in the construction of underground electric systems. The precast concrete structure may also house loadbreak junction boxes, and be used to make service connections and splices for the SCL system.

H20-rated 644 vault assemblies are not to be used in high traffic locations.

Standards Coordinator
Quan Wang

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

3. General Requirements

This standard is to be used in conjunction with the latest revision of SCL 7203.21.

4. Component Requirements

4.1 Grounding and Bonding

Vault grounding shall comply with SCL 7203.21.

4.2 Base

Table 4.2a. Vault Base Components

	Size, Nominal (in)	Location	Per Location	Total #
Knockouts				
Round	4-3/4 dia	All 4 walls, on bottom	8 ea side	32
Ground rod	1 dia	2 corners of floor	1 ea corner	2
Channels				
Galvanized "C" channel, horizontal, embedded in walls	36 long	End walls, above all knockouts	1 ea side	2
	60 long	Side walls, above all knockouts	1 ea side	2
Sump	8 dia	Floor, center	1, to one side	1
Pulling irons	1/2 dia	As request per project; 2 corners of floor (typical)	1 ea corner	4
Lift holes	1-1/2 dia	2 opposite walls, center wall, horizontal	1 ea side	2
Ground inserts, bronze	1/2 dia	2 opposite walls, internal and external	2 ea side	4
Ladder	–	Not required	–	

Base shall have dimensions as shown in Tables 4.2b and 4.2c, and Figure 4.2.

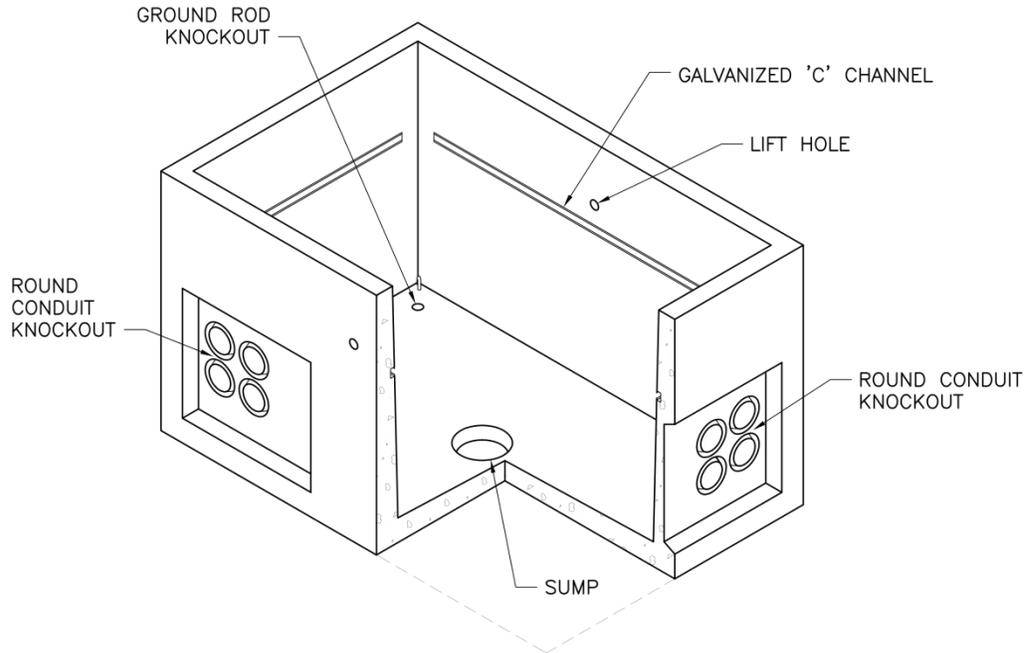

Table 4.2b. Base Dimensions, Inside, Nominal (ft-in)

Length	Width	Height
5-6	3-6	3-2

Table 4.2c. Base Dimensions, Outside, Nominal (ft-in)

Length	Width	Height
6-0	4-0	3-6

Figure 4.2. Base

4.3 Cover

Cover shall consist of a concrete collar with a slip-resistant solid hatch.

Cover shall have overall dimensions as shown in Table 4.3.

Cover shall have a 3/4-in diameter (nominal) lift insert at each corner on the top, as shown in Figure 4.3.

Caps shall be provided to cover the lift inserts.

Cover shall have a keyway to ensure a tight fit.

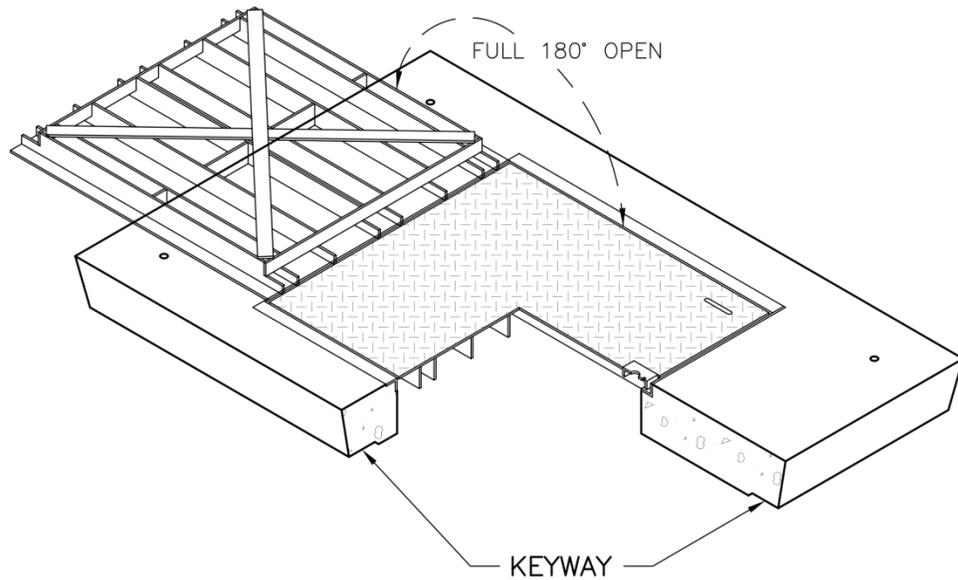

Table 4.3. Cover Dimensions, Nominal

Concrete Collar			
Length (ft-in)	Width (ft-in)	Thickness (in)	Opening (ft)
6-0	4-0	6	3 x 3

The solid hatch shall have the following:

- 3 ft x 3 ft dimension
- H20 rating
- Recessed lift handles
- Non-slip surfaces
- One handle located on each of the short ends of the hatch
- 5/8-in bonding point hole on support bar for grounding hatch
- Hatch-locking mechanism with Penta head bolt

687 Electric Vault, Primary Service

1. Scope

This standard covers the requirements for 687 electrical vault components (vault base, mid-section, and cover with round access) and assembled 687 electric vaults.

Either separate components or an assembled unit can be ordered.

This standard applies to the following Seattle City Light (SCL) stock numbers:

Stock No.	Description
013734	Base, standard 687
013735	Mid-section
013736	Cover with round access
013737	Assembly (base, mid-section, and cover with round access)

2. Application

687 precast concrete vaults are used to construct the underground electric system. The vault may be used to house medium-size transformers, and service connections and splices for the distribution system.

The standard assembly consists of a base, a mid-section, and a cover with one 42-in round access.

A 42-in round iron frame and cover must be ordered separately. For detailed material specifications for the iron frame and cover, see SCL 7204.70, "Frame and Covers, 42-Inch Round, Iron."

H20-rated vault assemblies with rectangular or square hatches should not be used in locations with high-density traffic.

Standards Coordinator
Quan Wang

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

3. General Requirements

This standard is to be used in conjunction with SCL 7203.21, "Precast Reinforced Concrete Structures, General."

Vault grounding shall conform to SCL 7203.21, Section 9, "Grounding."

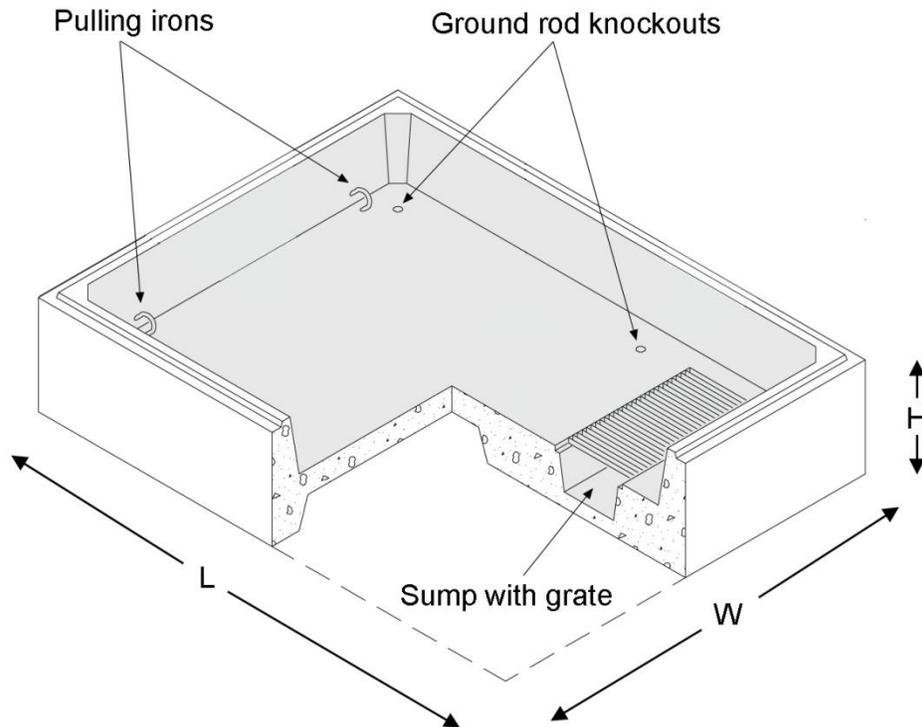

4. Base Requirements

The vault base shall be constructed according to the dimensions and details shown in Table 4 and Figure 4.

Table 4. Base Dimensions (Nominal)

Stock No.	Outside			Inside		
	Length	Width	Height	Length	Width	Height
013734	8' 8"	6' 8"	1' 10"	8' 0"	6' 0"	1' 0"

Figure 4. Base

Vault bases shall have:

- Round rod knockout (1 in diameter) at each corner of the floor.
- Trench sump with removable galvanized grating (12 in x 64 in x 8 in) 1 ft from, and parallel to, the end wall.
- Two pulling irons that are 7/8 in diameter at each end of the floor. 1/2-inch diameter pulling irons shall not be used for 687 vaults.

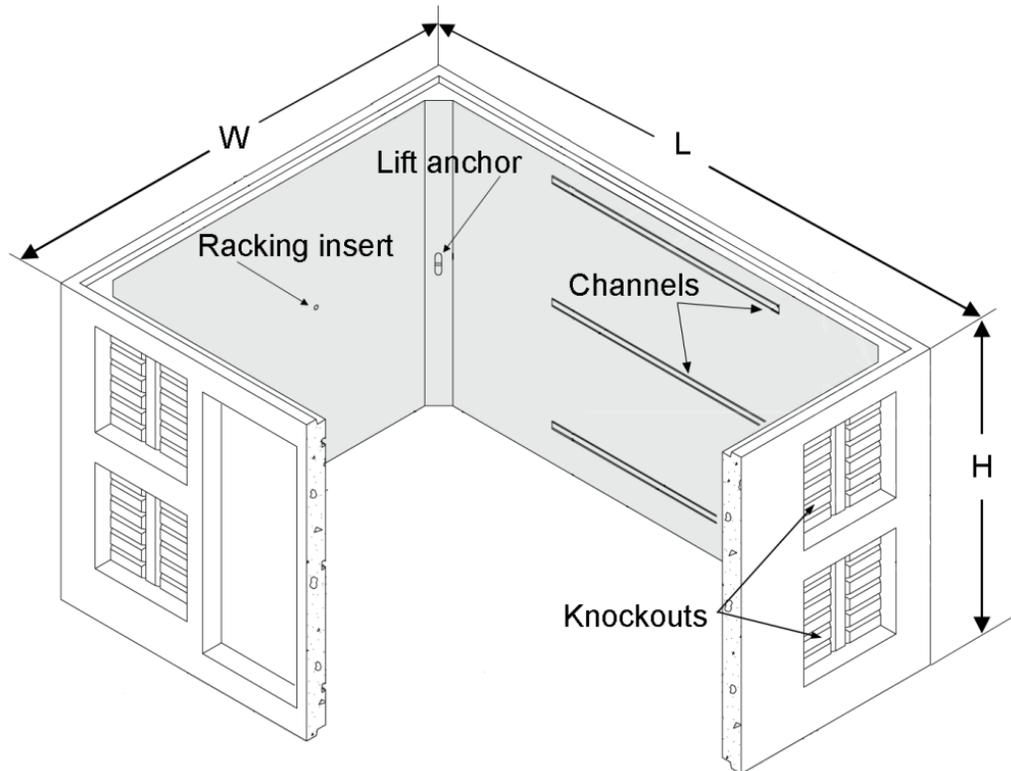

5. Mid-Section Requirements

The vault mid-section shall be constructed according to the dimensions and details shown in Table 5 and Figure 5.

Table 5. Mid-Section Dimensions (Nominal)

Stock No.	Outside			Inside		
	Length	Width	Height	Length	Width	Height
013735	8' 8"	6' 8"	4' 10"	8' 0"	6' 0"	4' 9"

Figure 5. Mid-Section

5.1 Knockouts, Waffle

Knockouts shall be of the waffle type.

Knockouts shall measure 18 in by 18 in.

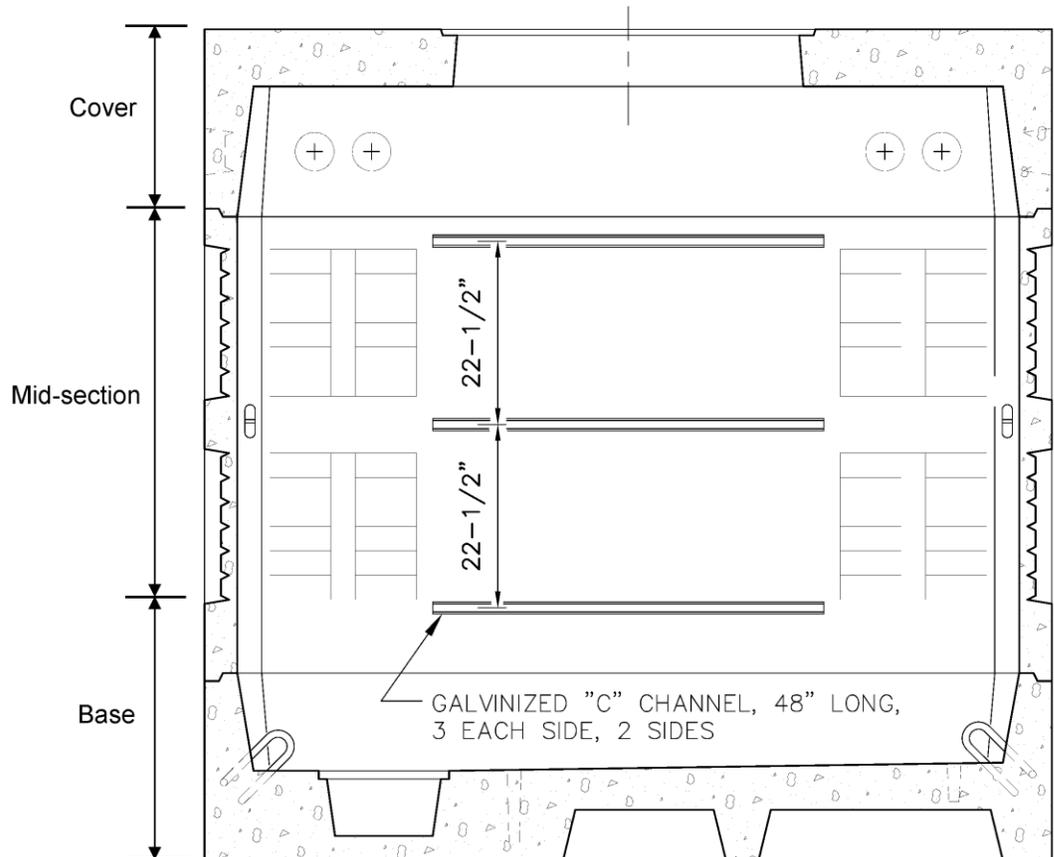

Four knockouts shall be located on the outer edge of each wall for a total of 16 knockouts.

5.2 Channels

Galvanized "C" channels shall be embedded and centered in the side walls between knockouts. There shall be 22-1/2 inches of space between channel rows as measured from the center of each row.

Channels shall measure 1-5/8 in by 13/16 in by 48 in. See Figure 5.2

Figure 5.2. Channel Placement, Side Wall

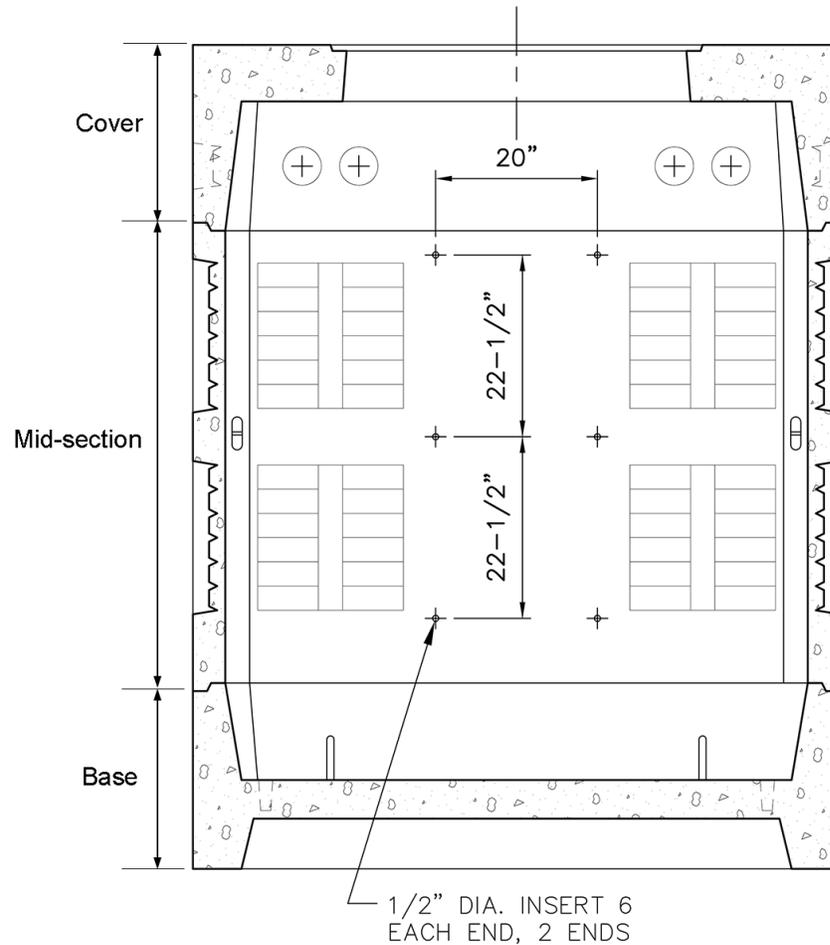

5.3 Racking Inserts

Racking inserts shall accommodate 1/2-in diameter threaded bolts.

Racking inserts shall be embedded in the center of end walls between knockouts. There shall be 20 inches of space (horizontal) and 22-1/2 inches of space (vertical) between racking inserts as measured from the center of each insert.

Figure 5.3. Racking Insert Placement, End Wall

5.4 Lift Anchor

A lift anchor with a 2-ton ultimate strength rating shall be located on each corner of the wall.

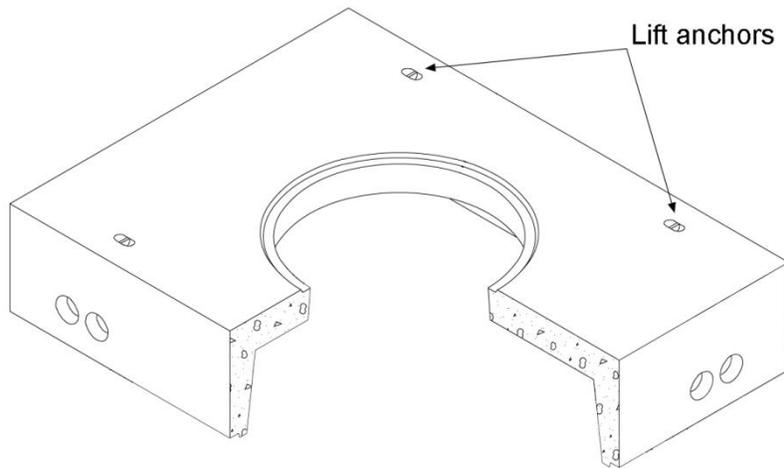

6. Cover Requirements

Covers shall be constructed according to the dimensions shown in Table 6 and Figure 6.

Table 6. Cover Dimensions (Nominal)

Stock No.	Outside			Inside			Access Configuration
	Length	Width	Height	Length	Width	Height	
013736	8' 8"	6' 8"	1' 10"	8' 0"	6' 0"	1' 3"	One 42" round

Figure 6. Cover with Round Access

The cover shall have:

- 2-ton lift anchors, two on each end of the top.
- A keyway on the cover to ensure a tight fit with the mid-section.

7. Issuance

Unit: EA

8. Approved Manufacturer

Stock No.	Components	Oldcastle/Utility Vault Catalog No.
130734	Base, standard 687	687-BL
130735	Mid-section with cable supports	687-ML
130736	Cover, with round access	687-TL-42C
130737	Assembly (base and cover with round access)	687-LA

Precast Reinforced Concrete Transformer Pads

1. Scope

This standard covers the detailed requirements for precast reinforced concrete transformer pads.

This standard applies to the following Seattle City Light (SCL) stock numbers:

Stock No	Description
013721	Single phase transformer pad
013722	Three phase transformer pad (75–300 kVA)
013723	Three phase transformer pad (500–1500 kVA)
013724	Three phase transformer pad (2000–2500 kVA)

2. Application

Precast reinforced concrete transformer pads are used as a platform for transformers or switchgear.

Due to their size, transformer pads will not be stocked in SCL inventory. Engineers and the Civil Crew Chief are required to order and specify delivery of these items.

3. General Requirements

This standard is to be used in conjunction with the latest revision of SCL 7203.21.

Standards Coordinator
Quan Wang

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

4. Requirements, General

Pad grounding shall comply with SCL 7203.21.

Transformer pads shall be constructed according to the dimensions and details shown in Table 4.2 and figures 4.2a and 4.2b.

Table 4.2. Pad Dimensions

Stock No.	Dimensions, nominal (ft-in)			Blockout Dimensions, nominal (in)		Blockout placement from edge of pad (in)
	Width	Length	Height	Width	Length	
	W_p	L_p	H_p	W_b	L_b	Q
013721	4-0	4-8	0-6	22	14	8
013722	7-0	7-0	0-6	60	16	12
013723	8-0	7-9	0-6	60	16	12
013724	8-0	10-0	0-8	60	24	12

Figure 4.2a. Transformer Pad

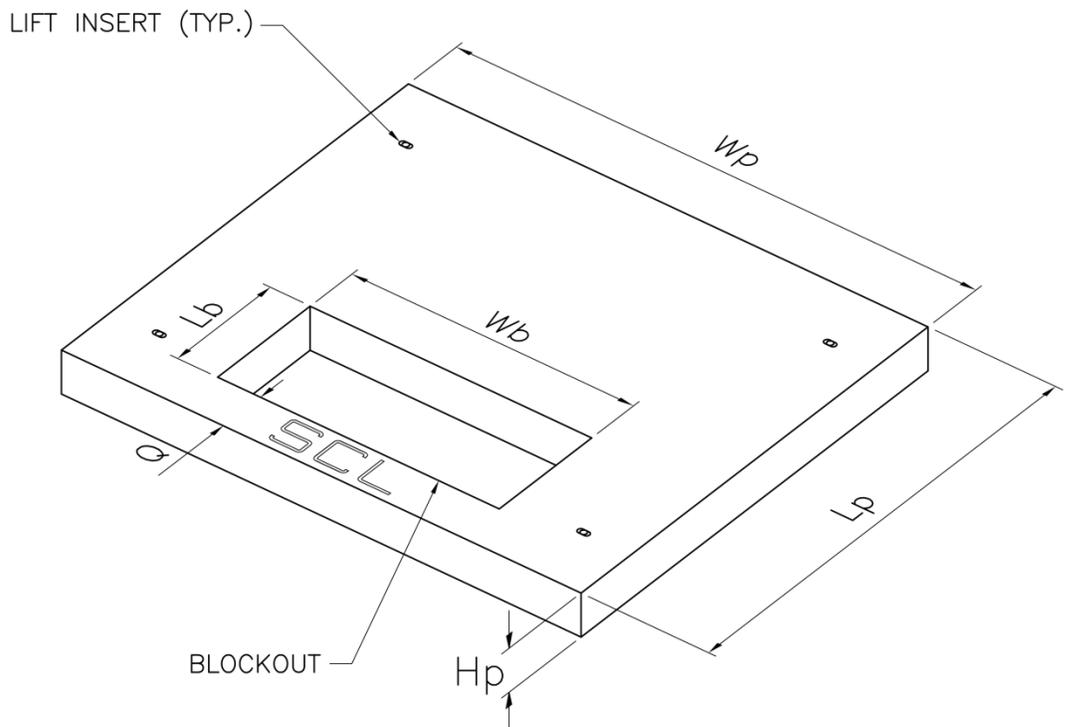

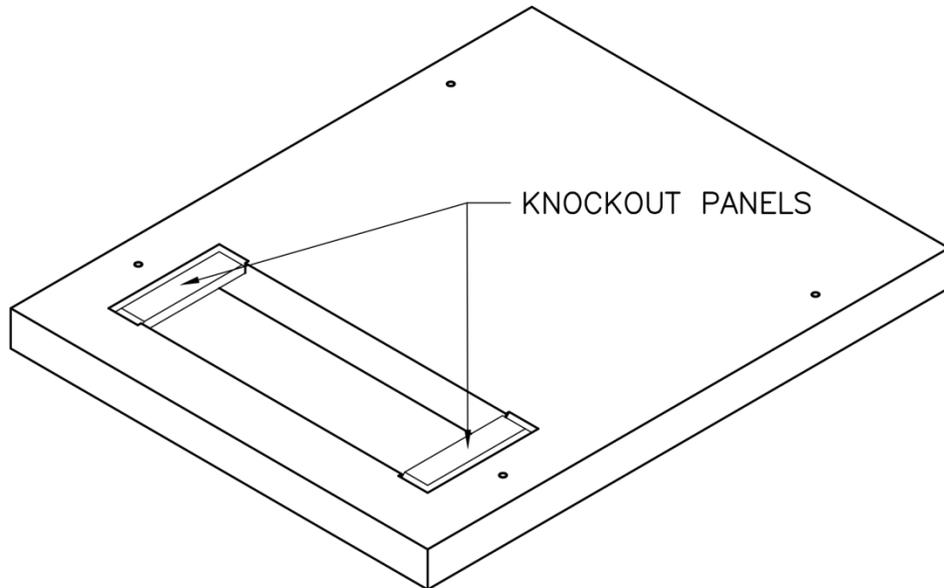

Figure 4.2b. Knockout Panel Detail

Lift inserts measuring 3/4-inch in diameter (nominal) shall be located at each corner on the top side of the pad.

Caps shall cover each lift insert.

For all transformer pads except for Stock No. 013274, the letters “SCL,” measuring 3-in high, shall be cast into the top side of the pad.

For Stock No. 013724, knockout panels measuring 6 in x 24 in shall be installed on each side of the knockout.

5. Issuance

Unit: EA

6. Approved Manufacturer

Stock No.	Description	Catalog No.
		Oldcastle/Utility Vault
013721	Single phase transformer pad	54-1422
013722	Three phase transformer pad (75–300 kVA)	77-1660
013723	Three phase transformer pad (500–1500 kVA)	88-1660
013724	Three phase transformer pad (2000–2500 kVA)	77-810-2460

2. Scope

This standard covers the requirements for precast reinforced concrete panel vaults.

Panel vaults are custom designed to any size and configured to each job requirement. Access openings, blockouts, and embedded accessories are configured as required per job.

All panel vault designs shall be submitted to Seattle City Light (SCL) Civil Engineering for approval prior to production.

3. Application

Precast reinforced concrete panel vaults are used to construct the underground electric system. Panel vaults may be used to house equipment, cables, service connections and splices for the distribution system.

Panel vaults are intended to be used in the network system areas.

4. Industry Standards

Precast reinforced concrete panel vaults shall meet the requirements of the following industry standards:

ACI 318-11; "Building Code Requirements for Structural Concrete and Commentary"

ANSI/AWS D1.4/D1.4M-11; "Structural Welding Code – Reinforced Steel"

ASTM A123/A123M-08; "Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products;"

ASTM A185/A185M-07; "Standard Specification for Steel Welded Wire Reinforcement, Plain, for Concrete"

ASTM A497/A497M-07; "Standard Specification for Steel Welded Wire Reinforcement, Deformed, for Concrete"

ASTM A615/A615M-09b; "Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement"

ASTM A706/A706M-09b; "Standard Specification for Low-Alloy Deformed and Plain Bars for Concrete Reinforcement"

ASTM C39/C39M-10; "Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens"

ASTM C150/C150M-12; "Standard Specification for Portland Cement"

ASTM C478-09; "Standard Specification for Precast Reinforced Concrete Manhole Sections"

ASTM C857-11; "Standard Practice for Minimum Structural Design Loading for Underground Precast Concrete Utility Structures"

ASTM C858-10e1; "Standard Specification for Underground Precast Concrete Utility Structures"

NESC C2-2012, Rule 094B6; "Concrete-Encased Electrodes"

5. Structural Design

Structural design of the precast vault shall conform to ACI 318, "Building Code Requirements for Structural Concrete" and ASTM C857, "Standard Practice for Minimum Structural Design Loading for Underground Precast Concrete Utility Structures," with the following clarifications:

- Top of vault shall be assumed to be at a minimum of 2 ft and a maximum (unless noted on drawings) of 5 ft below grade.
- Live load: AASHTO HS-25 truck, P=20 kips. Traffic can approach the structure from any direction. Load distribution per AASHTO LRFD Bridge Design Specifications.
- 30 percent live load impact load factor for soil cover less than or equal to 3 ft.
- No live load surcharge for soil cover greater than 8 ft.
- 100 lb per square ft live load surcharge.
- Soil density shall be 120 lb force per cubic ft.
- 40 lb force per cubic ft equivalent fluid pressure lateral soil pressure above water table.
- 80 lb force per cubic ft equivalent fluid pressure lateral soil pressure below water table.
- The groundwater table shall be assumed to be 5 ft below grade or higher as shown in project drawings or soil boring.
- Panel vault shall be designed for a single controlled density fill pour from the base to the vault roof.
- Buoyancy: The weight of the vault (without equipment) plus weight of soil cover shall be greater than 1.1 times the hydrostatic uplift force on the base of the vault. It cannot rely on skin frictional resistance between backfill and vault wall surfaces. If the gravity load is insufficient, then the vault shall be designed with restraints to withstand the buoyant force. The restraint design shall be submitted for review and approval.

All panel vaults with inside plan dimensions of 7 ft by 12 ft and larger shall have walls, floor and ceiling with a minimum thickness of 4 in.

10 ft by 20 ft panel vaults shall be fabricated with a single panel floor with built-in slope toward the sump.

A single panel floor with built-in slope is also preferred for other sizes of panel vault.

If multiple floor panels are required, provide positive mechanical connections between the panels to ensure against differential settlement at the floor panel joint.

Termaducts, knockouts and sumps shall be designed to carry the loads imposed upon them. The basic structure shall be designed to carry all imposed loads with knockouts and duct openings removed.

6. General Requirements

All panel vaults and accessories, including special order (non-stock) materials shall be manufactured in accordance with the requirements herein.

Panel vaults shall be reinforced precast concrete with features shown on the submittal drawings.

Panel vaults shall be designed and constructed to be watertight.

Structural components, including, but not limited to, grout, seals or mastics, and joint hardware shall be provided with vault wall, ceiling, and floor components.

Design changes shall require the prior written approval of an SCL standards engineer or civil engineer.

For all other precast reinforced concrete structures, including vaults, vault cover slabs, and pads or slabs, please refer to SCL 7203.21, "Precast Reinforced Concrete Structures – General."

7. Order Information

Seattle City Light orders will provide the following minimum information:

- Vault size and description
- Access, blackout, knockout and ladder requirement
- SCL general material standard number citing revision date
- SCL detailed material standard number citing revision date
- Total order quantity
- Delivery date
- Delivery location

All panel vault design detailed requirements shall be approved by SCL Civil Engineering prior to production.

8. Submittals

Panel vault design calculations and shop drawings shall be approved by a civil engineer licensed in Washington State.

Panel vault design calculations and shop drawings shall be submitted to SCL Civil Engineering 30 days prior to fabrication for review for compliance to specification.

8.1 Design Calculations

Design calculations shall include the following:

- Material spec notes
- Design loading notes
- Load case for 2 ft and 5 ft of soil cover for panel vaults
- Floor and ceiling design
- Wall design
- Hatch or cover design – hatch and cover shall be designed for 26 kips wheel load (HS 25 truck + 30% impact load)
- Buoyancy check

8.2 Shop Drawings

Shop drawings shall include the following:

- Plan and section views, dimensioning to all features
- Reinforcement placement plans and rebar bent details
- Bill of material
- Structural design notes
- Cover and hatches detail
- Pulling iron detail

8.3 Submittal Review Process

The general submittal review process is as follows for contractor construction of SCL projects:

1. SCL civil engineer works with distribution or network engineers to produce the panel vault design drawing and specifications, or review consultant's design for the project. The project is sent out for bid.
2. Successful bidder/contractor communicates with SCL-approved manufacturer for panel vault design and shop drawing needed for the project. The minimum submittal criteria are outlined in Section 8.
3. Construction schedule shall include transmittal time and the twenty (20) working days SCL requires to conduct its review.
4. The contractor shall furnish three (3) sets of design and construction proposal for review by SCL engineers (civil and electrical) and electrical reviewers. Submittal shall include panel vault design with design calculations and shop drawings for each vault used in the project. (See Section 8)
5. All approval drawings shall be endorsed for approval and be marked with SCL's project location/identification and supplier's shop order number.
6. SCL Civil Engineering will check with the responsible electrical engineer(s) to determine if the vault layout show the latest design (since design changes happen for long and complicated projects)
7. SCL will supply the stake holders a transmittal letter summarizing SCL's comments and results
8. Transmittal letter will indicate the approval status of each drawing and document reviewed by SCL. Approval status categories are as follows:
 - a. ACCEPTED – WITHOUT COMMENT - Item is approved by SCL as to general scope and content; however, the supplier is not relieved of their obligation to meet all of the requirements of the material standard.
 - b. ACCEPTED – WITH COMMENTS NOTED - Item is approved by SCL as to general scope and content subject to the minor changes noted on the item; however, the supplier is not relieved of their obligation to meet all of the requirements of the material standard.
 - c. NOT ACCEPTED - REVISE AND RESUBMIT - Item is not approved by SCL. Supplier shall specifically address and/or incorporate all SCL comments into a revised submittal, and resubmit the item to SCL for approval.
9. SCL will review all revised and resubmitted drawings and documents and return one (1) copy of each, together with a transmittal letter, to the contractor/supplier within (10) working days after receipt. Drawings and documents shall bear a revised revision date. Revised areas of the submittal shall be circled.
10. Contractor/supplier shall present a complete and acceptable submittal package to SCL not later than the second submittal of an item.
11. When the vault design submittal is approved by SCL Civil Engineering, the submittal is stamped and signed off by the SCL Civil Engineering Reviewer. SCL Civil Engineering informs the various stakeholders.
12. Contractor will inform the approved panel vault manufacturer to start production.

- Once panel vaults are manufactured and delivered to the job site, the SCL Electrical Reviewer and other SCL personnel may be onsite for receiving inspection. For critical projects, SCL will sometimes inspect these vaults at the manufacturing plant for compliance prior to concrete pour or delivery. SCL Electrical Reviewer and Civil Inspectors will receive and inspect the vaults. For WSDOT projects, the WSDOT Inspector may inspect the panel vaults at the manufacturing plant and on delivery site. Installation contractor may also inspect the vault to make sure any damages have been incurred prior to their installation.

Panel vault design and construction work done by SCL personnel shall be subject to a similar submittal review process as for contractors.

9. Reinforced Concrete

Minimum compressive strength of concrete shall not be less than 5000 pounds per square inch in 28 days as determined by the ASTM Method C39, Standard Test Method for Compressive Strength of Cylinder Concrete Specimens.

Cement shall conform to ASTM C150.

No additives containing calcium chloride or any other material that will produce corrosive ions shall be used in the concrete.

Welded wire fabric shall conform to ASTM A185 or A497.

Steel Reinforcing Bars shall conform to ASTM A615, Grade 60 or ASTM A706, Grade 60.

Welding of reinforcing steel shall conform to the Structural Welding Code, "Reinforcing Steel (AWS D1.4)," of the American Welding Society.

Concrete cover (measured from the surface of the concrete to the outside surface of the reinforcement) for reinforcement shall be 1-1/2 in minimum for main reinforcing bars and 3/4 inch for stirrups and ties.

Concrete finish shall be free of rock pockets and honeycombed areas.

Interior walls, ceiling, and exposed exterior surfaces shall be smooth.

Rock pockets over 3/8 inch deep and other imperfections on all surfaces shall be patched and troweled to match the surrounding surface.

Reinforcement of the concrete cover (measured from the surface of the concrete to the outside surface of the reinforcement) shall comply with ACI 318.

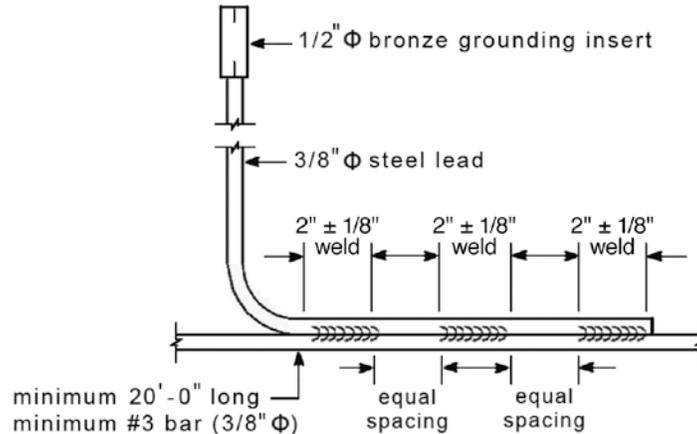

10. Ground Insert Connectors

Each bronze insert shall have a minimum surface contact area of 0.58 sq in.

Each bronze insert shall be tapped for 1/2-in 13 bolts, and located on the lower corner of each wall panel.

The lead rod, a 3/8-in steel or bronze rod, shall be connected to the ground electrode with arc or Cadweld (Exothermic Connection) at a minimum of three points as shown in Figure 10.

Figure 10. Lead Rod and Ground Electrode Weld Details

Each panel vault wall and floor shall be supplied with ground inserts.

Ground inserts shall be accessible internally and externally on vault walls.

The ground insert connector shall be installed flush (neither recessed nor protruding) with the vault wall.

Inserts shall be plugged to prevent contamination from entering threads.

11. Knockouts and Vault Openings

Vaults 7 ft x 12 ft (inside dimensions) and larger shall have two, 42-in-diameter access entries, unless specified otherwise by SCL.

Knockout and duct openings shall be beveled on the exterior surface. Size, shape, quantity, and location of knockouts shall be as specified in the design submittal.

12. Duct Bank Knockout Threaded Inserts (Dowel Inserts)

Panel vaults shall be provide with minimum of four, 1/2-in diameter ferrule-threaded inserts at 12-in on center around the perimeter of each duct bank knockout. These threaded inserts are to allow the duct bank rebar to dowel into the vault wall.

13. Panel Vault Accessories – Requirements

13.1 Cable Pulling Device

Panel vaults shall have cable pulling irons mounted on each corner of the vault and be suitable as anchors for cable pulling operations or as shown in project submittal drawings.

Pulling irons shall be according to the requirements of Table 13.1.

Pulling irons' maximum working tension shall be stenciled on the wall surface near two of the roof pulling irons.

Table 13.1. Pulling Iron Specifications

Pulling Iron Ultimate Strength (lb)	Maximum Working Tension (lb)	Maximum Allowable Tension (lb)	Size (in)	Steel
40,000	20,000	10,000	7/8	Stainless

13.2 Cable Support

Panel vault shall be provided with cast-in galvanized "C" channels for racking. Channels shall measure 1-5/8-in wide (nominal) and be of various depths depending on vault.

13.3 Drainage and Sump

All panel vault floors shall have a 26 in x 51 in blockout to accommodate a rectangular, flanged drop-in sump at one end wall, measuring 44-in long by 18-in (minimum) deep by 14-in wide at the top and 12-in (minimum) wide at the bottom.

Sump shall have a positive mechanical connection to the vault floor to prevent uplift due to hydrostatic pressure from the design water table or the CDF backfill pour.

Panel vaults shall be supplied with galvanized grating for the sump.

The floor shall be sloped to drain toward the sump.

13.4 Lifting Inserts

All metal lifting devices cast into the internal or external surfaces of vaults for handling purposes shall be hot-dipped galvanized or made from stainless steel.

13.5 Ladders

Where a ladder is required, it shall conform to the following requirements:

- Ladders shall be corrosion resistant.
- Ladder shall be made according to SCL drawing D-28304, "Retractable Ladder, Vault and Manhole Access."

Ladder substitution shall be submitted to SCL engineer for approval.

13.6 Joint Sealant and Grout

Joint sealant and grout shall be provided by the vault manufacturer.

Joint grout shall have a compressive strength of 3000 psi at 3 hours.

Vault sections shall be provided with butyl rubber joint sealant material (such as Con Seal CS0101) and fast-setting cement grout (such as Speed Crete Red Line Repair Fast Setting Patching Material or Quikrete Commercial-Grade FastSet Non-Shrink Grout) to be used between all precast sections, including wall, floor, and roof sections; hatch riser rings; and sumps.

14. Metal Doors and Access Cover Plates

All lids, hatches, and frames shall be provided with a grounding site.

14.1 Frames and Covers

All frames and hatch covers shall be designed for at least 26 kips wheel load (HS25 + 30% impact) applied in any direction.

All frames and lids shall have a non-slip surface. Refer to Section 15.

Vaults 7 ft x 12 ft or larger shall have two, 42-in diameter access or other access as shown in project submittal drawings.

The 42-in round cover and frames shall also comply with requirements in SCL 7204.70, "Frames and Covers, 42-in Round, Iron."

14.2 Doors

All doors shall include one 5/8-inch diameter bonding hole located in an underside bearing bar, approximately centered in the door and 2-1/2 to 3-1/2 in from the hinged edge.

All doors shall be designed for at least 26 kips wheel loading (H25 + 30% impact).

Aluminum doors for 36 in x 36 in and 36 in x 74 in opening access shall be designed for at least 26 kips wheel loading (H25 + 30% impact or equivalent H30 + 8% impact).

All steel doors and access cover plates shall be hot dipped galvanized in accordance with ASTM A123.

All equipment doors/hatches used in the Network area shall be of the drop-in/lift-off type. Hinged equipment doors/hatches are not allowed in the Network area.

All doors shall have a non-slip surface. Refer to Section 15.

All doors shall have a locking mechanism, such as a Penta head bolt, to prevent unsolicited access. Locking mechanism shall not protrude above the door surface.

Square or rectangular doors shall open along the lengthwise of the access opening.

15. Non-slip Surfaces

All non-slip surfaces shall have the following properties:

- Minimum coefficient of friction of 0.8
- Bond strength to the plate of 4000 psi or greater
- Surface hardness of 55 minimum on the Rockwell "C" scale

Type of non-slip surface ("S3" for SlipNOT® 3) and the year of manufacture shall be identified on the underside of the door, e.g., "S3 2005." The identification shall be bead welded or clearly stamped into a metal surface on the underside of each lid, or labeled with an adhesive, metallic foil-backed label.

16. Identification

All lids and doors shall be permanently marked with 3-in high letters “Electric” clearly visible on the top where distribution cables occupy the enclosure.

All panel vaults shall have a permanent identification plate installed inside the vault wall. The identification plate shall include the following information:

- Manufacturer name
- Date of manufacture
- Vault design load, e.g., “HS-25”
- Pulling iron capacity

17. Panel Vault Floor Requirements

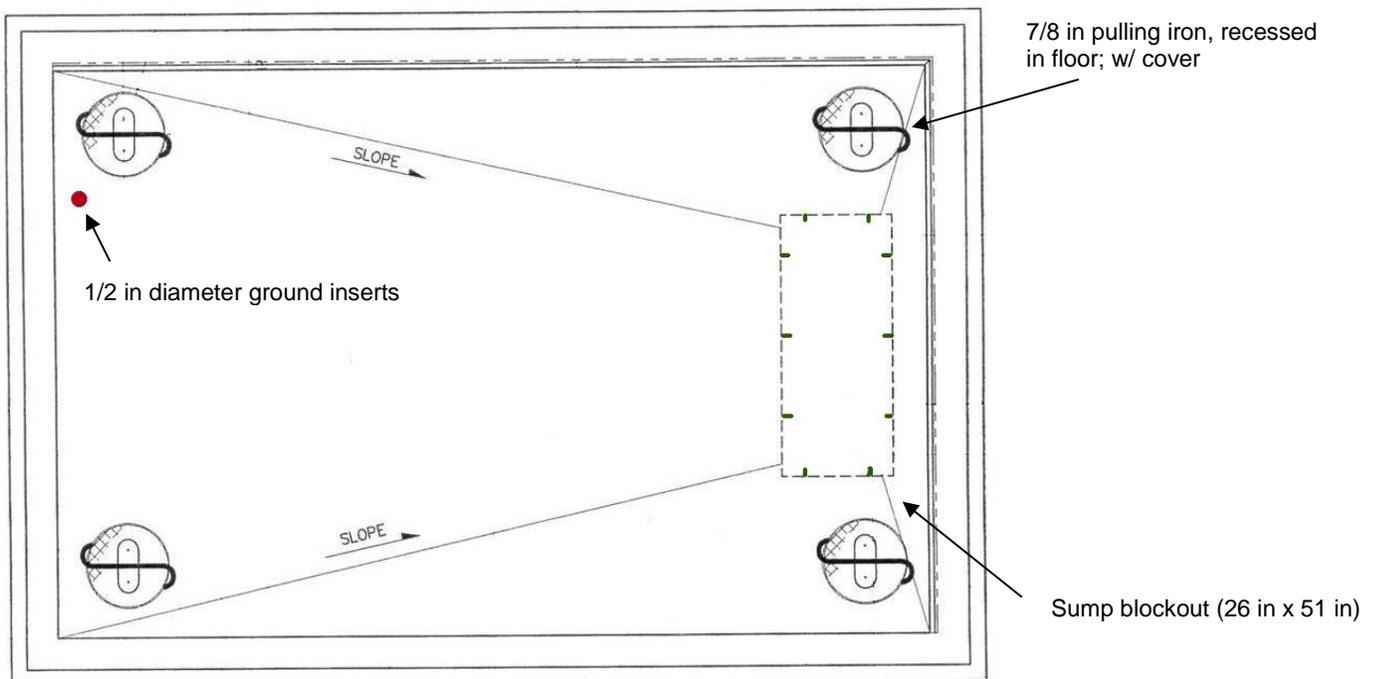

Panel vault floors shall be poured as one piece when possible. If multiple pieces are required, floor pieces shall be mechanically joined.

The 1020 panel vault floor shall be sloped at least 1/2 in per 10 ft along the length of the vault toward the sump. Other panel vault sizes shall be sloped when possible.

Panel shall have the following attributes:

- Blockout for a cast-in-place or precast sump; located 6 inches from inside edge of short wall, at bottom of sloped floor; refer to Section 13.3 and Figure 17
- Pre-casted sump or cast-in sump; refer to Section 13.3
- Pulling iron; one (1) shall be located at each corner of base floor (typical), as required, recessed in floor; one (1) each shall be located below personnel hatch (round)
- Pulling iron cover plate, located over each pulling iron
- Lift anchors; size and location as required by project submittal drawings
- Ground inserts
- Ladder

Figure 17. Panel Vault Floor

18. Panel Vault Wall Requirements

Each wall panel section of the panel vault may have some or all of the following features as specified and approved by SCL engineers. Size and location of each feature shall be as described in project submittal drawings:

- Knockouts – Refer to Section 11
- Pulling Irons - Refer to Section 13.1 and Figure 18.2.
- Cable Supports – Refer to Section 13.2 and Figure 18.2.; Crews prefer channels over racking inserts
- Ground Inserts – Refer to Section 10
- Duct Bank Knockout threaded or Dowel Inserts – Refer to Section 12 and Figure 18.2
- Lift Anchors - Refer to Section 13.4 and Figure 18.2
- Identification Plate – Refer to Section 16.
- Gasket/Grout – Refer to Section 13.6 and Figure 18.2.

18.1 Wall Corner Connection

Locations of all component pieces as required in project submittal drawings. See Figure 18.1.

Recessed, galvanized connection box shall be embedded in edge of wall. See Figure 18.1.

Wall connection insert as well as galvanized threaded rod or coil bolt, nut, channel washer, and flat washer shall measure 1 inch in diameter. If a square washer is used, that dimension shall be 2 inches square, or of a sufficient diameter to accommodate a 1-in bolt.

Figure 18.1. Panel Vault Wall Corner Connection Details

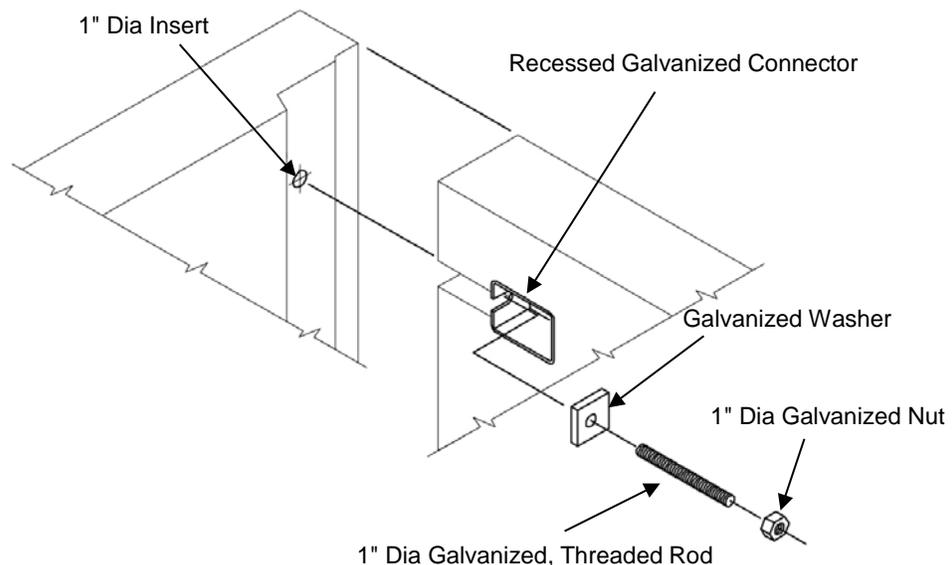

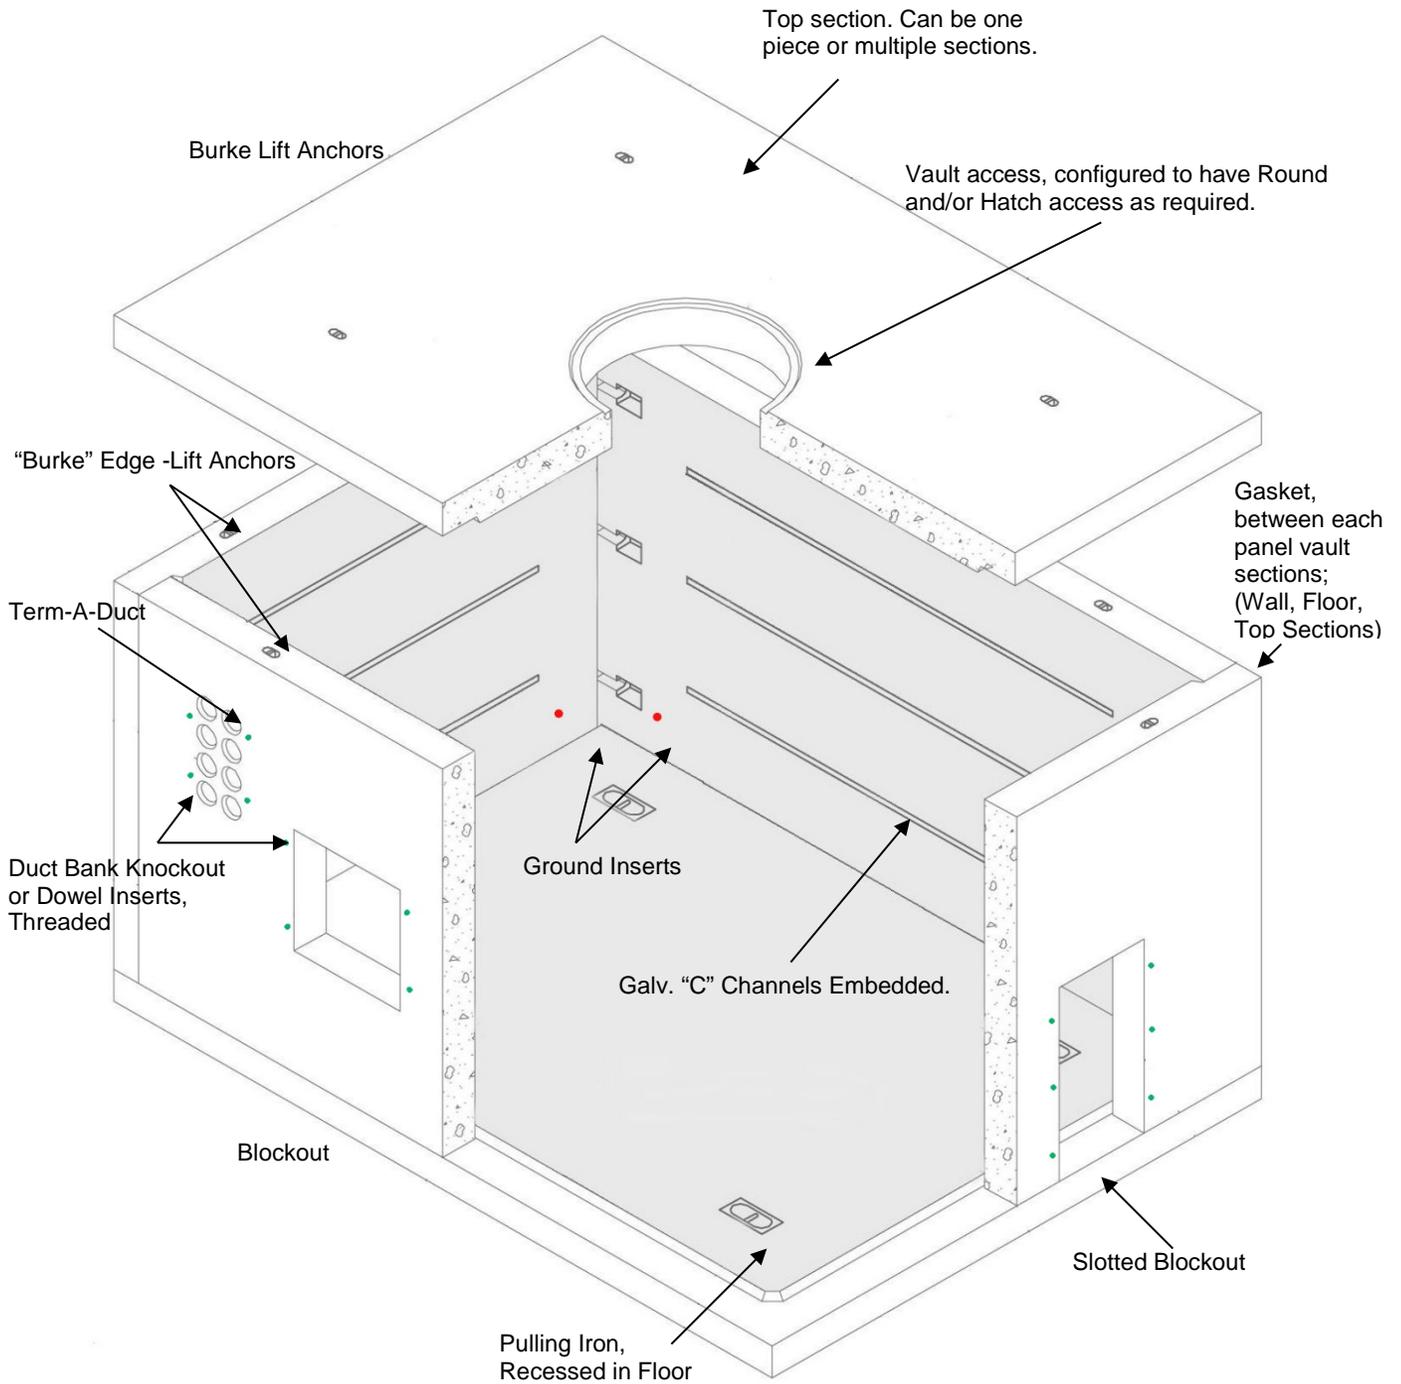

Figure 18.2. Panel Vault Assembly Components

19. Quality Control

Precast concrete vaults shall be manufactured in accordance with ASTM C858.

Vaults may be rejected if they fail to conform to construction and dimensional tolerances specified in ASTM C858.

Vaults may also be rejected if they do not meet SCL 7201.00, "Acceptance Criteria for the Installation of New Precast Concrete Distribution Facilities."

Minor defects that can be repaired in accordance with SCL material standards shall be done in accordance to SCL U2-6/NVH-20, "Inspection and Repair Procedures for Precast Vaults and Manholes."

Prior to panel vault delivery, vault manufacturer may be required to provide information such as concrete mix proportion, type and source of cement, aggregates, admixtures, and reinforcement steel mill certification.

Panel vaults shall be warranted for one year against design and manufacturing defects, including those resulting from poor workmanship and materials.

2. Scope

This standard covers the requirements for the risers and cover slabs used with the electric vaults.

This standard applies to the following Seattle City Light stock numbers:

Stock No.	Description
013105	5-ft x 7-ft x 6-in riser without Galvanized "C" channel
013106	5-ft x 7-ft x 18-in riser with Galvanized "C" channels
013362	5-ft x 7-ft x 24-in riser with Galvanized "C" channels
013107	42-in diameter x 4-in high round riser
013108	42-in diameter x 6-in high round riser
013109	42-in diameter x 12-in high round riser
013110	5-ft x 7-ft cover slab with one 42-in round access opening
013111	5-ft x 7-ft adjustable cover slab with two, H-20, 3-ft x 3-ft solid covers
013353	5-ft x 7-ft cover slab with two H-30 solid covers

Specific requirements shall be according to the detailed material standard and Purchase Order issued subsequent to competitive solicitations.

3. Application

Risers and covers slabs are parts of a vault assembly used in the construction of underground electric system. The risers are used to bring the access opening of the vault to the surface of the grade. The cover slabs are used to transition from a larger opening of the vault to the appropriate access opening for surface access.

Depending on the application, the vault may need to be customized with different cover slabs; and depending on the depth of the vaults, various risers may be require to bring the access entry to surface grade.

4. General Requirements

This detailed standard is to be used in conjunction with the latest version of SCL 7203.21, "Precast Reinforced Concrete Structures – General."

5. 5 ft x 7 ft Riser

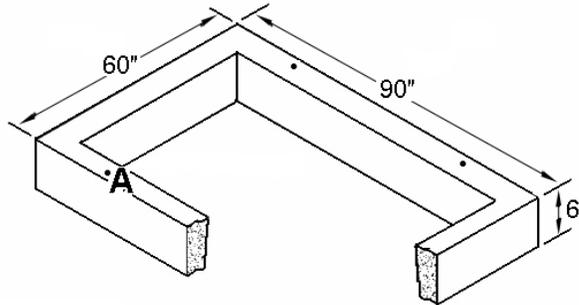

5.1 Dimensions

Five-foot by seven-foot risers shall be constructed according to the dimensions shown in Table 5.1.

Table 5.1. 5-ft x 7-ft Riser Dimensions

Stock No.	Riser Dimensions, nominal (in)					Fig. No.
	Wall, Outside		Access Opening			
	Length	Width	Length	Width	Height

Lift Inserts	013105	3/4 dia	2 on the top of riser, along length side	2 ea side	4
	013106	3/4 dia	2 on long wall above the channels, 1 at each end of long wall	2 ea side	4
	013362	3/4 dia	2 on the top of riser, along length side	2 ea side	4

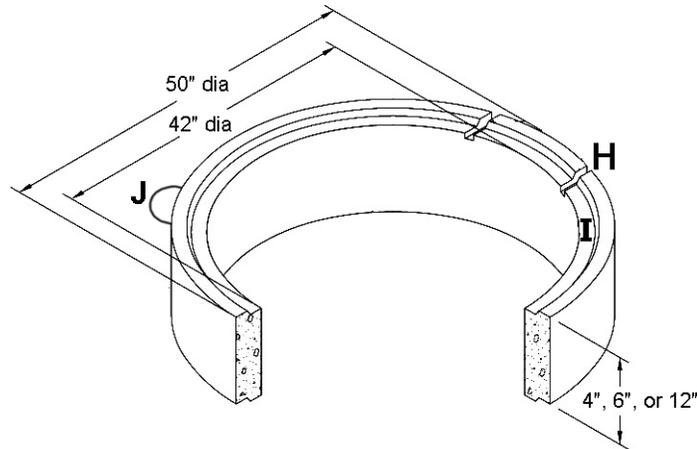

6. 42-in Round Riser

6.1 Dimensions

Table 6. 42-in Round Riser Dimensions

Stock No.	Riser Dimensions, nominal (in)		Height	Fig. No.
	Wall Outside Diameter	Wall Inside Diameter		
013107	50	42	4	6
013108	50	42	6	6
013109	50	42	12	6

Figure 6. 42-in Riser

NOTES:
 H = recessed ladder rung grooves
 I = 42-in diameter keyway
 J = wire lift loops, 3 evenly spaced

6.2 Attributes

All 42-in risers shall have two recessed ladder rung grooves, as shown in Figure 6.

All 42-in risers shall have three (3) wire lift loops.

Wire lift loops shall be equally space apart around the perimeter of the riser; positioned 120 degrees apart.

Wire lift loops on 6-in and 12-in risers shall be parallel with the riser's top surface.

Ends of wire lift loops on 4-in risers shall be even with the riser's top surface.

7. Cover Slabs

7.1 Dimensions

All cover slabs shall have overall dimension of 5 ft-2 in x 7 ft-6 in, as indicated in Table 7.

All cover slabs shall have a 3/4-in lift insert at each corner on the top, as shown in Figure 7.1.

Caps shall be provided to cover the lift inserts.

Table 7. Cover Slab Dimensions

Stock No.	Cover Slab Overall Dimensions, nominal (in)			Blockout Opening (in)	Lids and Hatches	Fig. No.
	Length	Width	Thickness			
013110	90	62	6	42 diameter round	-	7.1
013111	90	62	8	72 x 36	Two 3 ft x 3 ft, non-slip, H-20, solid covers	7.2
013153	90	62	8	74 x 34	Two non-slip, H-30, solid covers	7.3

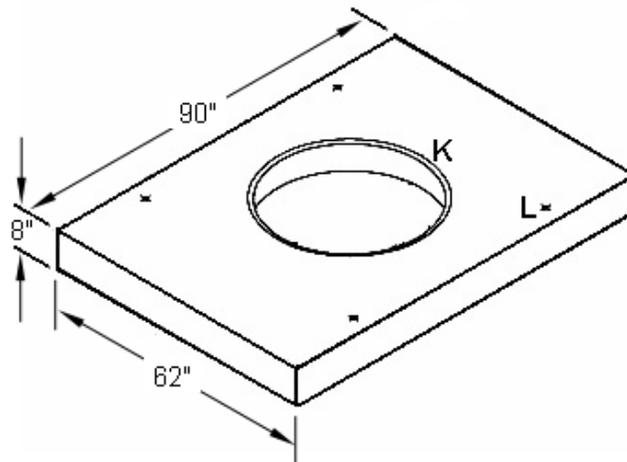

7.2 Attributes, 5 ft x 7 ft Cover Slab with 42-in Blockout Opening (Stock No. 013110)

Cover slab shall have a keyway all around the perimeter on the bottom of the cover slab, as shown in Figure 7.1.

Cover slab shall have a 42-in blockout opening to allow for 42-in risers.

Cover slab shall have a keyway around the top of the 42-in opening to allow for proper joint with 42-in risers.

Figure 7.1. 5-ft x 7-ft with 42-in Round Block-Out Cover Slab

NOTES:

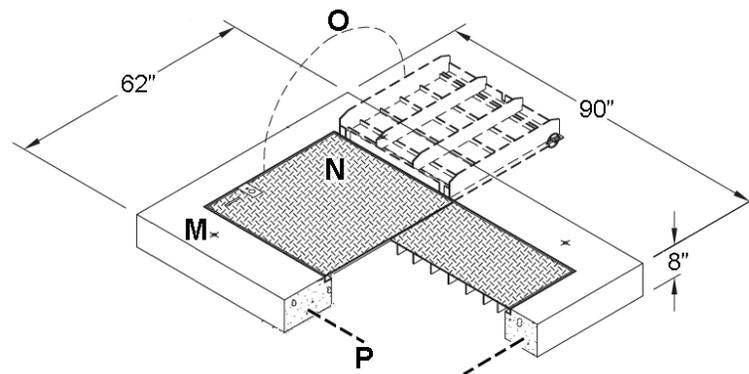

- K = 42-in diameter keyway for 42-in riser
- L = 3/4-in lift insert, 4 places on top with caps

7.3 Attributes, 5 ft x 7 ft Adjustable Cover Slab, H-20, Non-Slip Solid Covers (Stock No. 013111)

Cover Slab shall have a 72-in x 36-in blockout opening.

Cover slab shall include frame with two 3-ft x 3-ft, H-20, non-slip covers, as shown in Figure 7.2.

Figure 7.2. 5-ft x 7-ft Adjustable Cover Slab, H-20, Non-Slip Solid Covers

NOTES:

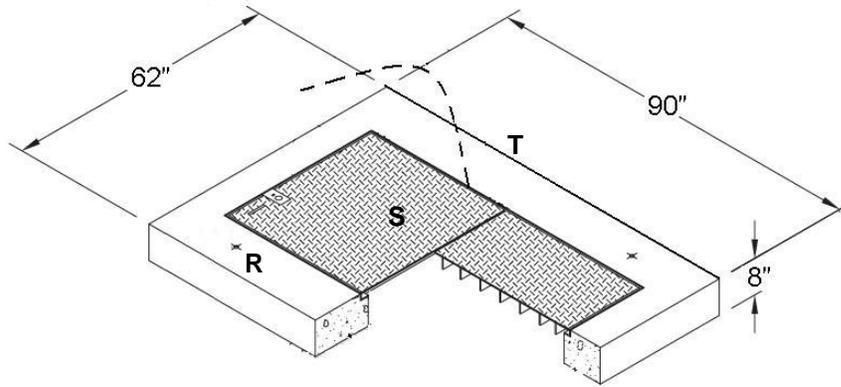

- M = 3/4-in diameter lift insert, 4 places in top with caps
- N = Non-slip solid covers with locking latch
- O = Opens full 180 degrees. All hinges for the lids shall be along the length of the cover slab.

7.4 Attributes, 5-ft x 7-ft Cover Slab, H-30, Non-Slip Solid Covers (Stock No. 013153)

Cover Slab shall have a 74-in x 36-in blockout opening.

Cover slab shall include frame with two 37-in x 36-in, H-30, non-slip doors, as shown in Figure 7.3.

Figure 7.3. 5-ft x 7-ft Cover Slab, Two 3-ft x 3-ft, H-30, Non-Slip Solid Covers

NOTES:

R = 3/4-in diameter lift insert, 4 places in top with caps

S = Non-slip solid covers with locking latch

T = Opens full 180 degrees on the short end; butterfly style

SCL Material Standard 7203.21; "Precast Reinforced Concrete Structures – General,"
June 2012

MATERIAL STANDARD

HATCH ASSEMBLY, SIDEWALK TYPE 4' 6" x 8' 0" OPENING FRAME - GRATING - PRECAST SLAB

1. Scope

This specification covers a hatch assembly consisting of Frame, Grating and Precast Slab.

2. General

Frames, Gratings and Slabs shall be fabricated true to form and in a plane to prevent rocking of the integral assembly. Top surfaces of all units shall be flush when assembled.

3. Fabrication

Fabrication shall be done in a neat and workmanlike manner. All welding shall be performed in accordance with AWS "Standard Code for Arc and Gas Welding in Building Construction." Welds on mating surfaces between frames, gratings and slabs shall be flush.

4. Finish

After fabrication and welding, all slag and rough or sharp edges shall be removed. Except for the reinforcing bar, the whole assembly shall be sand-blasted in accordance with SSPC SP7 and painted with two coats of black gilsonite base paint, meeting the requirements of Federal Specification TTV-51.

5. Inspection and Rejection

Inspection may be made either at the manufacturer's plant or upon receipt, at the option of the purchaser. Failure to meet any of the requirements of this specification will be cause for rejection.

Reference Specifications: AWS Code for Arc and Gas Welding in Building Construction; SSPC SP7; Fed. Spec. TTV-51; ASTM A 36, latest revisions.

MATERIAL STANDARD

GRATING, HATCH SIDEWALK TYPE 4' 10-5/8" x 4' 10-5/8"

1. Grating shall be Gary Type SSGW-125, or equal.
2. Steel shapes shall be in accordance with ASTM A 36.
3. Safe concentrated load: 850 lbs.
Safe uniform load: 375 lbs. per square foot.

Stock No. 720550

MATERIAL STANDARD**FRAMES AND COVERS, 42-INCH ROUND, IRON****1. Foreword****1.1 Scope**

This material standard covers the requirements for 42-inch round, iron, frames and covers.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Description	Load Rating (Minimum)
720226	cover, vented	H-20
720466	cover, solid	H-20
720461	frame, 4-lug	H-20
012753	frame, 8-lug	H-25

1.2 Application

Frame and cover assemblies are used to construct the means for entering and exiting underground vaults located in pedestrian sidewalks, side streets, or arterials and highways.

Vented covers are for use with vaults that meet any one of the following conditions, unless provisions are made for separate ventilation:

- Require special ventilation
- Contain more than 75 kVA of transformer capacity

Solid covers are for use with vaults that meet any one of the following conditions:

- Do not require special ventilation
- Contain 75 kVA or less of transformer capacity
- Where higher security is desired
- Where debris falling into the vault may be a concern
- Where a minimum load rating of H-25 is required

H-10 rated frames and covers are only for use in pedestrian sidewalks where motor vehicle access is not possible.

STANDARDS COORDINATOR

John Shipek

STANDARDS SUPERVISOR

John Barnett

UNIT DIRECTOR

John Nierenberg

1.2 Application, continued

H-20 rated frames and covers are for use in pedestrian sidewalks where an occasional car or light truck may inadvertently traverse, or side streets that see only light truck traffic; garbage trucks are not considered light trucks.

H-25 rated frames and covers are for use in arterials and highways that see frequent, heavy traffic from trucks and buses.

H-30 rated frames and covers are for use at heavily-used bus stops, or where repetitive, impact, and sustained loading (plus horizontal loading due to braking) is present.

For the purposes of this standard, H-20 may be considered equivalent to HS-20; H-25 may be considered equivalent to HS-25. AASHTO HB-17, Division I, Section 3.7, defines H loading as a two-axle truck and HS loading as tractor truck with semi-trailer.

AASHTO HB-17, Division I, Section 3.8, defines wheel loading in detail. Wheel loading classes above or below H-20 are calculated by simple ratio. For example,

$$\begin{aligned} \text{if, H-20 wheel loading} &= 32,000 \text{ pounds} \\ \text{then, H-25 wheel loading} &= 25/20 \times 32,000 \text{ pounds} \\ &= 40,000 \text{ pounds} \end{aligned}$$

Previous versions of this standard denoted H-25 as H-20+.

Four-lug (H-25) frames are no longer manufactured – cancelled Stock Number 720465 is retained here for record keeping and possible returns to Stores. Engineers should specify the 8-lug (H-25) frame for new designs.

1.3 Industry Standards

Frames and covers shall meet the applicable requirements of the latest revisions of following industry standards:

AASHTO HB-17 - American Association of State Highway and Transportation Officials Standard Specification for Highway Bridges, 17th Edition, 2002

ASTM A 48 - Standard Specification for Gray Iron Castings

ASTM A 536 - Standard Specification for Ductile Iron Castings

1.4 References

Federal Specification RR-F-621E, February 23, 1989 - Frames, Covers, Gratings, Steps, Sump and Catch Basin, Manhole

ASTM C 857-1995 – Minimum Structural Design Loading for Underground Precast Concrete Utility Structures

2. Construction**2.1 General**

Unless stated otherwise in this standard, dimensional tolerances shall be +/- 1/16 inch, and an additional tolerance of +/- 1/16 inch per foot of dimension.

Finished product shall be free of blowholes, splits, cracks, blisters, mold-pull, sharp edges, and other imperfections that may impair serviceability or pose a hazard.

2.2 Frame and Cover Assemblies

Notwithstanding allowed dimensional tolerances, all frames and covers of the same nominal size shall assemble interchangeably.

Any cover placed in a matched frame shall seat without rocking.

The difference in level between a cover and a matched frame shall not exceed 1/8 inch at any point, and shall not exceed 1/16 inch over a total of more than one quarter of the frame perimeter.

Side play between a cover edge and a matched frame shall not exceed 1/8 inch per foot of diameter.

2.3 Frames

Frames shall be gray cast iron produced according to ASTM A 48, Class 30B (minimum).

Frames shall meet the dimensional requirements of Figures 2.3.1 and 2.3.2.

Figure 2.3.1

4-Lug Frame, H-20
Stock Number 720461

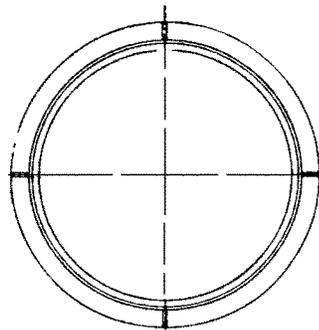

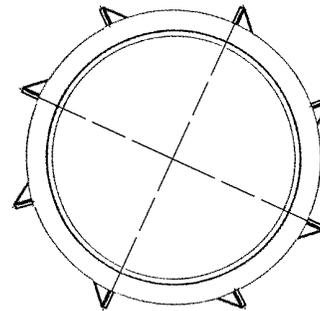

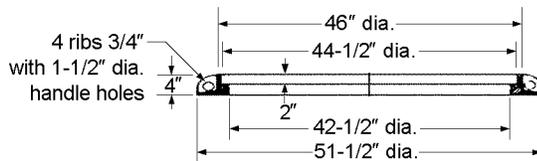

Figure 2.3.2

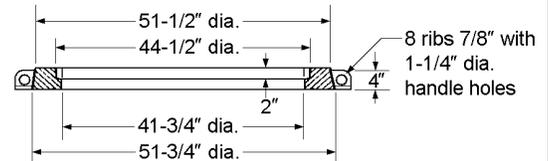

8-Lug Frame, H-25

Ring Top View

Ring Section

Ring Section

2.4 Covers

Covers shall be ductile cast iron produced according to ASTM A 536, Grade 80-55-06.

Covers shall meet the dimensional requirements of Figures 2.4.1 and 2.4.2.

Solid covers shall be manufactured with a safety tread design.

The word "ELECTRIC" shall be cast in the center of each solid cover and along the edge of each vented cover.

Each cover shall have a minimum of six, equally-spaced, 7/8 inch diameter holes for lifting.

The bottom center of each cover shall be provided with a spin ring that extends at least 1-1/2 inches below the underside of the outside edge.

The center of each cover shall have one 1/2 inch, UNC-series threaded hole for a lifting eye bolt.

A plug shall be provide to protect the 1/2 inch, UNC-series threaded hole from debris and normal wear.

Each vented cover shall have at least 500 square inches of clear opening for ventilation.

CABINET – TERMINATING FOR 26 KV LOADBREAK JUNCTIONS

This specification covers Terminating Cabinets for mounting two-, three-, or four-position 25-kV-class loadbreak junctions that include their own adjustable mounting brackets. The cabinets shall meet the physical dimensions listed and the following minimum requirements.

CABINET: The cabinet door shall be a "lift-up" design and shall include a door stop. It shall be all welded construction with welds ground smooth and fully assembled. The cabinet shall meet the security requirements of ANSI C57.12.28, including a corrosion-proof penta head security bolt and a recessed padlocking provision. The roof shall be designed to shed water. Cut edges shall be free of burrs.

MATERIAL: Cabinet: 12-gauge 304 Stainless Steel

Mounting Channel: 12-gauge 304 stainless steel, full cabinet width, as dimensioned above. It shall include four 5/8" min. holes with four 1/2" - 13 stainless steel nuts welded to the back side for the purpose of mounting junctions. The channel shall be intermittent welded 6"-6" T&B, minimum, to cabinet.

Hinges Locking Mechanism, and Other Hardware: Stainless Steel

FINISH: The finish paint shall meet ANSI C57.12.28, Section 5. The color shall be MUNSSELL GREEN 7GY3.29/1.5 or reasonable variation with prior approval.

GROUNDING BOSS: Two 1/2" - 13 stainless steel grounding nuts shall be welded to the cabinet 4" ± 1" above the base and from the end walls.

PLACARD MOUNTING: For the purpose of attaching switching/clearance cards unique to Seattle City Light, the cabinet shall include either (a) two 1/4" - 20 X 1/2" stainless steel "Nelson" type studs, or (b) two 1/4" - 20 stainless steel bosses welded to the cover as shown. The studs or bosses shall be 29/4" apart and approximately 4" ± 1/2" from the hinged edge.

SUGGESTED SUPPLIERS: Continental Columbus; Cooper Power Systems; Durham; Electrical Equipment; Malton; Reliable.

CABLE CLEAT AND LINER

1. Scope

This standard covers the requirements for cable cleats and liners.

This standard applies to the following Seattle City Light stock numbers:

Stock Number	Description
013428	Cleat
013429	Cleat liner for 15 kV, 1000 kcmil, 3-1/C cable

2. Application

Cable cleats (with liners) are used to cushion electric power cables from magnetic forces arising during fault currents. Cable cleats are also used to protect cables from chafing in areas subject to recurring vibration.

Cleat liner, stock number 013429, is designed to fit Seattle City Light's 15 kV, 1000 kcmil, 3-1/C primary cable, stock number 623670.

A complete assembly requires one cleat and one cleat liner. A particular assembly is not range taking.

Cable cleats should not be solely relied upon to provide vertical support of cable. For vertical support of heavy cable, use weave-style grips.

Refer to manufacturer's website (www.kvastrategies.com) for recommended cleat spacing and ratings for withstanding short-circuits.

3. Requirements

3.1 General

Operating temperature range, degrees F -40 to 140

3.2 Cleat

Figure 3.2, Cleat

Frame material	Marine grade, non-magnetic 316L stainless steel
Frame material dimensions, mm	50 x 2
Closure hardware	Captive 316 stainless steel M12 bolt and Nyloc nut
Mounting bolts	One or two 3/8-inch diameter bolts (not included)

standards coordinator	standards supervisor	unit director
 John Shipek	 John Shipek	 Darnell Cola

3.3 Cleat Liner

Figure 3.3, Cleat Liner

Liner material low smoke and fume, zero-halogen polymer

4. Packaging

Cable cleats and liners shall be packaged to prevent damage during shipping, handling, and inside storage.

Individual packages shall be legibly marked with:

- Manufacturer's name
- Manufacturer's catalog number
- Product description
- Quantity contained
- Seattle City Light's stock number

HOOKS, CABLE RACK, STEEL

1. Construction

Cable Rack Hooks, or supports, shall be fabricated from hot-rolled carbon steel strip conforming to ASTM Specification A 425.

The surface of the hooks shall be smooth and free of imperfections to protect the cable from damage. The interlock of the hook shall fit snugly in the rack to provide a rigid support for the cable.

The hooks shall be galvanized after fabrication in accordance with ASTM Specification A 153.

2. Industry Standards

ASTM A 425 - Specification for Hot-Rolled Carbon Steel Strip, Commercial Quality

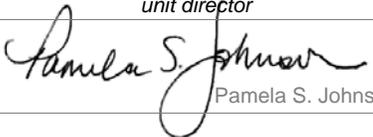

ASTM A 153 - Standard Specification for Zinc Coating (Hot-Dip) on Iron And Steel Hardware

PORCELAIN ENAMEL NAMEPLATES

COLOR DESCRIPTION		
	PEI	FED. S
YELLOW	7	23785
RED	12	11105
BLACK	28	17038
WHITE	1	17875

GENERAL: Porcelain enamel nameplates shall be manufactured in accordance with Porcelain Enamel Institute Standard PEI: S-100, latest revision.

PLATES: 20 gauge enameling grade sheet iron shall be of the dimensions shown in the details above and as indicated in the purchase order. Each plate shall have four holes 3/8" in diameter located as shown in the typical mounting hole arrangement above. The holes shall be drilled or punched before enameling. The four corners of the plates shall be rounded off to 1/2" radius.

GROMMETS: After enameling, each hole in the plates shall be equipped with a vinyl grommet, Walsco Cat. 7034, or equal, with 1/4" I.D. for 3/8" mounting hole.

LETTERING: Letters and numerals shall be U.S. Bureau of Public Roads Standards, Series "C" and size shown above and as indicated in the purchase order. All lettering, except that of Detail "D" and "F" shall be black on a yellow background. Lettering of Detail "D" and "F" shall be white on a red background.

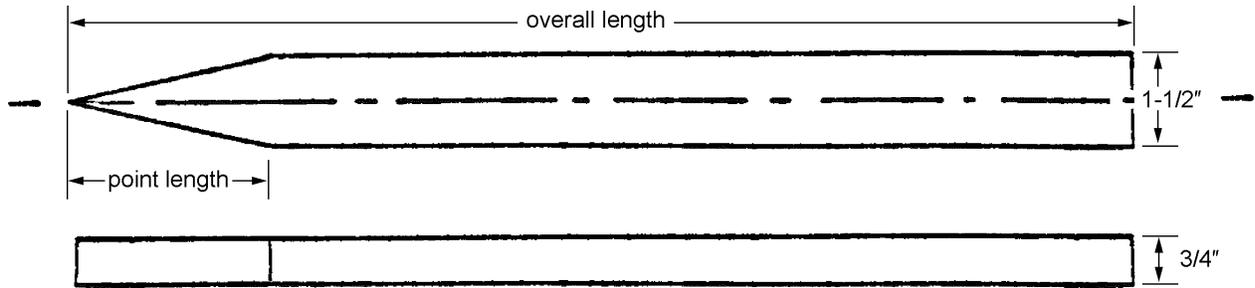

COLORS: Colors shall be in accordance with Porcelain Enamel Institute color standard PEI: CG-1 and designated: yellow PEI-7, red PEI-12; black PEI-28; white PEI-1.

Survey and Construction Marking Spray Paint

1. Scope

This standard covers the requirements for water and solvent-based, air-drying paint dispensed in inverted spray cans.

2. Application

Paint shall be suitable for use on soil, grass, gravel, asphalt, concrete, wood, and metal for marking underground facilities, warning of construction site hazards, surveying, and other inverted spray uses.

Solvent-based Stock No. 013005 should be used only in situations where long-lasting durability is required.

Asphalt black, Stock No. 724782, is used to spray over other colors.

3. Requirements

Cans shall be designed for inverted spray application.

Individual cans shall have a nominal net weight of 20 oz consisting of approximately 17 oz of pigment and 2 oz of propellant.

Paint shall be formulated to dry within 15 minutes under normal conditions.

Products shall be hexane-free.

4. Marking

Cases shall be marked with manufacturer's name, product description, color, and Seattle City Light's stock number.

Standards Coordinator
Brett Hanson

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

5. Packaging

Paint shall be packaged 12 cans per case.
Individual cases shall contain only paint of the same color.

6. Shipping

Paint shall be shipped in whole cases only.

7. Issuance

MATERIAL STANDARD

COMPOUND, OXIDE INHIBITING AND LUBRICATING (No Grit)

Scope: This specification covers an oxide-inhibiting compound free of all abrasive materials for use on aluminum-to-aluminum and aluminum-to-copper flat-to-flat surfaces, such as bus-to-bus and terminal pad-to-bus connections.

Network Area: *This is the only recommended flat to flat compound to use in the Network.*

Compound: The compound shall be a petroleum-base compound that acts to dissolve aluminum or copper oxide films, promote low-resistance joints, and seals the contact surfaces against moisture and further oxidation. The compound shall remain stable under the heat-cycling test conditions of EEI publication TJD-162. The dropping point shall not be less than 65° C (150° F) when tested in accordance with ASTM D-566 and shall retain film strength to a minimum of 90° C and (194° F).

Grit: The compound shall **not** contain any metallic, abrasive, or grit particles of any kind.

Packaging: The compound shall be supplied in 8-oz., round or oval, plastic dispensing containers. (Generally packaged with ten 8 oz. containers to a carton.)

Reference Specification: EEI TJD 162, ASTM D-566

Stock Unit: EA

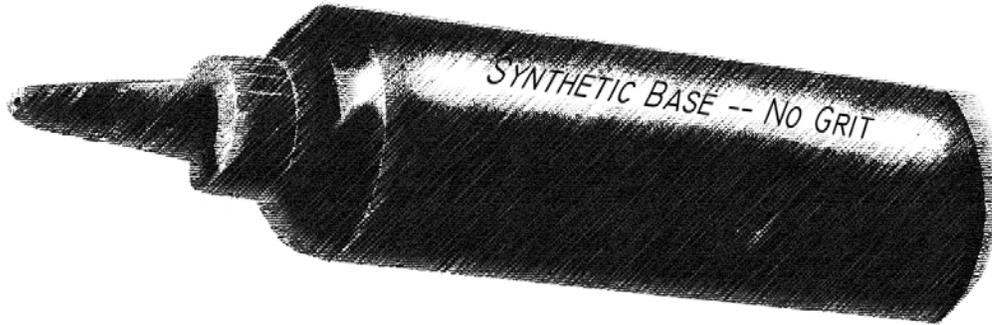

Stock Number: 726182

Approved Manufacturers: Alcoa - Alcoa No. 2 EJC

MATERIAL STANDARD

**COMPOUND
 OXIDE-INHIBITING
 SYNTHETIC BASE - NO GRIT**

Scope. This specification covers an oxide-inhibiting compound intended to be used on aluminum-to-aluminum and aluminum-to-copper; **cable-to-joint, flat-to-flat, and sliding surfaces.** The compound shall effectively lower contact resistance, seal out moisture, and be compatible with cable insulations.

Compound Carrier. The compound carrier shall be **synthetic base** (non petroleum) compound that is compatible with rubber, PVC, and polyethylene cable insulations. It shall be nontoxic and shall not harm linemen's leather and rubber goods, and when soiled clothing is laundered, no residual stains shall remain. The carrier shall be insoluble in water and noncorrosive to aluminum, copper, tin, zinc, and silver. It shall effectively seal electrical joints and surfaces against oxidation and corrosion and shall remain stable under the heat cycling test conditions of EEI-NEMA TDJ-162. The maximum pour point (the lowest temperature at which the compound is required to flow) shall be 0° F (-8° C) when tested in accordance with ASTM D-97. The minimum dropping point (the temperature at which the compound passes from a semisolid to a liquid) shall be 350° F (177° C) when tested in accordance with ASTM D566.

Metal Particles. The compound shall **not** contain any conductive or abrasive particles of any kind that may impair or abrade the contact surfaces.

Packaging. The compound shall be supplied in 8* or 10[¥] oz. round or oval plastic dispensing containers.

**CLEANER, ELECTRICAL INSULATION
(REPLACEMENT FOR 1,1,1-TRICHLOROETHANE)**

1. This **Electrical Insulation Cleaner** is intended primarily for cleaning electrical cables in the process of making electrical splices and terminations. It may also be used as a general purpose cleaner/degreaser for cleaning electrical and mechanical parts.

This cleaning solvent must be a safe to use halogen-free colorless dielectric liquid. This solvent must contain no known ozone-depleting chemicals and not adversely affect the environment. It may contain petroleum distillates. It must effectively remove greases and oils from solid surfaces and be compatible with all plastic and rubber cable insulations. Test reports from manufacturers of underground electrical cable, connectors, and terminators are required.

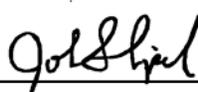

2. **Dielectric Strength:** When tested by ASTM D877 method (100 mil gap), the cleaner shall show a voltage withstand of at least 35 kV before breakdown.
3. **Toxicity and Combustibility:** This cleaner must contain no suspected carcinogens, teratogens or mutagens. Saturated wipes shall have no flash point and shall be non-flammable. Flash point of liquid products must be 140° F minimum (closed cup method) and boiling point must be 365° F minimum. Products must be classified under the RCRA as “non-hazardous” and must be classified as “non-flammable” or “combustible” by the DOT and OSHA.
4. **Directions:** Clean surfaces per instructions found on product container labels. Wipe surface with dry lint-free wipe after cleaning to speed evaporation. Wiping on top of the semiconducting insulation shield is not recommended.
5. **NOTE:** The products in quart and 5-gallon containers will evaporate much more slowly than 1,1,1-trichloroethane, typically slightly slower than water. However, the products are 100% volatile and will completely dry.
6. **Approved Manufacturers**

MATERIAL STANDARD

OXIDE-INHIBITING COMPOUND SYNTHETIC BASE - WITH GRIT

Scope. A compression joint compound for aluminum cables in aluminum connectors and copper cables in aluminum connectors, which is compatible with cable insulation and effectively lowers contact resistance and seals out moisture.

Compound Carrier. The compound carrier shall be a **synthetic base** (non petroleum) compound that is compatible with rubber, PVC, and polyethylene cable insulations. It shall be nontoxic and not harm linemen's leather and rubber goods, and when soiled clothing is laundered, no residual stains shall remain. The carrier shall be insoluble in water and noncorrosive to aluminum or copper. It shall effectively seal electrical joints against oxidation and corrosion and shall remain stable under the heat cycling test conditions of EEI-NEMA TDJ-162. The maximum pour point (the lowest temperature at which the compound is required to flow) shall be -20° F (-29° C). The minimum dropping point (the temperature at which the compound passes from a semisolid to a liquid) shall be 500° F (260° C). The pour point and the dropping point shall be determined in accordance with ASTM D-97 and D-566.

Metal Particles: The compound shall contain **conductive metal particles**, harder than aluminum (zinc, stainless steel, or nickel), whose function is to break through the oxide film on the contact surfaces, provide greater current-carry "bridges" and aid gripping of the conductor for better mechanical integrity.

Packaging: 8-ounce round or oval plastic dispensing containers. City Light would prefer (not require) that the inside diameter of the neck of the container, with the cap removed, be approximately 1-1/4" so that the container will slide over 750 kcmil cable.

MATERIAL STANDARD

LUBRICANT, CABLE-PULLING

1. **General:** Cable-pulling lubricant is used to provide maximum tension reduction in high stress electrical and communications cable pulling operations. It shall be polymer/water-based and have the consistency of a gel, except that the pourable version shall be a gel with a lower viscosity making it easy to pour or pump.
2. **Compatibility with Cable and Conduit:** It must have no effect on any type of cable insulation or jacket, including rubber, neoprene, lead, PVC, nylon, and polyethylene, including cross-linked polyethylene (XLP) and low density polyethylene (LDPE). Product must have been tested for effect on cable tensile strength after immersion.
 It must have no effect on semiconducting cable jackets or shields. Product must have been tested for resistance levels in accordance with ICEA T-25-425, NEMA WC 5, and NEMA WC 7.
 It must not cause stress cracking of polyethylene. Product must have been tested in accordance with ASTM D 1693.
 Product must have been tested and approved by a number of major cable manufacturers for compatibility with insulation and semiconducting jackets. Test reports are required. Product must be UL listed as a wire pulling compound.
 It shall have no adverse effects on hardware or any conduit, including steel, galvanized steel, aluminum, copper, PVC, and ABS.
3. **Properties:** It must have no significant soap, free alkali, or free acid content. The pH must be within the range of 5.0 to 8.5. The product may leave a slippery film but must not cause any locking or cementing of cable to conduit. Product must be suitable for a temperature range of 28° F to 110° F during application.
4. **Safety:** It must be non-toxic. It shall have no more than a mild, inoffensive odor. It shall be noninjurious to skin and to rubber or leather gloves. It shall not stain clothing nor, when dried on clothing, leave any residue that may appear offensive to personnel. It shall be easily cleaned from clothing with soap and water. It shall be non-flammable and non-combustible.
5. **Markings:** Each container shall bear the manufacturer's brand name.
6. **Reference Standards:** ICEA T-25-425; NEMA WC 5; WC 7; ASTM D 1693; latest revisions.

SULFUR HEXAFLUORIDE**1. Scope**

This specification applies to sulfur hexafluoride for use as an electrical insulating gas.

2. Applicable Documents

ASTM Standards:

- D1070 Test Methods for Specific Gravity (Relative Density) of Gaseous Fuels
- D2029 Test Methods for Water Vapor Content of Electrical Insulating Gases by Measurement of Dew Point
- D2284 Test Method for Acidity of Sulfur Hexafluoride
- D2472 Standard Specification for Sulfur Hexafluoride
- D2685 Test Method for Nitrogen and Carbon Tetrafluoride in Sulfur Hexafluoride by Gas Chromatography

3. Detail Requirements

Sulfur Hexafluoride for use as an electrical insulation material shall conform to the requirements prescribed in Table 1.

4. Sampling

All sampling for the test methods listed in Section 5 shall be with the cylinder inverted; that is, the cylinder valve shall be lower than any other portion of the cylinder. This will allow liquid phase delivery from the cylinder.

5. Test Methods

- 5.1 Water Content - Test Method D2029.
- 5.2 Hydrolyzable Fluorides - Determine the acidity, expressed as HF, in accordance with Test Method D2284.
- 5.3 Air - Determine the amount of noncondensable gases, expressed as nitrogen, by gas chromatographic analysis in accordance with Test Method D2685.
- 5.4 Carbon Tetrafluoride - Gas chromatographic analysis in accordance with Test Method D2685
- 5.5 Molecular Weight - Test Method D1070.
- 5.6 Toxicity - The Underwriters' Laboratories criterion for acceptance in Group VI as follows: Guinea pigs should not appear to have injury when exposed for 2 hours to a gas concentration of 20% volume in air.
- 5.7 Assay - Assay shall be by difference, after impurity content has been determined.

ROPE, SYNTHETIC FIBER

Scope: This specification covers heavy-duty synthetic fiber rope, to be used for pulling lines, hand lines, bull lines, capstan work for stringing conductor, hoisting transformers, and general purpose, heavy-duty utility work.

Description:

1. Three-strand, twisted, standard right-hand lay.
2. The rope shall be made of a combination of monofilament and multifilament polyester (polyethylene terephthalate), and polyethylene and polypropylene (olefins) fibers.
3. The basic color of the rope shall be white (except 1/4" barrier tope 727230).

Characteristics: The rope shall have good abrasion resistance, high dielectric strength, a low-moisture absorption rate, and be impervious to rot, mold, mildew, and fungus growth. The rope shall also be inert to most chemicals, including acids, alkalies, and organic solvents.

Packaging: The rope shall be put up on reels with a minimum of 1,200 feet unless otherwise specified on the purchase order. Each length shall be continuous throughout, containing no splices, hockles, kinks, or loose ends. The ends of the rope shall be secured to prevent fraying or unlaying of the strands.

Specification:

Stock Number	Rope Dim. (Approx.)		Lbs. Per 100 Feet **Density	Avg. Break Strength, Lbs.	Recommended Working Load, Lbs.	Lay
	Dia., In.	Circ., In.				
727230*	1/4	3/4	1.2	1050	105	—
727232	7/16	1-1/4	4.9	3900	390	Medium
727233	1/2	1-1/2	7.5	5400	600	Medium
727234	3/4	2-1/4	13.2	9800	1400	Firm
727239	1	3	24.2	17000	2428	Firm

* Stk. No. 727230 - 1/4" barrier rope **shall be yellow with one strand of black** and may be monofilament polypropylene.

** A specification sheet indicating all of the above specifications, or a letter of compliance to the above specifications, and a description of the makeup of the rope; i.e., polyester, polypropylene, or polyethylene fiber construction shall accompany each bid. At time of receipt, acceptance of material shall be subject to verification of compliance to the pounds-per-100-feet requirement. Material found to be less than 95% of the table value shall be rejected and replaced at no cost to Seattle City Light.

Steel Alloy Chain, Grade 100

1. Scope

This standard covers Grade 100, heat-treated, alloy steel chain.

This standard applies to the following stock numbers:

Stock No	Size, nominal (in)	Working Load Limit (lb)
726918	9/32	4300
726934	3/8	8800

2. Application

Steel alloy chain is used for applications such as slings and lifting assemblies. It is not appropriate for continuous motion applications.

Stock No. 726934 must be cut by the Steel Shop. Please notify the warehouse at least two hours prior.

3. Industry Standards

Steel alloy chain shall meet the requirements of the following industry standard:

ASTM A973/A973M; Standard Specification for Grade 100 Alloy Steel Chain; 2007 (reapproved 2012)

Standards Coordinator
Kathy Tilley

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

4. Requirements

Steel alloy chain shall conform to the requirements described in Table 4.

The diameter of the material from which the chain is manufactured shall not be smaller than the material diameter listed in Table 4 within -3% tolerance.

Table 4. Requirements for Steel Alloy Chain, Grade 100

Stock No.	Chain Size, Nominal (in)	Material Diameter (in)	Working Load Limit (lb)	Proof Test (lb)	Minimum Breaking Force (lb)	Maximum Inside Length (in)	Inside Width Range (in)
726918	9/32	0.276	4300	8600	17,200	0.9	0.375 to 0.430
726934	3/8	0.394	8800	17,600	35,200	1.26	0.512 to 0.600

5. Finish

The manufacturers applied surface treatment or finish shall not alter the chain properties so that it causes the chain to fall out of compliance with the provisions of the standard.

The chain shall be free of paint and other coatings that could mask surface anomalies.

6. Mechanical Testing

6.1 Proof Test

All chain shall be tested to the load requirements described in Table 4. When tested, the chain shall withstand the load without loss of integrity. Chain links that are not able to withstand the load requirements shall be removed from the chain.

6.2 Breaking Force Test

The test link shall be from a length of the lot that contains the least number of links. Chain shall be quenched and tempered before measuring the breaking strength. The results shall meet or exceed the minimum breaking force values detailed in ASTM A973/A973M and this standard. Elongation shall be a minimum of 20%.

7. Certification

Upon purchaser's request, manufacturer shall:

- Provide certification that the chain conforms to ordered specifications, including year of issue.
- Supply a certificate of proof test to purchaser or purchaser's representative.

8. Product Marking

Chain links shall not be marked with indented characters. Chain links shall be marked at intervals not greater than 3 ft. The marking shall include a grade indicator, manufacturer's mark or symbol, and traceability code or date code.

9. Packaging

Chain shall be packaged in a manner that prevents damage during shipping, handling and long-term storage. Units shall be marked with an SCL purchase order number and stock number.

10. Issuance

100-ft lengths

MATERIAL STANDARD

GASKET MATERIAL CORK AND SYNTHETIC (BUNA N) RUBBER COMPOSITION

Scope. Cork and synthetic rubber composition gasket material is intended for general purpose gasketing of oil-filled electrical equipment. Cork and synthetic rubber materials provide a transition from the compressibility of cork composition to the non-compressibility of synthetic rubber. This material will compress 25% to 35% at 400 psi without excessive side flow and shall be 60% synthetic rubber and 40% cork.

Material. The gasket material shall meet the requirements of ASTM Specification D 1170 (F 104), Type 2, Identification No. P2245A. The granulated cork shall be fine grain. It shall pass through a No. 20 sieve, and shall be retained on a No. 40 sieve.

Reference Specification: ASTM D 1170, (F 104) latest revision
 Purchase Unit: 36" x 36"

Stock Number	Thick. In.	Stock Unit	Approved Manufacturers				
			Armstrong	Dutch Brand	Hercules	Global Tech.	Southland Cork

727687	3/16	Sheet	NC-710	NF 716	547	HC-60	SC-92
727714*	1/4	Roll				HC-60	
727696	3/8	Sheet	NC710	NF716		HC-60	SC-92

* to be purchased in width of 40" +/- 1/4". Stock Unit: Roll

SYNTHETIC NITRILE (BUNA N) RUBBER (Special Purpose)

Scope. Synthetic rubber gasket material is intended for special-purpose gasketing of oil-filled electrical equipment, such as high-voltage bushing assemblies. It is especially well adapted where its property of extensibility allows it to flow into threads or recesses. To effect a seal, minimum flange loads of 500 psi should be available. As a general rule, it is best not to deflect synthetic rubber more than 20%.

Material. The material shall meet the requirements of SAE-ASTM Specification D 735 for Type S, Class SB, Grade SB715 synthetic rubber material.

Reference Specification: SAE-ASTM D 735, latest revision
 Purchase Unit: 36" x 36" Sheet, or 36" Width Roll, Approx. 185 Lbs.
 Stock Unit: Sheet

Fluorescent Lamps

1. Scope

This standard covers the requirements for medium bi-pin, aluminum-base, fluorescent lamps.

This standard applies to the following Seattle City Light (SCL) stock numbers:

Stock No.	Size	Watts	Color	Length (in)
730332	T12	34	Spec 41	48
730349	T12	34	Cool white	48
730348	T12	34	Warm white	48
730345	T12	60	Cool white	96
730344	T12	75	Spec 41	96
730350	T12	95	Cool white	96
730347	T12	110	Cool white	96
730346	T12	215	Cool white	96
013554	T8	32	Cool white	48

2. Application

Fluorescent lamps are for installation in medium bi-pin fixtures. Lamps have no restriction on operating position.

3. Compliance

Lamps shall be compliant with the EPA Toxicity Characteristic Leaching Procedure (TCLP) test specified in the Resource Conservation and Recovery Act (RCRA) of 1990, except for 215-watt size.

Standards Coordinator
Yaochiem Chao

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

4. General Requirements

Lamp shape shall be T12 or T8, as specified in this standard.

Lamp base shall be aluminum.

Lamp average rated life shall be defined as the total operational hours at which 50% of any group of lamps is still operating. The average life of a lamp shall be based on vertical operation (unless otherwise noted) of representative lamps operated under controlled conditions of up to 15 hours per start.

5. Detailed Requirements

5.1 Fluorescent Tubes – T12

Stock No.	Watts	Starting	Color	Length (in)	Package Quantity	Average Rated Life (hrs)
730332	34	Rapid start	Specification 41	48	30	20,000
730349	34	Rapid start	Cool white	48	30	20,000
730348	34	Rapid start	Warm white	48	30	20,000
730345	60	Instant start	Cool white	96	15	12,000
730344	75	Instant start	Specification 41	96	15	12,000
730350	95	Rapid start	Cool white	96	15	12,000
730347	110	Rapid start	Cool white	96	15	12,000
730346	215	Rapid start	Cool white	96	15	As noted

5.2 Fluorescent Tubes – T8

Stock No.	Watts	Starting	Color	Length (in)	Package Quantity	Average Rated Life (hrs)
013554	32	Rapid start	Cool white	48	30	30,000

6. Packaging

Lamps shall be packaged to prevent damage during shipping, storage, and casual handling prior to installation. Quantity of lamps per shipping carton shall as specified in Section 5.

7. Issuance

Lamps, Compact Fluorescent, 68 W

1. Scope

This standard covers the requirements for 68 W, compact fluorescent lamps. Lamps of this design are also known as one-piece spring lamps.

This standard applies to Seattle City Light (SCL) Stock No. 013462.

2. Application

Compact fluorescent lamps are used for lighting in-building vaults. This lamp is a highly efficient alternative to 300 W, incandescent lamps, Stock No. 730630.

While compact fluorescent lamps may be installed in most circuits designed for incandescent lamps, the reverse is not true. Before exchanging lamps in an existing circuit, verify the wiring and the transformer is appropriately sized for the load.

Compact fluorescent lamps are for use in dry locations only and should not be used with dimmers.

Lamps contain mercury. Dispose of properly.

3. Industry Standards

Lamps shall meet the applicable requirements of the following industry standard:

ANSI C78.20-2003 – American National Standard for Electric Lamps – A, G, PS, and Similar Shapes with E26 Medium Screw Bases

4. Requirements

Lamps shall meet the applicable requirements of ANSI C78.20 and this material standard with the following clarifications:

- Lamp shall be capable of operation in all positions
- Lamp shall be self-ballasted
- Lamp shall be UL listed.

Table 4. 68W Fluorescent Lamp Requirements

On state power consumption	68 W
Incandescent equivalent	300 W
Input line voltage	120 VAC
Initial	4200 lumens
Correlated Color Temperature (CCT), nominal	5100 °K
Color rendering index (CRI), minimum	82
MOL/height	9.5 in
Diameter/width	4.1 in
Base type	E26 medium screw
Base material	Brass
Starting temperature, minimum	-10 C / 14 F
Power factor	> .50
Total harmonic distortion (THD)	< 150%
Life, nominal	10,000 hours

5. Marking

Each lamp shall be marked with:

- Manufacturer's name
- Manufacturer's part number
- Rated voltage
- Rated wattage
- UL listing.

6. Packaging

Each lamp shall be individually packaged to prevent damage during shipping, handling and storage.

Lamps shall be packaged six per case.

Shipping containers shall be marked with:

- Seattle City Light purchase order number
- Seattle City Light stock number.

7. Issuance

8. Approved Manufacturer

Service Entrance Caps, PVC

1. Scope

This standard covers the requirements for extruded threadless rigid PVC (poly vinyl chloride) service entrance caps.

This standard applies to the following Seattle City Light (SCL) stock numbers:

Stock No.	Conduit Trade Size, IPS (in)
013570	1/2
013571	3/4
013572	1
013573	1-1/4
013574	1-1/2
013575	2
013576	2-1/2
013577	3
013578	3-1/2
013579	4

2. Application

PVC service entrance caps are used as a weatherproof service drop entrance point where overhead power cable enters a building. Caps are suitable for both overhead and underground secondary service lateral, where cable transitions between overhead and underground.

PVC service entrance caps are only used for low voltages (up to 600 volts). These caps are threadless, and attach to the PVC riser with adhesive.

PVC service entrance caps replace aluminum service entrance caps. The PVC version allows for ease of service cable installation as well as to reduce scarring of the cable jacket.

Standards Coordinator
Quan Wang

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

3. Industry Standards

PVC service entrance caps shall meet the requirements of the following industry standards:

UL 514B – Fittings for Cable and Conduit, 6th Edition, July 2012

NEMA TC-3 - Polyvinyl Chloride (PVC) Fittings for Use with Rigid PVC Conduit and Tubing, 2013

4. General Requirements

PVC service entrance caps shall:

- Be suitable for above ground use indoors or outdoors exposed to sunlight and weather.
- Fit conduit and fitting dimensions conforming to UL 651 and the Iron Pipe Standard (IPS), where dimensions are based on outside diameters of iron pipe sizes.
- Be medium to dark gray in color.
- Not have any features that can abrade or otherwise damage cable.
- Be certified by Underwriters Laboratories or one of the following NRTLs (Nationally Recognized Testing Laboratories) as meeting the minimum requirements of Standard UL 514B:
 - CSA (Canadian Standards Association)
 - ETL (Electrical Testing Labs)
 - NSF (National Sanitation Foundation) International.
- Meet the performance requirements as described in Table 4.

Table 4. Conduit Performance Requirements

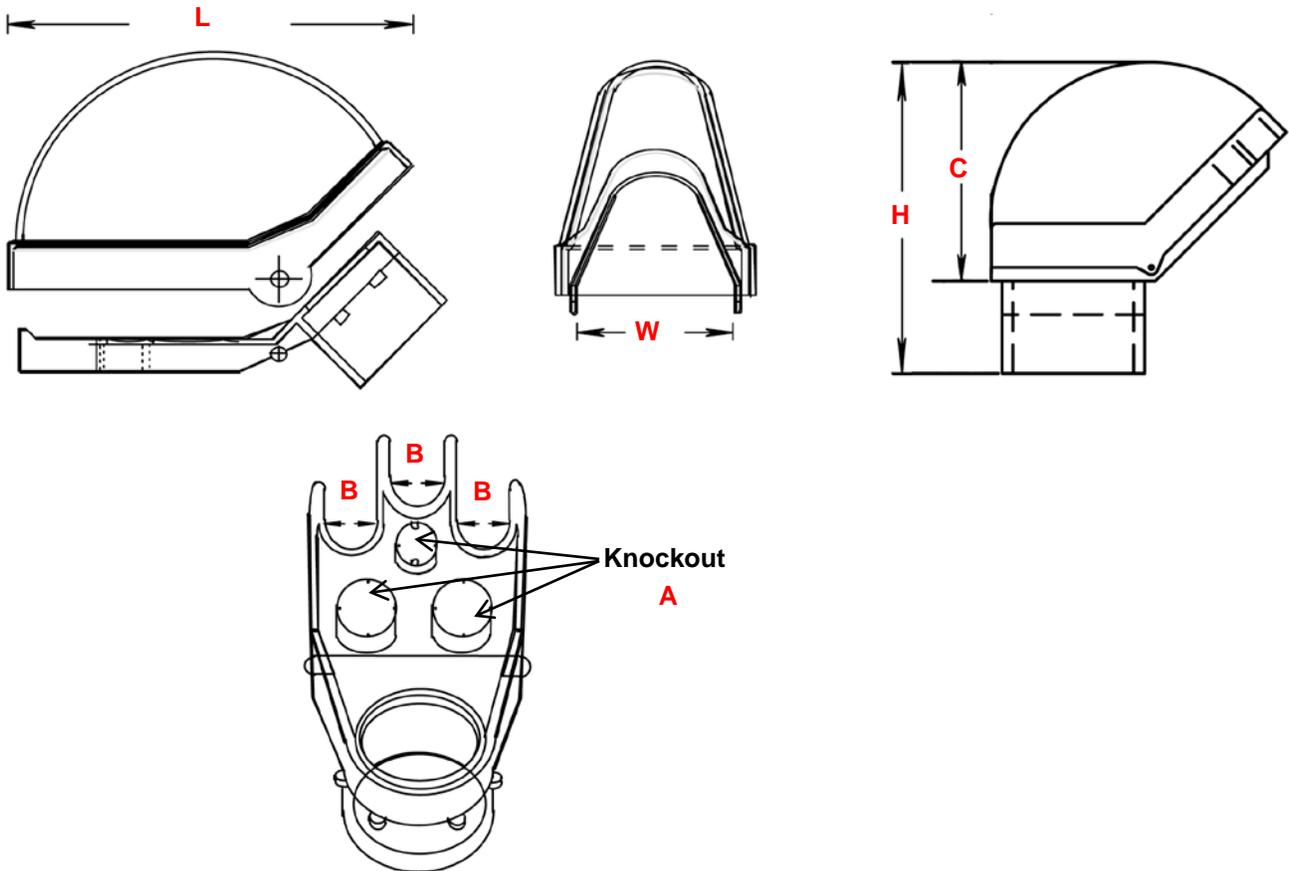

Description	UL 514B Section
Water absorption	91
Flame	92
Extrusion or Molding process	94
Identification	95
Resistance to crushing	96

Figure 5. Service Entrance Cap

6. Marking

Each conduit section shall be marked according to the requirements of UL 514B, Section 102.

The outer surface of each fitting shall be marked with the following minimum information:

- Manufacturer's name or symbol
- Catalog number
- Trade size.

7. Testing

PVC service entrance cap test data that establishes compliance with the requirements of UL 514B and this material standard shall be provided upon request.

8. Packaging

PVC service entrance caps shall be packaged to prevent damage during shipping, handling and storage.

Each carton shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Manufacturer's catalog number
- Quantity.

5. **FRONT FLANGE**: Make 4-3/4" x 5" cutout. Drill 8 - 5/16" holes. Weld to U Frame & U Frame Top.
6. **FRONT COVER**: Drill 8 - 5/16" holes.
7. Cut **GASKET** and make 8 - 5/16" holes.

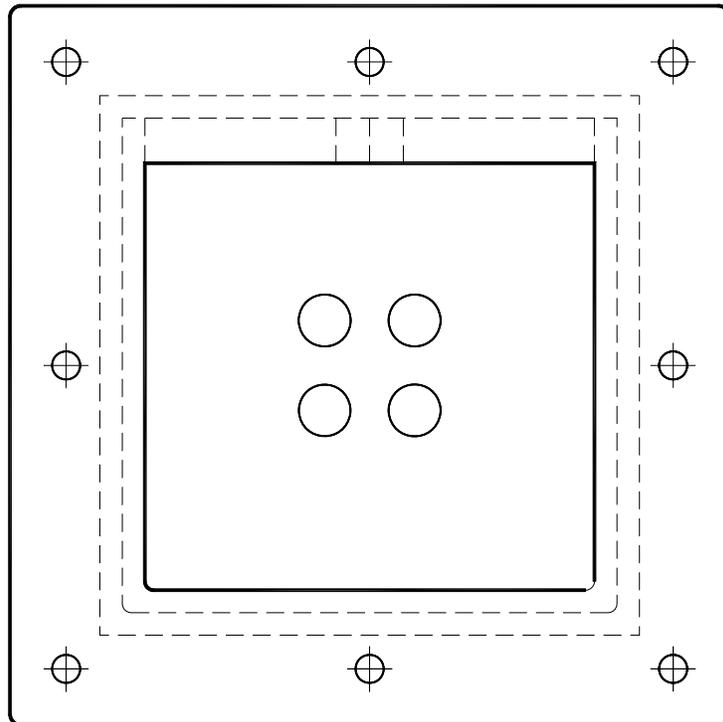

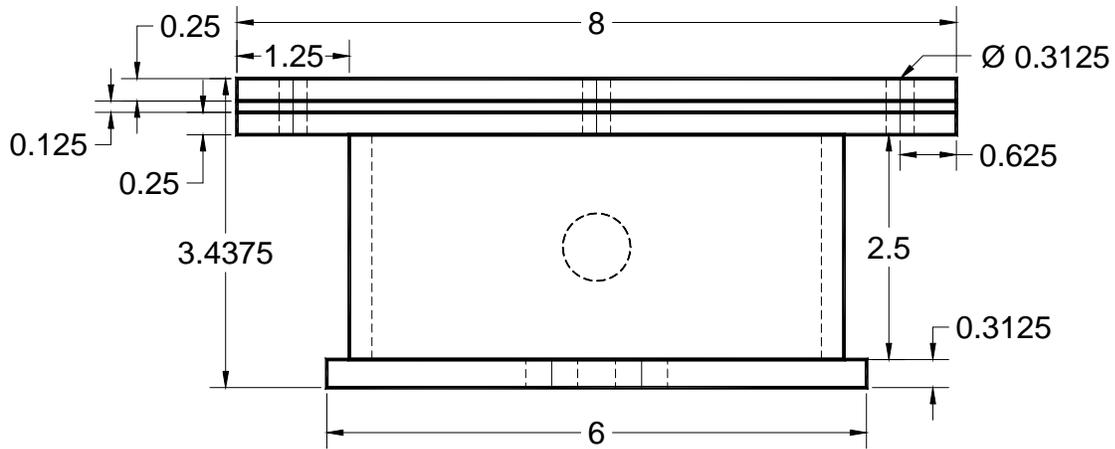

Exact sequence of operations performed to be determined by Shop Personnel.

RECEPTACLES (OUTLETS)

1. **Scope:** This specification applies to 120 - 250 Volt electrical appliance receptacles with 15 or 20 ampere capacities.
2. **General:** The receptacles shall be specification grade and meet the latest revisions of the Federal Specifications, ANSI, and NEMA Standards cited in the descriptions below, except as modified herein.
3. **Contacts:** All power and grounding contacts shall be bronze, double wiping, and meet the requirements on NEMA Standard WD 1-3.02.
4. **Ground-Strap:** The ground strap shall be one piece and a minimum of 0.052 inches (1.32 mm) thick.
5. **Wiring Connections:** All wire contact screws shall be no smaller than #8-32. The back wiring contacts shall be clamped by the wiring screws. The wiring connections shall be suitable for all wire up to #10 AWG.
6. **Case:** The receptacles shall be totally enclosed in a heavy-duty case and cover.
7. **Reference:** Federal Specs. WC 596 and WL 142, ANSI C73 series, NEMA WD-1, UL 817.
8. **Note:** See Material Standard 7331.0 for plugs.

PLUGS, LAMPHOLDERS, AND EXTENSION CORDS

- General.** Except as modified by this specification, each plug, connector, receptacle, lampholder, and extension cord shall comply with the latest revisions of the Federal Specifications, ANSI, and NEMA Standards in the descriptions below.
- Plugs, Connectors, and Lampholders.** All electrical parts shall be brass. The wiring terminals shall be suitable for the capacity of the device. All wiring clamps shall have their pressure maintained by screws. The bodies of these devices shall be built of materials that withstand high impact and crushing forces, and shall be resistant to grease, oil, solvents, moisture, and temperature extremes. The plug, connector, and portable lampholder bodies shall have a suitable means of clamping the cable. There shall be no protruding metal or other sharp edges to cut or damage personnel and equipment. The completed assembly shall be corrosion resistant.
- Cordsets.** The plugs and connectors shall comply with the description of their corresponding units. The completed assembly shall comply with the latest revision of UL Standard 817.

MATERIAL STANDARD

SWITCHES – TOGGLE-FLUSH

1. **Scope.** This specification is for 120-277 volt, 15- through 30-ampere, flush-mount toggle switches, back-and-side-wired with screw terminals. The switches are to be mounted in wall outlet boxes.
2. **General.** The switches shall be specification-grade and shall meet the latest revisions of all applicable NEMA and industrial standards, and Federal Specification W-S-896, except as modified herein.
3. **Contacts**
 - 3.1 The switching contacts shall be silver alloy.
 - 3.2 The wiring contact screws shall be #8-32 or larger in size. The back wiring contacts shall be clamped by the wiring screws. The wiring contacts shall be suitable for all wire up to #10 AWG.
4. **Case.** The case shall completely enclose the switching contacts and shall be highly resistant to arcing and tracking. The case shall have low moisture absorption and be scratch-and shatter-resistant. The case shall be color coded.
5. **Mounting Strap.** The mounting strap shall be one-piece steel at least 0.052 inches (1.32 mm) thick. The switch body shall be securely fastened to the strap.
6. **Identification.** The packaging of the assembly shall clearly show the manufacturer's catalog number, style, or model number.
7. **Reference Specifications:** Federal Specification W-S-896.
8. **Stock Unit:** EA

FITTINGS FOR UNDERGROUND USE, PVC

1. **Scope:** This specification is for polyvinyl chloride (PVC) plastic utilities fittings suitable for underground installations: Type DB-120.
 The fittings shall comply with the latest revision to NEMA TC 9, "Fittings for Polyvinyl Chloride (PVC) Plastic Utilities Duct for Underground Installation."
2. **Fittings** shall be furnished in the sizes and types specified on the purchase order. Sockets shall be in accordance with Table 2-2 or 2-3 of NEMA TC 9. Plugs and end bells shall be in accordance with Tables 2-12 and 2-7 or 2-8, respectively, of NEMA TC 9.
3. **Color:** Fittings shall be medium to dark gray in color.
4. **Markings:** In addition to the marking requirements of NEMA TC 9, each shipping lot shall be marked with the City purchase order number, gross and net weights, and the name and address of the manufacturer.
5. **Reference Specification:** NEMA TC 9, ASTM D 2672, ASTM F 512 (latest revisions)
6. **Stock Unit:** EA

**CABLE WRAP
 POLYTETRAFLUORETHYLENE**

1. Scope

Cable Wrap of the configuration shown shall be Type III, Grade 2, Class B (Teflon) polytetrafluoroethylene meeting the material requirements of ASTM D 1457 and D 3369, latest revision.

2. Industry Standards

ASTM D 1457 Specification for Polytetrafluoroethylene (PTFE) Molding and Extrusion Materials (Withdrawn 1996)

ASTM D 3369 Standard Specification for Polytetrafluoroethylene (PTFE) Resin Cast Film

3. Requirements

Color: The color of the cable wrap shall be natural (clear).

Adjustable Plastic Tie Straps of the configuration shown above are intended to harness or secure many different types of electrical wires and cables such as small control wire, triplex service cable, high-voltage power cables, etc. The straps are intended for a one-time use and are not required to be releasable.

The tie straps shall be made of polyimide (nylon) plastic compound in accordance with MIL-M-20693, Type I (natural) or Type II (UV-resistant black). The straps shall meet all applicable requirements of MIL-S-23190.

The straps shall meet the minimum tensile strengths listed above, regardless of the angle or direction in which the force is applied. (This is to simulate the movement of a single cable with the remaining cables in the bundle held stationary.)

Packaging: In sealed plastic bags of not more than 100 to a bag.

MATERIAL STANDARD**Tape, Sealing and Insulating Mastic****1. Scope:**

This Material Standard covers the requirements for self-amalgamating sealing and insulating mastic.

2. Application:

For sealing all types of overhead and direct buried electrical connections up to 600 volts.

For waterproofing duct work, cable ends, and all types of splices.

Product is not appropriate for applications that may contact the semi-con layer of primary cable.

3. Physical Requirements:

Size: 1/8" x 3-3/4" x 120"

Water Absorption: 2.5% maximum by weight per ASTM D 570, Paragraph 7.1; 24 hour immersion at 73.4° F (23° C)

4. Electrical Requirements:

Dielectric Strength: 350 volts/mil minimum on 0.020" thick specimen

5. Temperature Properties During Operation:

-40° F to 194° F (-40° C to 90° C)

6. Common Name:

This product is commonly referred to as "Aqua Seal", regardless of who manufactured it.

7. Packaging:

In roll form with release liner on one side to assure easy unrolling. Rolls to be packaged individually.

8. Stock Unit: RL**9. Approved Manufacturers:**

Stock Number: 736470

Putty, Electrical Insulation

1. Scope

This standard covers the requirements for insulating mastic tape. This product is also known as electrical insulation putty.

This standard applies to Seattle City Light Stock Number 736750.

2. Application

This product is a self-amalgamating, low voltage insulating mastic, designed for quick void-free insulation build-up. It is easily molded by hand to conform to irregular shapes and can be used as primary insulation for splices through 5 kV in conjunction with other insulating tapes. Insulating mastic tape provides an excellent moisture seal.

3. Properties (nominal)

Material	mastic
Material thickness	125 mil
Color	black
Temperature, normal service, max	80° C (176° F)
Core Diameter	1-1/2 in
Shelf life (inside storage)	5 years from the date of manufacture

Standards Coordinator
John Shipek

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

4. Packaging

Tape shall be packaged to prevent damage during shipping, storage, and casual handling prior to use.

Each roll of tape shall be individually packaged and legibly marked with the following information:

- Manufacturer's name
- Product number
- Product description

Number of rolls of tape per case shall be according to Section 6.

Each shipping container shall be marked with Seattle City Light's Purchase Order Number.

5. Issuance

TAPE, FIRE-RETARDANT, ELECTRIC ARC PROOFING

1. Scope

This material standard covers the requirements for fire-retardant, electric arc proofing tape dispensed in rolls.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Description
736525	1-1/2" x 20' roll
736527	3" x 20' roll

2. Application

Tape is applied to high-energy, communication, and control cables that are within 18 inches of other cables to offer protection in the event of a fault from fire and electric arcs until limiting devices have time to operate.

Tape is formulated to expand in a fire to form a thick char buildup. This insulating shield protects cables and accessories from fault arc generated heat and flames.

Tape is conformable and easy to apply. Wrap tape in half-lapped layers. Tape may be stretched to obtain a snug, wrinkle-free wrap which conforms to the cable. Overlap the last 6 inches of protected cable when starting a new roll of tape. Because tape is not adhesive coated, it must be held in place after wrapping with bands of silicone adhesive glass cloth tape, Stock Number 736632. The most effective and economical way to hold tape in place is by banding (two complete wraps) the first and last applied wrap.

Tape is light in color to facilitate visual inspection.

Prior to application, engineering should review tape's potential affect on cable rating.

3. Properties (nominal)

color	white to light gray
thickness, in	0.030
adhesive	none
breaking strength	1200 psi
elongation	150% at break
0023 degrees C	
0-12 degrees C	130% at break
flame resistant, per UL 94 (self-extinguishing)	V-O
oxygen index, per ASTM D-2863	29-30%
dielectric breakdown	500 V/mil
shelf life	5 years from the date of manufacture

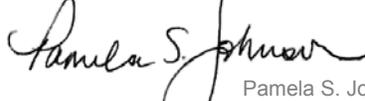

4. Testing

Test data that confirms the properties cited in the manufacturer's data sheet and this material standard shall be provided upon request.

5. Packaging

Each roll of tape shall be individually protected with plastic and legibly marked with the following information:

- Manufacturer's name
- Manufacturer's catalog number
- Product description

standards coordinator	standards manager	unit director
 John Shipek	 John Shipek	 Pamela S. Johnson

Tape, Electrical Shielding

1. Scope

This standard covers the requirements for electrical shielding tape.

This standard applies to the following Seattle City Light stock numbers:

Stock Number	Description
736244	1 in x 15 ft roll
736243	2 in x 10 ft roll

2. Application

Shielding tape is intended to:

- Provide shielding for cable joints on shielded power cables
- Make the conductive portion of the stress cone on power cable terminations
- Smooth connector area in oil-filled cables

Shielding tape is an all-metal, open-weave, shielding braid tape in a flat, cable-like form. It is conformable due to the open-weave knit construction of two No. 36 AWG tinned copper wires.

Because of its construction, the tape interlocks with the previous layer, thereby assuring a tighter wrap (no solder bead is required).

This product **should not** be used as a ground strap or jumper wire; its ampacity is not sufficient to carry large fault currents.

Standards Coordinator
John Shipek

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

3. Properties (nominal)

Shielding tape shall be an all-metal, flat, open-weave shielding braid that is compatible with all power cable insulations and all high-voltage splicing and terminating materials.

Material	Woven No. 36 AWG tinned copper wire
Material thickness	16 mil
Temperature rating, emergency	130° C (266° F)
Breaking strength, per ASTM D1000	22 lb/in (of width)
Shelf life (inside storage)	Indefinite

Shielding tape shall be RoHS (European Union Directive 2002/95/EC for Restriction of Hazardous Substance) compliant.

4. Testing

Test data that confirms the properties cited in the manufacturer's literature and this material standard shall be provided upon request.

5. Packaging

Each roll of tape shall be individually packaged in cellophane, plastic, cardboard, or metal containers to prevent damage during shipping, storage, and casual handling prior to use.

Each roll of tape shall be legibly marked with the following information:

- Manufacturer's name
- Manufacturer's catalog number
- Product description

Number of rolls of tape per case shall be according to Section 7.

Each shipping container shall be marked with Seattle City Light's Purchase Order Number.

6. Issuance

RL

7. Approved Manufacturers

TAPE, SILICONE RUBBER, ELECTRICAL

1. Scope

This standard covers the requirements for self-fusing, silicone rubber, electrical tape.
This standard applies to Seattle City Light stock number 736512.

2. Application

This product is a high-temperature, arc and track-resistant tape composed of self-fusing, inorganic silicone rubber with an easy-tear and easy-strip liner.

Silicone rubber tape is intended for the following applications:

- As an overwrap for protection of terminating high-voltage cables against arcing and tracking.
- As primary insulation where Class "H" (180°C/356°F) temperatures are encountered i.e., silicone rubber cables.
- As splice overwrap on spacer cable operating at 15 kV and above.

Standards Coordinator
John Shipek

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

3. Properties

Material	self-fusing, inorganic silicone rubber
Material thickness	12 mil
Cross section	rectangular
Color	sky blue gray
Temperature rating, operating	180° C (356° F)
Dielectric strength	875 V/mil
Tensile strength	12 lb/in (of width)
Shelf life (inside storage)	5 years from the date of manufacture

Silicone rubber tape shall be provided with an easy-tearing and easy-stripping polyester liner.

Silicone rubber tape shall be RoHS (European Union Directive 2002/95/EC for Restriction of Hazardous Substance) compliant.

4. Testing

Test data that confirms the properties cited in the manufacturer's literature and this material standard shall be provided upon request.

5. Packaging

Each roll of tape shall be individually packaged in cellophane, plastic, cardboard, or metal containers to prevent damage during shipping, storage, and casual handling prior to use.

Each roll of tape shall be legibly marked with the following information:

- Manufacturer's name
- Manufacturer's catalog number
- Product description

Number of rolls of tape per case shall be according to Section 7.

Each shipping container shall be marked with Seattle City Light's Purchase Order Number.

6. Issuance

RL

7. Approved Manufacturers

Stock Number:	736512
Description:	1 inch x 30 ft roll
Manufacturer:	3M
Product:	70
ID:	80-6114-3861-7
UPC:	00-051128-57261-0
Case Quantity:	50 rolls

Silicone rubber tape shall be provided with an easy-tearing and easy-stripping polyester liner.

Tape, Insulating, Electrical

1. Scope

This standard covers the requirements for self-amalgamating, electrical insulating tape. Self-amalgamating means self-bonding, self-fusing, or non - vulcanized.

This standard applies to the following Seattle City Light stock numbers:

Stock Number	Description
736503	3/4 in x 30 ft roll
736504	1 in x 30 ft roll
736505	1-1/2 in x 30 ft roll

2. Application

This product is a highly conformable, linerless, ethylene rubber (EPR), high-voltage insulating tape, formulated to provide excellent thermal dissipation of splice heat. The tape has excellent physical and electrical properties, which provide immediate moisture seals and void-free build-ups.

Insulating tape is intended for the following applications:

- Primary insulation for splicing all types of solid dielectric insulated cables through 69 kV
- Primary insulation for building stress cones on all types of solid dielectric insulated cables up to 35 kV
- Jacketing (secondary insulation) on high-voltage splices and terminations
- Moisture-sealing electrical connections
- Bus bar insulation

Standards Coordinator
John Shipek

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

Insulating tape is linerless to permit quicker application.

For best ultraviolet light (UV) protection, overwrap with a high-quality, vinyl electrical tape.

3. Properties (nominal)

Material	Self-amalgamating, ethylene propylene rubber (EPR)
Material thickness	30 mil
Color	black
Temperature rating, emergency	
Operating	90° C (194° F)
Emergency Overload	130° C (266° F)
Dielectric strength	750 V/mil
Thermal conductivity (at 23° C)	0.3 W/m° C
Breaking strength	7.5 lb/in (of width)
Tensile Strength	250 psi
Core Diameter	1-1/2 in
Shelf life (inside storage)	5 years from the date of manufacture

4. Testing

Test data that confirms the properties cited in the manufacturer's literature and this material standard shall be provided upon request.

5. Packaging

Each roll of tape shall be individually packaged in cellophane, plastic, or metal containers to prevent damage during shipping, storage, and casual handling prior to use.

Each roll of tape shall be legibly marked with the following information:

- Manufacturer's name
- Manufacturer's catalog number
- Product description

Number of rolls of tape per case shall be according to Section 7.

Each shipping container shall be marked with Seattle City Light's Purchase Order Number.

Tape, Semiconducting, Electrical

1. Scope

This standard covers the requirements for self amalgamating, electrical semiconducting tape. Self amalgamating means self bonding or non- vulcanized.

This standard applies to the following Seattle City Light stock numbers:

Stock Number	Description
736670	3/4 in x 15 ft roll
736671	1 in x 15 ft roll
010451	1-1/2 in x 15 ft roll

2. Applications

Semiconducting tape is a highly conformable, semi-conducting EPR (Ethylene Propylene Rubber) based high-voltage splicing tape. It elongates easily to conform to irregular shapes and retains its conductivity when stretched.

Semiconducting tape is intended for the following applications:

- To electrically round out high-voltage connectors and to bond to insulating materials to minimize electrical stresses
- Continue semi-conducting strand shielding found in solid dielectric (polyethylene, XLP, EPR, etc.) cables at 5 kV and above
- Provide shielding for cable joints on solid dielectric insulated power cables (shielded or concentric neutral)

Standards Coordinator
John Shipek

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

- Replace semi-conducting layer beneath metallic shield of similar cables in case of damage (screening)
- Make conductive portion of stress cone of power cable termination on solid dielectric insulated power cables
- Maintain positive connection between concentric neutral semi-conducting jackets of power cables and semi-conducting surfaces of plug-in units
- Establish a more positive contact between concentric neutral wires and pre-molded devices already installed with too much jacket exposed
- Round out bolted connections on insulated bus bars

Semiconducting tape is not oil resistant. It should not be used in splicing and terminating cables which contain oil or slippery compounds as part of dielectric such as PILC.

For best ultraviolet light (UV) protection, overwrap with a high-quality, vinyl electrical tape.

3. Properties (nominal)

Material	Self amalgamating, semi-conducting, ethylene propylene rubber (EPR)
Material thickness	30 mil
Color	black
Temperature, rating	
Continuous	90° C (194° F)
Short-Term	130° C (266° F)
Breaking strength	6 lb/in (of width)
Core diameter	1-1/2 in
Shelf life (inside storage)	5 years from the date of manufacture

Semiconducting tape shall be:

- Self amalgamating.
- Printed with identifying words to ensure it is not confused in the field with insulating tape.
- Provided with a separator/liner to prevent the product from sticking to itself.
- RoHS (European Union Directive 2002/95/EC for Restriction of Hazardous Substance) compliant.

4. Testing

Test data that confirms the properties cited in the manufacturer's literature and this material standard shall be provided upon request.

5. Packaging

Each roll of tape shall be individually packaged in cellophane, plastic, or metal containers to prevent damage during shipping, storage, and casual handling prior to use.

Each roll of tape shall be legibly marked with the following information:

- Manufacturer's name
- Manufacturer's catalog number
- Product description

Number of rolls of tape per case shall be according to Section 7.

Each shipping container shall be marked with Seattle City Light's Purchase Order Number.

Tape, Adhesive-Backed, Copper Foil

1. Scope

This standard covers the requirements for adhesive-backed, copper foil tape strips.
This standard applies to Seattle City Light (SCL) Stock No. 013499.

2. Application

Adhesive-backed, copper foil tape strips are used to supplement the material listed in SCL 0535.11, "Heat Shrink Splices, Straight, 110 kV BIL, Tyco."

This product can also be used to hold down constant force springs and aid in rebuilding corroded primary cable shields.

3. Properties

Material	copper foil
Material Dimensions	
Wide	3/8 in
Long	8 in
Thickness	1.5 mil ± 10%
Shelf life (inside storage)	5 years from the date of manufacture

Copper foil strips shall be fabricated with an adhesive on one side protected with easy-to-remove liners.

Standards Coordinator
Brett Hanson

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

4. Packaging

Copper tape strips shall be packaged to prevent damage during shipping, storage, and casual handling prior to use.

Copper tape strips shall be packaged 50 per box.

Each box shall be legibly marked with the following information:

- Manufacturer's name
- Manufacturer's catalog number
- Product description

Each shipping container shall be marked with the SCL purchase order number.

5. Issuance

Tape, Glass, Cloth, Electrical

1. Scope

This standard covers the requirements for glass cloth electrical tape.

This standard applies to Seattle City Light stock number 736632.

2. Application

Glass cloth tape is for applications that require high mechanical strength and resistance to high temperatures. The thermosetting adhesive provides an increased bond once applied in areas of high ambient temperatures.

This tape provides insulation and solvent-resistant protection and features a non-corrosive adhesive. It is conformable, printable and flame retardant.

Glass cloth tape is used to secure non-adhesive-backed, fire-retardant, electric arc proofing tapes, such as Stock Number 736525 and 736527.

Standards Coordinator
John Shipek

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

3. Properties (nominal)

Backing Material	Woven glass cloth
Adhesive	Thermosetting, pressure-sensitive, silicon
Thickness	7 mil
Color	white
Operating Temperature rating, max	200° C (392° F)
Temperature class H	180° C (356° F)
Breaking strength	180 lb/in (of width)
Dielectric breakdown	3000 V/mil
Shelf life (inside storage)	5 years from the date of manufacture

Silicone rubber tape shall be provided with an easy-tearing and easy-stripping polyester liner.

Silicone rubber tape shall be RoHS (European Union Directive 2002/95/EC for Restriction of Hazardous Substance) compliant.

4. Testing

Test data that confirms the properties cited in the manufacturer's literature and this material standard shall be provided upon request.

5. Packaging

Each roll of tape shall be individually packaged in cellophane, plastic, or metal containers to prevent damage during shipping, storage, and casual handling prior to use.

Each roll of tape shall be legibly marked with the following information:

- Manufacturer's name
- Manufacturer's catalog number
- Product description

Number of rolls of tape per case shall be according to Section 7.

Each shipping container shall be marked with Seattle City Light's Purchase Order Number.

Tape, Acrylic Foam, Double-Sided, High-Bond

1. Scope

This standard covers the requirements for gray, 1-1/2-inch wide acrylic foam, double-sided, high-bond tape.

This standard applies to the Seattle City Light stock number 013527.

2. Application

This product is a highly durable, adhesive, double-sided tape formulated to provide excellent bonds in interior and exterior bonding applications.

Acrylic foam, double-sided, high-bond tape is intended for applying street light pole number placards to street light poles, among other applications.

This adhesive provides excellent adhesion to a broad range of surfaces including metals, glass, and a wide variety of plastics.

3. Properties (nominal)

Acrylic foam, double-sided, high-bond tape shall have 100 percent adhesive retention when exposed to the following solvents and fuel:

- Water
- Salt water
- Hydraulic fluid
- 10W30 motor oil
- Glycol antifreeze

Standards Coordinator

Tape, Corrosion Protection

1. Scope

This standard covers the requirements for all-weather, corrosion protection tape. This product is commonly known as pipe wrap tape.

This standard applies to Seattle City Light stock number 736730.

2. Application

Corrosion protection tape is a tough, polyvinyl chloride based tape with special high tack adhesives formulated to resist corrosion of metal piping systems above and below ground.

Corrosion protection tape is:

- Resistant to corrosive salt water, soil acids, alkalis and salts, common chemicals, chemical vapors, and exposure to outdoor weathering and sunlight.
- Resistant to impact, abrasions, punctures, and tears.

Surfaces to be wrapped should be clean, dry and free of oil, grease, and other contaminants. Blast removal of rust and scale is preferred. Welding slag and spatter, sharp edges or burrs should be chipped, grinded or filed.

3M recommends coating the pipe or other metal surfaces with their non-sag, rubber-based primer before wrapping to enhance adhesion.

Corrosion protection tape is printed with "Pipe Wrap", "Scotchrap"®, or other similar words to ensure the product is not confused in the field with electrical tape.

Standards Coordinator
John Shipek

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

3. Properties (nominal)

Federal Classification Specification	L-T-1512A, Type III
Adhesive material	High-tack, pressure sensitive rubber
Backing material	Polyvinyl chloride (PVC)
Material thickness	10 mil
Color	
Backing	black
Adhesive	black
Temperature, range	
Application	-12° C (10° F) to 65° C (150° F)
Normal Service	-48° C (-55° F) to 80° C (175° F)
Breaking strength	20 lb/in (of width)
Core diameter	1-1/2 in
Shelf life (inside storage)	5 years from the date of manufacture

Tape shall be printed along its entire length with "Pipe Wrap", "Scotchrap"®, or other similar words to ensure the product is not confused in the field with electrical tape.

4. Testing

Test data that confirms the properties cited in the manufacturer's literature and this material standard shall be provided upon request.

5. Packaging

Tape shall be packaged to prevent damage during shipping, storage, and casual handling prior to use.

Each roll of tape shall be legibly marked with the following information:

Tape, Cotton Fabric, Friction

1. Scope

This standard covers the requirements for cotton fabric, friction tape.

This standard applies to the following Seattle City Light stock numbers:

Stock Number	Description
736400	3/4 in x 60 ft roll
736401	1 in x 60 ft roll
736415	2 in x 60 ft roll

2. Application

Cotton friction tape has high break strength and low stretch, making it ideal as a heavy-duty binding and harnessing tape.

Cotton friction tape is intended for the following applications:

- Provide abrasion and cut-through protection on wire and cable splices
- Provide mechanical protection for rubber electrical tape
- Provide bundling, binding and spot holding on wire harnesses
- Provide protection on sharp edges, to prevent scratching or cut through.

When applied over tool handles, it effects a non-slip surface.

Standards Coordinator
John Shipek

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

3. Industry Standards

Cotton friction tape shall meet the requirements of the following industry standards:

ASTM D4514-12 - Standard Specification for Friction Tape

ASTM D69-12 - Standard Test Methods for Friction Tapes

4. Properties (nominal)

Tape construction	high-quality cotton fabric, coated on both sides with an electrical-grade, solvent-free, rubber adhesive
Material thickness	14 mil, +/- 1
Color	black
Temperature, operating	80° C (176° F)
Adhesion, maximum	15 in/min
Aged adhesion, maximum	15 in/min
Breaking strength	40 lb/in (of width)
Breakdown Voltage	1000 V
Parallelism, maximum	0.125 in
Core diameter	1-1/2 in
Shelf life (inside storage)	2 years from the date of manufacture

Tape shall be shall be RoHS (European Union Directive 2002/95/EC for Restriction of Hazardous Substance) compliant.

5. Testing

Test data that confirms the properties cited in the manufacturer's data sheet, industry standards, and this material standard shall be provided upon request.

6. Packaging

Each roll of tape shall be individually packaged in cellophane, plastic, or metal containers and legibly marked with the following information:

- Manufacturer's name
- Manufacturer's catalog number
- Product description

Number of rolls of tape per case shall be according to Section 8.

Each shipping container shall be marked with Seattle City Light's Purchase Order Number.

Tape, Vinyl, Electrical

1. Scope

This standard covers the requirements for standard- and heavy-duty, pressure-sensitive, vinyl, electrical tape.

This standard applies to the following Seattle City Light stock numbers:

Stock Number	Description
736655	Standard-duty, 3/4 in x 66 ft roll
736656	Standard-duty, 1-1/2 in x 44 ft roll
736644	Heavy-duty, 1 in x 36 yd roll
736650	Heavy-duty, 2 in x 36 yd roll

2. Application

Standard- and heavy-duty tapes are intended for the following applications:

- Primary electrical insulation for wire and cable splices rated up to 600 volts
- Primary electrical insulation for 600-volt bus applications, and protective jacketing for low and high-voltage bus
- Protective jacketing for high voltage cable splices and repairs
- Harnessing of wires and cables
- Suitable for both indoor and outdoor applications
- Suitable for both above and below-grade applications

Standards Coordinator
John Shipek

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

Standard-duty tape has a lower installation and operating temperature rating than heavy-duty tape. Heavy-duty tape is more suitable for wrapping pipe than standard-duty tape.

Tape is applied in half-lapped layers with sufficient tension to produce a uniform wind (for most applications this tension will reduce the tape's width to approximately 5/8 of its original width). Connectors having irregular surfaces should be first padded with an appropriate product.

3. Industry Standards

Tape shall meet the requirements of the following industry standards:

ASTM D1000-10 - Standard Test Methods for Pressure-Sensitive Adhesive-Coated Tapes Used for Electrical and Electronic Applications

UL 510 - Underwriters Laboratories, Polyvinyl Chloride Polyethylene and Rubber Insulating Tape, 01-Feb-2005

4. Properties (nominal)

4.1 General

ASTM D1000 Class	2 (elastomeric)
Tape backing material	polyvinyl chloride (PVC) and/or its polymers
Adhesive	rubber-based, pressure-sensitive
Color	black
Breaking strength, per ASTM D1000 @ 22° C (72° F),	20 lbs/in (of width)
Voltage rating, per UL 510	600 V
Core diameter	1-1/2 in
Shelf life (inside storage)	5 years from the date of manufacture

Tape shall have excellent resistance to abrasion, moisture, alkaloids, acids, corrosion and varying weather conditions.

Tape shall be Underwriters Laboratories (UL) listed and marked as "Flame-Retardant, Cold Resistant."

Tape shall be shall be RoHS (European Union Directive 2002/95/EC for Restriction of Hazardous Substance) compliant.

4.2 Standard-duty

Temperature range	
Application	-18° C through 38° C (0° F through 100° F)
Operating	-18° C through 105° C (0° F through 221° F)
Material thickness, mil	8.5

4.3 Heavy-duty

Temperature range	
Application	-10° C through 38° C (15° F through 100° F)
Operating	-10° C through 80° C (15° F through 176° F)
Material thickness, mil	10

5. Testing

Test data that confirms the properties cited in the manufacturer's data sheet and this material standard shall be provided upon request.

6. Packaging

Each roll of tape shall be individually packaged in cellophane, plastic, or metal containers and legibly marked with the following information:

- Manufacturer's name
- Manufacturer's catalog number
- Product description

Number of rolls of tape per case shall be according to Section 8.

Each shipping container shall be marked with Seattle City Light's Purchase Order Number.

Tape, Vinyl, Color Coding

1. Scope

This standard covers the requirements for vinyl, color coding tape.

This standard applies to the following Seattle City Light stock numbers:

Stock Number	Color
736775	white <input type="checkbox"/>
736776	yellow <input type="checkbox"/>
736777	blue <input type="checkbox"/>
736778	red <input type="checkbox"/>
736779	green <input type="checkbox"/>
736780	orange <input type="checkbox"/>
736781	brown <input type="checkbox"/>

2. Application

Vinyl, color coding tape operates over a wide range of temperatures, applies smoothly, conforms, and is available in nine fade-resistant colors.

Vinyl, color coding tape is intended for the following applications:

- Color coding for phase identification, job identification and safety
- Insulating electrical wiring
- Protecting electrical conductors, motor leads and piping from moisture, alkalis, acids, corrosion, abrasion and weather

Standards Coordinator
John Shipek

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

3. Industry Standards

Vinyl, color coding tape shall meet the requirements of the following industry standards:

ASTM D1000-10 - Standard Test Methods for Pressure-Sensitive Adhesive-Coated Tapes Used for Electrical and Electronic Applications

RoHS (European Union Directive 2002/95/EC for Restriction of Hazardous Substance)

4. Properties (nominal)

ASTM D1000 Class	2 (elastomeric)
Tape backing material	polyvinyl chloride (PVC) and/or its polymers
Adhesive	rubber-based, pressure-sensitive
Temperature	
Application, min	0° C (32° F)
Operating, max	105° C (221° F)
Material thickness, mil	7
Breaking strength, per ASTM D1000 @ 23° C (73° F),	17 lbs/in (of width)
Voltage rating, per UL 510	600 V
Core diameter	1 in
Shelf life (inside storage)	5 years from the date of manufacture

Tape shall have excellent resistance to abrasion, moisture, alkalies, acids, corrosion and varying weather conditions.

Tape shall be Underwriters Laboratories (UL) listed and marked as "Flame-Retardant, Cold Resistant."

Tape shall be shall be RoHS (European Union Directive 2002/95/EC for Restriction of Hazardous Substance) compliant.

5. Testing

Test data that confirms the properties cited in the manufacturer's data sheet, industry standards, and this material standard shall be provided upon request.

6. Packaging

Tape shall be packaged to prevent damage during shipping, storage, and casual handling prior to use.

Each roll of tape shall be legibly marked with the following information:

- Manufacturer's name
- Manufacturer's catalog number
- Product description

Number of rolls of tape per case shall be according to Section 8.

Each shipping container shall be marked with Seattle City Light's Purchase Order Number.

MATERIAL STANDARD

TAPE, MASKING PRESSURE SENSITIVE

Scope: This specification covers high performance pressure-sensitive masking tape consisting of a pressure-sensitive adhesive on crepe paper backing.

Applicable Specification: Except as modified by this specification, the tape shall meet the requirements of Federal Specification UU-T-106, Type I, latest revision.

Clean Stripping: When applied to a properly painted surface, this tape shall strip clean, leaving no film or residue and shall not strip off or remove any of the underlying paint coating.

Physical Properties:

- Thickness, maximum 7.5 mils
- Tensile strength, longitudinal pounds per inch of width, minimum 19 lbs.
- Ultimate elongation, minimum 10 per cent
- Adhesion to steel, min. ounces per inch width 30 ounces

Packaging: The tape shall be uniformly and smoothly wound in 60-yard rolls on a suitable core having an inside diameter of $3 \pm 1/32$ inches. The tape shall be packaged with wax paper separators (or equivalent) between rolls.

Reference Specification: Fed. Spec. UU-T-106, Type I, latest revision

**SPLICE COVERS, CABLE CAPS AND BOOTS
HEAT SHRINKABLE**

1. Scope

Heat-Shrinkable Splice Covers, Caps and Boots shall be fabricated from thermally stabilized polyolefin and shall meet or exceed the requirements listed below. All listed items shall shrink into place or to minimum recovered dimensions upon uniform application of 250°F heat.

2. Requirements

Physical

Ultimate Tensile Strength (PSI): 2500 (ASTM D 412)

Ultimate Elongation (%): 250 (ASTM D 412)

Water Absorption (mg/sq. in.): 0.30

Air Oven Aging

21 Days (500 hours at 150°C):

Percent Original Tensile 85

Percent Original Elongation 85

Electrical

Dielectric Strength (volts/mil): 275 (ASTM D 149)

Operating Temperature: -65° to +130°C (continuous)

Adhesive: The inner walls of all splice covers and cable boots (Figures 3 and 1) listed in this standard shall have a full-length or total inside surface coating of meltable sealant which, with the application of heat, shall adhere to the cable jacket, forming a watertight seal. The adhesive lining shall be applied as a smooth surface with no spiral bead and no ribbing. The cable caps (Figure 2) shall have a full sealant coating extending at least one-third of the way from the closed end.

3. Packaging

All items shall be shipped as manufactured without bending, collapsing, creasing, or otherwise being deformed. In particular, tubing shall not be shipped bent in order to conform to or accommodate a shipping container. Supplier shall cut splice covers as necessary to conform to lengths specified below.

TUBING, HEAT SHRINK TYPE, THIN WALL

1. Scope

This standard covers the requirements for thin wall, heat shrink type tubing.

This standard applies to Seattle City Light Stock Number 012476.

Medium wall heat shrink tubing and heavy wall splice covers are outside the scope of this standard.

2. Application

Thin wall heat shrink tubing is for general, non-electrical use. Tubing may be used for wire jacket marking.

The requirements for medium wall heat shrink tubing and heavy wall splice covers are specified in Material Standards 7374.70 and 7374.75 respectively.

3. Attributes

Shrink tubing shall have the following attributes:

Material	polyolefin
Color	black
Shrink ratio, expanded-recovered	2:1
Full recovery temperature, degrees C	121

Shrink temperature, minimum, degrees C	90
Operating temperature, continuous, degrees C	
minimum	-55
maximum	110
Tensile strength, pound-force per square inch, minimum	1500
Shelf life, minimum	10 years

Shrink tubing shall be supplied uncoated, without adhesive.

Shrink tubing length, expanded internal diameter, recovered internal diameter, and wall thickness shall be as specified in Section 6.

4. Packaging

Shrink tubing shall be packaged to prevent damage during shipping, handling, and inside storage.

Shrink tubing shall be packaged and shipped in its natural round state. Product received excessively deformed will not be accepted.

TUBING, HEAT SHRINK TYPE, MEDIUM WALL

1. Scope

This standard covers the requirements for medium wall, heat shrink type tubing.

This standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Body Use Diameter, Maximum, in
010414	1.25
737622	1.70
737623	2.90

Heavy and thin wall heat shrink tubing are outside the scope of this standard.

2. Application

Medium wall heat shrink tubing is applied over broken-out, taped-shielded cable to provide mechanical and environmental protection. Cables of this type are exclusive to the Network system.

Medium wall heat shrink tubing may also act as primary insulation for systems rated 600 volts and below. Product is considered non-flame retardant.

Use only an approved propane torch, Stock Number 765897, to install heat shrink products.

3. Attributes

Shrink tubing shall have the following attributes:

Material	cross-linked polyolefin
Color	black
Shrink ratio, expanded-recovered	3:1
Shrink temperature, minimum, degrees C	121
Dielectric rating, kV	1
Operating temperature, continuous, degrees C	
minimum	-55
maximum	110
Tensile strength, pound-force per square inch, minimum	2400
Shelf life, minimum	10 years

Shrink tubing interiors shall be lined their full length with a smooth coating of thermoplastic (hot melt) adhesive.

Shrink tubing lengths, expanded internal diameters, recovered internal diameters, and wall thicknesses shall be as specified in Section 6.

SPLICE COVERS, HEAT SHRINK TYPE, HEAVY WALL

1. Scope

This standard covers the requirements for heavy wall, heat shrink type splice covers.

This standard applies to the Seattle City Light Stock Numbers cited in Section 8.

Sealing caps, breakout boots, and medium and thin wall heat shrink tubing are outside the scope of this standard.

2. Application

Splice covers, also known as shrink tubes or shrinks, are used to seal, insulate, and protect cable joints and terminations. They are appropriate for submersible and direct burial installations.

Splice covers may also act as primary insulation for systems rated 600 volts and below. Product is considered non-flame retardant.

Use only an approved propane torch, Stock Number 765897, to install heat shrink products.

3. Industry Standards

Splice covers shall meet the applicable requirements of the following industry standards:

ANSI C119.1-2011 - American National Standard for Electric Connectors-Sealed Insulated Underground Connector Systems Rated 600 Volts

UL Standard 486D - Insulated Wire Connectors for Use with Underground Connectors

4. Attributes

Splice covers shall have the following attributes:

Material	cross-linked polyolefin
Color	black
Shrink ratio, expanded-recovered, <i>minimum</i>	3:1
Shrink temperature, minimum, degrees C	121
Dielectric rating, kV	1
Operating temperature, continuous, degrees C	
<i>minimum</i>	-55
<i>maximum</i>	110
Tensile strength, pound-force per square inch, <i>minimum</i>	2400
Shelf life, <i>minimum</i>	10 years

Splice cover interiors shall be lined their full length with a smooth coating of thermoplastic (hot melt) adhesive.

Splice covers shall be non-corrosive.

Splice cover lengths, expanded internal diameters, recovered internal diameters, and wall thicknesses shall be as specified in Section 8.

CABLE BREAKOUT BOOTS, HEAT SHRINK TYPE

1. Scope

This standard covers the requirements for heat shrink type cable breakout boots.

This standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Number of Legs	Body Use Diameter, Maximum, in
737513	3	2.20
737517	3	2.90
010402	3	4.53
012479	4	8.50
737520	6	3.85

Sealing caps, and heavy, medium and thin wall heat shrink tubing are outside the scope of this standard.

2. Application

Cable breakout boots provide strain relief and mechanical and environmental protection for breakouts in three-, four-, and six-conductor cables. Cables of this type are exclusive to the Network system. Product is considered non-flame retardant.

Use only an approved propane torch, Stock Number 765897, to install heat shrink products.

3. Attributes

Break out boots shall have the following attributes:

Material	cross-linked polyolefin
Color	black or red
Leg length, minimum, in	1
Shrink temperature, minimum, degrees C	121
Operating temperature, continuous, degrees C	
minimum	-55
maximum	110
Shelf life, minimum	10 years

Breakout boot interiors shall be lined their full length with a smooth coating of thermoplastic (hot melt) adhesive.

Breakout boots shall be non-corrosive.

Breakout boots details shall be as specified in Section 7.

SEALING CAPS, HEAT SHRINK TYPE

1. Scope

This standard covers the requirements for heat shrink type cable end sealing caps.
 This standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Internal Diameter, Maximum Recovered, in
737475	0.36
737477	0.70
737479	1.00
737485	1.26
737483	1.77
737481	2.76

Breakout boots, and heavy, medium and thin wall heat shrink tubing are outside the scope of this standard.

2. Application

Sealing caps are used to seal cable ends and provide mechanical and environmental protection.
 Sealing caps may also be used as a live end seal for systems rated 600 volts and below. Product is considered non-flame retardant.
 Use only an approved propane torch, Stock Number 765897, to install heat shrink products.

3. Industry Standards

Sealing caps shall meet the applicable requirements of the following industry standard:

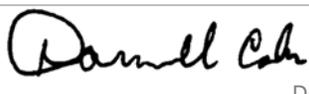

ANSI C119.1-2011 - American National Standard for Electric Connectors-Sealed Insulated Underground Connector Systems Rated 600 Volts

4. Attributes

Sealing caps shall have the following attributes:

Material	cross-linked polyolefin
Color	black
Expanded wall thickness, in	0.050 ± 0.020
Shrink temperature, minimum, degrees C	121
Dielectric rating, minimum, kV	1
Operating temperature, continuous, degrees C	
minimum	-55
maximum	110
Shelf life, minimum	10 years

Sealing cap interiors shall be lined their full length with a smooth coating of thermoplastic (hot melt) adhesive.
 Sealing caps shall be non-corrosive.
 Sealing caps details shall be as specified in Section 8.

Sealing Caps, Cold Shrink Type

1. Scope

This standard covers the requirements for cold shrink type cable end sealing caps.

This standard applies to the following Seattle City Light (SCL) stock numbers:

Stock No.	Use Range (in)	Nominal Length (in)
011682	0.46 to 0.82	2.5
011683	0.63 to 1.18	2.75
011684	1.02 to 1.94	3
011685	1.79 to 3.32	3.5

2. Application

Sealing caps are used to seal cable ends and provide mechanical and environmental protection.

Sealing caps may also be used as a live end seal for systems rated 600 V and below.

Product is considered non-flame retardant.

Installation requires no special tools.

3. Industry Standards

Sealing caps shall meet the applicable requirements of the following industry standard:

ANSI C119.1-2011 - American National Standard for Electric Connectors-Sealed Insulated Underground Connector Systems Rated 600 Volts

4. Requirements

Sealing caps shall have the following attributes:

Material	Mixed polyethylene
Color	Black
Wall thickness (in)	0.15
Operating temperature, range	
°C	-40 to 65
°F	-40 to 149
Installation temperature, minimum	
°C	-10
°F	20
Shelf life (years)	5
Dielectric strength, minimum (V/mil)	1

Sealing caps shall be suitable for direct bury, submersible, indoor, outdoor, and overhead application.

Sealing caps shall be ozone and ultraviolet light resistant.

Sealing caps shall meet the use range cited in Section 1.

Sealing cap interiors shall be close-ended, tubular, rubber sleeves that are factory expanded and loaded onto a removable core.

5. Packaging

Sealing caps shall be packaged to prevent damage during shipping, handling, and inside storage.

Sealing caps shall be packaged and shipped in their natural round state. Product received bent, collapsed, creased, or otherwise deformed will not be accepted.

Individual packages shall be legibly marked with:

- Manufacturer's name
- Manufacturer's catalog number

MATERIAL STANDARD

CAST IRON PUMP

1. Scope

This specification is for 110V-120V submersible centrifugal pumps intended for use in underground transformer vaults. The effluent to be pumped consists of water mixed with silt, small amounts of sand and gravel (up to 3/8" diameter), detergents, and other materials typical of what might be washed off city streets. The pumps shall comply with the latest revisions to all applicable ANSI, NEMA, NEC, MIL-P-28607 Type III, Class III, and UL requirements, except where modified by this specification. The motor shall be rated single-phase, 110-120V, 1 phase, 60 Hz.

2. Industry Standards

Cast iron pumps shall meet the applicable requirements of the latest industry standards:

- NEMA MG-1** – Motors and Generators
- MIL-P-28607** – Military Specification, Pump, Submersible
- ANSI**
- National Electrical Code**

3. Performance

The 1/2-hp pump shall have a minimum capacity of 45 U.S. gallons per minute at a 10-foot head. The maximum head shall not be less than 34 feet. The pumps shall be capable of passing suspended solids (up to 1" in diameter) equal to 30% by volume of the water being pumped without clogging the impeller or pump passages.

STANDARDS COORDINATOR	STANDARDS SUPERVISOR	UNIT DIRECTOR
 John Barnett	 John Barnett	 John Nierenberg

4. Construction**4.1 Materials**

The pump housing shall be cast iron. The rotor shaft shall be of 403 stainless steel. The semi-vortex impeller may be corrosion-resistant steel or urethane rubber material. If the impeller is not corrosion-resistant steel, the material must be pre-approved by engineering. All external fasteners shall be stainless steel.

4.2 Motor

The motor shall be rated for 115V, single-phase, 60 Hz., intermittent operation and thermally protected by an automatic reset overload protection device. The motor locked rotor rating shall not exceed NEMA Code M. The motor shall have permanently lubricated sealed bearings at both ends of the shaft (bushings are unacceptable). The motor shall be split-phase without a capacitor.

4.3 Outlet/Inlet

The 1/2-hp pump shall have a straight outlet with 2" NPT female threads. The inlet base shall be cast iron.

4.4 Power Cord

The power cord shall be 16 to 20 feet in length and shall be UL approved for submersible use.

5. Approved Manufacturer

LUBRICANT, SWITCH CONTACT

1. Scope

This material standard covers the requirements for switch contact lubricant.

This material standard applies to Seattle City Light Stock Number 013241.

2. Application

For lubricating S&C Electric type PMH, padmount, Mini-Rupter switch contacts.

Avoid contact with skin or eyes. During use, wear chemical resistant gloves and safety glasses. No ingredients are known to be hazardous under normal usage.

Refer to S&C Electric Data Bulletin 662-90 for type PMH switchgear inspection and maintenance recommendations.

3. Attributes

Product name	NYE Rheolube 368
Physical state	semi-solid
Packaging type/size	tube, 1/4 oz
Color	light tan to light yellow

4. Packaging

Tubes shall be packaged to prevent damage during shipping, handling, and storage.

Each shipping container shall be marked with:

BAG, CANVAS, LINE HOSE

Materials: Canvas line hose bags shall be made of water repellent cotton duck cloth meeting the requirements of Federal Specification CCC-C-419b; Cloth, Cotton, Duck, Unbleached, Plied Yarns, Type I, Numbered Duck.

The weight of the canvas cloth shall be 18-ounce (No. 6) or heavier hard textured canvas duck. The waterproof bottom and cuff shall be made of harness leather conforming to Federal Specification KK-L-156b or molded rubber. The top of the bag shall be formed with a nonmetallic ring over which the canvas is stitched. The stitching shall be of the best commercial practice.

Handle: The rope handle shall be reinforced with leather at attachment points.

Color: The color of the canvas duck shall be natural white or yellow.

Packing: The bags shall be packaged in accordance with the manufacturer's commercial practice to ensure safe delivery, without damage.

Reference Specifications: Federal CCC-C-419b, KK-L-156b, latest revisions

BAGS, GLOVE

Canvas Bags for Rubber Glove Storage shall be made of water-repellent, cotton duck cloth meeting the applicable requirements of *Federal Specifications CCC-C-419b; Cloth, Cotton, Duck, Unbleached, Plied Yarns, Type I, Numbered Duck.*

The weight of the canvas cloth for rubber glove bags shall be (#10) minimum 15 ounces per square yard.

The bags shall be furnished with heavy-duty button snaps, securely anchored, reinforced, snap hook, and ventilation and drain hole(s) in the bottom of the bags. Strain points shall be bar-tacked or riveted and the bags lock-stitched with nylon thread. The color of the canvas duck shall be white or yellow.

Reference Specification: *Federal CCC-C-419b*, latest revisions.

Vinyl Bags Made for Rubber Glove Storage shall be made of 10 ounce per square yard, vinyl-coated **both** sides, open-weave nylon cloth with beveled side gussets 2 inches at bottom and 4 inches at top.

The bags shall be furnished with two each #24 line nickel-plated brass snap button fasteners for closing, a securely-anchored, reinforced snap hook, and equally-spaced No. 1 brass grommets in bag bottom. Sewing should be with nylon thread, double row of stitching with corner stress points bar-tacked. Color: yellow.

Lettering: Each bag type shall be lettered "High-Voltage Gloves," or "Low-Voltage Gloves." Letter size shall be a minimum of 1/2 inches high.

Packaging: The bags shall be packaged in accordance with the manufacturer's commercial practice to ensure safe delivery without damage.

BAG, CANVAS, TOOL

MATERIALS: Canvas tool bags shall be made of No. 4 or heavier water repellent cotton duck cloth meeting the requirements of Federal Specification CCC-C-419b. The weight of the canvas cloth shall be a minimum of 25 oz. per square yard. The hardened, waterproofed bottom and cuff shall be made of leather or rubber. Polypropylene or other plastics are not acceptable. If made of leather, it shall meet Federal Specification KK-L-156b. The top of the bag shall be formed with a nonmetallic ring over which the canvas cloth is stitched. All stitching shall be done with nylon thread. The handle shall be 1/2" Safety Yellow polypropylene (hollow braid), tensile strength a minimum of 3,780 lb., working load a minimum of 420 pounds. A pocket of 6" x 6" minimum size shall be provided inside the tool bag located 3" from the top of the bag.

DRAINAGE HOLE: A 1/4" hole shall be placed in the bottom of the bag for water drainage. If the bag has a leather bottom, the hole shall be reinforced with nonmetallic material or grommet.

COLOR: The color of the bag shall be white or yellow.

SIZE: 12" diameter x 16" to 17" deep.

PACKAGING: The bags shall be packaged in accordance with the manufacturer's commercial practice to ensure safe delivery, without damage.

WHEEL CHOCKS, ALUMINUM

1. Scope

This material standard covers the requirements for aluminum wheel chocks. Each wheel chock is equipped with handle.

This material standard applies to Seattle City Light Stock Number 760931.

2. Application

Wheel chocks are used as a back up measure to prevent a vehicle from rolling down a hill in the event the vehicle's parking break system fails.

The wheel chock specified in this standard is only approved for use that conforms to the latest revision of Work Practice 0057.03 – Wheel Chock Application. Extensive field testing went into the development of Work Practice 0057.03.

Misapplication of wheel chocks could lead to serious personal injury to Seattle City Light employees or the general public.

3. Construction

Wheel chocks shall meet the requirements of the following Seattle City Light fabrication drawing:

A-5174 – Aluminum Wheel Chock, revision number 3, dated October 28, 2010

4. Pre-Production Approval

Successful bidder shall submit a first article (proto-type) to Seattle City Light Standards for approval prior to the fabrication of the first production piece.

Successful bidder shall submit a first production piece to Seattle City Light Standards for approval prior to the fabrication of the balance of the order.

5. Packaging

Wheel chocks shall be stacked and shrink-wrapped to wood pallets in quantities not to exceed 50 units per pallet.

Each pallet shall be marked with Seattle City Light's Stock Number.

6. Issuance

EA

7. Approved Manufacturers

Bids may be solicited from any fabricator identified by Civil/Mechanical Engineering or Material Control as being capable.

9. References

TRAFFIC SAFETY CONES, STANDARD PROFILE

1. Scope

This standard covers the requirements for standard profile, retroreflectorized traffic safety cones.

This standard applies to Seattle City Light Stock Number 761125.

2. Application

Traffic safety cones are used to channelize road users, divide opposing vehicular traffic lanes, divide lanes when two or more lanes are kept open in the same direction, and delineate short duration maintenance and utility work.

The cones specified in this standard are appropriate for day or night time use on low-speed roadways or freeways.

To minimize the possibility of being blown over or displaced by moving vehicular traffic, cones may be doubled up to increase their weight.

3. Industry Standards

Traffic safety cones shall meet the requirements of the following standard:

Federal Highway Administration (FHWA) Manual on Uniform Traffic Control Devices (MUTCD), 2009

4. Requirements

Material	
Base	black PVC
Underline	pink PVC
Top Coat	highly-pigmented, UV-stabilized PVC
Color	brilliant fluorescent orange
Tensile strength, minimum	1200 psi
Tear strength, maximum	250 lbs/in
Weight, nominal	8 lbs
Wall thickness, nominal	
Top	0.075 in
Bottom	0.130 in

Cones shall be provided with a 6-inch wide white, retroreflectorized band located 3 to 4 inches from the top of the cone with an additional 4-inch wide band located approximately 2 inches below the 6-inch band.

Cones shall be designed and fabricated to nest neatly and separate easily when stacked.

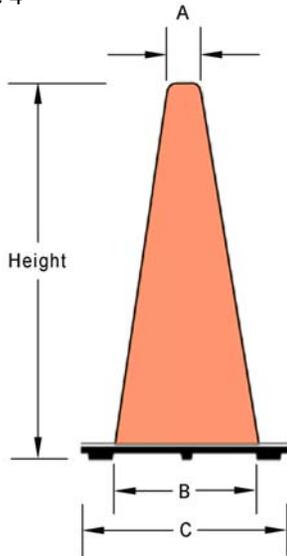

Cones shall be inner (in-mold) stenciled with "SCL" or equivalent text in letters readable from a distance of ten feet.

FLAG, WARNING

WARNING FLAG of the configuration shown shall be made of nylon fabric, heat sealed between vinyl plastic sheets. The nylon base fabric shall be at least 4 oz. per sq. yd., and shall be 13 oz. per sq. yd. after sealing in vinyl.

Color. The color shall be red-orange fluorescent matching Government Designation Color No. 633 of MIL-P-21563A or No. 28915 of Federal Standard 595.

Stitching. The thread shall be nylon size D-46 or equal, lock stitch, 7 stitches per inch, plus or minus one stitch.

Packaging and Shipping. Warning flags shall be packaged in accordance with the manufacturer's commercial practice to assure safe delivery without damage. Shipping containers shall be legibly marked with the type and quantity of items, the City Purchase Order number, the name and address of the manufacturer, and the address of the receiving warehouse.

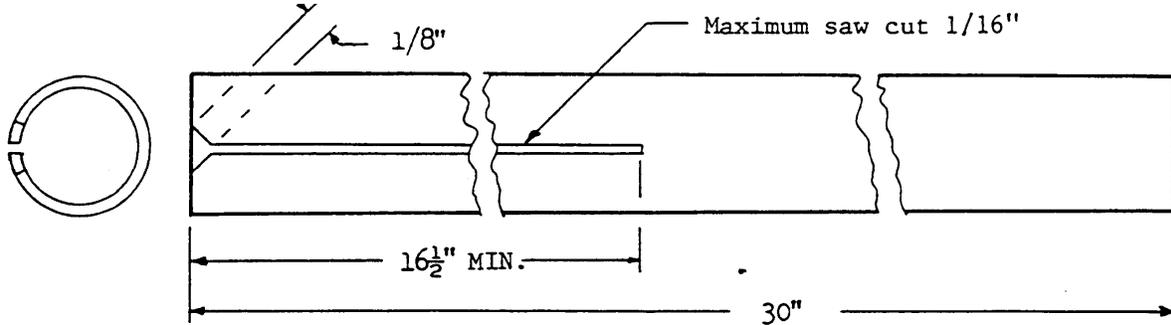

Reference Specifications: MIL-P-21563A; Fed. Std. 595.

**BLANKETS
RUBBER INSULATING**

This specification is for rubber insulating blankets used as portable protective devices to guard against accidental contact with live electrical conductors.

Rubber insulating blankets shall meet the requirements of the latest revision of ASTM D 1048 for Type II, CLASS 4, Style A Blankets. The blankets shall be molded of corona-resistant, chlorosulphonated polyethylene rubber or ethylene, propylene, diene, modified rubber (EPDM) compounded to withstand the ASTM Voltage Test of 40,000 (RMS AC) and 70,000 DC applied for 3 minutes as per Sections 9 and 18.6 for Class 4 Blankets. The rubber compound shall remain flexible in a temperature range of -20° F to 235° F.

The blankets shall be of the beaded edge type with molded eyelets. The color of the blankets shall be highly visible orange per ASTM D 1048 Section 7.3.1, latest revision.

Insulating blankets shall be packaged in accordance with the manufacturer's commercial practice to ensure safe delivery without damage.

Reference Specifications: ASTM D 1048, latest revision.

GLOVES, GENERAL PURPOSE, LEATHER

1. Scope

This material standard covers the requirements for general purpose, leather gloves.

Leather protector gloves that are worn over insulating rubber gloves are outside the scope of this standard.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock No.	Size	Style
013189	small	cowhide
013190	medium	cowhide
013191	large	cowhide
013192	extra-large	cowhide
013193	7	goatskin
013194	8	goatskin
013195	9	goatskin
013196	10	goatskin
013197	11	goatskin
013198	12	goatskin
013199	13	goatskin
013200	7	goatskin with gauntlet
013201	8	goatskin with gauntlet
013202	9	goatskin with gauntlet
013203	10	goatskin with gauntlet
013204	11	goatskin with gauntlet
013205	12	goatskin with gauntlet
013206	13	goatskin with gauntlet

2. Application

General purpose gloves are worn to protect hands against cuts, abrasions, and punctures.

Cowhide gloves are durable and warmer than goatskin, but are prone to get stiff after being wet. Cowhide gloves are not washable.

Goatskin gloves are durable, supple, and waterproof, but do not retain heat as well as cowhide. Goatskin gloves are washable. Because goatskin gloves do not stretch, they must fit on first try.

General purpose gloves with gauntlets offer additional protection.

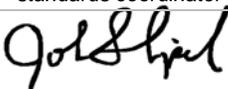

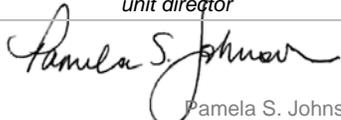

General purpose gloves are *not* appropriate for use as protectors over insulating rubber gloves or for any sort of protection against hazardous voltage.

3. Requirements

3.1 Cowhide

Cream color, LM weight (3.5 oz to 3.75 oz), side grain, economy grade cowhide palm; yellow canvas back. Full fit, gunn pattern with leather finger tips, and knuckle strap, red elastic band at back of wrist. Straight thumb. Two-inch stiff canvas safety cuff with "RAWHIDE" emblazoned in red letters, leather heel pull.

**PROTECTORS, LEATHER,
FOR CLASS 0 RUBBER INSULATING GLOVES**

1. Scope

This material standard covers the requirements for leather protector gloves appropriate for use with Class 0 electrical insulating rubber gloves, Material Standard 7634.60.

The requirements for leather protector gloves appropriate for use with Class 1 and 2 electrical insulating rubber gloves are specified in Material Standard 7634.21.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Size	Length, in
012267	7	10
012268	7-1/2	10
763373	8	10
012797	8 short finger	10
763374	9	10
763379	9-1/2	10

763380	10-1/2	10
763376	11	10
763377	12	10
013260	10	13
013261	11	13

2. Application

Leather protector gloves, also known as keepers, are worn over rubber insulating gloves to protect against cuts, abrasions, and punctures.

Rubber insulating gloves shall not be used without leather protector gloves.

Leather protector gloves shall not be used alone for protection against electric shock.

Gloves with an overall length of 13 inches, Stock Numbers 013260 and 013261, are used exclusively by network protector crews.

3. Industry Standards

Gloves shall meet the requirements of the following industry standard:

ASTM F 696-06 - Standard Specification for Leather Protectors for Rubber Insulating Gloves and Mittens

4. Detailed Requirements

Leather protector gloves shall have the following attributes:

length	as specified in section 10
glove color	may vary from pearl to tan
cuff design	
10 in length	no cuff
13 in length	straight cuff
type	goatskin
required options	shirred elastic back

**PROTECTORS, LEATHER,
 FOR CLASS 1 AND 2 RUBBER INSULATING GLOVES**

1. Scope

This material standard covers the requirements for leather protector gloves appropriate for use with Class 1 and 2 electrical insulating rubber gloves, Material Standards 7634.61 and 7634.62 respectively.

The requirements for leather protector gloves appropriate for use with Class 0 electrical insulating rubber gloves are specified in Material Standard 7634.20.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Size
763353	8
763350	8-1/2
763354	9
763351	9-1/2
763355	10
763352	10-1/2
763356	11
763357	12

2. Application

Leather protector gloves, also known as keepers, are worn over rubber insulating gloves to protect against cuts, abrasions, and punctures.

Rubber insulating gloves shall not be used without leather protector gloves.

Leather protector gloves shall not be used alone for protection against electric shock.

3. Industry Standards

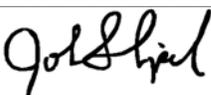

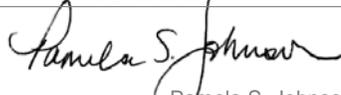

Gloves shall meet the requirements of the following industry standard:

ASTM F 696-06 - Standard Specification for Leather Protectors for Rubber Insulating Gloves and Mittens

4. Detailed Requirements

Leather protector gloves shall have the following attributes:

length	12 inches
glove color	may vary from cream to tan
cuff design	straight
cuff color (backside)	fluorescent orange
type	cowhide
required options	non-metallic buckle and pull strap

<i>standards coordinator</i>	<i>standards manager</i>	<i>unit director</i>
 John Shipek	 John Shipek	 Pamela S. Johnson

MATERIAL STANDARD

Protectors, Leather, for Class 1 and 2 Rubber Insulating Gloves

5. Marking

Each glove shall be marked according to the requirements of ASTM F-696, Section 9.

6. Testing

Gloves shall be tested according to the requirements of ASTM F-696, Section 8.

Test data that establishes compliance with the requirements of ASTM F-696 shall be provided upon request.

7. Packaging

Gloves shall be packaged to keep them clean during shipping and storage.

8. Issuance

PR

MATERIAL STANDARD

LINERS, COTTON, KNIT FOR RUBBER OR LEATHER GLOVES

Cotton glove liners are used for cold weather protection and to reduce the discomfort of lineworkers' rubber or leather gloves (keepers).

The liners shall be made of 100% cotton yarn in a seamless, one-piece knit construction. The liners shall have a minimum of 3-1/2" length of thermal-knit wrist cuff to prevent the cuff from rolling up and bunching in the palm.

The liners shall be free from holes, cuts, tears, and dropped or loose stitches.

GLOVES, INSULATING, RUBBER, CLASS 0

1. Scope

This material standard covers the requirements for Class 0 electrical insulating rubber gloves.

The requirements for leather protector gloves, appropriate for use with Class 0 rubber gloves, are specified in Material Standard 7634.20.

The requirements for Class 1 and 2 insulating rubber gloves are specified in Material Standards 7634.61 and 7634.62 respectively.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Size	Length, in
012269	7	11
763359	8	11
012796	8 short finger	11

013361	12	11
013258	09-1/2	14
013259	10-1/2	14

2. Application

The phase-to-ground voltage to which the rubber insulating gloves may be exposed shall be limited to the *maximum use voltage* (see detailed requirements) of the glove.

The gloves specified in this standard are only appropriate for use on systems rated 1000 V or less.

Refer to WAC 296-45 and ASTM F-496, Section 3 for more information.

Gloves with an overall length of 14 inches, Stock Numbers 013258 and 013259, are used exclusively by network protector crews.

3. Industry Standards

Gloves shall meet the requirements of the following industry standards:

ASTM D 120-08 - Standard Specification for Rubber Insulating Gloves

ASTM F 496-08 - Standard Specification for In-Service Care of Insulating Gloves and Sleeves

4. Detailed Requirements

Gloves shall have the following electrical ratings and attributes:

type	I, non-resistant to ozone
class	0
length	as specified in section 9
length tolerance, in	+0, -1/2
glove color (outside)	yellow
glove color (inside)	yellow
cuff design	straight
halogenation treatment	required, or approved equal treatment
class color	red

GLOVES, INSULATING, RUBBER, CLASS 1

1. Scope

This material standard covers the requirements for Class 1 electrical insulating rubber gloves.

The requirements for leather protector gloves, appropriate for use with Class 1 and 2 rubber gloves, are specified in Material Standard 7634.21.

The requirements for Class 0 and 2 insulating rubber gloves are specified in Material Standards 7634.60 and 7634.62 respectively.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Size
763338	8
763339	8-1/2
763340	9
763342	9-1/2
763344	10
763346	10-1/2
763348	11

2. Application

In Washington State, insulating rubber gloves are only appropriate for use as a secondary layer of personal protection for the purpose of guarding against accidental contact with primary voltage.

The phase-to-ground voltage to which the rubber insulating gloves may be exposed shall be limited to the *maximum use voltage* (see detailed requirements) of the glove.

The gloves specified in this standard are only appropriate for use on Seattle City Light systems nominally rated 4 kV (line-to-line) or less.

Refer to WAC 296-45 and ASTM F-496, Section 3 for more information.

3. Industry Standards

Gloves shall meet the requirements of the following industry standards:

ASTM D 120-08 - Standard Specification for Rubber Insulating Gloves

ASTM F 496-08 - Standard Specification for In-Service Care of Insulating Gloves and Sleeves

4. Detailed Requirements

Gloves shall have the following electrical ratings and attributes:

type	I, non-resistant to ozone
class	1
length	14 inches
glove color (outside)	black
glove color (inside)	red
cuff design	straight
halogenation treatment	required, or approved equal treatment

WOOD LADDERS, SINGLE AND EXTENSION, EXTRA HEAVY-DUTY

1. Scope

This standard covers the requirements for extra heavy-duty, wood, single and extension ladders and accessories.

This standard applies to the following Seattle City Light stock numbers:

Stock Number	Description, Ladder Type	Highest Standing Level	Wt, lb
013007	16-foot single	12 feet 6 inches	33
013008	18-foot single	14 feet 6 inches	42
013009	24-foot extension	17 feet 4 inches	55
013010	Slip-on ladder shoes, pair		-

2. Application

Wood ladders are used by operations personnel to access underground vaults and above ground structures. Highest standing levels may be found in the list above. Maximum intended load is 300 pounds.

Ladders are furnished with pivot shoes as standard. If slip-on shoes are required, request Stock Number 013010. Contact Standards for information on how to perform the retrofit.

3. Industry Standards

Wood ladders shall meet the applicable requirements of the following:

ANSI-ASC A14.1-2007 - American National Standard for Ladders - Wood Safety Requirements

Chapter 296-876 WAC - Ladders, Portable and Fixed

4. Construction

4.1 General

Ladder side rails shall be constructed of straight-grained Western Hemlock or a species equivalent in strength as determined by ANSI A14.1.

Ladder rungs shall be constructed of hickory or oak.

Ladder rungs shall be fully rodded with truss blocks.

Each ladder shall have at least three coats of a moisture-resistant, synthetic sealer; sealer shall be Sher-Wood Homoclad.

Each ladder shall be provided with a pair of Johnson #360810 pivot shoes installed.

4.2 Single Ladders

Single ladders shall be type IA, equating to a maximum intended load rating of 300 pounds.

Single ladder channels shall be parallel.

standards coordinator	standards supervisor	unit director
 Kathy Tilley	 John Shipek	 Darnell Cola

MATERIAL STANDARD

Wood Ladders, Single and Extension, Extra Heavy-Duty

4.3 Extension Ladders

Extension ladders shall be type IA, equating to a maximum intended load rating of 300 pounds.

Extension ladder channels shall be parallel.

Each extension ladder shall be provided with rope and pulley according to the requirements of ANSI A14.1, Section 6.3.3.10.

5. Tests and Test Reports

Data that establishes compliance with the requirements of ANSI A14.1, WAC, and this material standard shall be provided upon request.

6. Marking

Each wood ladder shall be marked according to the requirements of ANSI A14.1, Section 9.

7. Packaging

Wood ladders shall be packaged to prevent damage during shipping, handling, and storage.

8. Issuance

Mandrels, Proofing

1. Scope

This standard covers the requirements for rigid proofing mandrels. This standard applies to the following Seattle City Light (SCL) stock numbers.

Stock No.	Conduit Trade Size (in)
013294	3/4
013295	1
013296	1-1/4
013297	1-1/2
013298	2
013299	2-1/2
013300	3
013301	3-1/2
013302	4
013303	5
013304	6

2. Application

Rigid proofing mandrels are used to test for obstructions in an underground conduit run after trench backfill and/or conduit pour is complete.

The mandrel size should be at least as large as the largest cable pulling head (or grip) that could be used within that conduit to ensure cable can be pulled in successfully.

Standards Coordinator
Brett Hanson

Handwritten signature of Brett Hanson in black ink.

Standards Supervisor
John Shipek

Handwritten signature of John Shipek in black ink.

Unit Director
Darnell Cola

Handwritten signature of Darnell Cola in black ink.

3. Construction

Proofing mandrels corresponding to conduit sizes up to and including 3-1/2 inches shall be constructed per Figure 3.1. A stainless steel 1/8-in aircraft cable shall be run through the center of the mandrel, looped at the ends, and secured with red Loctite compound and a flat washer.

Proofing mandrels corresponding to conduit sizes 4 inches and larger will be constructed per Figure 3.2. At each end of the mandrel, 1/2-in galvanized steel oval eye nuts shall be installed and secured with red Loctite compound to the 1/2-in galvanized rod via a lock washer and flat washer.

Acceptable dimensional mandrel length and diameter tolerance is +0% to -3%

Each mandrel shall be marked in a permanent legible fashion with the stock number and date of manufacture. Marking shall appear on the mandrel end face to prevent damage.

013303	5	4.75	12.0	1.5	0.5	Delrin or nylon	3.2
013304	6	5.50	14.0	2.0	0.7	Delrin or nylon	3.2

4. Pre-Production Approval

The successful bidder shall submit a first prototype to SCL Standards for approval prior to the fabrication of the first production piece. The successful bidder shall submit a first production piece to SCL Standards for approval prior to the fabrication of the balance of the order.

5. Issuance

Stock Unit: EA

6. Approved Manufacturers

Bids may be solicited from any fabricator identified by Civil/Mechanical Engineering or Material Control as being capable.

**REFLECTIVE LETTERS AND NUMBERS, PRESSURE-SENSITIVE,
2-7/8" X 1-3/4", AND PANEL**

1. Scope

This material standard covers the requirements 2-7/8" x 1-3/4", pressure sensitive, reflective letters and numbers and flexible mounting panel.

2. Application

Pressure sensitive, reflective letters and numbers are used to mark a variety of equipment and material, including wood poles.

Pressure sensitive, reflective letters and numbers are appropriate for above and below ground applications.

Letters and numbers may be affixed to wood poles with the aid of flexible, horizontal panels, Stock Number 766300, which provide backing for up to eight characters.

3. Attributes

3.1 Letters and Numbers

Adhesive	acrylic
Grade	standard
Dimensions	
Character height, in	2-1/2
Backing height, in	2-7/8
Backing width, in	1-3/4
Color	
Character	yellow
Backing	black
Service life, years, min	7

3.2 Panel

Panel shall be designed and fabricated to be used with the letters and numbers specified in this material standard.

Material	Lexan
Orientation	horizontal
Dimensions	
Height, in	3-15/16
Width, in	17-3/4
Number of characters, max	8

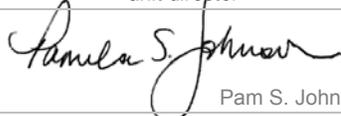

Figure 3.2 Panel

4. Packaging

Pressure sensitive, reflective letters and numbers shall be packaged to prevent damage during shipping, inside storage, and casual handling prior to installation.

Pressure sensitive, reflective letters and numbers shall be packaged in individual character sets, in packs of 25.

**NUMBER TAGS, ALUMINUM, EMBOSSED, 7/8" BY 1-5/8"
 BAR CODE, AND HOLDER**

1. Scope

This material standard covers the requirements of 7/8 by 1-5/8 inches, embossed aluminum number tags, custom sequential bar codes, and aluminum mounting holder.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Description
013062	0
013063	1
013064	2
013065	3
013066	4
013067	5
013068	6
013069	7
013070	8
013071	9
013072	holder only
013073	assembled set

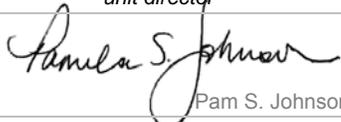

2. Application

Embossed aluminum number tags and custom sequential bar codes are primarily used to mark power and streetlight poles. They may also be used to mark other assets.

Embossed aluminum number tags and custom sequential bar codes are intended for above ground applications.

Embossed aluminum number tags and custom sequential bar codes are affixed to poles with the aid of vertical, aluminum holders, Stock Number 013072, which provide backing for up to seven numbers plus one bar code.

Individual number tags are available as separate stock items to repair damaged sets. Custom sequential bar codes are only available as components of assembled, sequential sets. If assembled sets are required, users must contact Material Control and provide a beginning and ending number sequence.

<i>standards coordinator</i>	<i>standards manager</i>	<i>unit director</i>
 John Shipek	 John Shipek	 Pam S. Johnson

MATERIAL STANDARD

Wide to narrow ratio	3.0:1

3.3 Holder (only)

Holder shall be designed and fabricated to be used with the number tags and bar codes specified in this material standard.

Material	aluminum
Material thickness, in	0.024 +/- .005
Orientation	vertical
Dimensions	
height, in	10.245 +/- .005
width, in	1.62 +/- .030
Capacity (number of tags excluding bar code)	7

Holder shall be furnished with mounting slots and holes as pre-approved by Seattle City Light Standards.

3.4 Assembled Sets

An assembled set shall consist of seven numbers and one corresponding custom sequential bar code installed in one holder.

Assembled sets shall be composed of components meeting the requirements of this material standard.

The numbering sequence shall be as specified on the purchase order.

**4. Packaging**

Embossed aluminum number tags, holders, and assembled sets shall be packaged to prevent damage during shipping, inside storage, and casual handling prior to installation.

Each package shall be marked with the following information:

- Manufacturer's name or symbol
- Manufacturer's catalog number
- Seattle City Light stock number

5. Issuance

PK (25 per pack), number tags

EA, holder

Custom sequential bar codes are only available as a component of assembled, sequential sets.

Signs, Danger Hazardous Voltage, 10 in x 14 in, Rigid

1. Scope

This standard covers the requirements for rigid “Danger Hazardous Voltage” signs.

This standard applies to Seattle City Light (SCL) Stock No. 013740.

2. Application

“Danger Hazardous Voltage” signs provide a visual aid in identifying potential hazards that may exist if a person were to come in contact with electrical equipment.

These signs are intended for use on the inside fence or on walls within a SCL substation. Signs may also be used in other situations where the same level of alert is warranted.

The term “danger” indicates a hazardous situation that, if not avoided, **will** result in death or serious injury. The use of this term is to be limited to the most extreme situations.

See SCL 7651.31 for rigid “Warning Hazardous Voltage” signs.

3. Industry Standards

Signs shall meet the applicable requirements of the following industry standards:

Occupational Safety and Health Administration (OSHA) 1910.145; Specifications for accident prevention signs and tags

American National Standards Institute (ANSI) Z535.1; Safety Colors

ANSI Z535.2; Environmental Facility and Safety Signs

ANSI Z535.3; Criteria for Safety Symbols

ANSI Z535.4; Product Safety Signs and Labels

Signs, Danger Hazardous Voltage, 14 in x 20 in, Rigid

1. Scope

This standard covers the requirements for rigid “Danger Hazardous Voltage” signs.
This standard applies to Seattle City Light (SCL) Stock No. 765207.

2. Application

“Danger Hazardous Voltage” signs provide a visual aid in identifying potential hazards that may exist if a person were to come in contact with electrical equipment.

These signs are intended for use on transmission towers. Signs may also be used in other situations where the same level of alert is warranted.

The term “danger” indicates a hazardous situation that, if not avoided, **will** result in death or serious injury. The use of this term is to be limited to the most extreme situations.

Sign, Equipment Transportation Agreement

1. Scope

This standard covers the material requirements for Equipment Transportation Agreement (ETA) signage.

2. Application

Specific signage is required when an ETA contract exists between a customer and Seattle City Light (SCL) for transformers or related equipment installed in a vault.

An ETA is a binding agreement typically established between SCL and a property owner as part of the electrical service initiation process. It dictates that in the event SCL equipment needs to be replaced or installed on site, it is the owner's responsibility to move such equipment in and out of the building.

ETA signage is not part of SCL stock. The customer is responsible for procuring signage per this standard.

Signs, Danger Hazardous Voltage, 7 in x 10 in, Adhesive

1. Scope

This standard covers the requirements for adhesive-backed decal “Danger Hazardous Voltage” signs.

This standard applies to Seattle City Light (SCL) Stock No. 765182.

2. Application

“Danger Hazardous Voltage” signs provide a visual aid in identifying potential hazards that may exist if a person were to come in contact with electrical equipment.

These signs are intended for use on the inside of switches, cabinets, transformers, or vault lids. Signs may also be used in other situations where the same level of alert is warranted.

The term “danger” indicates a hazardous situation that, if not avoided, **will** result in death or serious injury. The use of this term is to be limited to the most extreme situations.

See SCL 7651.35 for “Warning Hazardous Voltage” adhesive-backed decal signs.

3. Industry Standards

Signs shall meet the applicable requirements of the following industry standards:

Occupational Safety and Health Administration (OSHA) 1910.145; Specifications for accident prevention signs and tags

American National Standards Institute (ANSI) Z535.1; Safety Colors

ANSI Z535.2; Environmental Facility and Safety Signs

ANSI Z535.3; Criteria for Safety Symbols

ANSI Z535.4; Product Safety Signs and Labels

ANSI C2; NESC Handbook, Appendix B Safety Signs

ASTM D4956 Type IX; Standard Specification for retroreflective sheeting conforming to Type IX.

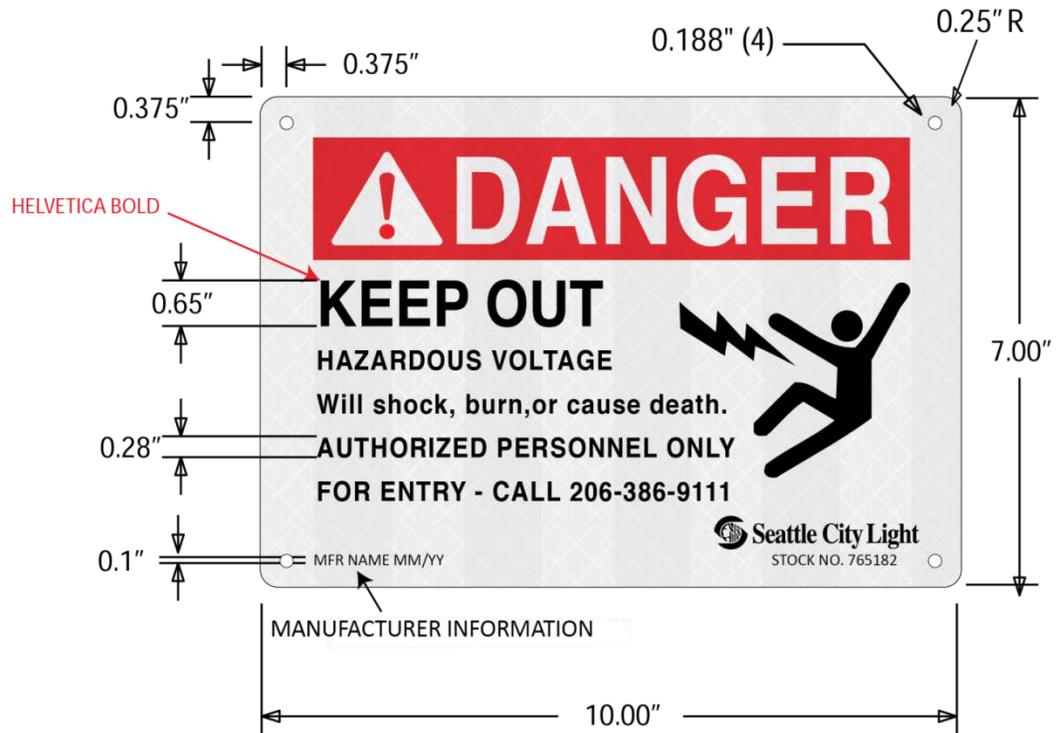

4. Requirements

Sign shall be fabricated according to Table 4 and Figure 4.

Table 4. Sign Requirements

Material	Suitable for application without requiring additional coats of adhesive or water to the application surface Minimum application temperature of -10°F Self-extinguishing
Coating	3M Series 3930 high intensity prismatic reflective sheeting; UV-inhibiting Sheeting strips applied in a vertical orientation Tedlar clear laminate
Adhesive	Clear, with silver underneath Pre-coated, pressure sensitive Shall have no staining effect on the decal material Mildew resistant Shall form a durable bond to clean, well-painted surfaces or unpainted corrosion-proof metals
Liner	Paper, back scored for easy removal Easy release-type; removable without tearing after storage for up to 4 hours at 180°F
Durability	Outdoor life of 6 years minimum, with vertical exterior exposure Resistant to 500 hours at 90% humidity Resistant to degradation by petroleum solvents and greases
Dimensions (in)	7 x 10
Text Colors	Signal word panel: Safety White letters on a transparent Safety Red background Text copy: Safety Black Exclamation point pictogram in triangle: Safety Red surrounded by Safety White Electric shock symbol on body pictogram: Safety Black Shocked person pictogram: Safety Black
Manufacturer and SCL Product Identification	Manufacturer name or logo and the date of production clearly marked along the bottom left edge of each decal SCL stock number clearly marked along the bottom right edge of each decal
Lettering	Ink: 3M 880N series or equivalent Manufacturer and SCL identification: In a style and size that is legible but that does not detract from the warning message All other text: Helvetica Bold font
Layout	Per Figure 4

Figure 4. Example Sign Layout

Signs, Danger Keep Out, 10 in x 14 in, Adhesive

1. Scope

This standard covers the requirements for adhesive-backed decal “Danger Keep Out Hazardous voltage inside” vault signs.

This standard applies to Seattle City Light (SCL) Stock No. 765209.

2. Application

“Danger Hazardous Voltage” signs provide a visual aid in identifying potential hazards that may exist if a person were to come in contact with electrical equipment.

These signs are intended for use specifically on, in, or around vaults. Signs may also be used in other situations where the same level of alert is warranted.

The term “danger” indicates a hazardous situation that, if not avoided, **will** result in death or serious injury. The use of this term is to be limited to the most extreme situations.

3. Industry Standards

Signs shall meet the applicable requirements of the following industry standards:

Occupational Safety and Health Administration (OSHA) 1910.145; Specifications for accident prevention signs and tags

American National Standards Institute (ANSI) Z535.1; Safety Colors

ANSI Z535.2; Environmental Facility and Safety Signs

ANSI Z535.3; Criteria for Safety Symbols

Standards Coordinator
Kathy Tilley

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

ANSI Z535.4; Product Safety Signs and Labels

ANSI C2; NESC Handbook, Appendix B Safety Signs

ASTM D4956 Type IX; Standard Specification for retroreflective sheeting conforming to Type IX.

4. Requirements

Sign shall be fabricated according to Table 4 and Figure 4.

Table 4. Sign Requirements

Material	Suitable for application without requiring additional coats of adhesive or water to the application surface Minimum application temperature of -10°F Self-extinguishing
Coating	3M Series 3930 high intensity prismatic reflective sheeting; UV-inhibiting Sheeting strips applied in a vertical orientation Tedlar clear laminate
Adhesive	Clear, with silver underneath Pre-coated, pressure sensitive Shall have no staining effect on the decal material Mildew resistant Shall form a durable bond to clean, well-painted surfaces or unpainted corrosion-proof metals
Liner	Paper, back scored for easy removal Easy release-type; removable without tearing after storage for up to 4 hours at 180°F
Durability	Outdoor life of 6 years minimum, with vertical exterior exposure Resistant to 500 hours at 90% humidity Resistant to degradation by petroleum solvents and greases
Dimensions (in)	10 x 14
Text Colors	Signal word panel: Safety White letters on a transparent Safety Red background Text copy: Safety Black Exclamation point pictogram in triangle: Safety Red surrounded by Safety White Electric shock symbol on body pictogram: Safety Black Shocked person pictogram: Safety Black
Manufacturer and SCL Product Identification	Manufacturer name or logo and the date of production clearly marked along the bottom left edge of each decal SCL stock number clearly marked along the bottom right edge of each decal
Lettering	Ink: 3M 880N series or equivalent Manufacturer and SCL identification: In a style and size that is legible but that does not detract from the warning message All other text: Helvetica Bold font
Layout	Per Figure 4

Figure 4. Example Sign Layout

5. Approval Process

Manufacturer must submit artwork and one representative physical sample for review by SCL Standards prior to being considered for approved manufacturer status. Artwork submission shall include manufacturer's part number for SCL use in ordering product.

6. Approved Manufacturers

Manufacturer	Catalog No.
Almetek Industries	LABEL-14605
Designer Decal	DD-765129-SCL

Signs, Warning Hazardous Voltage, 10 in x 14 in, Rigid

1. Scope

This standard covers the requirements for rigid “Warning Hazardous Voltage” signs. This standard applies to Seattle City Light (SCL) Stock No. 013741.

2. Application

“Warning Hazardous Voltage” signs provide a visual aid in identifying potential hazards that may exist if a person were to come in contact with electrical equipment.

These signs are intended for use on the outside fence or exterior walls of an SCL substation. Signs may also be used in other situations where the same level of alert is warranted.

The term “warning” indicates a hazardous situation that, if not avoided, **could** result in death or serious injury.

See SCL 7651.19 for rigid “Danger Hazardous Voltage” signs.

3. Industry Standards

Signs shall meet the applicable requirements of the following industry standards:

Occupational Safety and Health Administration (OSHA) 1910.145; Specifications for accident prevention signs and tags

American National Standards Institute (ANSI) Z535.1; Safety Colors

ANSI Z535.2; Environmental Facility and Safety Signs

Signs, Warning Hazardous Voltage, 7 in x 10 in, Rigid

1. Scope

This standard covers the requirements for rigid “Warning Hazardous Voltage” signs. This standard applies to Seattle City Light (SCL) Stock No. 013755.

2. Application

“Warning Hazardous Voltage” signs provide a visual aid in identifying potential hazards that may exist if a person were to come in contact with electrical equipment.

These signs are intended for use on the outside fence or exterior walls of an SCL substation or other electrical facility. Signs may also be used in other situations and facilities where the same level of alert is warranted.

The term “warning” indicates a hazardous situation that, if not avoided, **could** result in death or serious injury.

See SCL 7651.23 for rigid “Danger Hazardous Voltage” signs.

3. Industry Standards

Signs shall meet the applicable requirements of the following industry standards:

Occupational Safety and Health Administration (OSHA) 1910.145; Specifications for accident prevention signs and tags

Signs, Warning Hazardous Voltage, 7 in x 10 in, Adhesive

1. Scope

This standard covers the requirements for adhesive-backed decal “Warning Hazardous Voltage” signs.

This standard applies to Seattle City Light (SCL) Stock No. 013754

2. Application

“Warning Hazardous Voltage” signs provide a visual aid in identifying potential hazards that may exist if a person were to come in contact with electrical equipment.

These signs are intended for use on the inside of switches, cabinets, transformers, or vault lids. Signs may also be used in other situations where the same level of alert is warranted.

The term “warning” indicates a hazardous situation that, if not avoided, **could** result in death or serious injury.

See SCL 7651.27 for “Danger Hazardous Voltage” adhesive-backed decal signs.

3. Industry Standards

Signs shall meet the applicable requirements of the following industry standards:

Occupational Safety and Health Administration (OSHA) 1910.145; Specifications for accident prevention signs and tags

MATERIAL STANDARD

**SIGN
 TRAFFIC CONTROL**

Traffic Control Signs shall be of the configuration shown and shall conform to Part 5 of ANSI D6.1, "Manual on Uniform Traffic Control Devices for Streets and Highways." Each sign shall be complete with a 2-inch diameter staff, 60 inches long, with a suitable coupler for connecting the sign and staff.

Letters. All letters shall be 6 inches high, Series C, per Bureau of Public Roads "Standard Alphabets for Highway Signs."

Fabrication. The signs shall be 24" to 26" in diameter and fabricated from ABS plastic, meeting the requirements of ASTM D1788 for Type 1, Grade 2 material. The 2-inch diameter, 24-inch long handle shall be securely attached to the sign body with bolts.

Colors. Colors of background, letters, and staff shall be air-drying enamel and shall conform to Federal Standard 595.

Reference Specifications: ANSI D6.1 (Part V); Bureau of Public Roads "Standard Alphabets for Highway Signs"; ASTM D1788; Federal Standard 595, latest revisions.

MATERIAL STANDARD

**SIGN
 TOWER/CIRCUIT IDENTIFICATION
 6" x 20"**

Tower/Circuit identification signs shall be of the configuration shown and shall meet the applicable requirements of the latest revisions to ANSI standard Z53.1, *Safety Color Code for Marking Physical Hazards*.

Lettering. Letters and numbers shall be black on a yellow background. They shall be fabricated from Minnesota Mining Company No. 3271 yellow *Scotchlite*® (or approved equal) and screened with No. 305 opaque black (or approved equal). The lettering and numbering shown on the example above are for illustration purposes only and are not necessarily representative of the actual sign. The size of the letters shall be as follows: 1-1/2" letters and numbers on 1-3/4"-high backing; 2" (numbers only) on 3" backing; and 3" (letters only) on 4" backing. Lettering is not part of Stock No. 765210, and is shown for example only.

Finishing. No finishing is needed other than installing the letters and numbers on the aluminum sign blank.

Reference Specification: ANSI Z53.1

Note: Lettering is shown only as an example of a typical installation. Letters and numbers are to be supplied by City Light crews, and are not part of Stock No. 765210.

RECORDING CARD

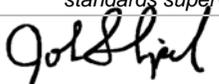

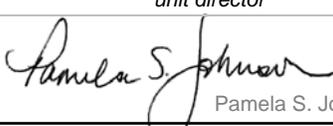

The recording card, of the configuration shown, shall be made of 15 mil (min.) plastic that shall withstand moisture, grease, and dirt. The surface shall be a matte finish that is easy to write on with ball-point pen or pencil. The background shall be yellow, and the lettering shall be black as shown. Camera ready artwork available from City Light Engineering Standards.

A perforated circle approximately 3/16" in diameter shall be located adjacent to the words or numbers as shown. The perforated circles shall be easily removed or punched out with an object similar to a pen or pencil.

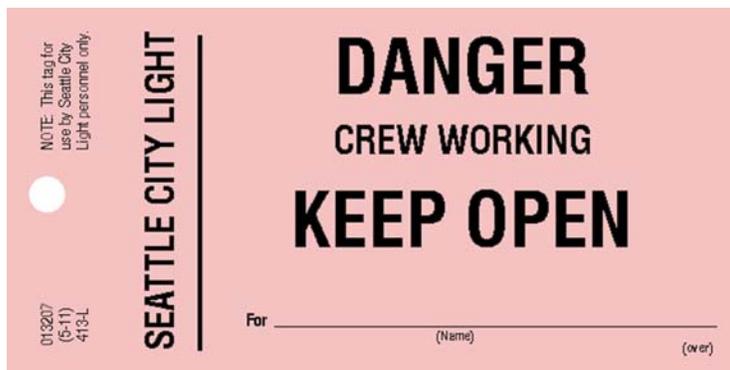

The cards shall be packaged 25 per package. Reasonable variations are acceptable upon approval from City Light.

OPERATIONS TAGS

1. Scope

This standard covers the requirements for operations tags.

This standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Tag Label
013207	Danger Keep Open
013208	Abnormal Condition
013239	Station Warning Tag
013240	Recloser Off

2. Application

Operations tags are used by field personnel in the performance of switching and tagging procedures.

A complete description of how operations tags are used may be found in Seattle City Light's *Systems Operations Clearance Keep Open and Hold Open Procedures* book.

Note: Only solid-yellow Abnormal Condition tags are under the control of System Operations. Multi-colored Abnormal Condition Tags are in use at Seattle City Light but outside the control of System Operations. The use of these tags is the responsibility of the

divisions for which their use is intended. Under no circumstances shall multi-colored tags be substituted for the solid-yellow tag.

Operations tags were once all manufactured in-house and assigned form numbers such as 413-L. As Seattle City Light's tags become standardized, references to these form numbers will gradually give way to Stock Numbers.

3. Requirements

3.1 General

Tags shall be fabricated from a material that can be reliably and durably written on in pencil or permanent ink marker.

Tags intended for outdoor application shall be water-proof and ultraviolet-light-resistant, suitable for long-term exposure.

The front, upper left corner of each tag shall contain the following information, arranged as typified in figure 3.2a:

- Seattle City Light's six-digit Stock Number
- (mm-yy) where mm = month of printing, yy = year of printing
- Seattle City Light's alphanumeric Form Number

Each tag shall be marked in an inconspicuous location with the manufacturer's name or symbol.

MATERIAL STANDARD

SLINGS, WIRE ROPE

CROSS SECTION VIEW

Wire Rope Slings shall be made of wire rope conforming to the requirements of Federal Specification RR-W-410 and ANSI B3Q.9, except as modified herein.

Fabrication. The wire rope shall be Type 1, Class 2, Construction 4, 6 x 19 improved plow steel, with independent wire rope core (IWRC).

Lay. The wire rope shall have right regular lay.

Finish. The wire rope shall have an uncoated finish (bright).

Loop. The sling loops shall be formed by opening the end of the wire rope and laying it back so three strands pass around the loop in one direction and the other three strands, with the independent wire rope core, pass around the loop in the other direction (Flemish splice). The throat of the loop shall have all ends securely compressed under a steel sleeve. Under normal load conditions, the loop shall be free from "bird caging", evidenced by protrusion of the core.

Marking. The manufacturer's name or identifying mark shall be permanently impressed upon the sleeve or upon a permanently attached metal tag.

Approved Manufacturers: (1) B & J Equipment; (2) Broderick-Bascom; (3) West Pacific - WR; (4) N.W. Wire Rope; (5) West Coast - WR; (6) Pacific Industrial Supply.

765480	3	one-ply
765484	4	one-ply
765485	5	two-ply
765486	6	two-ply
765488	8	two-ply
765490	10	two-ply
765492	12	two-ply

2. Application

Slings are used to rig and hoist loads.

Before starting a job, sling users shall be trained in the selection, inspection, cautions to personnel, effects of the environment, and rigging practices cited in ANSI/ASME B30.9.

3. Industry Standards

Slings shall meet the applicable requirements of the following industry standard:

ANSI/ASME B30.9-2010 – Slings, Safety Standard for Cableways, Cranes, Derricks, Hoists, Hooks, Jacks, and Slings

4. Requirements

4.1 Common

Webbing material	nylon
Webbing material color	yellow
Abrasion resistant webbing treatment	required
Webbing construction, tensile strength, minimum	9,800 lb/in of webbing width
Width, in	2
Length, ft	as cited in section 9 of this Standard
Type, per ANSI/ASME B30.9	IV (twisted-eye)
Class, per ANSI/ASME B30.9	7
Design factor	5 to 1
Eyes	leather or Cordura® brand reinforced
Wear indicator system	required

standards coordinator	standards supervisor	unit director
 John Shipek	 John Shipek	 Pamela S. Johnson

MATERIAL STANDARD

Slings, Nylon

effective date: April 12, 2011

page: 2 of 2

4. Requirements, continued**4.2 One-Ply**

Rated capacity, minimum

Vertical, lb	3,100
Basket, lb	6,200
Choker, lb	2,480

4.3 Two-Ply

Rated capacity, minimum

Vertical, lb	6,200
Basket, lb	12,400
Choker, lb	4,960

5. Marking

Each sling shall be marked according to the requirements of ANSI/ASME B30.9, Section 9-5.7. This information shall include, but not be limited to:

- Name or trademark of manufacturer
- Manufacturer's code or stock number
- Rated load for at least one hitch type and the angle upon which it is based
- Type of synthetic web material
- Number of legs, if more than one

In addition, each sling shall be marked with:

- "SEATTLE CITY LIGHT"
- Date of manufacture

Height of sling marking text shall be at least 3/16 inch.

Sling marking shall appear on a permanently attached tag made of leather or abrasion resistant polymer.

6. Testing

Test data that establishes compliance with the requirements of ANSI/ASME B30.9 shall be provided upon request.

7. Packaging

Slings shall be individually packaged to prevent damage during shipping, handling, and storage.

Each shipping container shall be marked with:

- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

8. Issuance

MATERIAL STANDARD

FUNNELS, POLYETHYLENE, GENERAL PURPOSE

1. Scope

This material standard covers the requirements for general purpose plastic funnels.

This material standard applies to Seattle City Light the following Stock Numbers:

Stock No	Capacity, oz
013168	16
013169	32
013170	48

2. Application

For general purpose liquid channeling. May be used for petroleum products.

3. Requirements

Stock No	Material	Nominal Capacity, oz	Nominal Diameter, in	Nominal Height, in
013168	polyethylene	16	5.5	4.5
013169	polyethylene	32	7.5	7.0
013170	polyethylene	48	8.0	7.0

Funnels shall be professional grade and suitable for general purpose application in a utility environment.

Capacity indicates what volume the funnel will hold when the outlet is blocked.

4. Packaging

Funnels shall be packaged to prevent damage during shipping, handling, and storage.

Each shipping container shall be marked with:

- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

5. Issuance

DOT TYPE-II SAFETY CANS

1. Scope

This standard covers the requirements for Department of Transportation (DOT) type-II safety cans.

This standard applies to the following Seattle City Light stock numbers:

Stock Number	Capacity, gal
013413	2.5
013414	5.0

2. Application

Safety cans are used for over-the-road transport of gasoline and other flammable liquids.

3. Federal Regulations

Safety cans shall meet the applicable requirements of US Department of Transportation, Pipeline and Hazardous Materials Safety Administration, Hazardous Materials Regulations (HMR) CFR 49 Parts 100 to 185.

4. Requirements

Material	24-gauge premium coated steel
Color	Red
Body outer diameter, in	11-3/4
Body height, in	
2.5 gallon can	12
5.0 gallon can	17-1/2
Hose outer diameter, in	5/8
Hose length, in	9

Fusible link melt point, degrees F	165
------------------------------------	-----

Positive pressure relief actuation, range, psig	3 to 5
---	--------

Safety cans shall have the following features:

- Full-fist rounded grip
- Positive-pressure-relief cap
- Spring-loaded, self-closing lid
- Long-life lid gasket
- Fusible link bracket
- Lead-free steel body and handle
- Flexible pour hose
- 24-gauge premium coated steel construction
- Durable, high-gloss powder paint finish
- Yellow banding with large ID zone
- Trilingual warning (English, Spanish, and French)
- Reinforced sidewalls
- Corrosion-resistant, stainless-steel flame arrester within the fill/pour spout
- Wide free-span opening lid
- Raised bottom construction
- Single hold-down bracket
- Heavy roll bars to protect mechanism

Safety cans shall be:

- DOT type-II compliant
- FM Global tested and approved
- Underwriters Laboratories listed

standards coordinator	standards supervisor	unit director
 John Shipek	 John Shipek	 Darnell Cola

5. Marking

Each safety can shall be marked with:

- Manufacturer's name
- Capacity
- Applicable compliances, approvals, and listings

6. Packaging

Each safety can shall be packaged to prevent damage during shipping, handling, and storage.

Each shipping container shall be marked with:

- Seattle City Light purchase order number
- Seattle City Light purchase stock number

7. Issuance

EA

8. Approved Manufacturer

FLASHLIGHT, LED TYPE

1. Scope

This material standard covers the requirements for battery-powered, LED (light emitting diode) type flashlights.

This material standard applies to Seattle City Light Stock Number 013156.

2. Application

For general purpose, hand-held lighting needs.

Do not mix new and old batteries. Do not mix alkaline, standard (carbon-zinc), or rechargeable batteries.

Do not look directly into the beam of an LED type flashlight; the light is much brighter than that of traditional incandescent type flashlights and can cause eye damage.

3. Requirements

Light source	single, high performance LED
Light output	120 lumens, minimum
Efficiency	comparable to Cree XP-C technology or better
LED life	50,000 hours, minimum
Battery configuration	four AA Alkaline
Battery run time	4 hours, nominal

Flashlight shall be impact- and water-resistant.

Flashlight shall be professional grade, suitable for general purpose application in a utility environment.

4. Product Approval

Manufacturers and/or distributors interested in having their product approved for purchase by Seattle City Light must participate in the stepped processed summarized below. Contact Standards for the details.

- Submit evidence that product meets the requirements of this standard
- Provide one sample for evaluation

5. Packaging

Flashlight shall be packaged to prevent damage during shipping, handling, and storage.

Each shipping container shall be marked with:

- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

6. Issuance

EA

7. Approved Manufacturers

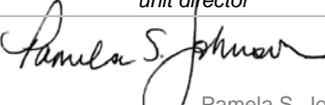

Ray-O-Vac RNF4AA-B 120 Lumens Roughneck

ALKALINE BATTERIES

1. Scope

This standard covers the requirements for alkaline batteries.

This standard applies to the following Seattle City Light Stock Numbers:

Stock Number	Size
760191	AAA
760190	AA
760192	C
760194	D
760189	9 volt transistor
760185	6 volt lantern

2. Application

Alkaline batteries are for powering flashlights and other small electronic devices.

Do not mix new and old batteries. Do not mix alkaline, standard (carbon-zinc), or rechargeable batteries in the same device.

To minimize power loss during storage, batteries should ideally be stored at a maximum temperature of 77° F (25° C). Refrigerated storage is neither necessary nor recommended.

Batteries should not be left in electronic devices past their expiration date.

3. Industry Standards

Batteries shall meet the applicable requirements of the following industry standards:

ANSI C18.1M Part 1; "Portable Primary Cells and Batteries with Aqueous Electrolyte - General and Specifications," American National Standards Institute, 01-Jan-2001

ANSI/NEMA C18.1M Part 2-2011; "For Portable Primary Cells and Batteries with Aqueous Electrolyte - Safety Standard," National Electrical Manufacturers Association, 2010

4. Requirements

4.1 General

Classification	alkaline
Temperature Range, degrees C	
Storage	-18 to 35
Operating	-18 to 54
Shelf life, years at 21 degrees C, 80% initial capacity, nominal	
1.5 V cells	7
9 V cells	5

Batteries shall meet Environmental Protection Agency (EPA) requirements for landfill disposal. No mercury-added formulation shall be used. Batteries shall not contain cadmium.

Bolts, Expansion Anchor, Stainless Steel

1. Scope

This standard covers the requirements for two types of stainless steel expansion anchor bolts.

This standard applies to the following Seattle City Light (SCL) stock numbers:

Stock No.	Size (in) (Diameter x Length)	Type
780032	1/2 x 3-3/4	304
013666	1/2 x 4-1/2	304
780033	3/4 x 8	304
780147	5/8 x 4-3/4	304
780034	5/8 x 4-3/4	316
780141	1/2 x 3-3/4	316
780143	1/2 x 5-1/2	316
780145	5/8 x 6	316

2. Application

Table 2. Expansion Anchor Bolt Applications, All Types

SCL Standard	Material	Application	Environment	Seismically qualified?
7800.95 (this standard)	Stainless steel bolts with Type 304 stainless steel nuts and washers	Permanent	Wet	Yes
	Stainless steel bolts with Type 316 stainless steel nuts and washers	Permanent	Wet, corrosive/saltwater conditions	Yes
7800.96	Carbon steel	Permanent	Dry, in-building	Yes
7800.97	Carbon steel	Light duty/temporary	Dry, in-building	No

Kathy Tilley

John Shipek

Darnell Cola

Expansion anchor bolt strength requirements depend on a variety of factors, including:

- Strength of concrete
- Bolt spacing
- Shear and tension
- Seismic

Please refer to the Hilti Kwik bolt TZ, Stainless Steel, 304 and 316 Expansion Anchor technical data sheet for additional information and contact SCL Civil Engineering for application-specific strength requirements.

3. Industry Standards

Expansion anchor bolts shall meet the applicable requirements of the following industry standards:

ACI 355.2; Qualification of Post-Installed Mechanical Anchors in Concrete

ANSI/ASME B18.2.1; Square, Hex, Heavy Hex, and Askew Head Bolts and Hex, Heavy Hex, Hex Flange, Lobed Head, and Lag Screws (Inch Series)

ANSI/ASME B18.21.1; Washers: Helical Spring-Lock, Tooth Lock, and Plain Washers (Inch Series)

ASTM F594; Standard Specification for Stainless Steel Nuts

ICC-ES AC 193; Acceptance Criteria for Mechanical Anchors in Concrete Elements

4. Requirements

Expansion anchor bolt, nut, and washer shall be provided to SCL pre-assembled.

Stainless steel expansion anchor nuts and washers are to be made from Type 304 or Type 316 stainless steel respectively.

Nuts shall meet the dimensional requirements of ASTM F594.

Washers shall meet the dimensional requirements of ANSI/ASME B18.21.1, Type A, plain.

Expansion sleeves (wedges) shall be made from Type 316 stainless steel.

Seismic qualification shall be tested in accordance with ACI 355.2 and ICC-ES AC 193.

Table 4. Dimension Requirements

Stock No.	Size (in) (Diameter x Length)
780032	1/2 x 3-3/4
013666	1/2 x 4-1/2
780033	3/4 x 8
780147	5/8 x 4-3/4
780034	5/8 x 4-3/4
780141	1/2 x 3-3/4
780143	1/2 x 5-1/2
780145	5/8 x 6

5. Marking

A red band near top of bolt differentiates this product from the light-duty Hilti Kwik Bolt 3. Product and length identification shall be marked on all expansion anchor bolts.

A length identification mark shall be embossed into the impact section (dog point of the anchor). This mark shall be surrounded by four embossed notches identifying the anchor as a Hilti Kwik Bolt TZ.

6. Packaging

Each standard package shall be legibly marked with the following information:

- Manufacturer identification
- Product description
- Seattle City Light stock number
- Quantity contained

Quantity per box shall be as described in Section 8.

Each shipping container shall be legibly marked with the following information:

- Manufacturer identification
- Country of origin
- Product description
- Seattle City Light purchase order number

Expansion anchor bolt strength requirements depend on a variety of factors, including:

- Strength of concrete
- Bolt spacing
- Shear and tension
- Seismic

Please refer to the Hilti Kwik bolt TZ, Carbon Steel, 304 and 316 Expansion Anchor technical data sheet for additional information and contact SCL Civil Engineering for application-specific strength requirements.

3. Industry Standards

Carbon steel expansion anchors shall meet the applicable requirements of the following industry standards:

ACI 355.2; Qualification of Post-Installed Mechanical Anchors in Concrete

ASTM A563, Standard Specification for Carbon and Alloy Steel Nuts

ASTM F844; Standard Specification for Washers, Steel, Plain (Flat), Unhardened for General Use

ASTM B633/A668M; Standard Specification for Steel Forgings, Carbon and Alloy for General Industrial Use

ICC-ES AC 193; Acceptance Criteria for Mechanical Anchors in Concrete Elements

4. Requirements

Expansion anchor bolt, nut, and washer shall be provided to SCL pre-assembled.

Carbon steel anchor components shall be plated in accordance with ASTM B633 to a minimum thickness of 5 µm.

Nuts shall conform to the requirements of ASTM A563, Grade A, Hex.

Washers shall meet the requirements of ASTM F844.

Expansion sleeves (wedges) shall be manufactured from type 316 stainless steel.

Seismic qualification shall be tested in accordance with ACI 355.2 and ICC-ES AC193.

Table 4. Dimension Requirements

Stock No.	Size (in) (Diameter x Length)
780104	3/8 x 3
780105	3/8 x 3-3/4
780111	1/2 x 3-3/4
780113	1/2 x 5-1/2
780024	5/8 x 4-3/4
780115	5/8 x 6

Bolts, Expansion Anchor, Carbon Steel, Light Duty

1. Scope

This standard covers the requirements for carbon steel expansion anchors. This standard applies to the following Seattle City Light (SCL) stock numbers:

Stock No.	Size (in) (Diameter x Length)
780091	1/4 x 1-3/4
780092	1/4 x 2-1/4
780095	1/4 x 3-1/4
780103	3/8 x 2-1/4
780022	1/2 x 2-3/4

2. Application

Table 2. Expansion Anchor Bolt Applications, All Types

SCL Standard	Material	Application	Environment	Seismically qualified?
7800.95	Stainless steel bolts with Type 304 stainless steel nuts and washers	Permanent	Wet	Yes
	Stainless steel bolts with Type 316 stainless steel nuts and washers	Permanent	Wet, corrosive/saltwater conditions	Yes
7800.96	Carbon steel	Permanent	Dry, in-building	Yes
7800.97 (this standard)	Carbon steel	Light duty/temporary	Dry, in-building	No

Standards Coordinator
Kathy Tilley

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

Expansion anchor bolt strength requirements depend on a variety of factors, including:

- Strength of concrete
- Bolt spacing
- Shear and tension
- Seismic

Please refer to the Hilti Kwik Bolt 3, Carbon Steel Expansion Anchor technical data sheet for additional information and contact SCL Civil Engineering for application-specific strength requirements.

3. Industry Standards

Carbon steel expansion anchors shall meet the applicable requirements of the following industry standards:

ASTM B633-13; Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel

ASTM A563-15; Standard Specification for Carbon and Alloy Steel Nuts

ASTM F844-07a(2013); Standard Specification for Washers, Steel, Plain (Flat), Unhardened for General Use

4. Requirements

Expansion anchor bolt, nut, and washer shall be provided to SCL pre-assembled.

Carbon steel anchor components shall be plated in accordance with ASTM B633 to a minimum thickness of 5 μm .

Nuts shall conform to the requirements of ASTM A563, Grade A, Hex.

Washers shall meet the requirements of ASTM F844.

Expansion sleeves (wedges) shall be manufactured from Type 316 stainless steel.

Table 4. Dimension Requirements

Stock No.	Size (in) (Diameter x Length)
780091	1/4 x 1-3/4
780092	1/4 x 2-1/4
780095	1/4 x 3-1/4
780103	3/8 x 2-1/4
780022	1/2 x 2-3/4

5. Marking

Product and length identification shall be marked on all expansion anchor bolts.

A length identification mark shall be embossed into the impact section (dog point of the anchor). This mark shall be surrounded by four embossed notches identifying the anchor as a light-duty Hilti Kwik Bolt 3.

6. Packaging

Each standard package shall be legibly marked with the following information:

- Manufacturer identification
- Product description
- Seattle City Light stock number
- Quantity contained

Quantity per box shall be as described in Section 8.

Each shipping container shall be legibly marked with the following information:

- Manufacturer identification
 - Country of origin
 - Product description
 - Seattle City Light purchase order number
-

7. Issuance

Stock Unit: EA

8. Approved Manufacturer

Name: Hilti, Inc. (US)

Product Description: Kwik Bolt 3

Stock No.	Size (in) (Diameter x Length)	Item No.	Box Quantity
780091	1/4 x 1-3/4	282502	100
780092	1/4 x 2-1/4	282503	100
780095	1/4 x 3-1/4	282504	100
780103	3/8 x 2-1/4	282505	50
780022	1/2 x 2-3/4	282509	25

ANCHOR, FLUSH-MOUNT, INTERNAL-THREADED

1. Scope

This material standard covers the requirements for stainless-steel flush-mount internal-threaded anchors.

This material standard applies to the following Seattle City Light Stock Numbers:

Stock No.	Dimension, in
012960	1/2 x 2
012386	5/8 x 2-9/16

2. Application

The anchors are use in concrete or masonry where protruding bolt anchors would pose a hazard.

The anchors allow for reusable applications such as for setting temporary pulling plates or blocks as well as mounting items on the wall that may later be used elsewhere.

The anchors are used for installing pulling plates in Network vaults.

3. Attributes

Anchors shall be of stainless steel material (chromium-nickel steel), meeting the requirement of American Iron and Steel Institute (AISI) grade 303 stainless steel specifications also designated as UNS S30300 (Unified Numbering System for Metals and Alloys).

Anchors shall have the following attributes:

Stock No.	Bolt Size, in		Allowable Working Load, 4000 psi concrete, lb	
	Internal Thread	Embedment and Anchor Length	Tension	Shear
012960	1/2	2	1840	2760
012386	5/8	2-9/16	2630	4510

4. Packaging

Anchors shall be packaged to prevent damage during shipping and storage.

Each package and carton shall be marked with:

- Seattle City Light's Stock Number
- Manufacturer's name or symbol
- Manufacturer's catalog number
- Thread diameter

5. Issuance

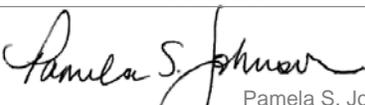

Stock Unit: EA

6. Approved Manufacturer

MATERIAL STANDARD

ANCHORS – SPRING TOGGLE BOLT

Spring Toggle Bolt Anchors of the configuration shown are for very light anchoring in hollow walls and horizontal surfaces.

The anchors are composed of full-threaded, round-head bolts and spring-loaded toggle heads. The anchors shall be zinc or cadmium plated for protection against rust.

CARRIAGE BOLT WITH NUT

1. Foreword

1.1 Scope

This material standard covers the requirements for zinc-coated carriage bolts, each provided with one square (or hex) nut.

1.2 Application

Carriage bolts and nuts are for general use.

1.3 Industry Standards

Carriage bolts and nuts shall meet the applicable requirements of the following industry standards:

- ASME B18.5-1990 (R2003)** - Round Head Bolts (Inch Series)
- ASME B18.2.2-1987 (R1999)** - Square and Hex Nuts (Inch Series)
- ASME B18.12-2001** - Glossary of Terms for Mechanical Fasteners
- ASTM A153/A153M-2004** - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware
- ASTM B695-2004** – Standard Specification for Coatings of Zinc Mechanically Deposited on Iron and Steel

2. Fabrication

2.1 Common Requirements – Bolts

	Requirements	Reference
Product Name	round head square neck bolt	ASME B18.12, Section 3.1.1.6.5
Material	steel	ASME B18.5, Section 2.8.1
Dimensions	per reference	ASME B18.5, Table 2
Minimum Thread Length	per reference	ASME B18.5, Section 2.6.2
Corrosion Protection	per reference	ASTM A153 or ASTM B695

2.2 Common Requirements - Nuts

Nuts shall be provided installed on bolts, one nut per bolt.

	Requirements	Reference
Product Name	square nut	ASME B18.12, Section 3.2.1.29
	hexagon nut	ASME B18.12, Section 3.2.1.14.
Material	steel	ASME B18.2.2, Table 1, General Note (f)
Dimensions	square nuts	ASME B18.2.2, Table 1
	hexagon nuts	ASME B18.2.2, Table 3
Corrosion Protection	per reference	ASTM A153 or ASTM B695

			5	780534

3. Packaging

3.1 Quantity

Standard package quantity shall not exceed 100 per box.

3.2 Weight

Standard package weight shall not exceed 50 pounds.

3.3 Package Marking

Each standard package shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Seattle City Light's Stock Number
- Quantity contained

3.4 Shipping Container

Each shipping container shall be legibly marked with the following information:

- Manufacturer's identification
- Country of origin
- Product description
- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

4. Shipping

Product shall be shipped to the address specified on the Purchase Order.

5. Issuance

Stock Unit: EA

6. Approved Manufacturers:

- A. B. Chance (Hubbell Power Systems)
- Hughes Brothers, Inc., Seward, NE
- Joslyn Manufacturing
(MacLean Power Systems)
- Kortick, Hayward, CA
- Portland Bolt, Portland, OR

Seattle City Light Material Control personnel may identify and approve distributors, and hence manufacturers, for 5/16 and smaller hardware.

Carriage Bolts, High Strength

1. Scope

This standard covers the requirements for high strength, zinc-coated, steel carriage bolts.

<u>Stock No.</u>	<u>Nominal Size (in)</u>
013487	7/16 x 8-1/2

2. Application

High strength carriage bolts are used with overhead travelers for installation of overhead conductors.

An ASTM A449 steel carriage bolt is equivalent in strength to an SAE Grade 5 fastener.
Refer to SCL 7804.1 for general use carriage bolts.

3. Industry Standards

Carriage bolts shall meet the applicable requirements of the following industry standards:

ASME B18.12-2001 - Glossary of Terms for Mechanical Fasteners

ASME B18.5-1990 (R2003) - Round Head Bolts (Inch Series)

ASTM A449-1993 - Standard Specification for Quenched and Tempered Steel Bolts and Studs

ASTM B695-2004 - Standard Specification for Coatings of Zinc Mechanically Deposited on Iron and Steel

ASTM F1941/F1941A - Standard Specification for Electrodeposited Coatings on Threaded Fasteners

SAE J429 - Mechanical and Material Requirements for Externally Threaded Fasteners Specification

Standards Coordinator

Carriage Bolt Assembly

1. Scope

This standard covers the requirements for a carriage bolt assembly.

This standard applies to SCL Stock No. 013486.

2. Application

This assembly is used for rigging the traveler for installation of overhead conductors. Replacement parts may be obtained separately.

3. General Requirements

Each assembly shall consist of one high strength, steel carriage bolt, one wing nut, and one flat round washer.

Assembly components shall meet the requirements described in Table 3.

Table 3. Assembly Component Requirements

Description	Stock No.	Dimensions, nominal (in)	Reference
Carriage bolt, high-strength, steel	013487	7/16-14 x 8.5	SCL 7804.12
Wing nut	013488	7/16-14	SCL 7830.00
Flat washer, plain, Type A, narrow	013489	7/16	ANSI B18.22.1

Standards Coordinator
Quan Wang

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

4. Packaging

Bolt, washer, and nut sets shall be shipped assembled.

Standard package quantity shall not exceed 50 per box.

Each standard package shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Seattle City Light's stock number
- Quantity contained

Each shipping container shall be legibly marked with the following information:

- Manufacturer's identification
 - Country of origin
 - Product description
 - Seattle City Light's purchase order number
 - Seattle City Light's stock number
-

5. Bid Submittal

Manufacturer shall include as part of the bid submittal all exceptions to this specification.

Suppliers shall indicate the manufacturer and country of origin of each lot of carriage bolts and wing nuts and provide the manufacturer's test or specification sheet indicating compliance with this specification.

6. Issuance

Stock Unit: EA

7. Approved Manufacturers

SCL Material Control personnel will identify and approve distributors, and hence manufacturers, for this set of stock numbers.

SQUARE HEAD MACHINE BOLT WITH SQUARE NUT

1. Foreword

1.1 Scope

This material standard covers the requirements for zinc-coated, square head, steel machine bolts, each provided with one square nut.

1.2 Application

Machine bolts and nuts are used in overhead line construction and where the applied load is primarily a tensile load. Refer to IEEE C135.1, Table 10 for minimum tensile strength values.

1.3 Industry Standards

Machine bolts and nuts shall meet the applicable requirements of the following industry standards:

IEEE C135.1-1999 - Standard for Zinc-Coated Steel Bolts and Nuts for Overhead Line Construction

ASME B18.12-2001 - Glossary of Terms for Mechanical Fasteners

ASTM A153/A153M-2004 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware

2. Fabrication

2.1 Common Requirements – Bolts

	Requirements	Reference
Product Name	square head bolt	ASME B18.12, Section 3.1.1.39
Material	steel	IEEE C135.1, Section 3.1.
Dimensions	per reference	IEEE C135.1, Tables 1, 6, 7 & 9
Minimum Thread Length	product length 4 in. or greater	IEEE C135.1, Section 5.5.
	product length 4 in. or less	ASME B18.2.1, Table 1
Corrosion Protection	zinc-coated	IEEE C135.1, Section 8

Machine bolt threads shall be machine-rolled; cut threads are not acceptable. This requirement is a clarification to IEEE C135.1, Section 5.1.

2.2 Common Requirements – Nuts

	Requirements	Reference
Product Name	square nut	ASME B18.12, Section 3.2.1.29
Material	steel	IEEE C135.1, Section 3.2.
Dimensions	per reference	IEEE C135.1, Tables 4 & 8
Corrosion Protection	zinc-coated	IEEE C135.1, Section 8

Nuts shall be provided installed on bolts, one nut per bolt.

STANDARDS COORDINATOR	STANDARDS SUPERVISOR	UNIT DIRECTOR
John Shipek <i>John Shipek</i>	John Skinner <i>John Skinner</i>	Hardev Jui <i>Hardev Jui</i>

Bolts, Galvanized, Double-Arming

1. Scope

This standard covers the requirements for galvanized bolts and nuts used to construct double arms. Double-arm bolts are commonly referred to as DA bolts.

This standard applies to the stock numbers cited in Section 8.

2. Application

Double-arm bolts are used to construct double wood crossarm installations where one crossarm is attached on each side of the pole.

3. Industry Standards

IEEE C135.80; "IEEE Standard for Fasteners for Overhead Line Construction"

ASME B18.2.1; "Square and Hex Bolts and Screws (Inch Series)"

ASME B18.2.2; "Square and Hex Nuts (Inch Series)"

ASTM A153/A153M; "Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware"

4. General Requirements, Bolts

4.1 Material

Bolts shall be made from hot-rolled steel produced by open-hearth, basic-oxygen, or electric-furnace process, and of a grade that is suitable to meet the requirements of IEEE C135.80.

Standards Coordinator
Kathy Tilley

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

4.2 Dimensions

Bolts shall have threads the full length of the bolt per ASME B18.2.1. Diameter, length, and strength are shown in Table 4.2.

Table 4.2 Double-Arming Bolt Dimensions and Strength

Stock No.	Diameter (in)	Bolt Length (in)	Minimum Tensile Strength (lb)
560518	5/8	18	12,400
560520	5/8	20	12,400
560522	5/8	22	12,400
560524	5/8	24	12,400
560526	5/8	26	12,400
560528	5/8	28	12,400
560530	5/8	30	12,400
560532	3/4	32	18,350

4.3 Finish

Bolts shall be free from burrs, seams, laps, and irregular surfaces that affect serviceability.

Bolts shall be hot-dip galvanized as stated in ASTM A153/A153M.

4.4 Assembly

Each bolt shall be fitted with four nuts on the bolt. Nuts shall not be supplied loose within the packaging.

5. General Requirements, Nuts

5.1 Material

Nuts shall be made from hot-rolled steel produced by open-hearth, basic-oxygen, or electric-furnace process, and of a grade that is suitable to meet the requirements of IEEE C135.80.

5.2 Dimensions

Nuts shall be square or hexagonal in accordance with ASME B18.2.2. Nut sizes are shown in Table 5.2.

Table 5.2. Nut Sizes

Diameter (in)	Threads per inch
5/8	11
3/4	10

Nuts shall be tapped oversized in accordance with Table 8, IEEE C135.80.

5.3 Finish

Nuts shall be hot-dipped galvanized as stated in ASTM A153/A153M.

6. Packaging

Each standard package shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Seattle City Light stock number
- Quantity contained

Each shipping container shall be legibly marked with the following information:

- Manufacturer's identification
 - Country of origin
 - Product description
 - Seattle City Light purchase order number
 - Seattle City Light stock number

Bolts, Galvanized, Oval Eye

1. Scope

This standard covers the requirements for oval eye bolts.

This standard applies to the Seattle City Light (SCL) stock numbers cited in Table 4.

2. Application

Oval eye bolts have many uses in overhead line construction such as securing clevises, links, and dead-end insulators.

3. Industry Standards

Oval eye bolts shall meet the applicable requirements of the following industry standard:
IEEE C135.80-2012; IEEE Standards for Fasteners for Overhead Line Construction

4. Requirements

Oval eye bolts and nuts shall meet the requirements listed in Table 4 and IEEE C135.80.

Oval eye bolts are supplied with a threaded end and one assembled square nut. Nuts shall not be supplied loose in the box.

Oval eye bolts and nuts shall be made of hot-rolled steel produced by open-hearth, basic oxygen, or electric furnace process.

Eye Nuts

1. Scope

This standard covers the requirements for oval eye, thimble eye, and twin eye nuts.

This standard applies to the following Seattle City Light (SCL) stock numbers:

Stock No.	Description	Min. Tensile Strength (lb)
565252	Oval eye nut	12,400
565254	Oval eye nut	18,350
565260	Thimble eye nut	18,350
565266	Twin eye nut	18,350

2. Application

Oval eye nuts are used for deadening, back-guying, and attaching pole head guys on the threaded end of a crossarm bolt.

Thimble eye (thimbleye) nuts, also known as strand eye nuts, are used to attach through bolts or the threaded end of a straight or angle eye bolt for straight-away guys.

Twin eye (twineye) nuts, also known as twin strand nuts, are used for head or stub guying of two strands of guy wire. The grooves are contoured to protect the guy wire strands.

3. Industry Standards

IEEE Standard C135.80; Standard for Fasteners for Overhead Line Construction

Standards Coordinator
Kathy Tilley

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

4. Requirements

Eye nuts shall meet the requirements of IEEE C135.80 and Table 4.

Eye nuts shall:

- Be made of hot-rolled steel produced by open-hearth, basic oxygen, or electric furnace process.
- Be tapped after galvanizing.
- Have the minimum tensile strength of the bolts or anchor rods for which they are intended.
- Meet the minimum and maximum dimensions as detailed in IEEE C135.80.

Nuts, Clevis

1. Scope

This standard covers the material requirements for 5/8-in galvanized clevis nuts.
This standard applies to Seattle City Light (SCL) Stock No. 565280.

2. Application

Clevis nuts are used in guying and dead-ending applications. They connect guy wire, conductor, wire grips, or dead-ended bails to eye fittings of insulators, eye bolts, and pole eye plates.

3. Industry Standards

Clevis nuts shall meet the applicable requirements of the latest revision of the following industry standards:

IEEE C135.80; "IEEE Standard for Fasteners for Overhead Line Construction"

ASME B18.2.1; "Square and Hex Bolts and Nuts (Inch Series)"

ASTM A153/A153M; "Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware"

ASTM B633/A668M; "Standard Specification for Steel Forgings, Carbon and Alloy for General Industrial Use"

Standards Coordinator
Kathy Tilley

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

4. Requirements

Clevis nuts shall be made of hot-rolled steel that has been produced by open-hearth, basic oxygen, or electric-furnace process, or of malleable or ductile type ferrous castings.

All material shall be of grades and qualities suitable to meet the requirements of IEEE C135.80.

Clevis nuts shall be hot-dip galvanized as stated in ASTM A153/A153M.

Hole shall be tapped after galvanizing as stated in IEEE C135.80. See Figure 4.

Cotter key shall be stainless steel, humped-type.

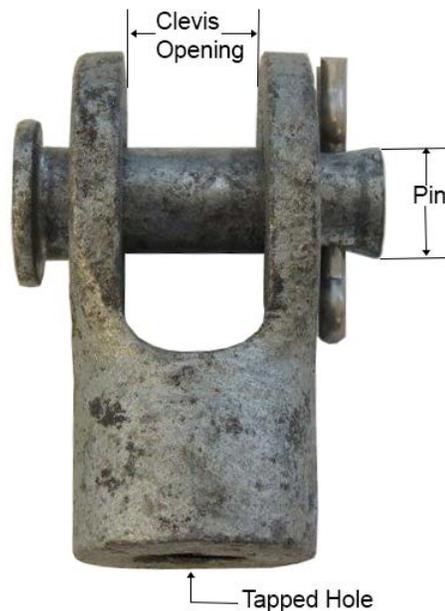

Clevis nut, pin, and cotter key shall be provided by manufacturer as an assembled unit.

Dimension and strength requirements are described in Table 4 and Figure 4.

Table 4. Dimension and Strength Requirements

Stock No.	Minimum Tensile Strength (lb)	Tapped Hole Diameter (in)	Pin Diameter (in)	Clevis Opening (in)
565280	12,400	5/8	5/8	3/4

BELLEVILLE SPRING WASHER BOLT ASSEMBLY KITS AND PARTS STAINLESS/ALUMINUM

1. General

This specification is for prepackaged Belleville spring washer bolt assembly kits and replacement parts. The kits will contain one bolt, one nut, two flat washers, and one Belleville spring washer. The assembly kits are used for making bolted copper and aluminum electrical connections. Replacement stainless steel parts shall be supplied separately.

2. Material

2.1 Stainless steel parts shall meet the latest requirements of ASTM F593 and F594 for the manufacturing and supply of stainless steel nut and cap screws. The bolt, nut, and flat washers shall be a Group I stainless steel alloy; i.e., 304, XM7. The Belleville spring washer shall be 17-7 PH Rockwell C 38/43 annealed and fully heat treated stainless steel; the flat deflection shall be $0.024 \pm 10\%$ with a flat load rating of 3,000 lbs. $\pm 10\%$.

2.2 Aluminum hex-head cap screws shall be 6061-T6 or 2024-T4 aluminum alloy. Aluminum finished hex-head nuts shall be 6061-T6 aluminum alloy.

3. Packaging

3.1 The bolt/nut/washer assembly kits shall be shipped as a complete assembly in individual packages containing all the parts for one complete assembly kit. The packaged kits shall be clearly marked with the SCL Stock Number and the contents of the kit; e.g., alloy, size of bolt, and manufacturer of Belleville washer.

3.2 Individual stainless steel parts may be shipped in boxes containing up to 100 units, with each box marked indicating the part and number of units in the box; e.g., 1/2" stainless steel split lock washers, quantity: 50, 6 digit SCL Stock Number.

4. Bid Submittal

The manufacturer shall include as part of the bid submittal all exceptions to this specification. Suppliers shall indicate the actual manufacturer of each individual part or parts of the assembly kit with the manufacturer's test or specification sheet indicating compliance with this specification.

Bolted Electrical Connection Assembly Kits with Belleville Spring Washers

Steel Nuts

1. Scope

This standard covers the requirements for zinc-coated steel, square and hex nuts.

2. Application

Square nuts are generally used in the overhead system. Hex nuts are used in the underground system, networks, substations, and in a variety of other applications.

The heavy hex nut is intended to be used with the cross-plate anchor (SCL Stock Number 562058).

3. Industry Standards

ASME B18.2.2-1987 (R1999) - Square and Hex Nuts (Inch Series)

ASME B18.12-2001 - Glossary of Terms for Mechanical Fasteners

ASTM A153/A153M-2004 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware

ASTM B695-2004 - Standard Specification for Coatings of Zinc Mechanically Deposited on Iron and Steel

ASTM A194 / A194M - 2012a - Standard Specification for Carbon and Alloy Steel Nuts for Bolts for High Pressure or High Temperature Service, or Both

Standard package quantity shall be as follows:

Nominal Size (in)	Quantity per Box
1/4, 5/16, 3/8	50 or 100
7/16, 1/2, 5/8	25 or 50
3/4, 7/8, 1	10, 20 or 25

Each standard package shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Seattle City Light's stock number
- Quantity contained.

Each shipping container shall be legibly marked with the following information:

- Manufacturer's identification
 - Country of origin
 - Product description
 - Seattle City Light's purchase order number
 - Seattle City Light's stock number.
-

6. Shipping

Product shall be shipped to the address specified on the purchase order.

7. Issuance

Stock Unit: EA

8. Approved Manufacturers

- A. B. Chance (Hubbell Power Systems)
Hughes Brothers, Inc., Seward, NE
- Joslyn Manufacturing (MacLean Power Systems)
Kortick, Hayward, CA
- Portland Bolt, Portland, OR

Seattle City Light Material Control personnel may identify and approve distributors, and hence manufacturers, for 5/16 inch and smaller hardware.

Steel Wing Nuts

1. Scope

This standard covers the requirements for zinc-coated steel wing nuts.

This standard applies to the following Seattle City Light (SCL) stock number:

Stock No.	Size, Nominal (in)	Threads per in
013488	7/16	14

2 Application

Wing nuts are used with overhead travelers for installation of overhead conductors.

3 Industry Standards

Nuts shall meet the applicable requirements of the following industry standards:

ASME B1.1 - Unified Inch Screw Threads

ASME B18.6.9 - Wing Nuts (Inch Series)

ASME B18.12-2001 - Glossary of Terms for Mechanical Fasteners

ASTM A153/A153M-2004 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware

ASTM B695-2004 - Standard Specification for Coatings of Zinc Mechanically Deposited on Iron and Steel

ASTM F1941/F1941A - Standard Specification for Electrodeposited Coatings on Threaded Fasteners

Standards Coordinator

MATERIAL STANDARD

SILICON BRONZE HEX NUT

1. Scope

This material standard covers the requirements for silicon bronze hex nuts.

2. Application

Silicon bronze hardware is used to make up electrical connections. Refer to Construction Guideline D14-4/NSV-20. Silicon bronze hardware is also used in situations where high-strength and corrosion-resistance is desired.

3. Industry Standards

Hex nuts shall meet the applicable requirements of the following industry standards:

ASME B18.2.2-1987 (R1999) - Square and Hex Nuts (Inch Series)

ASTM F467-1993 - Standard Specification for Nonferrous Nuts for General Use

ASME B18.12-2001 - Glossary of Terms for Mechanical Fasteners

4. Fabrication

4.1 Common Requirements

	Requirements	Reference
Product Name	hexagon nut	ASME B18.12, Section 3.2.1.14
Material	silicon bronze alloy 651	ASTM F467, Tables 1 and 2
Dimensions	per reference	ASME B18.2.2, Table 3
Threads	standard series UNC Class 2B	ASME B18.2.2, Table 3, General Note (d)

4.2 Marking

Nuts shall be marked according to ASTM F467, Section 17.1.

4.3 Detailed Requirements

Stock Number	Nominal Size, in	Threads per in
783321	1/4	20
783322	5/16	18
783323	3/8	16
783325	1/2	13
783326	5/8	11
783327	3/4	10

5. Packaging

Nuts shall be packaged 25, 50 or 100 per box.

Each standard package shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Seattle City Light's Stock Number
- Quantity contained

Each shipping container shall be legibly marked with the following information:

- Manufacturer's identification
- Country of origin
- Product description
- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

6. Shipping

Product shall be shipped to the address specified on the Purchase Order.

7. Issuance

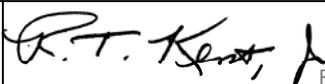

Stock Unit: EA

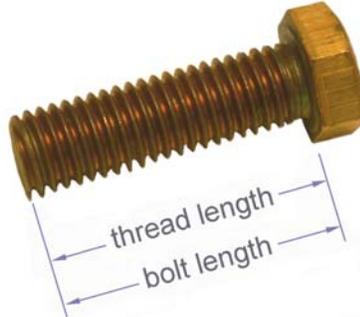

8. Approved Manufacturers

Seattle City Light Material Control personnel will identify and approve distributors, and hence manufacturers, for this group of Stock Numbers.

6. Approved Manufacturers

Seattle City Light Material Control personnel will identify and approve distributors, and hence manufacturers, for this family of products.

MATERIAL STANDARD

ALUMINUM HEX HEAD CAP SCREW, HEAVY

1. Foreword

1.1 Scope

This material standard covers the requirements for aluminum, heavy hex cap screws.

1.2 Application

Aluminum hardware is used to make up bolted aluminum-to-aluminum and aluminum-to-copper electrical connections. Refer to Construction Guideline D14-4/NSV-20. This includes connections to integral web channel bus (IWCB) in the Network, transformer and bus terminals, and aluminum lugs in stations and elsewhere.

Aluminum fasteners are anodized and lubricated for corrosion resistance and to prevent galling and seizing.

Refer to ASTM F468, Table 2 for tensile strength values.

1.3 Industry Standards

Cap screws shall meet the applicable requirements of the following industry standards:

ASME B18.2.1-1996 - Square and Hex Bolts and Screws (Inch Series)

ASTM F468-03a - Standard Specification for Nonferrous Bolts, Hex Cap Screws, and Studs for General Use

ASME B18.12-2001 - Glossary of Terms for Mechanical Fasteners

2. Fabrication

2.1 Common Requirements

	Requirements	Reference
Product Name	heavy hex cap screw	ASME B18.12, Section 3.1.2
Material	aluminum alloy 2024-T4	ASTM F468, Tables 1 and 2
Dimensions	per reference	ASME B18.2.1, Table 6
Threads	standard series UNC Class 2A	ASME B18.2.1, Table 6, Note (12)
Minimum Thread Length	per reference	ASME B18.2.1, Table 6, Note (9)

Cap screws shall be anodized and coated with Aluminite 205.

MATERIAL STANDARD

Aluminum Hex Head Cap Screw, Heavy

2.2 Marking

Cap screw heads shall be marked according to ASME B18.2.1, Section 2.8.

2.3 Detailed Requirements

Nominal Size, in.	Threads per in.	Length, in.	Stock Number
1/2	13	2	781809
5/8	11	1	781819
		2	781813
		2-1/2	781815
		3	781817

3. Packaging

Cap screw standard packaging shall be as follows:

Nominal Size, in.	Length, in.	Quantity per Box
1/2	all	50
5/8	all	25

Each standard package shall be legibly marked with the following information:

- Manufacturer's identification
- Product description
- Seattle City Light's Stock Number
- Quantity contained

Each shipping container shall be legibly marked with the following information:

- Manufacturer's identification
- Country of origin
- Product description
- Seattle City Light's Purchase Order Number
- Seattle City Light's Stock Number

4. Shipping

Product shall be shipped to the address specified on the Purchase Order.

5. Issuance

Stock Unit: EA

6. Approved Manufacturers

Seattle City Light Material Control personnel will identify and approve distributors, and hence manufacturers, for this group of Stock Numbers.

MATERIAL STANDARD**ALUMINUM HEX NUT, HEAVY****1. Foreword****1.1 Scope**

This material standard covers the requirements for aluminum heavy hex nuts.

1.2 Application

Aluminum hardware is used to make up bolted aluminum-to-aluminum and aluminum-to-copper electrical connections. Refer to Construction Guideline D14-4/NSV-20. This includes connections to integral web channel bus (IWCB) in the Network, transformer and bus terminals, and aluminum lugs in stations, and elsewhere.

Aluminum fasteners are anodized and lubricated for corrosion resistance and to prevent galling and seizing.

1.3 Industry Standards

Hex nuts shall meet the applicable requirements of the following industry standards:

ASME B18.2.2-1987 (R1999) - Square and Hex Nuts (Inch Series)

ASTM F467-1993 - Standard Specification for Nonferrous Nuts for General Use

ASME B18.12-2001 - Glossary of Terms for Mechanical Fasteners

2. Fabrication**2.1 Common Requirements**

	Requirements	Reference
Product Name	heavy hexagon nut	ASME B18.12, Section 3.2.1.14
Material	aluminum alloy 6262-T9	ASTM F467, Tables 1 and 2
Dimensions	per reference	ASME B18.2.2, Table 9
Threads	standard series UNC Class 2B	ASME B18.2.2, Table 9, General Note (d)

Nuts shall be anodized and coated with Aluminite 205.

6. Approved Manufacturers

Seattle City Light Material Control personnel will identify and approve distributors, and hence manufacturers, for this group of Stock Numbers.

STEEL HEX BOLT**1. Foreword****1.1 Scope**

This material standard covers the requirements for steel hex bolts.

1.2 Application

Hex bolts are for general use.

1.3 Industry Standards

Hex bolts shall meet the applicable requirements of the following industry standards:

ASME B18.2.1-1996 - Square and Hex Bolts and Screws (Inch Series)

ASME B18.12-2001 - Glossary of Terms for Mechanical Fasteners

ASTM B633-98e1 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel

ASTM B695-2004 - Standard Specification for Coatings of Zinc Mechanically Deposited on Iron and Steel

2. Fabrication**2.1 Common Requirements**

	Requirements	Reference
Product Name	hexagon head bolt	ASME B18.12, Section 3.1.1.17
Material	steel	ASME B18.2.1, Table 2, Note (15)
Dimensions	per reference	ASME B18.2.1, Table 2
Threads	standard series UNC Class 2A	ASME B18.2.1, Table 2, Note (13)
Minimum Thread Length	per reference	ASME B18.2.1, Table 2, Note (11)
Corrosion Protection	zinc-coated	ASTM B633 or ASTM B695

2.1 Common Requirements, continued

Hex bolt thread length shall be according to ASME B18.2.1, Table 2, Note (11).

Hex bolts shall be protected from corrosion according to ASTM B633 or ASTM B695.

2.2 Marking

Hex bolt heads shall be marked according to ASME B18.2.1, Section 2.8.

MATERIAL STANDARD**STEEL HEX HEAD CAP SCREW, HIGH STRENGTH****1. Foreword****1.1 Scope**

This material standard covers the requirements for high strength, zinc-coated steel, hex head cap screws.

1.2 Application

High strength cap screws are for use on network protectors.

An ASTM A449 steel cap screw is equivalent in strength to an SAE Grade 5 fastener.

1.3 Industry Standards

Cap screws shall meet the applicable requirements of the following industry standards:

ASME B18.2.1-1996 - Square and Hex Bolts and Screws (Inch Series)

ASME B18.12-2001 - Glossary of Terms for Mechanical Fasteners

ASTM A449-1993 - Standard Specification for Quenched and Tempered Steel Bolts and Studs

ASTM B695-2004 - Standard Specification for Coatings of Zinc Mechanically Deposited on Iron and Steel

2. Fabrication**2.1 Common Requirements**

	Requirements	Reference
Product Name	hex cap screw	ASME B18.12, Section 3.1.2.7

Lag Screws

1. Scope

This standard covers the requirements for zinc-coated, square head, gimlet-point and fetter-drive steel lag screws.

This standard applies to the Seattle City Light (SCL) stock numbers cited in Table 4.

2. Application

Lag screws are used in overhead line construction and where the applied load is primarily a tensile load.

Gimlet-point lag screws are generally twisted into wood members, while fetter-drive lag screws are generally installed with a hammer. See Figure 2.

Figure 2. Screw Types

Gimlet point

Fetter drive

3. Industry Standards

Lag screws shall meet the applicable requirements of the following industry standards:

IEEE C135.80-2012; Zinc-Coated Ferrous Lag Screws for Pole and Transmission Line Construction

ASME B18.2.1; Square and Hex Bolts and Screws (Inch Series)

ASME B18.12; Glossary of Terms for Mechanical Fasteners

ASTM A153/A153M; Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware

Standards Coordinator
Kathy Tilley

Standards Supervisor
John Shipek

Unit Director
Darnell Cola

4. Requirements

All lag screws shall be square head.

Lag screw dimensions and strengths are shown in Table 4.

COPPER ALLOY WASHERS, PLAIN AND LOCK

plain

external tooth

split lock

1. Foreword

1.1 Scope

This material standard covers the requirements for copper alloy, plain, external tooth and helical spring (split) lock washers.

1.2 Application

Copper alloy washers are used in conjunction with silicon bronze cap screws and nuts to make up electrical connections. Refer to Construction Guideline D14-4/NSV-20. Silicon bronze hardware is also used in situations where high-strength and corrosion-resistance is desired.

1.3 Industry Standards

Washers shall meet the applicable requirements of the following industry standards:

ASME B18.21.1-1999 - Lock Washers (Inch Series)

ASME B18.22.1-1965 (R2003) - Plain Washers

ASME B18.12-2001 - Glossary of Terms for Mechanical Fasteners

ASTM B96-1993 - Standard Specification for Copper-Silicon Alloy Plate, Sheet, Strip, and Rolled Bar for General Purposes and Pressure Vessels

ASTM B99-2001 - Standard Specification for Copper-Silicon Alloy Wire for General Applications

ASTM B591-1993 - Standard Specification for Copper-Zinc-Tin Alloys Plate, Sheet, Strip, and Rolled Bar
