Part 1

STATE, COUNTY AND CITY POPULATIONS

POPULATION TRENDS provides demographic data for Washington state counties, cities and towns as of April 1, 2018. Population determinations contained in this document are developed by the Office of Financial Management and represent the state's official population figures. Population figures for Washington's counties, cities and towns have been prepared on an annual basis for more than five decades. These estimates are cited in numerous statutes using population as criteria for fund allocation, program eligibility and determining county participation under the Growth Management Act.

The 2018 population estimates will be used for state program administration and in allocation of selected state revenues beginning in January 2019 as specified in RCW 36.13.100, 43.62.020, 43.62.030, 66.08.200 and 66.08.210.

Summary of Population Trends: Washington State

The April 1, 2018, population estimate places Washington's population at 7,427,600. The state population grew by 117,300 persons, or 1.6 percent, over the past year. While growth remains strong by historical standards, the growth rate is down slightly from last year.

Migration is once again the primary driver behind Washington's population growth. The net migration gain of 83,700 persons accounted for 71 percent of the state's population growth, with natural increase (births minus deaths) responsible for the other 29 percent, or 33,600 persons. This is the fifth consecutive year that migration has exceeded the prior decade average of 45,000.

Figure 1. State Population Change and Components of Change

Driver license data can be used to provide trend information about migration flows between Washington and other states. Approximately 42 percent of in-movers to Washington last year came from California, Oregon, Texas and Arizona. The 12-month moving sum of in-movers from these four states is 79,200. The remaining states accounted for 52 percent of in-migrants, with 6 percent arriving from other countries.

Figure 2. Driver Licenses Surrendered to Washington

During the past year, 33,600 persons were added to the state's population due to natural increase, down 200 from the prior year. Births are increasing not because of higher fertility but because there are more women of childbearing age. Deaths are also increasing, along with the graying of the state's population. Due to higher mortality, the expectation is for natural increase, as a share of state total population growth, to gradually decline over time. Last decade, population growth due to natural increase averaged 38,000 persons per year, or 46 percent of total population growth, while this decade, natural increase is averaging 35,800 persons per year, or 41 percent of total population growth.

Figure 3. Births, Deaths and Natural Increase

Housing, another indicator of population change, continued to strengthen in 2018. Housing growth in 2018 increased by 7.5 percent over the previous year. Washington added 42,200 housing units last year — 2,900 more than the previous year but still lower than the prior decade annual average of 43,500 housing units. Statewide, 52 percent of all new housing units were associated with multi-family structures.

Figure 4. Change in Housing Units

Summary of Population Trends: Counties and Cities

Although population growth remains concentrated in the five largest metropolitan counties, momentum has shifted to the other metropolitan and nonmetropolitan counties. Seventy percent of the growth occurred in the state's five largest counties: King, Pierce, Snohomish, Spokane and Clark, respectively, down 7 percent from last year. King County accounted for the largest share of state growth this year, at 31 percent, followed by Snohomish and Pierce at 13 and 11 percent, respectively. The state's 18 nonmetropolitan counties accounted for 8 percent of population growth, up 3 percent from last year.

Different county classification schemes can be used to examine population change in more detail. In 2018, Eastern Washington grew by 1.4 percent and Western Washington by 1.7 percent. Counties along the Interstate 5 corridor grew by 1.7 percent versus 1.4 percent for rest of the state. Metropolitan counties grew 1.6 percent compared to nonmetropolitan counties, which grew 1.3 percent. Counties that border, or are within, Puget Sound grew by 1.7 percent versus non-Puget Sound counties, which grew by 1.5 percent. Rural counties, defined by RCW 82.14.370, grew by 1.3 percent versus 1.7 percent for nonrural counties. Distressed area counties, defined by RCW 43.168.020, grew by 1.3 percent versus 1.7 percent for the remaining counties.

Figure 5. Percentage Change in Population by Region

Figure 5. Percentage Change in Population by Region, Continued

The geographic distribution of population change by county can be seen in Figure 6. Franklin and Benton counties grew at an annual rate of 2.4 percent and 2.0 percent, respectively. In 2018, 29 counties experienced growth exceeding 1.0 percent, with 11 of these being nonmetropolitan counties. No counties lost population in the past year.

Figure 6. Distribution of Population Change by County

The population of incorporated places totaled 4,836,500 on April 1, 2018, an increase of 83,700 people since last year. Most of the population growth in incorporated areas was due to natural increase and net migration rather than annexation. Of the total increase in incorporated area population, only 6,300 was due to annexation.

The total unincorporated area population increased by 33,600 persons over the previous year. The five most-populous unincorporated county areas (Pierce, Snohomish, King, Clark and Kitsap, respectively) have almost as much population as the five largest cities in the state (Seattle, Spokane, Tacoma, Vancouver and Bellevue, respectively): 1.41 million versus 1.49 million, respectively.

Notes:

- Year 2018 vital events data are estimated.
- Rates are calculated per 1,000 midpoint population based on unrounded numbers.
- Totals may not add due to rounding.

- Notes:
- The county and municipal populations shown for 2010 are, with a few exceptions, the 2010 federal census PL 94-174 counts. Some 2010 counts may differ from the federal census. See Table 5 for more information.
 - With the exception of corrections to federal census counts, annual estimates in this official series are not revised on the basis of other information that becomes available after the estimate date.

- Symbols:
- * State Certified Special Census
 - # Informal census. A population and housing count that is considered accurate but does not meet all special census certification.
 - + Informal count. A population count that is considered accurate but does not meet special census certification.
 - \$ Adjusted Census 2010 population and housing. See Table 5 for more information.

Table 5. Federal Corrections and OFM Adjustments to Census 2010 Public Law 94-171 Counts

The Office of Financial Management (OFM) is responsible for April 1 population determinations that are used for state revenue allocations to local governments and in selected state programs requiring population as a criterion for funding and/or administration.

Abbreviations: Occ. - Occupied, Vac. - Vacant, HH - Household, GQ - Group Quarters

I. Federal Corrections to Census 2010 Counts Due to Misallocation of Housing Units and/or Group Quarters

There were no federal corrections associated with the 2010 census. State and local governments in Washington did not submit any formal challenges to their 2010 census counts through the Census Bureau's Count Question Resolution program.

II. OFM Adjustments to Census 2010 Counts Due to Annexation Activity from Jan. 2, 2010, through April 1, 2010

Symbols: A Population and housing units added to the cities due to annexations effective from January 2, 2010, through April 1, 2010.
 B Special city April 1, 2010, censuses used in place of the federal censuses.
 F Census Bureau corrections to federal counts due to misallocation of population and housing units. Federal corrections to *city* totals affect only the incorporated-unincorporated split. Federal corrections to *county* population and housing units affect state totals.

Notes:

- Part cities combined for ranking purposes.
- Negative annexed populations mean the city/town either de-annexed area or had a boundary line adjustment with either an adjoining city/town or its county.
- With few exceptions, year 2010 data are federal census Public Law 94-171 data. See Table 5 for more information.

- Notes:
- The 2010 counts for total housing units represent federal census counts, special city census counts or OFM adjusted counts that control for annexations from January 2, 2010 through April 1, 2010.
 - Estimates of housing units by structure type for 2010 are developed using an allocation procedure based on Census 2010 Summary File 1 data, housing completion data reported by cities and counties (2000–09), annexation census data (2000–09) and Census 2000 Summary File 3 data. The resulting 2010 estimates maintain the 2010 census counts of total housing units, occupied housing units and population in housing units.
 - Housing unit estimates (post-2010) are developed using housing completion data reported by cities and counties and annexation census data.
 - Housing unit estimates (post- 2010) are revised in cases where more accurate data become available.
 - Abbreviation: MH/TR/Spec – mobile homes, trailers and special housing.

- Notes:
- All boundary changes are due to annexation, deannexation, boundary line adjustment or incorporation. Unless otherwise noted, the source is annexation (annexation, deannexation, boundary line adjustment), not incorporation.
 - 'Annex. Parcels' refers to the number of noncontiguous areas annexed. Noncontiguous areas can be annexed under a single ordinance.
 - 'Area' can sometimes be negative due to deannexation or boundary line adjustment.
 - Areas less than 0.0005 square miles are shown as 0.000 square miles.
 - Abbreviations: Annex. – annexation, sq mi – square miles, Occ. – occupied, Pop. – population

Notes:

- The county-level population estimates of the 65 and over population are based on a method that uses decennial census, Medicare and Medicaid data. These figures will not match the 65 and over population found in OFM's estimates of population by age, sex and race which are produced using a different methodology.
- Totals may not add due to rounding.

Table 11. Intercensal Estimates of Population by County: April 1, 2000, to April 1, 2010

County	Census 2000	Estimate 2001	Estimate 2002	Estimate 2003	Estimate 2004	Estimate 2005	Estimate 2006	Estimate 2007	Estimate 2008	Estimate 2009	Census 2010

Notes: • Intercensal estimate series produced June 23, 2016.

SUPPLEMENTAL POPULATION INFORMATION

ADDITIONAL INFORMATION about the development of annual population estimates can be found in this chapter. The information includes state statutes related to the Office of Financial Management's official April 1 population determinations, the Small Area Estimate Program, how to access OFM population data products, State Data Center and Business and Industry Data Center contacts, and acknowledgment of the organizations that provide OFM with data.

Washington State Statutes Related to the Population Estimates Program

Population estimates for the state, counties, cities and towns and their use are governed by a number of statutes:

RCW 43.41.110: Assigns OFM duties related to population and annexation.

RCW 43.62.030: Requires annual estimates as of April 1 of each year for cities and towns. Used for allocation of specific funds the following Jan. 1. Only persons meeting resident criteria are to be included in the population estimates.

RCW 43.62.035: Requires annual estimates as of April 1 of each year for all counties. Used for allocation of specific funds in July of the same year.

RCW 43.62.040: Agencies, cities, towns and counties will furnish OFM whatever aid is needed in performance of its population studies. OFM's population determinations are final and conclusive.

Population Estimates Development

Population estimates represent the resident population as defined by the U.S. Census Bureau. This includes persons in housing units, military personnel and their dependents, persons living in correctional institutions and persons living in residential care facilities. College students are considered residents of the place where they live while attending school. Seasonal populations, such as vacationers or migrant farmworkers, are counted at their usual place of residence. Persons with no usual place of residence are counted where they are located on April 1.

The estimates are developed as accurately as possible from standard and tested methods. The specific procedures used to develop estimates depend on the availability of state and local area data.

State estimates are developed by a component method. The *component method* uses three basic demographic indicators — births, deaths and migration — to produce population estimates. The population change is the result of subtracting deaths and then adding births and migration to the base year population. Vital statistics data are obtained from the Washington State Department of Health. The migration estimate is based on administrative data sets such as school enrollment and tax filers' data which reflect the mobility of the population.

County populations are developed by three methods: the component method, ratio correlation and the housing unit method. *Ratio correlation* relates change in the county's share of the state population over a specific 10-year period to changes in the county's share of a set of symptomatic data over the

same time period. The current equation contains school enrollment, voter registrations, auto registrations, housing, births and deaths to persons age 65 or over. Changes in the symptomatic data are then tracked annually through the current decade to estimate population. The *housing unit method* estimates population on the basis of housing change and assumptions about occupancy rates and average household size.

City/town populations include both estimates and actual counts. A small number of cities/towns census their entire population each year. The housing unit method is used by OFM to prepare population estimates for the remaining cities. City population estimates are determined based on changes in the housing stock and counts of persons residing in group quarters facilities. The household population is estimated based on knowledge of housing unit change since the last census, occupancy rates and average household size. The population residing in group quarters facilities and from recent annexations is subsequently added to the estimate of household population to derive the final estimate. The reliability of the housing unit estimation method depends on accurately determining changes to the housing stock, the occupancy rate and average household size.

Small Area Estimates Program

OFM's annual city and county population determinations satisfy a variety of needs related to planning and program administration. However, population and housing estimates are frequently required for areas that do not coincide with city or county boundaries. The Small Area Estimate Program was developed to produce population and housing estimates for such areas while maintaining as much consistency as possible with OFM's city and county estimates.

The SAEP produces a consistent set of small area population and housing data for statewide applications. SAEP estimates are generated for census areas, "special areas" that are statutorily required and other areas of statewide significance. Small areas are defined as geographic areas below the level of the state that may be coincident with the boundaries of U.S. Census Bureau geographic entities.

SAEP estimates are not the official state population estimates used for revenue distribution and program administration for cities/towns and counties. Although city/town and county population totals from the state's official population estimates program serve as control numbers, the SAEP targets different geographic areas and therefore has different data and methodological requirements.

The SAEP takes OFM's official April 1 city/town and county population and housing estimates and distributes these to census blocks based on a variety of information, including residential building permits, assessor records, postal delivery statistics and decennial census information.

The SAEP uses area-weighted and parcel point-weighted areal interpolation techniques to develop estimates for geographic areas that are not coincident with census blocks. This strategy takes advantage of more geographically precise information where it is available.

SAEP data products are summarized by geography and available in tabular and GIS shapefile format. Each SAEP data product contains information on the following demographic measures: total population, household population, group quarters population, total housing units and occupied housing units. Estimates for the following geographic areas are provided:

- census block groups
- census tracts
- census designated places
- congressional districts

- fire protection districts
- legislative districts
- public hospital districts
- Public Use Microdata Areas
- school districts
- selected islands
- tribal areas
- urban areas
- urban growth areas
- Water Resource Inventory Areas
- ZIP Code Tabulation Areas

Small Area Demographic Estimates

OFM's Small Area Demographic Estimates model produces a consistent set of small area population estimates by the following characteristics: age, sex, race and ethnicity.

The SADE model uses using an Iterative Proportional Fitting (IPF) procedure. IPF is a mathematical scaling procedure that converges the population estimates to constraining totals developed from multiple sources. To begin, an IPF procedure is executed to allocate census 2010 modified-age-race-sex data at the county level to census blocks. To move one year forward, IPF gradually adjusts the benchmark estimate through repeated calculations to fit the various constraints. These constraints, also known as controls, are OFM's annual total population by census block, county-level population estimates by age and sex, and county-level estimates by race and ethnicity.

SADE estimates use the characteristic proportions from the 2010 Census MARS data. These proportions don't reflect aging or migration of the small area population, so SADE data shouldn't be used to examine trends in small geographic areas. We suggest using SADE data at geographies more or less on the same scale as census tracts, about 5,000 people per geography. Estimates for the following geographic areas are provided:

- census tract
- congressional district
- county
- legislative district
- school district
- state

There are three tables for each geography representing the total population, the Hispanic population and the non-Hispanic population. The data are tabulated by OMB 1997 race category, sex and five-year age groups.

Population Data Products

OFM produces a number of population data products. To find frequently requested population items, please see <http://www.ofm.wa.gov/pop/key2pop.asp> or click on one of the links below. You can subscribe to the OFM-Forecasting LISTSERV to receive email notifications about updated OFM data products at <http://listserv.wa.gov/cgi-bin/wa?SUBED1=ofm-forecasting&A=1>.

Estimates:

- age, sex and race
- official April 1 population estimates
- small areas
- special areas

Projections:

- Growth Management Act county projections
- state population forecast

Other products:

- American Community Survey
- annexations
- decennial census
- population density
- GIS data

Washington State Data Center and Business and Industry Data Center

The Washington State Data Center and Business and Industry Data Center are federal-state cooperative programs sponsored by the U.S. Census Bureau. OFM is the agency responsible for administering these programs in Washington.

A list of the Washington SDC/BIDC coordinating agencies and affiliate members is provided below. These organizations and their contact persons play an important role in the dissemination of census information. Many of the larger participating universities, regional councils of governments and county planning agencies publish census information targeting the needs of local constituents. Many of these same organizations can also assist with data requests.

Acknowledgments

OFM acknowledges the following entities for providing data and/or assistance in support of the population estimates program:

- Center for Health Statistics, Department of Health for supplying vital statistics data.
- Office of Research and Data Analysis, Department of Social and Health Services for providing institutional population counts.
- Department of Veterans Affairs for providing veteran institutional counts.
- Department of Licensing for providing driver's license and vehicle registration data.
- Office of Superintendent of Public Instruction for providing student enrollment counts.
- Employment Security Department for providing state employment data.
- Puget Sound Regional Council for providing building permit information.
- City and county planners/staff for providing building permit and other information used in the development of April 1 population estimates.
- Housing directors at colleges and universities for submitting April 1 dormitory counts.
- Armed forces personnel at major military installations for contributing data on resident military population counts.
- Municipal Research and Services Center for providing technical assistance/resources related to annexation and revenue distribution.
- Agency personnel in other states who provide reciprocal data on interstate movements.
